There is not much sky around Washington, except above it and that's a long way off, and when you come to throw targets from the middle of a marsh, with trees in every direction, targets have to be thrown at an angle of about 90° if it is intended that they shall have the sky as a background. The trappers, in order to even things up, applied the same mathematical calculations to the quartering birds, and the way in which they whizzed by the end of the screen at direct right angles and started toward Baltimore generally guaranteed them an unimpeded flight had they but the staying power to make the distance. Shooting began about 10:30 A. M. and continued until 6:30 P. M., with but a slight interruption of fifteen minutes at noon, when the cravings of one's inner consciousness were appeased.

The club team race was the center of interest; there were four teams present, representing the Capital City Gun Club, of Washington; the Standard Gun Club, the Baltimore Shooting Association, and the Green Spring Valley Gun Club, of Baltimore. The Capital City boys got a little the best of the contest and seem now to have a pretty strong cinch on first place, having made the highest averages at each of the league tournaments which have taken place. The day, barring the uncanny heat, was a most enjoyable one and everyone went home pleased, with the exception perhaps of the ones who failed to land. They were rather quiet and reflective. How hard it comes, but oh, how easy it goes, at a $1.50 and $2 entrance.

The next league shoot will be held on the grounds of the Standard Gun Club, Baltimore, on Wednesday, Aug. 7. All shooters, whether members of clubs or not, are invited to be present at these tournaments. The following are the scores:

No. 1, 10 targets, $1: Wagner 9, Bond 8, Gulick 6, Eldridge 8, Arnold 7, McKnew 9, Hood 7, Rothwell 9, Thomas 7, Heiskell 5, White 8 Malone 9, Mattingly 2, Smith 7, Buckbee 8, Hamilton 7, Hartner 10, Dixon 8, Randall 7, Hawkins 7, Gant 8, Bird 9, Lupus 7, Penrose 8

No. 2, 15 targets, $1.50: Wagner 14, Arnold 14. Heiskell 9, White 11, McKnew 10, Thomas 8, Band 15, Hawkins 13, Claridge 14, Penrose 13, Malone 13, Hood 9, Rothwell 13, Mattingly 12, Dixon 8, Randall 11, Bird 11, Gent 12, Hamilton 10, Lupus 13, Smith 13, Lee 12, Hartner 13.

No. 3, 20 targets, $2:

STANLEY.

Vernon Rod and Gun Club.

BROOKLYN, N. Y., July 27.—The regular Saturday shoot of the Vernon Rod and Gun Club was held this afternoon, under very inauspicious conditions as regards the weather. The wind blew a gale all the time, while driving rain and heavy, dark clouds made it difficult to get on to the erratic flights of the blue rocks. Woods's average of 83 per cent. was exceptionally good. The scores were:

Events:	1	2	3	4	5	6	7	8	9	10
Woods	8	7	10	8	..	7	..	8	22	9
Edwards	7	8	4	7	..	6	..	6	15	7
Welles	4	9	8	7	..	8	..	9	17	..
Gray	1	1	..	..	3	..	..	5	3	..
Thompson	8	7	..	..	6	..	7	7	13	..
Allen	4	5	..	..	5	..	4	..	..	..
Dr. Little	..	..	6	8	6	7	9	7	18	9
Burham	..	..	6	8	5	8	4	..	..	..
Bishop	..	..	9	8	..	7	..	7	16	8
Osterhart	..	..	..	..	..	6	..	5	7	..
Lahey	..	..	..	..	..	..	..	4	..	2

All events were at 10 targets, except No. 9, which was 25 targets.

The Question of "Proper Angles."

THE team races at the New Jersey Trap-Shooters' League tournaments are shot at known traps, unknown angles. Prior to 1895 the races have been shot at known traps and known angles. This year, however, at the annual meeting, the delegates by a very narrow margin, the casting vote of the chairman, we believe, decided to change the conditions to unknown angles. This decision, imposing as it did more severe conditions upon young and more inexperienced clubs, resulted in the secession of one club and caused considerable dissatisfaction in one or two other instances.

FOREST AND STREAM has twice called attention to what it believed to be the inevitable results of such a change—dissatisfaction with the manner in which the targets were thrown. A third case occurred at the last tournament, the one held on Thursday, July 25, on the grounds of the Union Hill Gun Club. In this case it was the flight of a target, refused by a shooter, that caused the trouble, not the general way in which the targets were thrown—everybody was served alike. Two or three of the trappers, however, took advantage of the traps having no "stops" on them, and flung the targets up and down the screen, the angles being very acute at times.

The incident occurred when the first team was shooting—the Union, of Springfield "Uncle Billy" Sigler, one of the best shots in the league, and probably without a peer of his own age at targets, drew an extreme left-quarterer from No. 3; it went right down the screen and low at that. He refused it. Another target was allowed and again he refused to shoot, the target taking the same flight exactly. His third target, almost a straightaway, was pulverized. There was a good deal of kicking at the scoring of a dead bird to Sigler, but we believe that the decision was absolutely correct, as the two previous targets were certainly outside the limits prescribed by the American Shooting Association rules—the rules by which the New Jersey Trap-Shooters' League contests are governed. Sec. 12 of the League's by-laws says: "The shooting rules of the League shall be those of the American Shooting Association, revised edition, with the exception that amount of shot shall not exceed 1½oz." (The last reservation appears to be unnecessary, as neither of the revised editions permits more than 1¼oz. of shot.)

Rule 13 of the A. S. A. trap-shooting rules, revised 1890, and rule 7 of the A. S. A. trap-shooting rules, revised by C. W. Dimick, 1893, govern the point above stated, each using precisely the same wording. After prescribing the adjusting of the traps and the proper flight of each target, Section 3 states: "After the traps are set for their angles, if the target for any reason shall take a different course, it shall be considered a fair target, *provided the trap has not been changed.*" In the instance above cited, the contest was at unknown angles, therefore the trap *had been changed.* No set of A. S. A. rules, revised or unrevised, tackles contests either at unknown angles or under expert rules; therefore, by implication, we must presume that all angles in unknown angle events should be within the limits prescribed in the rule above mentioned. Hence we think that the referee's decision on Sigler's target was correct. A protest was lodged against it being scored "dead," not from any vindictive feeling, but simply for the sake of having this question of what is, and what is not, a proper angle defined so far as the team contests of the New Jersey Trap-Shooters' League are concerned.

Section 3 above quoted will, we think, be a surprise to many shooters who have been under the impression that, when shooting at known angles, they could properly refuse a target that takes a wrong flight through some fault of the trap, or error of the trapper—such as putting the target in the carrier without pushing it up solidly, etc. This section says positively that, provided the trap has not been charged, such a target is a fair target.

Both books of A. S. A. rules quoted from above also contain a section that is surely clerically incorrect: Section 1 of Rule 20 of the 1890 revision, and Section 1, Rule 19 of Dimick's revision, define the reasons for which a shooter shall be allowed another target. Section 2 of these rules states how such other targets shall be thrown as follows: "When the shooting is at *known angles* he shall have another target from the same trap; but if the shooting is at *unknown angles* he shall have another target from an unknown trap, to be decided by the indicator, except it be the last trap, when the shooter has the right to know which trap is to be sprung. In this case he shall have another target from the same trap." The evident intention must have been to make the words in italics read "known *traps*" and "unknown *traps.*" (The italics in all cases are ours.) It is unnecessary to state that, as far as we know, such has always been the interpretation of this rule. An effort is being made by the recently organized American Trap Shooters' League to provide clubs with an up-to-date and perfected set of rules that shall clear up as far as possible all ambiguities in the sets of rules now in general use, and which shall also decide many other moot points not touched by these same rules. Such a book of rules, it must be conceded, the trap-shooting fraternity stands much in need of. These last remarks apply not only to target-shooting, but also to live-bird shooting.

Council Bluffs Gun Club.

COUNCIL BLUFFS, Ia., July 20.—A few members of the Council Bluffs Gun Club held a live-bird shoot at the club's grounds to-day. The conditions were: 30yds. rise, 80yds. boundary. The birds were a capital lot, only two requiring the use of scare ropes. Following is the score:

	No. 1.	No. 2.

CHARLES MATTHAI, Scorer.

Brunswick Gun Club.

NEW BRUNSWICK, N. J., July 27.—Fourteen members of the Brunswick Gun Club took part in the club's monthly shoot this afternoon. R. M. Pettit headed the list with 24 out of 25, missing his seventh target; Stevens scored 23, tieing Van Dyke for second place; Hoagland with 22, and Blish and Nicholson with 21 each. All shot well. The conditions of the club shoot are: 25 targets per man, unknown angles. Score:

R M Pettit	1111111011111111111111111—24

Worcester Gun Club.

THE Worcester (Mass.) Gun Club is bent on keeping up the interest of its members in trap-shooting. The Forehand Arms Company's trophy contests do a great deal to promote friendly rivalry among the members, and in addition to these contests the club is now starting in on a second series of prize shoots similar to those which have just been concluded. The manner in which these prize shoots are conducted, their conditions, and the awarding of the prizes, will be interesting as instructive to other gun clubs who may wish to adopt similar methods of drawing out their members and increasing a healthy interest in trap-shooting. The following clipping from the Worcester (Mass.) *Spy* tells the whole of the story:

"The series was 10 weeks at 30 targets each week, making 300 targets shot at, and the 8 best scores out of 10 were counted, that it might not be absolutely necessary for a member to attend every shoot in order to get a prize, and in the eight weeks 240 birds were shot at. The poorer shooters were given a number of "dead" birds to bring them up to 80 per cent., the average standing of the best shooters, who, to keep up their average, were obliged to break 24 targets out of the 30 shot at, and were handicapped by the number of birds given those who could not shoot so well. That this handicap was a good one is shown by the totals, where a dozen or more men are bunched together with only 20 targets difference between the highest and the lowest, and that the system was satisfactory is shown by the harmony and friendly rivalry which prevailed among the shooters. The handicap proved, unintentionally to the committee, to be more difficult for the older than for the younger shooters, and the more experienced marksmen had to shoot the best they could all the time, while some of those who have been ranked as poor shooters went above their average.

"Of the 240 targets in eight weeks, Jay Snell got eight full scores, and won the first prize, a $100 Lovell Diamond bicycle, given by the Lovell Arms and Cycle Company. John B. Tougas came next with 235, and has the second prize, a $35 gold watch, given by A. B. F. Kinney. Charles H. Goodell got 234, winning the third prize, a $35 silver tea service, given by Nelson H. Davis. Charles A. Parker had 233, with which he took the fourth prize, a banquet lamp, given by O. S. Kendall & Co. Thomas H. Davis is fifth with 232, and wins a silver ice pitcher, given by the Clark-Sawyer Company. The sixth prize is a silver watch, valued at $20, given by A. B. F. Kinney, and was won by Frank A. Caswell, with a score of 226. The seventh prize is a $10 gun case, given by A. B. F. Kinney, and was won by Frederick Bucklin with a score of 223. C. Henry Colvin made a score of 220, and wins a pair of custom trousers, given by Davis & Co. This prize has seemed for the last few weeks likely to go to John Mascroft, of Sutton, who would not have required less than 10yds. for the pattern, and Messrs. Davis & Co. should do a good job for 'Harvey,' and feel under lasting obligations to him for helping them out.

"The gun club intended to send the largest man they had and get the most they could for the present, but the severe storm interfered, and lightning struck where it did. Samuel Randall scored 219, and has his choice in a year's subscription to the daily papers. Estabrook takes tenth prize with a score of 213, and wins his choice of sporting papers, one year's subscription. John T. Mascroft and Earl W. Ide are tied with 210 for the eleventh prize, a $6 silk umbrella given by the George H. Corbett Company. Caspar Mifflin Brown scored 208, and gets twelfth prize, an alligator hand-bag, given by S. E. Hanson. Erford A. Holmes comes thirteenth with 204, and wins a pair of $4 shoes, given by George C. Hunt & Co. Charles E. Forehand's score was 203, and he wins a hat, given by Edward B Clapp. William H. Farnsworth is fifteenth with a score of 163, and wins the barred owl given by Charles K. Reed."

West Newburgh Gun and Rifle Association.

NEWBURGH, N. Y., July 25.—Our regular Thursday shoot to-day was well attended. Lunch consisted of roast pigeon, pickled sweetbreads, etc., Steward Gidney getting there in fine shape, as usual. The feature of the day was the shooting of Taggart, Wood and Higginson. Taggart at live birds killed his 10 straight with one barrel only; his total for the afternoon was 24 out of 25, 16 of them one-barrel kills.

In the prize shoot, Wood won a heat for the first prize—ten-dollar gold piece; Higginson won a heat for the second prize—five-dollar gold piece. Scores:

Prize shoot, 25 targets—10 known angles, 3 pairs and 9 unknown angles—handicap of misses as breaks:

Wood (5)	1111111111	11 11 10	111111010—23
Higginson (0)	1111111111	10 11 10	11101111—22
Taylor (0)	1100101111	11 11 11	01101111—20
Likely (3)	1001111010	01 11 11	01100111—20
Gibbs (4)	1011010111	00 00 00	11111111—20
Taggart (4)	0100011011	11 10 10	11101001—19
Chadwick (10)	0100000110	10 11 10	10000100—19
Kissam (3)	1001011101	10 10 00	01011111—18
Stansborough (3)	0000111110	10 10 10	10010011—15

No. 2, 15 targets, unknown angles: Higginson, Likely and Taylor 13, Wood 11, Kissam 9, Gibbs 8, Chadwick 6.

No. 3, 10 live birds:

Taggart	1111111111—10	Wood 1210102211— 8
Taylor	1121121211—10	Stansborough 23122●2w — 6
Higginson	2●22222221— 9	

Other live-bird scores shot during the day were: Taggart 14 out of 15, Higginson 9 out 10, Taylor 4 out of 5, Likely 8 out of 10, Gibbs 2 out of 5.

DAVID BROWN.

A Press Team Race.

ABOUT 10:30 A. M. on Saturday morning last, July 27, the trap editor of FOREST AND STREAM called into the store of Von Lengerke & Detmold. He found Major J. M. Taylor, of the *American Field*, and Mr. Jacob Pentz, of *Shooting and Fishing*, already in possession. The result of the meeting of "three of a kind," as Carl Von Lengerke put it, was the following:

While we were talking together Carl said: "Why don't you three each choose a team and shoot a race for the honor of your papers, calling the teams by your paper's name?" After discussing the question, we came to the conclusion that we might all happen to want the same shooter, which would complicate matters. It was then agreed that if possible we would promote a tournament at which the FOREST AND STREAM'S, *American Field's* and *Shooting and Fishing's* teams should be a special feature. Although the idea is yet in embryo, the scheme for chosing the teams may be as follows: The three above-named representatives of the sportsmen's press shall meet and together select (say) 36 names of prominent shooters who live within easy reach of New York. Dates for the tournament (probably early in October) will be chosen and the 36 shooters will be written to, asking them to attend and take part in the team race. (The number of shooters is not limited to 36, but that number at least will be included.)

To do away with the difficulty of choosing the teams, the names of all the shooters will be placed in a hat and the representatives of the papers named will draw their teams. All conditions are as yet only in the rough, but we believe that such a race will not only attract shooters, but will make a good nucleus for a rattling tournament. It will certainly add to the interest already excited in trap-shooting.

Canadian Trap Scores.

HAMILTON, Can., July 23.—To-day was the occasion of the shoot at Brantford for the Big Four prizes. The attendance was good, the weather delightful and the tournament an entire success. In the team race there were six entries: 3 from Toronto, 2 from the Galt Gun Club and 1 from the Mallard Gun Club, of Hamilton. The Mallard Gun Club's team won the race with 90 out of 100, No. 1 team of the Stanley Gun Club, of Toronto, being a good second with a total of 88. The following were the scores in this match, each man shooting at 20 targets:

Mallard Gun Club Hamilton: Cliff 19, Smyth 18, Clyne 18, Marshall 18, Patterson 17—90.

Stanley Gun Club, Toronto, No. 1: Wilton 19, Lucas 19, Gordon 18, George 16, Casey 16—88.

Galt Gun Club, No. 1: Wayper 20, Smith 19, Thompson 18, Wheeler 15, Campbell 12—84.

Stanley No. 2: McDowall 19, McCleary 19, Rice 16, Tippett 16, Musson 13—83.

Galt No. 2: Patrick 18, Draisey 18, R. C. Patrick 17, Gress 14, Tremain 14—81.

Victoria Gun Club, Toronto: Crew 19, Burgess 16, Myler 16, Enoch 14, Beatty 14—79.

WESTERN TRAPS.

CHICAGO, Ill., July 27.—My attention is asked to the fact that in the report of Cleveland shoot a "world's record" was claimed for the squad which broke 116 out of 120 targets. This is well meant, but not quite correct, as reference to the types will show that the report said, "This broke the squad record," meaning of course the squad record for that shoot only. With Mr. Waddell's DuPont Smokeless pictures all about as they were, one could not well have forgotten, even had he wished to do so, the fact that the squad record of all shoots, so far as we know at date, was broken by the six men who ran 119 out of 120 at the Cincinnati DuPont tournament, which was duly shown in the report for that shoot and elsewhere. This would not affect the Cleveland squad record, nor its mention as news. It is also pointed out that in the (exclusive) FOREST AND STREAM report of the Nebraska State shoot a "world's record" was claimed for 89 out of 90. I find no mention in that report (or the Cleveland report) of this being claimed for any powder. The term "world's record" is one that is often heard in a newspaper office, but I don't think FOREST AND STREAM is likely to use it to the detriment of any of its friends. It couldn't afford to, and doesn't want to, I think one may make bold to say. FOREST AND STREAM is about as big and square as they make 'em.

KANKAKEE COUNTY GUN CLUB.

They used to shoot ducks along the Kankakee, but now they shoot targets. On Aug. 7, 8 and 9 the Kankakee Gun Club will give a nice little tournament, with $300 added to induce the attendance of those who used to shoot ducks and now shoot targets, or those who still shoot both, or those who don't shoot either very much. All will be welcome. Kankakee is only sixty miles from Chicago and is a pretty place at this season.

Aug. 3 is the day set for the juvenile live-bird race at Watson's Park, Burnside; also for the Garfield-Eureka club race at the Eureka grounds; should the latter race go through as planned, there should be interest in each event.

E. HOUGH.

New Jersey Trap-Shooters' League.

THE sixth shoot of the 1895 series of team contests promoted by the New Jersey Trap-shooters' League was held on Thursday, July 25, on the grounds and under the auspices of the Union Hill Gun Club, of Hoboken, N. J. These grounds are located near the Guttenburg race track and are reached by trolley cars from either one of these places: Hoboken depot of the D. L. & W. R. R.; the Jersey end of the new Fourteenth street, New York, ferry; or the Courthouse, Newark. From Barclay street, New York city, to the gun club's grounds, is a trip of about sixty minutes, but a pleasant one at that, as the trolley cars in Jersey keep going and make fast time. The system of transfers over those lines is something immense, the public being well looked after in that respect, but apparently neglected as to the number of cars run on the different lines. Partly owing to the long interval between cars and also to the length of the trip from Hoboken, several members of the various teams did not arrive until well after 2 P. M., the hour set for the commencement of the team race. The manager, W. N Drake, with the league score book, was slightly behind time owing to the same causes. It might be just as well to mention right here that the league team race is always advertised for 2 P. M.; if started promptly it should be over by 4, thus allowing those who live at a distance to get home at a decent hour. But the 2 P. M. rule is never adhered to, the consequence being that the team race drags along until somewhere between 5 and 6. Why not advertise it for 3 P. M. and begin promptly? Or, better still, why not adhere to the present hour and start promptly on the stroke of 2? If it was understood that 2 o'clock meant 2 o'clock, shooters composing the various teams would be on deck at that hour and would not come dribbling in between 3 and 4.

The day was exceedingly warm, too warm for comfort, and the shooting of several of the contestants suffered in consequence. Considering the heat, the inferior background and the numerous balks caused by the poor work of the pulling apparatus, the scoring as a whole was very good. The Boiling Springs total of 115 was a performance to be proud of, Greiff and McAlpin leading with clean scores of 25 each. Elizabeth took second place with 109, also a capital score under the circumstances. The Climax were third by a narrow margin, scoring 100 to Maplewood's 99. Four of the latter club's team scored 87. Van Iderstine most unaccountably falling down on his string. The South Side team was much weakened by the absence of Maj. R. H. Breintnall, who was attending to his military duties at Sea Girt, N. J., and of Asa Whitehead, who has a percentage of 85 6 for five completed strings. "Wanda" (Mrs. M. F. Lindsley) made the excellent score of 22, aiding very materially in the making of 72 by the Union Hill team.

Before the team race was shot the following eight sweeps were decided, North's bluerock traps and empire targets being used throughout the day:

No. 1, 10 targets, unknown angles, $1.00: Van Dyke 9, Hyde 8, Greiff 8, Sigler 8, Miller 8, Jackson 8.

No. 2, same as No 1: Collins 9, McAlpin 9, Sigler 8, Greiff 8, Van Dyke 8, Miller 8, Hyde 7, Jackson 7.

No. 3, 15 targets, unknown angles, $1.50: McAlpin 15, Van Dyke 14, Hyde 13, Sigler 13, Greiff 13, Jackson 6

No. 4, same as No. 1: McAlpin 10, Sigler 10, Miller 10, Van Dyke 9, Keller 9, Thomas 8, Collins 8, Hyde 8, Dutchy 8, Apgar 7, Hebbard 7, Edwards 6, Fayette 6, Greiff 6, Jackson 6.

No. 5, same as No. 3: McAlpin 15, Greiff 15, Apgar 15, Van Dyke 14, Collins 14, Sigler 13, Miller 13, Smith 13, Keller 13, Hebbard 12, Thomas 11, Hyde 11.

No. 6, same as No. 1: Greiff 10, Apgar 10, Dustin 10, Geoffroy 10, Thomas 9, Collins 9, Sigler 9, McAlpin 8, Hebbard 8, Jackson 8, Van Dyke 7, Hyde 7, Smith 7, Miller 7, Keller 7, Piercy 6, Edwards 5, Herrington 4.

No. 7, same as No. 1: Geoffroy 10, Smith 10, McAlpin 10, Apgar 9, Thomas 9, Greiff 9, Sigler 9, Miller 9, Keller 8, Dustin 8, Van Dyke 8, Hyde 8, Hebbard 8, Piercy 7, Heddon 6, Herrington 6, D. Terry 5.

No. 8, 25 targets, unknown angles, $2.50: Geoffroy 24, Warren Smith 24, McAlpin 23, Greiff 23, Keller 23, Van Dyke 22, Hyde 21, Collins 21, Dustin 21, Apgar 18, Piercy 17, Herrington 17.

As soon as No. 8 had been brought to a conclusion, manager Drake called up the Union Gun Club to the score to shoot its string in the team race: five men to a team, 25 empires per man, unknown angles. The scores made were as follows:

Boiling Springs.	
G S McAloin	1111111111111111111111111—25
G E Greiff	1111111111111111111111111—25

J Sullivan	0000110000011001101100010— 9— 72

Prior to this shoot the club averages were: Maplewood 84, South Side 83, Union 81 6, Boiling Springs 79, Climax 78 2, Elizabeth 74.4, Endeavor 71.8, Riverside 67.7, Union Hill 53.6. Of the above teams, Union, Boiling Springs and Union Hill had only taken part in four shoots; Riverside had shot in three races only; all the rest had shot in the five monthly shoots held previously. The result of the sixth shoot left the teams in the following order, the five best scores being counted: Maplewood 84 1, South Side 83, Boiling Springs 81 4, Climax 80.4, Elizabeth 80, Union 78.7, Endeavor 75 5, Riverside (three shoots) 67.7, Union Hill 54.4. It will be noticed that the Union Gun Club has dropped from third to sixth place. All the other teams improved their averages with the exception of the South Side, which remains the same, the score of 87 made at this shoot being the lowest yet made by that club; it is therefore not counted in the average, the prizes being awarded for the five best scores. There are three more shoots to come: Aug. 7, at the Climax Club's grounds near Fanwood, N. J.; Sept. 3, at the South Side's grounds, Newark, N. J.; at Red Bank, N. J., some time in October, on the grounds of the Riverside Gun Club.

The individual averages of the 24 highest scorers show the standing of the contestants for the individual prizes, computed in the same manner as the team averages. The figure in parentheses after a shooter's name tells the number of shoots he has taken part in; where no figure in parentheses appears, the shooter has taken part in at least five contests, the five best scores being chosen:

F. Van Dyke 93.6, W. N. Drake 92, G. S. McAlpin (3) 92, W. Sigler (4) 91, N. Apgar 88 8, Collins 88, Sickley 88, Breintnall (4) 88, Miller 87.2, Hoffman 86.4, N. E. Money 85.6, Whitehead 85 6, Williams 85 6, Hebbard 84 8, Greiff (4) 84, Parker 83.2, C. Smith (4) 83, Thomas 81 6, Astfalk (4) 81, Huck 80.8, Geoffroy 78.4, W. Smith 78.4, Keller 76.8, Terry 74 4.

From the above it will be seen that Van Dyke, Drake and McAlpin helped their averages considerably. McAlpin indeed shot a great gait at this last shoot, as a reference to the score will show. During the day and up to the close of the team race he shot at 120 targets, scoring 115, an average of 95.8. Grieff broke 117 out of 130—exactly 90 per cent.; Van Dyke's average for his scores to the close of the team race was 88 4.

The Hunter Arms Company, of Fulton, N. Y., manufacturers of the L. C. Smith gun, have gotten out a very neat catalogue, showing by numerous cuts, its specialties, and also describing the same in a manner that can be understood by anybody who knows anything about a gun.

Trap in Texas.

MARLIN, Falls County, Tex., July 16.—A few members of the Marlin Gun Club shot a couple of 10-target races this evening, the conditions being known traps and angles:

	No 1.	No. 2.
W E Hunnicutt	1111110111—9	0001110111—6
A Stumbach	0100100000—2	0001001100—3
"The Newsman"	1101100000—4	0011011010—5
Theo Peoples	1100011100—5	.....
Judge S R Scott	1011011110—7	0010111111—7
A Threadgill	1111101101—8	1110100111—7
D S Moffatt	0111110010—6	1010111001—6
D S Eddins	1100101000—4	1110111010—7

The low average was owing to the targets being very hot, some being evidently perforated without being broken, although most of the boys had an individual excuse for their personal satisfaction. Judge Scott did not have his gun with him, but tested all the guns on the ground. When the Judge can't keep all the boys in good spirits with his humor it is a very cold day for this time of year. Moffatt, usually 90 per cent. man, had his left suspender break on his seventh rock and did some fine snap shooting with his cylinder bore afterward. "The Newsman" was experimenting with a new load of black powder and got his left shoulder pounded into a pulp in first match. He changed hands on second match and got his nose bruised and lip swelled in first round. In fact he would have been completely knocked out had not Mr. Peoples kindly tendered the use of his Manton gun with ears like a jack rabbit and a stock like a 24in. gauge. It had the barrels all right enough, but "The Newsman" couldn't point it right.

MARLIN, Falls County, Tex., July 19.—On the 12th inst. we mailed you score of our gun club, and mentioned a prize shoot that was about to take place at Lott, Tex., on the 18th inst. under the auspices of the Lott Gun Club. Owing to the bridge over the Brazos washing away between here and there, the Marlin Club was not represented. However, I was determined to be there, so took a roundabout route by rail. After getting to Lott I could not resist the temptation of participating in all the good things, shooting included, but not as a representative of the Marlin Club, understand, although a member.

The occasion was a barbecue picnic in celebration of the fifth anniversary of the city of Lott, a very live little place, twenty-eight miles south of Waco, on the S. A. & A. P. R. R. The picnic grounds were about one mile from town, on the banks of a beautiful little lake and in a magnificent grove of towering trees. Preparations had been made to accommodate 5,000 people, but owing to the bridge washing away and no excursion train being run from the south, only about 2,500 were there. The shooters' tent was about fifty steps from the main ground. The management was controlled by Messrs. M. A. Reese, captain, and T. H. Ligen, secretary of the Lott Club, and the result certainly was a compliment to their energy and good judgment. At the commencement the idea occurred to me that "these boys had been reading Mr. Hough's account of the Memphis tournament." Messrs. E. W. Merrill and R. E. Harris filled the cashier's and score keeper's office in a prompt and able manner, while Dr. Joe Willis, of Temple, acted as referee, and did not need the assistance of a book of Association rules. Three Cleveland trap and empire targets were used very satisfactorily, except that the trappers broke a good many at first. After Mr. Reese cautioned them not to put the targets in quite so hard there was less trouble.

The shooting began about 9 o'clock, and at 12 Mr. G. H. Threadgill, chief marshal of the day, invited all the "gun boys" to a certain table set by the yard in length, and which was about to break under the load of barbecued meats of all kinds, salads, pickles, breads, pies and cakes—too much to name, much less write about.

All of the inanimate events were rapid-fire system, in squads.

No. 1, 7 targets, known angles, $1 entrance, three moneys, with fourth prize, a silk umbrella: A. H. Reese 6, "The News"-man 2, H. Stricker 2, H. L. Sherrill 4, J. R. Jackson 4, Wm. Caldwell 4, T. E. Hubby 6, Dr. W. O. Alvis 4, T. H. Ligon 5, W. F. Leeds 1.

Reese and Hubby divided first, T. H. Ligon took second, Sherrill, Jackson, Caldwell and Alvis divided third, Stricker and "News"-man shot off at 5 targets for umbrella, the latter winning.

No. 2, 10 targets, known angles, $1.50 entrance, three moneys, with fourth prize—box of cigars: J. R. Jackson 9, M. A. Reese 7, H. L. Sherrill 7, Wm. Caldwell 6, T. E. Hubby 7, Dr. W. O. Alvis 6, T. H. Ligon 9, M. F. Leeds 9, "News"-man 4, H. R. Seward 7, F. W. Stallworth 2.

Jackson, Ligon and Leeds divided first; Reese, Sherrill, Hubby and Seward second, Caldwell and Alvis third, "News"-man box of cigars.

No. 3, 6 singles and 2 pairs, $2, three moneys, with fourth prize—pair of gold cuff buttons: M. H. Reese 9, M. F. Leeds 7, Dr. M. A. Hayes 6, T. H. Ligon 7, Dr. W. O. Alvis 3, J. R. Jackson 7, W. M. Caldwell 5, T. E. Hubby 7, E. J. Mickey 7, H. L. Sherrill 8, R. B. Louis 4.

Reese won first, Sherrill second; Leeds, Ligon, Jackson, Hubby and Mickey divided third; Dr. Hayes got the buttons.

No. 4, 5 singles and 5 pairs, $2, three moneys, with fourth prize—oil painting: M. F. Leeds 9, M. H. Reese 10, T. E. Hubby 14, J. R. Jackson 10, H. R. Sherrill 9, T. H. Ligon 12, R. B. Louis 8, H. R. Seward 11, Dr. M. A. Hayes 10.

Hubby first, Ligon second, Seward third; Reese, Jackson and Hayes shot off tie for the painting, which was won by Jackson.

No. 5, 5 live pigeons, 28yds. rise, $2.50, three moneys and 100 loaded shells for poorest score: M. H. Reese 5, T. E. Hubby 4, J. R. Jackson 5, T. H. Ligon 4, H. R. Seward 4, "News"-man 3, M. F. Leeds 3, Dr. M. A. Hayes 3.

Reese and Jackson divided first, Hubby and Seward second, Leeds, Hayes and "News"-man third; Ligon feathered all of his five, but he got the 100 loaded shells.

No. 6, 4 live birds, 28yds. rise, $1 entrance, 10 cents each deducted for pigeons, three moneys: R. B. Louis 2, M. F. Leeds 3, H. L. Sherrill 4, "News"-man 2, M. A. Reese 5, J. R. Jackson 4, G. H. Threadgill 3, C. S. Jackson 0, Dr. W. O. Alvis 2, E. Threadgill 2, T. H. Ligon 3, H. R. Seward 4.

M. A. Reese secured first; Sherrill, J. R. Jackson and Seward second; Leeds, G. H. Threadgill and Ligon third; all divided.

No. 7, 9 targets, known angles, $1.00 entrance, three moneys, with fourth prize—1 set shirt studs: M. H. Reese 8, W. M. Caldwell 4, J. R. Jackson 6, H. L. Sherrill 4, T. E. Hubby 8, T. H. Ligon 6, Dr. W. O. Alvis 4.

Reese and Hubby divided first, Jackson and Ligon second, Caldwell, Sherrill and Alvis third.

No. 8, 6 singles and 1 pair, known angles, $1.50 entrance, three moneys, with fourth prize—whalebone whip: M. H. Reese 6, T. H. Ligon 7, T. E. Hubby 6, "News" man 5, J. R. Jackson 6, H.L. Sherril 2. T. H. Ligon first, Reese, Hubby and Jackson divided second, "News" man third, while sherrill got the whip.

NOTES.

The marshall found it impossible to keep the crowd back of the dead line, but should be commended for working faithfully. About a six string fence of barbed fence wire ought to be used for a dead line at picnics.

The gun boys of Lott are not as young in experience as their city is in years, when it comes to making visitors feel at home or in managing a shoot.

M. A. Reese has a record of 96 out of 100 several years ago, but has not shot much since until lately.

T. E. Hubby of Waco has a record of 74 targets straight with his little 20 gauge Lefever, but for this shoot he had not time to load his shells, and had to shoot bought cartridges.

M. F. Leeds was using a new and handsome gun, to which he was not thoroughly accustomed.

A few of the averages of which seemed to be the leading guns are as follows, errors and omissions excepted: Inanimates: Hubby 82, Reese 78, Ligon 78, Jackson 71, Leeds 50. Live birds: Hubby 89, Reese 100, Ligon 78, Jackson 90, and Leeds 60.

The following table may prove of interest:

Shooter.	*Gun.*	*Shell.*	*Powder.*
M A Reese	Colt, 12	Club	Black.
"The News"-man	Parker, 12	Smokeless	S.S.
H Stricker	J N Scott, 12	Smokeless	S.S.
H L Sherrill	Holtman, 12	Club	Black.
J R Jackson	Parker, 10	Smokeless	
Wm Caldwell	Lefever, 16	Smokeless	Dupont.
T E Hubby	Lefever, 20	Smokeless	Dupont.
T H Ligon	Remington, 12	Club	Black.
W F Leeds	New Era, 12	Club	Black.
H R Seward	L. C. Smith, 12	Club	Black.
F W Stallworth	Colt, 12	Club	Black.
R B Louis	Colt, 12	Club	Black.

July 22.—Some members of the Marlin Gun Club who were disappointed in their intention of attending the match shoot at Lott, owing to the ferry across the Brazos breaking down, got together here and had a consolation shoot. The scores below will compare favorably with that made at Lott.

No. 1 match, 10 bluerocks, known angles: W. W. Turner 10, C. W. Rush 3, A. Stumbach 4, Theo. Peoples 3, E. K. Herring 4, D. S. Eddins 7, Judge S. R. Scott 10.

No. 2, same: W. W. Turner 9, C. W. Rush 8, A. Stumbach 8, Theo. Peoples 6, E. K. Herring 9, D. S. Eddins 9, Judge S. R. Scott 6.

No. 3, 5 bluerocks, known angles: W. W. Turner 5, C. W. Rush 3, A. Stumbach 4, Theo. Peoples 3, E. K. Herring 3, D. S. Eddins 4, Judge S. R. Scott 5.

Four of the leading averages are as follows: Turner 96, Judge Scot 84, Eddins 80, Stumbach 64. The four averaging 81, while the four first at Lott averaged 77.

July 26.—The Marlin Gun Club had another shoot this evening, the scores being as follows:

No. 1, 10 targets: H. G. Rush 7, Judge Scott 8, A. Stumbach 6, "News"-man 3, W. W. Turner 9, W. E. Hunnicutt 9, D. S. Maffatt 8, Judge Wm. Shelton 8, C. W. Rush 7, D. S. Eddins 8.

No. 2, same: H. G. Rush 5, Judge S. R. Scott 6, H. Stumbach 8, "News"-man 4, W. W. Turner 8, W. E. Hunnicutt 7, D. S. Moffatt 7, Judge Wm. Shelton 7, C. W. Rush 5, D. S. Eddins 8,

After the shoot an impromptu meeting was held with Judge Scott and the "News"-man acting as president and secretary respectively. A motion was made and carried to have an all-day shoot on Aug. 14, and a committee of arrangements was appointed.

The club has aroused from its hibernation and is strictly alive. When one member says, "Let's shoot," everybody starts. It reminds one of the old saying, "What will you have, gentlemen?" THE NEWSMAN.

Climax Gun Club Shoot.

PLAINFIELD, N. J., July 23.—The regular monthly shoot of the Climax Gun Club took place this afternoon. The weather was decidedly sultry and all against much activity on the part of either trappers or shooters. With a background of heavily foliaged trees, a dull, thundery-looking sky and low-flying targets, the scores made were remarkable. The club race is at known traps, unknown angles; 18 members took part in this event, Singer and "Fayette" scoring the maximum number of points—6. Five others (three of them scratch men) scored 24 birds—5 points. Singer, who is shooting a new gun, has improved in his work to a remarkable extent. The shooting of the scratch men as a whole was very good.

The seventh shoot of the New Jersey State League takes place at the Climax Club's grounds on Aug. 7. For this occasion the club will do its best to entertain its visitors. A new set of empire traps, the new expert trap, will be placed in position for this occasion.

Scores in the club shoot to-day were as follows:

J Singer (10)	1111101111101111111101010111011111—28
J M "Fayette" (3)	1111111010111111111111011111 —25
Neaf Apgar (0)	1111111111101111111111 —24
T H Keller (0)	1111111111111111111111101 — 24
F Van Dyke (0)	1111111111111111011111111 —24
Aaron Woodruff (2)	1110111111111111111111011111 —24
J Swody (6)	1101101111111111111101111010111 —24
E "Edwards" (3)	0010111111111011111110011011111 —23
L H Schorty (1)	1011111111101111111100111111 —22
D Terry (1)	0111100111111101111111111 —22
G E Greiff (0)	1111110111111011111011110 —21
C Smith (0)	1111101010011111011111111 —20
C E Hebbard (0)	1100011101111101111111011 —19
N Astfalk (0)	1111000111101111101111101 —1
J "Williams" (4)	1000111111010011100101101101 —18
J Darby (7)	0011010110110110000010101111010 —17
J Zeglio (4)	0000011001110011111001011101 —16
T McCarty (10)	0011010010010011100010000100011101—14

During the afternoon the following four sweeps were also decided. Nos. 1 to 6 were at unknown angles, No. 4 at unknown traps and unknown angles:

	No. 1.	No. 2.
Edwards	0101111011— 7	1011111111— 9
Apgar	1111111011— 9	1111111111—10
Smith	1111111111—10	1110110111— 8
Keller	1011111111— 9	1101101111— 8

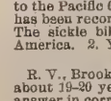
W A Judd	0010010110100000011010101—11
E Mattison	0101000001 — 3
Geo W Lisk	0100100000000011100 — 5

GEORGE W. LISK, Sec'y.

Answers to Correspondents.

No notice taken of anonymous communications



JASON, Sprague, Wash.—1. Kindly give habitat and range of cinnamon teal and sickle bill curlew. 2. Is the American bittern an edible bird? Ans.—1. The range of the cinnamon teal is west of the Mississippi River to the Pacific Coast, where, and in the Rocky Mts., it is common. It has been recorded, but only as a straggler, from Illinois and Florida. The sickle bill curlew is found through entire temperate North America. 2. Yes.

INFORMATION WANTED.

R. V., Brooklyn.—Can you tell me of a club of American lads, say about 19-20 years of age, that go camping in the fall? If so please answer in correspondence so I can communicate with them.

PUBLISHER'S DEPARTMENT.

ARE NOW READY.—The Ideal Manufacturing Co., of New Haven, Conn., U. S. A., announce that they are now ready to furnish No. 3 Special and No. 6 Regular tools for the new Marlin .25-36. The bullet illustrated here shows six grooves and weighs 104 grains. It is said that the mixture of one part tin to about ten parts of lead produces the best results. Write for Ideal Handbook No. 6.

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where we get back a good deal more than cost of catalogue and postage.

ABBEY & IMBRIE,

18 Vesey Street, New York City

MARSTERS HAS WORMS.

Sand Worms, 12c. per dozen. White or Blood Worms, 25c. per dozen.

NATCHAUG WATERPROOF BAIT & FLY LINES

will float on the water. The finish cannot be broken. Those who have used them will have no others. Send four cents for samples and prices and pamphlet containing our awards of prices for last season and cash prizes for 1895. For sale by all dealers.

$225 in Gold Given Away!

WE offer the following Prizes for the Season of 1895, $225 in Gold for the largest fish caught on the

NATCHAUG SILK LINES

From April 1st to November 1st, 1895.

First Prize—$25 in Gold for the heaviest Muskallonge.
Second Prize—$25 in Gold for the heaviest small-mouthed Bass.
Third Prize—$25 in Gold for the heaviest large-mouthed Bass.
Fourth Prize—$25 in Gold for the heaviest Lake Trout.
Fifth Prize—$25 in Gold for the heaviest Mountain Trout caught west of the Mississippi River.
Sixth Prize.—$25 in Gold for the heaviest Brook Trout caught in Maine or Canada.
Seventh Prize—$25 in Gold for the heaviest Brook Trout caught in the United States, east of the Mississippi River, outside of Maine and Canada.
Eighth Prize—$25 in Gold for the heaviest Pickerel, Pike or Salmon.
Ninth Prize—$25 in Gold for the heaviest fish of any kind caught with the Natchaug Silk Line in fresh or salt water.

CONDITIONS:

All of these fish must be caught with the Natchaug Silk Fishing Line, and by fair angling.

Competitors must forward to us their full name, P. O. address, together with description and weight of fish caught, and name of dealer from whom line was purchased, within thirty days after such catch is made, together with the name of one reputable witness affixed. On November 7, 1895, the award will be made and the list of successful competitors announced in the Forest and Stream and the *American Field*.

All successful competitors before receiving their prizes will be required to send an affidavit as to their statement of fish caught.

If your dealer does not keep the Natchaug Silk Fishing Lines, order direct from

THE NATCHAUG SILK CO., Willimantic, Conn.
Or, 213-215 Fifth Avenue, Chicago.

"Outside the Danger Line."

Mr. Wilmot Townsend's new drawing, "Outside the Danger Line," depicts a flock of broadbills alighting; and the study of action will readily be recognized by observing gunners as true to the life. The scene is on a calm day, when, with nothing to alarm them, the ducks have concluded to rest a while far from shore. Reproduced by the artotype process, the plate being 16×21in. Edition limited to 100. Price is $3.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, AUGUST 10, 1895.

VOL. XLV.—No. 6. No. 318 BROADWAY NEW YORK.

For Prospectus and Advertising Rates see Page vii.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

A HIGHER STANDARD.

HAVE the sportsmen of to-day reached a higher and better sportsmanship than that of their predecessors of a few generations ago? At best, the question can have but a speculative answer. So far as one can judge, the ethical standards and practices of the present are more commonly advocated and observed than they were. But we must fairly consider the conditions of the times, past and present, in their relation to the evolution of sportsmanship. At a period which is so recent that it is within the knowledge of a majority of men still living, game large and small was in such abundance everywhere that it was comparatively easy for any one to gratify his desire either for sport or slaughter. The number of sportsmen and pot-hunters was relatively a very small number compared to the number at present. The quantity of game now is very small as compared to the quantity then. Conditions thus have greatly changed. There is not the opportunity now for such slaughter as obtained in the past, even if there were the inclination for it, since there is a scantiness of material.

In justice to the sportsman of the past it is a pleasure to believe that there were then men whose ideas of sportsmanship were as good and true as are the best ideas of the present day; men who fearlessly denounced slaughter for slaughter's sake, and who diligently sought to establish the ethics of a higher sportsmanship. However much good there was in the theory of sport at that time in practice it largely resulted in destruction. So merciless was the pursuit that some species were practically exterminated, others were exterminated in such sections of country as were not obstructive to their pursuit, while others were greatly reduced in numbers. The quantity killed was at that time commonly accepted as the test of success.

That there has been a general evolution and transformation in sportsmanship there is much in evidence to show. The adoption of game laws by all the States and the strong public opinion against large bags are proof of a conservative interest. The boastful and bloody era has become greatly modified. Killing and quantity are not of themselves considered as being all of sport.

While the present time is not free from the depredations of the game butcher, the better and more refined pleasures of the sport are more generally understood and practiced. Men go into the wilds equipped with a camera to photograph wild animals in their native haunts. Others take canoe trips on the waters of the wilderness. Camp-life, which in olden times was a necessary incident of killing game, too rude and rough to be considered as a means to a healthful outing, is now adopted as one of the most popular forms of outing, whether for fishing or shooting. In old times the killing was the sport. Now, the manner of pursuit and killing are considered. The modern sportsman pursues under certain restrictions whereby the skill of the hunter is pitted against the native wariness and fleetness of the game. It is intelligence and skill against wildness and cunning. The killing is but an incident of the real enjoyment. The beautiful and the wholesome have succeeded that which was mostly savage. There is far less of the wanton slaughter of a few years ago, when deer were left to rot in the woods and fish on the bank.

Probably many causes have contributed to a better order of things. Opportunities to kill are less, and the youth of the present day are being better taught in the higher ethics of sport with gun and rod, than were the youth of the past. A better and greater variety of sportsmen's literature is available to teach good lessons of sportsmanship. A more thorough teaching of the youth of this country in the ethics is certain to result in a more cultured class of sportsmen. When men learn sportsmanship by experimenting or by bad teaching, it is sure to be learned imperfectly. A certain training and instinct are quite as necessary to make the genuine sportsmen as to make the gentleman; therefore, do not neglect the education of youth in these essential accomplishments.

A WORD ABOUT THE TRAP.

TRAP-SHOOTING as a sport was never more firmly seated in popularity among American sportsmen than at the present time. Its growth has been constant and rapid, and its ranks receive fresh accessions every week. It is not too much to say that there are to-day two trap-shooters where five years ago there was only one; and it is possible that even in these figures we under-estimate the growth of the sport.

That there is a more healthy tone about everything that pertains to trap-shooting is the chief cause for congratulation. FOREST AND STREAM has always worked for the purity of the sport, and has spared no one whom it has held to be guilty of doing a dishonest or an unsportsmanlike act. The publicity of the press—a turning on of the light, as it were—is the bugaboo only of those who, we are told, love the darkness because their deeds are evil. An honest man's actions will always bear inspection.

There is, however, a cause for anxiety on the part of those who have the best interests of the sport at heart. There seems to be a danger that the promotion of tournaments may be overdone, and that a reaction hurtful to the sport may ensue. It costs 90 per cent. of those who attend an ordinary tournament a considerable amount of money to take part in the sport. Traveling expenses, shells, hotel bills, etc., all cost money, not to mention possible, or rather probable, losses of a large proportion of the entrance moneys. Nowadays there are so many men of equal caliber in attendance at each tournament that the moneys are split up into so many portions that straight scores often do not return anything over the money paid in, especially if 3 cents be deducted for targets. Tournaments where, by means of a large amount of added money, the management offers inducements for trap-shooters will always be a success, but the day has gone by when the average gun club could hold a tournament and expect to fill its coffers at the expense of its guests. All it can hope for is a fair remuneration for the good time it has afforded its guests. And we believe that the sooner gun clubs and kindred organizations realize that fact the better it will be for the sport of trap-shooting. "Generous emulation," words incorporated in Article II. of almost any club's constitution, is better served by club medals, inter-club team races and league shoots than by a dozen two- or three-day tournaments.

SNAP SHOTS.

After the first day of 1896 a game law will go into force in the unorganized territories of the Northwest. Buffalo will be protected until 1900, and close seasons will be in force for musk ox, elk and other game, big and small. But Indians and inhabitants will be exempt from the provisions of the law; and travelers, explorers and surveyors in need of food may kill for their necessities. The head-hunters and skin-butchers are not provided for.

At the annual meeting of the British Medical Association in London last week, the effects of the new weapons of war being under discussion, Sir William McCormack expressed the opinion that the next great war would be more destructive of human life than any of those past. Our notion is that in this the eminent surgeon is mistaken. The next great war will not involve the destruction of any human lives whatever. It will all be fought out in the columns of the progressive "news"papers. The editors have just very successfully conducted a bloody and ferocious Bannock war without any actual harm to anybody save a number of the Indians themselves, and having discovered how simple it is, they may be trusted with confidence to follow up the achievement with further and more ambitious campaigns. They know little of the enterprise of a modern journalist who dream that his military achievements are to be confined to Holes or a remnant of beggarly Bannocks.

The Fort Myers, Fla., *Press* gives the recorded tarpon score for 1895 as 221 fish, taken between Dec. 22, 1894, and June 26, 1895. Mr. G. R. W. Armes, of New York, is credited with the largest tarpon of the season, one measuring 7ft. in length and weighing 180lbs. A jewfish, taken in April by Mr. J. R. Stonebraker, of Baltimore, weighed 310lbs. Tarpon fishermen resorted to Florida from all parts of this country, and many Englishmen this year sought the new fields of fishing conquest and renown so charmingly described by Mr. Harmsworth.

Our St. Louis correspondent, who wrote of the waters where ducks darken the sky, tells us that the non-resident Chinese wall doesn't amount to anything in Missouri. Sportsmen from other States are welcome and will be given the best that the country affords, whether that best be clad in fur, feather or scale. We are glad to know this, for it is an American way of doing things, and that is better than the Chinese way.

It's the big fish that finds his way into print, but for every big one heralded a thousand smaller ones go to the frying pan unchronicled. If there were no fun in fishing except when a big fish was captured, the aggregate of disappointment and disgust would far outweigh the sum total of satisfaction found in the average fishing of the average fisherman. As it is, one may find a day full to overflowing with interest and bright memory storing experiences, and yet not catch a fish worth the weighing.

A golden precept is to make the most of the fishing open to you. If you are chained to business, don't sulk because you cannot journey to the far away and famous resorts, where the giants are waiting for fly or spoon or bait; but take a half-day and go to the home waters. There you may hear the birds, find the flowers, catch a fish or two, get yourself soaking wet and tired and too hungry to look pleasant; and then, being at home, you may have a more comfortable bed to sleep on than you could possibly have in the woods. There is so much of a silver lining to the cloud.

It is reported that the island of Anticosti, in the Gulf of St. Lawrence, is to be purchased by M. Menier, the millionaire chocolate manufacturer of Paris, and converted into a game preserve. The country will be stocked with game and fish, and the preserve will be conducted after the fashion of the Continent. It is worthy of note that a description of Anticosti and the sport to be had there was the first paper published in the first number of the FOREST AND STREAM twenty-two years ago. The writer was Lieut. R. Hutchinson Poe, of the Royal Navy.

The death of ex-Judge Slocum, of Nyack, N. Y., from poisoning by eating mushrooms last week, and that of his companion Frank Briggs from the same cause on Monday, give a melancholy emphasis to Mr. Kephart's warning as to the camper's use of mushrooms for food. There are so many poisonous mushrooms, and their distinction from the edible ones is often so extremely difficult to determine, that he actually takes his life into his hands who ignorantly experiments with them.

The most interesting work we have ever seen relating to mushrooms is the book by Capt. Julius A. Palmer, of Boston, who for more than a quarter century has given his leisure time ashore to a study of the subject. As he wrote in this journal as far back as 1877, "I am a professed fungus eater, using various species of toadstools for food daily. I gather them fresh in summer, and dry my superfluous stock for winter use." A tribute paid to Capt. Palmer by the late Paul Casamajor, the well-known sugar refinery chemist, is unique and worth reprinting. "In taking a ship around the world," he wrote, "there are thousands that can equal you; in speaking foreign languages you will own that there are many who excel you; but where is the man who can step into a grove, pick up a score of different toadstools, make a meal on them and live to write about it?"

The Sportsman Tourist.

LOST IN THE SWAMPS.—II.

THE cabin belonged to John Acree, a stave splitter, who was absent, but the young man whom he had engaged as helper took us in and made us at home. The appurtenances were of course primitive, and the stock of provisions was limited; but Albert did his best, and before long we were seated before a meal of hot biscuits and coffee, without sugar. For butter we had the bubbling grease of tried-out pork, with "long sweetenin'" for garnishment. It was the best meal I ever ate.

Supper was scarcely over when a horn sounded on the edge of the clearing, and in came Green, George and Uncle Dan. They had been in camp at the Beaver Pond, miles from the Twin Sisters, but had strayed away too far in the day's hunt to return that night; so our meeting was a coincidence. They congratulated us on our escape from a comfortless night, but had little to say about the fellow who had deliberately abandoned them as well as us. That night they camped near the cabin. In the morning George and Dan started for town in their light wagon to get provisions and fetch us our outfit.

The rest of us spent the day in lazy fashion. The wagon did not appear by supper time. Night fell, and we grew a little anxious. Finally from afar off we heard the faint note of a hunter's horn.

"They're lost," exclaimed Green.

Albert blew a sturdy answer from the doorway. They heard us, and blasts were interchanged at frequent intervals; but the sound of a horn several miles off is very deceptive, and it was soon plain that they were making no headway toward the clearing.

"We must go to them."

Barnes, being six inches taller than any of us, strapped the lantern to his head, and we struck out into the forest in single file, guided by the signals of the horn. We were an hour or more reaching the wagon. Then there was laughter and chaffing on the return, until some one turned to Albert and asked for directions.

"Now you've got me. I've only been here a week, and I don't know any more than you do about where the clearing lies from here."

We sought hither and thither in the darkness for a trail or a line of blaze; but finally had to halt and confess that we were lost. I had a compass, but it might as well have been a rag baby, for we did not knew whether the cabin was north, east or south of us.

Uncle Dan laughed. "Well, boys, it looks like a dry camp for to-night. We may as well unhitch and make the best of it."

George had been sounding the horn vigorously, and just as we were about to give up for the night an answer came. Acree's only neighbor—a hunter, some miles away—had heard us and was coming with lantern, horn and hounds.

He found us and led us back to the clearing. It was long past midnight when the last story was told, and we fell asleep around the camp-fire.

The next morning we were to have a deer drive. It was arranged that each of us should go off for a little still-hunt on his own hook and turn up at his proper stand by 8 o'clock; then the hounds would be turned loose and Green would follow them.

What the other men did I do not know; but my own plans were quickly formed. I would set my compass, hunt on down toward Whirl Creek, make a detour to the east and return diagonally to the clearing. It was unnecessary to bother with a hatchet and blaze away, for I could not wander very far in the time allotted me, nor could I hunt while making so much noise. So I watched the compass faithfully for a while and kept a reasonably straight course.

But deer sign was plentiful in the overflow, and fresh. The tracks of one big buck in particular led me over a devious course. He was moving deliberately and I might jump him any moment. The compass became a nuisance. Here his trail meets that of two does—or are they hogs? No, the sharply pointed toes tell the story. I spend fifteen minutes getting around a piece of cover formed by drift logs, another fifteen minutes getting to leeward of a patch of switch cane into which the buck's tracks led. Other tracks are numerous and all made this morning, but I want the maker of those big ones.

And so the time slipped away, quickly but stealthily, like the white flags that occasionally appeared, only to baffle a shot. Unwillingly I turned at last toward the upland. It was further off than I had calculated, and when reached, the question was: East or west? Well, I would go east a mile or two, and then if the clearing did not turn up, I would retrace my steps and could not miss it. The clearing was not to the east. I returned westward, and in three-quarters of an hour was on the banks of a lake which I had never seen before.

Lost again.

I sat down and lit my pipe, but the more I thought the thing over the worse my reasoning became entangled, and all on account of that confounded lake. It seemed to me that, for a stranger, the dense upland forest was more hopeless than the overflow, because in the overflow there were watercourses, whereas the upland was level and dry as a prairie, and showed nothing but one eternal sameness in every direction.

Well, the drive would have to get along without me. I could knock off a squirrel's head with the .45, catch a fish in the lake (there was hook and line in my wallet), smoke and wait for somebody to find me. At intervals I fired off the hunter's grand hailing sign of distress and waited. Finally there was a spiteful little crack near by.

"That is Barnes, for there isn't another .22 in this part of Arkansas."

I arose and soon met him.

"What were you shooting at?" he added.

"Oh, squirrels; but I can't hit anything this morning."

"We are too late for the drive."

"Yes; but I was following the biggest buck you ever saw tracks of."

"Have you heard the hounds?"

"No."

"Neither have I. Those fellows have got off after squirrels and changed their minds."

Later in the day, when we were lounging in front of the cabin, I remarked to him: "Say, Barnes, my conscience pricks me. I was lost this morning when you ran across me."

"I knew it, and was looking for you."

"Then you knew that I was lying about those squirrels."

"Of course, we can all lie a little now and then."

Perhaps he was disgusted by the outcome of the drive that didn't come off, or perhaps, as a veteran still-hunter, he chuckled over it; but at any rate he went off by himself shortly after lunch.

At supper time there was no Barnes. It grew very dark in the clearing, for the moon rose late at that season, and we could only imagine the intensity of that darkness through which the long hunter must be groping down in

UNCLE DAN.

the overflow. Finally Dan stopped our conversation with a sharp command: "Hark!"

We listened. Presently we heard from far down in the overflow a long-drawn, infernal howl—then another—and another.

"They're circling in a pack. Barnes may have trouble on his hands."

Then we heard, faintly, the high-pitched whoop that the hunter knows will carry further than any other note in a man's register.

"Blow the horn, George; it's too dark for him down there, and he's lost."

"Hadn't we better go after him?" I suggested. "He may have sprained an ankle, or met with some other accident."

"Wait a bit, and see."

His answers to the horn shifted gradually to the east,

ACREE'S CABIN.

then north, and in half an hour he stalked unconcernedly into camp, puffing under the weight of a pair of coons.

That night, after the panther stories were told, I turned to the old man and asked: "Uncle Dan, what would you do if you got lost in the overflow, and night came on, and you had nothing to eat?"

He smiled and said: "I reckon I'd crawl into a hollow tree and think of the days at Murfreesboro, when we were hungry *and* shot at."

Unconsciously he raised a shattered hand to support his rusty gun.

Poor old Uncle Dan! Long years of war; defeat; maimed by a minie bullet; hunting squirrels for a living; yet with only a smile for the past, and for anything to come.

The next morning at daybreak Barnes and I were off for a long tramp.

"I want you to get the lay of the land around here before you undertake any still-hunting by your lonesome," he remarked, "and I want you to get over that habit of expecting meals in the middle of the day; so you can just leave that little bag in camp. To-day we must see what the blue cane is like. You won't know much about the swamps until you have studied a canebrake."

By noon we reached the blue cane. Before us was a wall of fishpoles living in such exceeding close communion that they resent intrusion from all outsiders larger than a chigre (*him* I will back to go anywhere, and if he does not frequent the cane it is only because he likes grass better). This fraternity was bound together by such a tangle of interwoven vines and briars, creepers and tendrils, and everything else that is twisty and thorny, that even the obstinacy of that perverse creature the razor-back hog softens before it, and piggy seeks a slash. Now the funny thing about these fishpoles is that they have leaves. I was totally unprepared for this revelation, and coming thus buck up against a brand new fact it dumbfounded me. Yes, fishpoles on their native soil have leaves.

We entered the brake boldly, proceeded bravely, fought desperately, and died game (no we didn't—that was another time—I'm getting two stories mixed up). In the fullness of Arkansas time we emerged; and you can qualify that with any adjective that suits you—I did.

Subsequent experience in the brakes has confirmed my first impression, that they offer advantages for getting lost and staying so which no other North American real estate can afford. Once let a man enter blue cane, and he is alone with his Maker. The parted reeds close behind him like water over a sinking ship. Before, behind and all about him there is nothing but cane. He cannot lift a finger without pressing cane. Below him is a bed of cane; above him cane; for the leafy tops fairly shut out the light of heaven. In any direction that he may turn his eyes cannot pierce six feet. He moves on; it is cane, cane. His strength is quickly spent against the ever-yielding but ever-rebounding cane. He seeks an altitude, an opening, anything to give him bearings; there is none. There is nothing to climb for an outlook, nothing to escape by detours—nothing but cane. He is lost; and can defy the very powers of a bonding agency ever to find him.

Once I read somewhere what purported to be an old Arkansas bear hunter's recipe for navigating a canebrake. He said: "Cut the longest and stiffest cane that you can find, straddle it as a boy does a broomstick, and git ep; the cane will keep you from walking in a circle."

Well, I thought I could see the point, and you know that theory and practice occasionally agree. So the first time that I struck blue cane by myself I cut a big fellow, straddled him and advanced, gun in one hand and steed in the other. By dint of hard work and acrobatics I must have ridden that pole as much as sixty feet. Then I gave it up and retreated. The recipe is a good one. A cane straddled according to specifications will keep a man from walking in a circle, or anywhere else, in a brake.

Barnes would have died if he had heard of that performance; so I never told him.

We walked and walked. Somehow that notion about lunch hour would not leave my head. In all previous adventures by flood and field I had contrived to carry at least a few hard tack about my person, and the habit rebelled against correction. I was following my leader, and, as usual, looking for persimmons, when Barnes whispered:

"Shoot, shoot!"

Up rose a fine old buck, so gracefully that the movement seemed deliberate, almost lazy. I could not fire without stepping aside, for my companion was in the way, and when this was done the buck had vanished in the cane.

The moist ground of the overflow is a capital place for studying tracks, and we had abundant opportunities, as overcup mast was abundant; but only the saucy flutter of distant flags rewarded us that afternoon.

"Well, don't be disappointed," counseled the long-legged man. "You can see how plentiful the deer are and how easy it will be to get all you have any business to shoot, but we must walk too fast for hunting to-day, as we are out for a different purpose."

We reached the mouth of Whirl Creek. Suddenly Barnes paused, looking at the ground. He paused so long and earnestly that I reached for the old "Missouri meerschaum" and sought a dry spot to sit down on. Finally he remarked: "See here, sonny, didn't you say something the other day about losing a bear?"

"Yep."

"And didn't I promise to show you bear sign?"

"Yep."

"Well, how does this suit you?"

Sure enough, there in the moist earth, clear as a plaster mould, was a great sprawling track. Never before was mud so fascinating.

"Well, sonny, are you still yearning for bear?"

Was I still yearning for bear? Well, why had I been toting a 10-pound gun all this time? That gun, my very latest pride and darling, had worn my shoulders to the quick, and now it was rubbing skin off the back of my neck. It was a big and brutal .45-70, loaded with expanding bullets, and had yet to be fired at anything that it didn't make a mess of. Did I want bear? Well, didn't I? Conventional story-telling would have me suddenly grow pale and qualmish, but this is a true story, every word of it.

"Now pardy, don't ask me such a fool question. What am I here for, with twenty rounds of ammunition? Run right along and bring that bear in here and give us an introduction."

But my hardihood did not make the slightest impression. It is not pleasant to record your friend's shortcomings, but Barnes didn't do anything of the sort. To put it mildly, I was disappointed in him, and we moved on for some time in silence.

But no man of a sociable disposition can stand that sort of thing very long, and at last curiosity got the better of me.

"Say, Barnes, how old was that bear track?"

He grinned.

"About a year."

"Why, you weather-beater old humbug! Didn't you tell me that the water comes in here 12ft. deep and washes out——"

"Certainly, but it doesn't wash tracks off an island."

"Was that an island?"

"Hadn't you just climbed up the bank?"

"Oh, yes; but aren't there any bears around here now?"

"There were plenty of them the last time I was here, and I'm disappointed in not finding sign to-day. They must be in the cane."

"Here's cane. Let's look around a little."

"No use without bear dogs. The only way to hunt bears in the cane without dogs is to find a dry watercourse that runs far into the brake and follow it up till you strike a wet hole where they come to wallow. Then if you're on hand at the right time you can get a good standing shot. But sometimes its chilly business sitting there watching."

"Aren't there any bear dogs around here?"

"None that I know of nearer than Newport. They are good for nothing else and few hunters find it profitable to train a pack for bear only."

"Well, how do they get them then? Bears are no novelty in the St. Louis market. At the restaurants a bear steak is as cheap as beef, and the dealers say that most of the animals come from Arkansas."

"Yes: but I'll tell you how it's done. For one bear killed in a fair fight there are ten killed in traps or with spring guns. Of course it's against the law to set a spring gun, and it's only done on the sly."

"Oh, that's the way they do it. I've been told that the typical Arkansas hunter leaves his gun at home, and goes into the cane after bear with nothing but a few curs and a long bowie."

"Yes; the typical Arkansas hunter in dime novels does that; but I've never seen it done, and never met a reliable man in Arkansas who claimed to have seen it. I won't say that nobody hunts bear with a knife, for sometimes one of these planters finds time hanging on his hands and might be capable of anything, from riding a cyclone to signing the pledge; but one such exploit with the bowie will soon have a dozen heroes, and I haven't even met a hero to date."

"Still-hunting bear in the cane is not so easy, then?"

"No: there are two impediments—the cane and the bear. You have seen how it goes to navigate blue cane, and you can bet a primer or two that the big knife you've read about is intended for the cane itself. The only way to go through some of these brakes is to get into them with something like a corn-knife or the machete that they use in the tropical jungles. As for Mr. Bear, he isn't half the fool that he looks. If there is any animal that can smell corduroy or dead-leaf canvas further, I don't know him, and as for ears—there went a white flag! Didn't you see it, past that old pecan?"

"No: I was thinking of bear, and looking for 'simmons."

"Too bad; the deer down here don't make allowance for absent-minded people."

"Well, we're not hunting to-day, you know; we're exercising our legs and tongues to get up an appetite, and you had the floor. Do you suppose there are any bears left in this part of the world?"

"There are more bears within five miles of this spot, right now, than in any similar area in the Rockies. But they are like some other people in caring a great deal about their tummies, so they don't stay long in one place after the groceries play out. We must ask the hunters where to look for bear; they will know."

"But if they know, why don't they go after them themselves?"

"You haven't hunted bear very much. After you get a pelt or two you can answer that question yourself."

"Why, do they think it's dangerous?"

"Bosh! I'd rather meet a bear any day than a razorback boar like the one that stampeded you back there at Camp Copperhead. No; the trouble is that still-hunting bear is a good deal like work, and dressing him and getting him out of the cane *is* work. You won't catch many Arkansas market-hunters going after bear, so long as squirrels bring sixty cents a dozen in the Memphis market. Now, where's the clearing?"

"Right over there."

"You're learning. That isn't five degrees off. If you stay around here a few weeks you'll get like Acree's old mule—can't get lost if you try. You've been there often enough not to get rattled?"

"Yes; but I've always had a snack with me, and I'll tell you one thing right now. I'll never go out alone in swamp or upland without a ration or two in that old shell bag. If you sling the thing right, it is never in the way; it holds my quart pail, with the little bags of tea, sugar and salt, together with bread, a bit of bacon, tobacco, map and field cleaner. With such things to back me, I don't much care whether I get lost or not."

Thereafter the romance was gone from Whirl Creek, for I was lost no more. HORACE KEPHART.

VIEW IN FRAZER CAÑON NEAR YALE.

IN SHINTANGLE CAMP.

SHINTANGLE CAMP, July 17.—Good morning, gentlemen. I hope you are all very well and enjoying yourselves as much as us two graybeards, who have been cruising for a few days among the islands, reefs and shoals which lie off the northwest coast of Lake Michigan, in a 14ft. sail boat, and having experienced no serious misadventures have made our camp on Gascon (pronounced Gasco) Bay.

This camp bears about northeast from Skilligalee (Ile aux Galets) Sight, from which it is distant some fifteen miles. To an inland dweller it has a decidedly barren appearance, but it possesses wondrous possibilities which gradually unfold as we investigate, and we cannot hope to reach the end thereof during our stay.

Just here I seem to hear from the man in the club window the words:

"How's the fishing?"

Really, my son, I cannot say, as we have not fished.

Then in a low voice speaks the New Hampshire lad: "Well, I swow, I'd a took a hook 'n line along."

That is but reasonable, and we have in fact made provision to satisfy those cravings or desires of humanity which can only be allayed by a stick and a string with a fish at one end thereof.

But along this shore trout brooks are few and far between and in this dry season yield little sport. But we did not come a-fishing.

"Ain't there no game?"

Well, yes. There are crows along the beach, an eagle now and then, a few—a very few—sandpipers. That is all the game in season, except that we have seen some hares. Also deer, grouse and ducks, but our gun has not been uncased. "Then I'd like ter know what yer took it along fer?"

Well, to tell the truth, it was mainly, I think, as a defensive measure. Enormous sea serpents have of late been rife along this coast from Traverse City northward to Harbor Springs. If one of these monsters should wish to swallow our boat and his time had come, it would never do not to have a gun.

"If you did not go to fish or shoot, why went ye?"

Just for a cruise. It is not all of life to hunt and fish, though both of us are good at either sport upon occasion. In fact, I have been hunting lions a good deal since we made this camp. Ant-lions, understand. There is here a large colony of them. I do not hunt to injure them, but to observe their habits, and, like the Indians—of whom there are many in this region—they understand their business better than any one else can teach it them. This reminds me that I this morning found on a pile of drift lumber on the beach a braided rope of basswood bark some twenty or more feet long. The Indians make frequent use of it, and not far from us are two camps where they have landed, and with their squaws are scouring the woods for birch bark to be bleached this summer and made up later into baskets, mococks and other notions, to sell at the summer resorts.

The stores at Cross Village buy a good deal of bark work—mats of scented grass and rushes, etc.—and send it to Mackinaw or Potoskey.

"Indians, ant-lions and bark ropes;
Are these the attractions of your camp?"

My dear sir, if you had not interrupted me and, so to speak, sort o' jumbled me up, I was going on to relate how many points of interest have already claimed my attention at this place, all barren as it seemed when we came in in some haste before a nor'wester and beached our boat stern foremost in order to avoid wetting our dunnage.

The habitations of the ant-lion indicate the presence of ants, and the ant is a very interesting creature. N. B. You are of course aware that if you pitch your tent over his nest, he becomes quite too entertaining at times, so that you will do well to hold him at a safe distance.

Then I had intended to speak of the vegetation, but the subject is too extensive for me to tackle on this occasion, and needs a better botanist then I to do it even small justice. There are near the camp Norway pines, arbor vitæ and white spruce, all dwarfed by the fierce lake winds. Then there is plenty of shintangle, which makes a bang-up bed if you have leather gloves to handle it, and a rubber or canvas sheet atop.

I have counted nearly twenty plants in blossom, the more conspicuous being the wild rose, the campanula, various of the compositæ, beach peas, etc. There are huckleberries, raspberries, beach cherries, juniper berries, cornel, and other fruits. By the by, I wonder if the juniper berry is utilized in any way. There are quantities along the shore.

It just occurred to me that some ignorant person may wish to know what "shintangle" is, and be disposed to confound it with rye whisky. To such I would say that there is no whisky in this camp, and that I will further enlighten his understanding if he will tell me what are the constituent elements of "El Comancho's" "singgamble fire."

"But if you don't fish or shoot, how do you live?"

If you hadn't interrupted me, I was going to say something on that head; but I detest interruptions. I may say, however, that the tea and coffee are above praise; that the cow is not quite dry as yet—or, in common parlance, the condensed milk holds out; the butter is only just a little rancid; the bacon—corn-cob smoked—is prime; the salt pork is bully, the potted ham is good, the tongue ditto, the hardtack excellent, the soft tommy not very dry, the beans choice, the butter crackers fresh, the—yes, oh! yes, we are doing very well, I thank you. Did you think we came up here among the Chippewas to starve? What d'ye take us for, anyhow? KELPIE.

P. S.—CROSS VILLAGE, July 22.—Just heard from Old Hickory. The Kingfishers are booked for a good time this summer, as I think, and I am sorry that I shall not be able to be with them.

NORTHWARD TO THE FAR WEST.—VI.

[*Concluded from page 92.*]

THE reader who has followed our erratic wanderings will remember we left the main line of the Canadian Pacific road at Revelstoke, to take our trip down the Columbia, and now we take the main line westward again, with Vancouver as our destination.

We cross the Columbia on a long wooden bridge, as soon as we leave Revelstoke, and enter the Gold range, whose snow-capped hills seem to bar the way, by Eagle pass. We now commence to climb again, but do not reach any great altitude above the Columbia, as the pass seems to avoid any of the higher peaks and is a natural road pass. Four beautiful mountain lakes are passed and the road winds around the mountain side above their shores.

Twenty-eight miles from Revelstoke is a small station named Craigellachine, which had the honor of being the meeting point of the eastern and western construction parties of the Canadian Pacific, and here was driven the last spike in this stupendous work.

The road lies along the shores of the great Shuswap Lakes, named for the tribe of Indians who live about it. The lakes extend in different directions into the mountains which rise about, and are a great resort for wild fowls.

A canoe trip over the numerous arms of these lakes would give one a great summer outing, and plenty of sport of all kinds.

Four miles below North Bend, we get into the great cañon of the Fraser River, and here we feel like dropping the pen and saying it is no use, we have exhausted all our poor descriptive powers, thinking we were through with the best scenery, and now we find some more that requires new vocabulary. The great river rolls below us through bare and rocky walls, and we exclaim with the poet:

"Against what great obstructions hast thou won
Thine august way. The rock-formed mountain plain
Has opened at thy bidding, and the steep
Bars not thy passage, for the ledge in vain
Stretches across the channel. Thou dost leap
Sublimely down the height, and urge again
Thy rock-embattled course on to the distant main."

In the famous coast country it rains "too easy," and during the rainy season it is liable to rain at any time. So we were not surprised to see rain at Mission Junction, where rail connection can be made for the South into Washington. It grows mistier and damper as we get nearer the coast, and evidences of the great timber industry of the country are on every hand, also signs of the great '94 spring flood are seen in two old and stranded rivers left high and dry upon the sandy bars, as if taking a new "route over land." Westminster Junction, where connection is made with the new Great Northern line of railway for Seattle, Tacoma, etc., is only eighteen miles from Vancouver, and five miles further we strike the straits, or an inlet from it—Burrow Inlet. The saw mills and timber docks are the principal objects near by, while through the mist and clouds the distant hills and mountains across the inlet peek forth, and on their tops we see that what is rain with us is snow with them. It rained when we arrived at Vancouver, but no one minds such a trifle as that in the Sound region. You don your rubber boots and a mackintosh and off you go. Of course it don't rain all the time, and any one who is fortunate enough to get there during the dry season of summer will find it a delightful and pretty place to visit. The Hudson's Bay Company have one of their ever present establishments here, and in it we saw one of the finest wood buffalo or bison heads that is in existence. It is not for sale.

One of the oddest sights to one from the East is the crow as he appears on the streets of Vancouver. Mr. Crow, just as black as his Eastern brother, is cock of the walk out here, and he knows it. Flocks of them are all over town sitting on the housetops, squatting in the gutters, hopping on the lawns, cawing to his mate or scolding at some mean crow who tries to rob him of some dainty he has stolen from some other crow. The crow is a very smart bird, and if you don't believe it go to Vancouver and see for yourself.

I knew they were too smart for me when a youngster ever to let me get very close to them, and here they are so smart they don't care how close you are, because the rascals know that it costs $25 to kill one of them, and they know they are not worth it. Two of them flew down into the street near by, and I stopped to watch them. One evidently had something to eat and was enjoying his lunch; the other sat by as sober as a judge. Then came along crow No. 3, and spying the tidbit made a dive for it. Off went No. 1 with No. 3 after him, and evidently he was the "better crow," as the first one tried to get away; but what does No. 2 do (who had sat patiently by and seen its mate eating) but up and after crow No. 3, pitching into him and driving him away so his mate could alight on a roof tree and finish his lunch. Then they cawed a nice song and went their way. Oh, there is lots of fun in Vancouver, among the crows, and for the inhabitants on whose house some quiet Sunday morning a crow congress assembles.

It does not take long to get into the woods from Vancouver, and such woods! they are so dense and thick and the trees are of such immense size that the stories we have heard of the tremendous size of the sound timber seem tame. An electric railway runs through the woods to Westminster, which is a great salmon canning center and has more saw mills.

A visit to Vancouver would not be complete without seeing one of the great Canadian Pacific steamships; and we are in luck, for the Empress of Japan was just in and we got a permit and boarded her. Of course, anyone who has been aboard of the great Atlantic liners would not see much to interest him (unless it was the hordes of Chinese servants), but the steamers are about the finest plying to the Orient from the Pacific Coast, and compare very favorably with the great ones on the Atlantic that we have seen—though not as large as some of the latest "flyers." The arrival of one of the Empresses means lots of business for a few days on the C. P., as they bring great cargoes of tea, rice and other Oriental products, and trains are loaded and sent East. These steamers are built under the supervision of the English Admiralty, and in case of war can be quickly turned into fast cruisers, having an arrangement of rapid-fire guns, the carriages for which are in place. England does not propose to be caught napping even on the Pacific.

We concluded that it might not rain so hard in Victoria, so made up our minds to run over there.

To encourage us, it really did clear up a little about noon, and at 2 P. M., when we boarded the Charmer, the sun showed his face and smiled at us. It was a miserable, sickly smile, however, and the fog and mist soon made him look glum again, but that little glimpse of sunlight gave us an opportunity to see what a really pretty place Vancouver is, and what fine scenery there is about it. It cannot help being picturesque when the Cascade Mountains, the mountains on Vancouver Island, the Olympic Mountains and great Mt. Baker are all in sight. Then near by are the dense green forest and sparkling waters of the inlet, to add to the charming landscape.

Passing out of a narrow entrance to the inlet we came into a broad stretch of water and then into the Strait of Georgia. Here, if the wind is right, a nasty choppy sea will sometimes get up. Where the waters of the Fraser and the Strait unite is a very strange sight—they seem not to mingle and the line of demarkation can be traced for miles. After a long stretch across the Strait we get among numerous islands, and the channel twists and turns so that at times we seem to be in a cul de sac, but suddenly rounding some precipitous rocky island, we find an outlet and steam on to repeat the same experience. Flocks of ducks fly up on both sides and Indians in great dugout canoes with high, curiously carved prows paddle out from behind the islands. It is dark before we get to Victoria and raining again, so we are glad to get into the cabin, but feel satisfied that the trip is worth taking.

The location of the Navy Yard at Esquimalt by the British Government makes it the chief naval station of the North Pacific. The seal fishing fleet makes that place its headquarters; the factories and its commercial trade have been long established.

The climate is likened to that of southern England, and an Englishman from Liverpool, who was doing Victoria with us, said it was the only place he had seen that seemed like home, and he would like "to stay there a bit, ye know."

The dry dock at Esquimalt is a massive stone structure and worth a visit. There is also a large Chinese quarter in Victoria, but to anyone who has been in San Francisco it seems "tame." The street car service is good and takes one all over the city and into the suburbs. One can get on an electric car and get to Oak Bay in fifteen minutes, where he will find flocks of wild ducks in the fall, but a large number of them are not worth shooting. The sportsman can get plenty of game on the Island of Vancouver by going inland, small deer being abundant, and the hunting grounds are quite accessible.

In July and August the trout fishing in Cowichan Lake and river is superb, and one can easily fill a large creel in a couple of hours. The route is by rail to Duncan, where a canoe can be taken up the river. Of course the further one goes up the island the wilder the country becomes and the better sport can be found, but the extent of the island and the denseness of the forests make it a fine preserve.

A very fine and commodious steamer, the City of Kingston, plies between Victoria, Seattle and Tacoma down the great far-famed Puget Sound, that lovely body of water of which so much has been and still will be written.

After seeing Tacoma, the Flyer, a swift little steamer, was taken for Seattle, where we made a pleasant stop, and one rather windy morning again boarded the City of Kingston for our return trip to Victoria. The City of Kingston was built East and ran on the Hudson, I believe, and was taken round the Horn. She is a fine comfortable boat and makes the trip on the Sound a pleasure.

The sail up was fine, though a little sea was rolling. It was the day of the great launch at Everette of a new "whale-back," and as we left Seattle we saw several large excursions on steamers going up. Flags were flying and it was a gala day.

After looking over Victoria again, we took the Charmer one evening and the next morning arrived in Vancouver. October was fast slipping away, and turning our faces eastward we started for Sicamous. We got out of the rainy belt before the afternoon was gone, and the next morning at Sicamous found a cool, frosty morning, and a clear sky. There is a very pleasant little hotel at this point, where they set a good table and the angler can stop very comfortably. It is only a short distance from the station, and is kept by an old bachelor, whom every one calls "the Colonel." Leaving Sicamous, we follow the shores of Mara Lake and then along the Spallumcheen River. The country is quite level and is settling up fast; there are plenty of wildfowl along the waterways and good shooting in season.

Sicamous is called the gateway of the Osooyos division of Yale, in which is included the famous Okanagan district, probably the finest farming or ranching district in British Columbia.

Forty-six miles from Sicamous is Vernon, a pretty good place to outfit for a hunting trip into the country lying east, and a good trail and wagon road leads up to Cherry Creek mining camp and then over into Fire Valley, which opens up into Lower Arrow Lake, the country described before.

It is not wise if one goes into this country to hunt to make too much noise over the game killed, as it may cost the shooter $50 for a license. There are a great many English parties that go in hunting from here, and there are several kinds of game still very abundant, of which more later. At Vernon, there is one store in the place that will attract the sportsman, and that is the establishment of a taxidermist who has a very fine lot of heads. This party got up the specimens which were shown at Chicago, at the Columbian Exposition, in the British Columbia exhibit; and has heads of caribou, goat, sheep, elk, moose, and about everything else in the way of animal or bird life that can be found in the West.

It is only five miles from Vernon to Okanagan landing. Here we found the steamer Aberdeen with all colors flying. We were much gratified as well as surprised to find "Old Glory" spreading the beautiful Stars and Stripes to the wind at the bow, much more prominent than the Union Jack at the stern. But those British Columbia chaps are about half Yankee anyway. Okanagan Lake is about eighty miles long and averages about three miles in width. There are several small steamers plying on it, but the Aberdeen, built, owned and run by the Canadian Pacific, is the only real passenger steamer, and she is a very commodious and comfortable craft. She is a stern-wheeler, like all Western lake or river boats. The round trip can be made from Vernon to Penticton in two days, going one day, returning the next.

A person need not go off the boat, as it has very fair staterooms. The sail down to Kelowna, about thirty-five miles, is a charming one, as the high hills and mountains rise on both sides of the lake and stretch away into the blue distance.

Kelowna is a good point for a start into the caribou country back of it, and we were convinced of this, as we were out walking in the afternoon, by meeting two half-breeds coming in with a fine caribou head on their pack pony. A little later, when heavy snows come, one can go right across the lake up into bear valley and shoot deer. Ducks are in the marshes within sight of the hotel, and the ruffed grouse are in the bush right back of it.

The chief trouble at Kelowna is, to find the proper guides and get the right kind of an outfit. Everything in the way of supplies however can be purchased there, excepting tents, and any one going into a country hunting ought to take his tents with him, as at very few points can they be secured of the right style and size.

Several days were spent about Kelowna in looking over the country and arranging for a trip into the caribou country; but this had to be abandoned, on account of a snowstorm in the mountains, which we could see from Kelowna, but which did not get to our level, and also on account of the actions of the half-breeds, their extortionate demands and their getting drunk. Getting disgusted with the whole outfit, I packed up and took the boat down the lake to Trout Creek, only five miles from the end of the lake and about nine from Penticton by land.

The sail down is even more charming than from Okanagan landing to Kelowna, as the mountains grow in size and height as you proceed south. There are some very charming bits of scenery just before one reaches Trout Creek, where the rocks rise precipitously from the lake into great cliffs, and then the country rolls back into high hills, covered with the dark-green firs, and still further rise the snow-covered mountains.

At Penticton, the end of the steamboat travel, there is a hotel where the sportsman can stop, and if he will stay until in December he can hunt right from the hotel and stand a good chance of getting a goat or a sheep, and be sure of deer. Prairie chickens and blue grouse are abundant in the mountains. South of Penticton a stage line takes one into the United States, and connection can be made for Spokane via Marcus. In the country south of Penticton are a number of mines and about Dog Lake and further on to Osooyos Lake is probably as good a place to get a big horn as anywhere in the country.

Right about Penticton no very large heads are secured, but one can get a specimen. I was fortunate to be able to get off at Trout Creek, as there is no hotel, but a rancher whom I had become acquainted with proved a friend indeed, and met me at the landing. It was a pretty stiff climb up from the lake, as the land all about this section is high, rolling table land, rising abruptly from the lake several hundred feet, and it was dark before we climbed the mile and a half to the ranch. Here we found a hearty welcome and a good supper of roast deer and good things from the ranch. Never was a stranger treated more royally, and it was a novelty to one who had knocked about hunting as I had to find a place where game was where we could live as well as at home, and go out and shoot right in the dooryard, as it were. It took a couple of days to get the lay of the land, hunting togs unpacked, and in shape for a hunt, and then the first day's hunt took place and three fine mule deer, or as they are commonly called black-tail, were the result and I was home by five o'clock and did not go out in the morning until nine.

The country was one of the finest to hunt over I ever saw—rolling, free from brush, not very hard climbing in the mountains and the deer anything but wild. Deer can be slaughtered there if one desires, but not being on a first hunt and more anxious to see the country and learn it than to make big bags I took it easy. Our ranch and the others near by had all the meat we wanted while I stayed; and though some of the Englishmen roundabout "kicked" because the Yankee came in and killed "their" deer, they did not refuse to take some of the venison, and one of those who "talked" came along one day just after a fine deer was killed and very gladly got off his cow pony and walked home with the deer that was offered him, as I did not care to go after the horse to pack it in. He was out with his "scatter gun" after a duck and walked home with a deer, which the Yankee shot and gave him.

There was much pretty, if not grand, scenery about the Lloyd-Jones Ranch at Trout Creek, and when not in a mood for hunting we took some views. Mr. Lloyd-Jones informed me of a mountain down the lake that he said he had always been anxious to get a photo of, as it was a natural curiosity, there being on the side of it an exact representation of an old man's profile. So we walked the five miles one morning and packed the camera and made an exposure, which proved to be a very good picture when we reached home. It does not require any very vivid imagination to see the cap, forehead, nose, mouth and beard of the "old man of the mountain," as we christened the huge rock, and we were the first ones to take his huge "phiz," so ought to have the honor of naming him. There are so many pretty views to be taken that if we had wished we could have spent several days in this way, but, as every brother in the craft knows, one cannot pack glass plates enough to take everything he sees and wants to. It is hard sometimes, though, to choose when there are so many fine things. The days passed rapidly on the ranch twixt hunting and photography.

Unfortunately a storm came up just when with an Indian guide I was about to go back into the main range for a few days, and as the Siwash said "High as rain; no hunt um much; no see um in mountain; heap fog, scukum in sail house," meaning that if we went there would be lots of rain and we would have to stay in the tent, as the fog would prevent our hunting; therefore, as the quarters I had were so nice that it was more tempting to stay there than to roam about in the rain and snow, I concluded to stay and hunt nearer home. We went, the rancher and myself, one day after blue grouse and deer up into the highest peaks of the mountains I usually hunted on, and though we got into a fog and could not see far enough to see any deer we had good sport with the grouse, knocking them out of the tree with a little .22cal. rifle.

Nov. 1 I was to have been in Detroit, but here it was long past the first and I was not even started homeward; but the time came for us to go, and though not satisfied (who ever is?) I felt I had accomplished about all I could, and it would be only repetition to hunt more.

The last evening of my more than pleasant stay at the Lloyd-Jones ranch came, and we hitched up the buckboard to haul some of the luggage to the wharf, and started for the lake. We hesitated about taking the rifles, and decided not to, and off we went. A mile below the house the dogs stirred up a flock of at least one hundred chickens, and then just below us stood two deer.

We whispered "It might have been," and drove on. We unloaded the boxes and started back, and there, much nearer, in fact within easy range, stood the deer. They knew we did not have a gun. "It was ever thus."

A dreary cold morning came in honor of my departure and we were at the lake ready to signal the Aberdeen when she came round the point. I took leave of my friend and soon was speeding northward again. The November sun shone out of a stormy-looking sky, and the attempts to photograph some of the scenery below Kelowna, though made, did not promise great success.

At Kelowna we did not stop long on the up trip, and continued our journey. Only a few miles from Okanagan landing we saw a boat putting out into the track of the steamer, and when we slowed down and she came alongside we had more proof that this was a great game country. An old chap and a boy were in the boat, and they had two fine big horns (mountain sheep) and a big mule deer buck, which they had shot just back from the lake.

We took the game on board and went our way, while the boat pulled back to their camp. A short stop was made at Vernon and we then went on to Sycamous. The Okanagan country is one of the finest game countries of the West, and anyone who goes there who is at all a sportsman cannot help being repaid, and the tourist who simply wants to see a new and charming country, easily accessible and where there are no hardships to be encountered, should take the Okanagan trip. The late summer is the most pleasant for the tourist, and the sportsman should go into the country not later than September, and stay two months; he will then get shooting of all kinds. There are a good many bear, grizzly and black, east of Kelowna on Kettle River and a large number of fine hides were secured through the country this season. To secure moose and elk one would have to go into the States and hunt into Idaho, but about everything else can be found in the way of big game.

We arrived at Sycamous in the evening, and the next morning took the east-bound train, feeling that we were at last homeward bound. Much to our disgust the day proved stormy and clouds hung low. We got into the Selkirks and found that though there was lots of snow it was raining, which at this season was surprising. When we reached Field, where we took supper, we found the air cool and crisp, and the white frost shone and sparkled like diamonds in the bright moonlight, which came down in a silvery flood from over the top of Mount Steven; and now we began what is called by one writer "the stiffest railway climb in the world." We mentioned the drop off going west. The same writer told his experience in climbing up these mountains so well, and as it is about the same experience that we had and in the winter, or at least with the snow all about us, it is worth repeating here:

"The train was divided into two parts. In front of the first was an 85-ton engine. At the rear of this division a 100-tonner was run up; then the rear portion of the train was coupled on to this, and then last of all came an iron monster weighing 110 tons. Not very far short of 1,000 tons would be the total dead weight that had to be raised through 1,200ft. before the top of the Kicking Horse was reached. The first part of the climb was easy and the only perceptible difference was to be found in the deep, sonorous chest notes given out by the two giants who had come to our assistance; but about five miles further on the real struggle began. The speed slowed down so that I could get off the car platform and walk along the line over the snow that lay almost close up to the rails. The three iron Titans sobbed and roared and strained at their work till the earth trembled with the stress of their struggle to drive the great train up the break-neck grade that lay in front of it. Every now and then the driving wheels of the lighter engine would slip and the weight would fall on the colossus at the rear, and gallantly did he respond to the call. The beats of his 24in. cylinders throbbed like pulses along the whole train, and from his iron throat he belched forth showers of sparks and clouds

CARIBOU HEAD WITH THIRD HORN IN CENTER OF FOREHEAD.
A very old animal. Killed back of Kelowna, British Columbia. Amateur photo by F. F. Frisbie.

of smoke, with roars of strenuous defiance. Then the other engines would get their grip again, and once more the train would begin to creep upward.

"Once or twice colossus himself lost his hold. Then the train would stop, and we held our breath waiting for the slight backward gliding motion that would tell that the grade had conquered the engines; then would come a chorus of roars, mingled with deep-voiced sobs, bursting from the laboring breasts of the toiling giants, the pistons would beat passionately in the palpitating cylinders, and the driving wheels would rip and tear round and round until the sparks flew from the rails. At last something would catch; a creaking groan ran along the train and then, with a steady pound, pound! the giants got down to their work again, the cars moved on and steam and steel had gained another victory over the force that sought to drag us back into the valley.

"I need hardly say that the sight from the bands of the track was absolutely unique; there, in the midst of wildness of black gorges, somber forests, snow and ice and towering peaks, the long, brilliantly lighted train crept slowly upward, like a great gleaming snake, and the three mighty engines, roaring and groaning and throbbing with their work, sent showers of sparks flying up into the darkness. The furnace doors would open and the gloom would be shattered by a long, blinding ray of red light shooting from the fiery heart of the monster far back over the forest and snow field, glacier and rock peak, until it lost itself in the black sky beyond."

The summit gained and we descend the Atlantic slope. The moon shines forth from a sky that is only flecked here and there with flying, fleecy clouds that hardly dim her royal luster when they pass across her round and beaming face. The light strikes full upon this side of the range, while on the other things were partly in the shadow.

The snow and ice-covered peaks stood out with almost startling distinctness in the silvery light, while the cañons and ravines below look more dark and forbidding in the shimmering moonbeams. The scene in daylight is a beautiful one, and one that we would be apt to imagine could not be improved on, but in the mellow light of a full moon from a cloudless sky it becomes enchanting and more like a spirit world where everything seems softened, and while each rock and peak and cañon are there they seem less tangible and more othereal.

As we got down into the valley of the Bow and joined the river as it flows down toward the plains, the still unfrozen, rushing stream glistens and shines, throwing off sparkling rays of light from each little wavelet that is formed on the riffles.

Looking back, the high rugged peaks of the Bourgeau Range stand out like giant specters, white with their unsullied mantles of the driven snow. The moonbeams strike full upon their snow-crowned heads and add luster to the spotless covering.

It was 11 o'clock when we pulled into the little rustic station at Banff, but so interesting had been our ride that we did not feel the fatigue of the long day we had put in since we left Sycamous. Only a short visit was made at Banff, and no time lost in taking a few more photographs of views we had missed on our westward way, and then we again start eastward.

A perfect night, with the full moon but twenty-four hours old and the train on time, was enough good fortune for once and again were we treated to a scene of enchantment as we sped down the valley of the Bow. Moonlight on the water is lovely, but in the mountains is grand, and if one has never seen the glories of moonlight amid snow-capped mountain peaks there is a revelation awaiting him.

The "Three Sisters," looking more lovely in their white mantles under the soft but still bright light of fair Luna, gazed down on us as we sped by, and as we turned back for one more lingering look at the grandeur of the magnificent Rockies a deep sigh was breathed to think that for many months, perhaps years, we would not gaze upon their glories again.

Across the white plains we fly and at midnight stop at Calgary. As we had not visited this very noted town on our way out we determined to put in a day or two there.

As we stepped from the cars we found the midnight air cool and full of frost, and such a moonlight. Ye gods! can it be true? Yes, there they are, over seventy miles away, but standing out strong, full and clear, the rugged peaks of the Rockies.

Calgary boasts of a good hotel in the Alberta, and, moreover, much to my joy, when I came to register, who should pick up the pen after me but an old and esteemed friend from Detroit, who had been on the train with me, but unseen before. Verily, the world is small.

Calgary is built up on English money, and there are lots of Englishmen round about and in the city. Large numbers have been tempted from home by the great profits supposed to be made in the cattle business, and many young scions of wealthy families, who were too wild at home, have been sent out into these supposed "wilds" to get rid of them, and they are what are called "remittance men"—that is, they "toil not, neither do they spin," but they live on what they get from home, and generally are either very flush or dead broke. They are a roystering, hard-drinking set, but great sports, and not bad fellows on the whole. We were fortunate to reach the town when a large number of the Blood and Cree Indians were receiving their payments from the Government, and the streets were full of the genuine children of the plains.

Outside of the city, at their camp, they were holding races and "doing up the pale face" with some of their scrub ponies. "Lo" is no fool in some ways, even if he is childlike in others. A large body of mounted police are quartered at Calgary, and they keep their eyes on Mr. Redskin and see that he does not get any "fire water," if they can help it. The average Indian will sell body, soul and everything else for whisky, and there are the most stringent laws all through this country against selling it to them; but they get it.

Winnipeg, which we had left under an almost tropical sun in August, was now covered with a mantle of snow and held fast in the embrace of old Jack Frost.

This is where the cold waves we read of are born. At least "Old Prob" generally says "a blizzard is on its way from Manitoba;" but we did not stop long to investigate. It was cold, to be sure, but a fine, dry, bracing cold, that did not penetrate one like our damp lake climate. At Fort William we did not take the steamer, but continued on along the north shore by train. Lake Superior looked cold and uninviting as the foam-crested waves beat upon the rock-bound coast, and we feel that it is better to be looking down upon this wide waste of water from our snug and warm sleeper than it would be to be tossing on the steamer.

The scenery is of the wildest and most rugged description. As the train ran along the lake through the wilderness, one could not help wondering how the road was ever built through such a desolate country, and yet there is a fascination about the scenery of the north shore of Lake Superior.

Its wildness and its desolate character seem to lend a charm that is unexplainable. The great lake is followed in all its curves and indentations, and miles at times are traversed around some cove or bay to accomplish a short distance in a straight line. At Jack Fish Bay the line takes a sweep of six miles to make one. Great rock cuts are passed through and the expense of building the road was immense. We catch views of Black and Thunder bays and run along the Nepigon Bay, into which the far-famed Nepigon River empties. All day and night we travel through the wilderness and the next morning breakfast at North Bay on Lake Nippising, which is a body of water forty miles long and ten miles wide. This is a great summer resort and also a great point for sportsmen in the fall.

We were just in time to see the end of the deer hunting season, and parties were taking the train at every station with a fine show of deer. At one place I counted over twenty, all of the white-tail variety or Virginia deer. From North Bay we strike south, leaving the main line, and pass through the great Muskoka country, the greatest summer outing region in Ontario, and a grand place it is if one cannot spare time to go far. As we near lake Simcoe, the country changes and becomes more settled—fine farms are seen and now we approach civilization and Toronto. A night and part of a day here and then home.

In conclusion let me say that it has been my personal intention to give to our brother sportsmen and tourists information in regard to a section of the West that is comparatively new rather than to write a detailed account of how each deer was secured; and as our trip was more of a tour for pleasure of all kinds than a hunting trip alone, it is hoped that the ordinary tourist will gain some pleasure and profit from its perusal, as well as the sportsman who only cares for the information in regard to game.

I would also state that the editor has my address, and

if I have not given details enough to please any reader, it will give me pleasure to be more explicit if I receive inquiries through him.

There is so much one can say that sometimes one is afraid he will say too much, in giving pointers in regard to "outfits," etc.; and again so much has been said before of these things that it is hardly necessary to repeat.

Farewell to the mountains with gray peaks so high,
Whose snow-covered summits seem to pierce the blue sky;
Farewell to the plains where the antelope glide,
Farewell to the streams where the speckled trout hide,
Farewell to the crags where the big-horn doth play,
Farewell to the cañons where the white goat doth stay,
Farewell to the forests where the caribou feeds,
Farewell to the hillside where the mule deer speeds,
Farewell to the dark swamps where bruin has his home,
Farewell to the uplands where the elk loves to roam,
Farewell to the lakes that are fed by the snow,
Farewell to the rivers that oceanward flow,
Farewell to the land of more charms than the rest,
Farewell to the wild but beautiful West.

F. F. Frisbie.

MOOSEHEAD LEGENDS.

I.—Suboomiak.

On the West Branch of the Penobscot River, north of Moosehead Lake, between Elm Stream and Chesuncook Lake, are a series of falls or rips, necessitating a carry by any one journeying the stream in a canoe. There is a legend that Suboomiak, a Tarratine Indian, once ran the rapids in his frail birchen craft, hence its name at the present time, "Suboomiak Falls." The range or township as surveyed out is known as Suboomiak, and includes the territory that was once the hunting ground of the Indian whose name it bears.

The beautiful West Branch of the picturesque Penobscot never looked fairer than on that June afternoon so many years ago. The soft haze of spring twinkled in the vista, the stream opened among the gigantic firs that diffused their balsamic odors on the sweet-scented air. The gay carol of a robin was heard in the little clearing where stood the rude cabin of Eldridge, the trapper, the only reminder to his motherless children of their home in the distant settlement, from which their nomadic father had brought them to this forest wilderness. For three days the robin had been their only companion, save for the midnight prowling bear or lynx. The father was absent on a trip, to dispose of his season's stock of furs at the trader's by the lake, leaving the sturdy boy of 9 to care for his toddling sister of 3.

On the opposite bank, where a graveled bar had formed against the prostrate trunk of some forest giant, was drawn up a birch-bark canoe. It was fashioned by a master hand, and at either end was a rude drawing on the birchen surface of a Beaver—the totem of the Tarratine, Suboomiak, the last of his tribe, who had seen his comrades exterminated from their home among the lakes and streams of these forest wilds. Alone, he had clung to his old hunting ground, trusting to remain in peaceful possession until he should be called to a better by the Great Spirit, whose presence was visible to him in every mood of nature, whether mountain storm, or solitude of the dense evergreen woods, that surrounded his lonely tepee. With eye as bright and form erect as ever, the aged Indian stood by the side of his canoe gazing in bitter resentment at the cabin in the little clearing, which bespoke the encroachment of the white hunter on the territory so long his sole privilege and in which his totem had ever been respected. The rifle of the pale face had driven away the deer once so easily stalked and slain by his swift arrow, and the traps of the invader placed on otter slide and beaver dam destroyed the furry occupants that had provided his wigwam with protection from the fierce blasts of the winter. Dark thoughts surged through the brain of the swarthy Tarratine: Why should not he assert his right to the grand old forest with its network of streams and lakes? Did not the unconquered spirit of his fathers, who had fought and died in defense of their homes, move him to perpetual hatred of the white race, and their blood call to him for vengeance?

The voice of conscience pleaded for kinder and nobler impulse. He was known as Suboomiak "the Faithful." The prospectors for the lumber camps and the hunters from the great cities—in which he had heard the white men were thicker than the leaves on the upland maple—had entrusted life and property to his care in the untracked wilderness he knew so well. Never had he betrayed a trust or shirked a task; should he now stain the record of an honest life with a savage act of personal evenge? Yet his rights had always been respected, until the hunter from the lake settlement, covetous of the game and fur, had trespassed on the range and surlily ordered him to move further north to the cheerless bogs of the boundary marshes. Now that the opportunity to destroy the deserted cabin and clear the virgin woods of every taint of foe lay before him, why should he hesitate to grasp it?

As he stood racked with the mental tumult of emotions a faint dull sound fell on his ear, causing him to start in alarm and scan in the direction of the wind. Was it the roar of the great falls below? and what meant the thickening of the haze on the river surface? To his ear and eye trained in forest lore it was a more evil sound than the troubled waters of the river at the long rips; more than a spring atmosphere that dimmed the landscape, and it needed not the glimpse of rushing deer and swift flying birds to tell the dusky hunter the terrible death they were seeking to escape. It was that horror of the dense resinous woods, a forest fire travelling before the wind with race-horse speed.

A grim smile settled on the stoical features of the Indian; by no act of his the desolation he had contemplated would be most thoroughly complete and vengeance be wrought, while from his canoe in midstream he could watch the scene of destruction and then escape in safety, for none were so swift with the paddle as he.

The roar of the advancing fire now became more distinct, and the smoke so dimmed the sun as to scarce show the Indian's shadow behind him. At the window of the cabin a white baby face was pressed against the single pane and a pair of innocent eyes appealed to the silent dusky form, standing motionless on the opposite bank, watching intently the approaching fire. Now the flames shot up over the tops of the tallest firs, leaping forward and catching ablaze its neighbors of less stature, and thick black smoke rolled over the clearing, obscuring it from the Indian's view. As it was lifted by a puff of wind the children were disclosed crouched at the river's bank awaiting the fearful end that was so swiftly and surely approaching. At sight of the doomed children the Indian leaped hastily into his canoe, and with a deep sweep of the paddle directed it toward them. Gone from that savage bosom was all desire for vengeance, gone all thirsting for blood, all memories of hatred.

The totem of the Beaver so long the symbol of integrity and friendship must not desert the faith so implicitly given in face of an awful death. A few quick strokes and he reached the bank in front of the cabin which was now in flames, the little ones were grasped by a single movement of the strong dusky arm, another plunge of the paddle and the frail craft with its precious burden had begun its race with the fiery element now raging on either bank. The muscles on the sinewy back of the Indian rolled into great cords as he bent to his task. Like an arrow the canoe shot ahead in mid-stream, keeping pace with the death on either hand. The thick smoke, black from the consuming pitch, was so dense and stifling as almost to suffocate the occupants. Directing the children to lie on the bottom the Indian dipped his blanket in the stream and covered them with its safe protection.

Ever nearer and nearer, the roar of the "great rips" ahead rose above the crackling of the flames. No canoe had ever passed in safety over its dangerous vortex of cross currents and whirlpools, but it was the only path from the fire-fiend that so fiercely pursued them.

The sun had long since set behind the western woods, and the fitful glare of the flames gave an uncertain light in which to combat with the treacherous stream and half-sunken rocks. Throwing aside his paddle and grasping the tough setting pole, he threw all his strength and alerntness into the task before him. The canoe, caught by the swift descent of the current, poised on the smooth surface of a rock and then, caught at the stern by the on-rushing waters, swept broadside on toward the brink of the first fall. With a firm brace in the bow, the Indian hurled his weight on the pole against a projecting boulder; the light craft swayed an instant, trembling like a dry leaf in the autumn breeze, then swung around and shot over the edge, and dropped to the pool below down into the semi-blackness of the rips beyond. The stream grew narrower, and blazing branches dropped around and on them from the fiery towers above, thus adding another danger to the horrors of the elements. On dashed the canoe, skillfully deflected from death-dealing rock or whirlpool by those keen eyes and tense muscles of steel. The fire now leaped from bank to bank of the narrow stream; it singed the hair of the Indian's head and scorched the hands that held, as in a vise, the faithful pole. More than once it caught in the blanket that screened the children from the fiery blast, and which was now dried from its immersion by the intense heat, necessitating the holding of the craft in the on-rushing stream by the strength of a single arm, while the blanket could again be plunged in the seething waters; then onward the mad rush would continue toward the lower falls.

The fire almost blinded the Tarratine as it played before his face, and his brain whirled as the deadly flame swept into his set, determined face, while again and again the scorching air was drawn into his laboring lungs; but not once did he flinch from his erect position, gazing steadily forward to see and shun the dangers of the stream. Now the canoe was poised for the last leap at the lower falls, and held again to steady for the fearful plunge. As the fragile craft struck at the base of the falls it was swept by a strong current toward the bank, the sturdy pole failed for the first time to hold on the slippery rocks, and the canoe with a quick lurch hurled the dusky pilot into the boiling whirlpool. With a superhuman effort the Indian gained the rock, retaining his grasp on his pole.

The canoe with its precious freight had disappeared in the gloom of the forest-shadowed stream, now tranquil for the remainder of its course to the broad, safe expanse of the lake below. The fire had been outdistanced in the fearful run of the rapids, and the impetus of the falls had carried the birch bark and its occupants to safety. The limit of ordinary human strength had been passed long ago; only one trained to undergo the tortures of pain could have held to such endurance; but at last the tremendous exertion tells, and the pole on which the Indian leans heavily slips from the grasp of those nerveless fingers and the river sweeps without obstacle over the smooth surface of the rock.

At dawn next morning a canoe was found by the log drivers on Chesuncook against the shore. It was of Indian design, of handsome build, and on its fire-blackened sides could be traced the rude outline of a Beaver. Lying under a seamed and scorched blanket were the two children of Eldridge, the trapper, asleep, locked in each other's embrace, safe through the baptism of fire.

Near the foot of the lower falls on the river was found later, where the whirlpool had cast it, the body of an Indian—Suboomiak, the Faithful. Frederic Howard.

Round Mountain Lake.

Eustis, Me., July 28.—The camps at Round Mountain Lake are well filled with guests, many of whom have come for the months of July and August. The cabins have been improved and about the camps everything bespeaks a spirit of enterprise and push.

Fish are rising finely to flies in greater numbers, and are larger than ever before, while at the new wharf are anchored nice boats for all to enjoy the fishing and scenery, which cannot be excelled in the State.

During the past few weeks five moose have been seen here, and deer are plentiful and very tame, coming out into the water each day at sunrise and sunset. Groups of three and five have been seen frequently.

In the woods about the camps small game is abundant, rabbits and partridges roaming fearlessly near the cabins.

This week, on a trip to Snow Mountain, Ned Bly, with Davis Moody, guide, saw twenty-five or thirty partridges along the trail. The prospect for fall hunting is of the best, and bids fair to be well patronized.

We had a call from the new game warden, Mr. S. S. Tufts, and feel sure that he will make many friends with his cordial greeting and genial manner, and prove a fine man for the place. Taking everything as a whole, we have an ideal summer home, one that cannot be surpassed, and all join in regrets that the time will come to leave it. J. H. B.

Natural History.

TWO FEATHERS.

Chicago, Ill., July 30.—After scouting around with Hough on the fantail deer question to-day, I find myself with "that tired feeling" in evidence to a considerable extent. When a fellow feels that way and his hunting grounds are below the horizon that purples into perspective away to the West, he is apt to dig up an old pipe, stick his feet higher than his head, close his eyes and dream of things that have passed into that ghost land of recollection. At such times the roar and bustle of the city and its thousand odors are pushed into the background and forgotten. Memory conjures up past scenes which bring their own surroundings, pictured so vividly that you see the yellow sunlight, the floating clouds and blue sky of one day now long gone. Momentarily you detect the scent of sage or pine in a breeze straight from God's own meadows, and mayhap your pulse thumps a little harder as you live over again, in a few brief moments, that day of long ago.

Such is the condition I find myself in to-night, so I'll just hypnotize you enough to enjoy it with me. A few passes—so; now you are in Wyoming. We ride along the Belle Fourche River, up along the dusty trail that shimmers and dances in the heat of the blazing afternoon sun. It is as hot as any alkali plain well can be, but we are several thousand feet above the sea, and a gentle southerly breeze keeps the air from being oppressive.

The grass is dry enough to crackle and break underfoot when the horses step off the trail. The sage brush lends its somber hues to the landscape, and the prickly pear neighbors its fleshy pads with the dagger-pointed leaves of the soap root or "bear grass" as the cow puncher dubs it; prairie dogs scurry from mound to mound, gossip and scurry back home again, edge half-way down the doorway and "sass" us as we pass. Away up toward the floating mass of cottony clouds a pair of brown eagles float, swing and circle; circle, swing and float; now they dip; now up again; now one drops, with folded wings, straight for the earth like a black plumb-bob and sweeps up again in a graceful curve. The other, shortly afterward, pitches headlong from a dizzy height and goes through the same performance as the first, but his objective point is further ahead. Now they circle about excitedly and pitch headlong again only to rise with a wild scream and strain their pinions in their efforts to rise for the next dash.

Something is under them, moving, and moving swiftly in our direction. Let us stop. Ah, that's it! An antelope dashes into view breasting the rise of the knoll; and a fawn, not much bigger than a jack rabbit, runs alongside, half sheltered under the mother. Again those pirates of the air sweep downward, silent and straight, aiming for the baby 'lope. The mother stops short, rises and strikes upward with her sharp forefeet in time to baffle the big birds, which rise with hoarse screams and hover over the pair again, waiting for the next favorable chance.

The mother antelope seems to be decided on making a stand. Back and forth the big birds circle and swing, dash and rise again. At last the mother realizes that a patch of prickly pears won't keep eagles off as it will coyotes, whose feet are too soft to venture among the thorns, and she takes refuge in flight. Fatal mistake! That is what the birds want. A quick dash, a feint, a thrashing of wings, against which the mother is unable to cope single-handed, then a piteous, weak little bleat mingles with the shrieks of the birds, and the baby 'lope lies quiet on the ground.

The pirates have won. Not so fast! There is another act yet! One bird sweeps down, but the other, with a fierce scream, disputes his right to the spoils, and they dash at each other. Feathers float downward as the two strike at each other with beak and claw, circle, scream and dash back again. A battle is on, a battle royal that rages 1,000ft. above the ground! At last they strike, thrash their wings and fall, a whirling mass of winged demons, down, down, faster always until they strike the brown grass at the foot of the knoll.

We ride forward. The old antelope runs off a short distance, stops, runs again, and circles the spot where her baby stiffens on the burning ground. One eagle lies prone with outstretched pinions; the other, still full of fight and with feathers roached the wrong way, flaps along the ground dragging a useless wing, until a pistol ball stretches him down on the curled buffalo grass.

A few minutes later the old antelope runs across the valley and disappears.

That night a tiny antelope skin is tacked on the cabin wall to dry, and two eagle feathers, the center one from each tail, are hung over a pair of deer antlers to wait until we want them for a new war bonnet. They are just the right thing and belonged to warriors before they came to us.

That antelope skin has eight holes in the back of the neck, each made by a talon that sunk through it deep in the owner's flesh and thus ended its short life. Yet what good did it do, other than maybe to give some vagabond coyote a dinner on two tough old eagles that were left to dry into mummies in the blaze of the mountain sun?

A few passes—Awake, you have seen it all.

El Comancho.

Do Animals Practice Hypnotism?

Richmond, Va., July 29.—*Editor Forest and Stream:* An article under this heading in your issue of July 27 mentions a squirrel which had gained a safe place springing right off into danger for no apparent reason. I recall an occasion on which a gray fox in Florida did precisely the same.

It was a moonlight night, and with four hounds I had given reynard a lively chase, during which all the cur dogs within hearing had joined in—making a motley crew of about thirteen or fourteen in all. Our fox at last climbed a sapling tree and was comfortably ensconced on a limb about 25 or 30ft. up by the time the pack arrived and pandemonium began. I am sure that the racket completely rattled the fox, as, after surveying his surroundings—men, horses and dogs—for a minute or two he deliberately jumped into the very jaws of the dogs and stayed right there. R. F. B.

THE DEER'S CHALLENGE.

Editor Forest and Stream:

Some time ago I was reading an article in FOREST AND STREAM asking, does the white-tailed deer challenge? As an old time deer hunter I can safely say they do. For instance, I was hunting on the first snow. It was in open growth. I was following a large buck. Coming up on the side of the ridge I heard this low, muttering sound, as though it was made in the throat. It was coming toward me at the time. I did not know what it was. I crept down toward the sound and a large buck deer, with neck curved and nose most to the ground, was making the sound mentioned. I shot him on the spot. At the sound of the gun the one that I was following jumped from some bushes, not 20ft. from where this one stood that I shot.

Then another time I was hunting in burnt land; was coming up over a horseback; on the other side I heard the same noise, only made by two. I crept up so I could see over the other side. There were the two large bucks some 20 or 30ft. apart. They were both hooking the bushes and making that same rattling sound. I shot both on the spot; and when I went to them I expected to see the snow all torn up; but they had not come together. So I assume to say that they never come to a fight without giving that same or some other challenge.

Now I would ask Mr. A. Y. Walton to answer one question for me—that is this, did he ever see any two animals come together for a fight without some kind of a challenge? I will ask him to just name one instance either of domestic or wild animals; I won't except human, for no two men will start into a fight without words in way of challenge. Let two dogs come to a fight; will they come together without growling at each other? That is their way of challenge. Also let two bulls come together for a fight; don't they bellow and paw up the earth? That is their way of challenge. Now deer have their way just the same as all others; at least, I shall always think so until some one convinces me different, for the reason that I heard them at different times.

A. McLAIN.

Editor Forest and Stream:

I had thought some one else would respond to this interesting question before now. I have had some ten years' experience in still-hunting deer, about evenly divided between the black-tail of the Coast Range in California and the white-tail of the eastern cordillera of the Sierra Madre in Mexico. Only once during that time have I heard any vocal sound from deer except the cry of the wounded.

The exception was during my Christmas hunt of 1894. I was slowly climbing a long steep point toward camp about 11 o'clock one morning. I had hunted all the morning, most of the time for a crippled deer that finally escaped, and was tired and disgusted. My attention was suddenly arrested by a rather coarse and short bawl or bleat, very like that of a goat. I looked across the cañon to my right and saw a fine buck deer. When my eyes first lighted on him he was trotting with his nose to the ground, but at that instant he stopped and threw up his head. I was too anxious to retrieve my lost morning to wait and see whether he would call again or not, but took a hasty aim and fired. The shot was a long one and my nerves were unsteady, so that I scored a miss. The distance was probably over 200 yards, but I had heard him distinctly. He pitched over the hill without ever seeing me, as I judged, being frightened chiefly by the impact of the ball.

I went around the head of the cañon, and when I crept up found three deer instead of one—two bucks and a doe. Whether the one which challenged had been driven off by the other, or whether he had been in search of a mate and had just then come up on the pair, I had no means of knowing. Nor did I see him when he made the call above described. But he certainly made it. My own belief is that he was alone and seeking a mate, that is a doe, for December is the height of the running season here. What little I saw of his movements gave me that impression.

Speaking of the bawling of wounded deer, I should like to ask if others have concluded, as I have, that the cry is chiefly the effect of fright rather than of pain. A deer may be wounded in such a way that the pain must be acute, without making any moan. But if he is not rendered helpless, especially if the wound does not greatly impair his vitality, he will invariably bawl. Of course the outcry is not the less trying to the sensitive hunter, but possibly it may be of slight relief to some to think that it is a symptom of fright and not of excruciating pain.

We are all indebted to the gentleman who gave us so clear and full an account of the deer of Western Texas. He has thrown not a little light on the habits of those found in this section, which are, as I said above, Virginia deer. Their chief peculiarities are that they have no red coat at any time, and that the breeding season is quite two months later than in the Middle and Southern States of our own country. They are, I should say, about of average size, though not often very fat. Why they should have a late running season I cannot conjecture. The summers are not hot, as my readers might suppose, but quite cool. While the inhabitants of the United States are sweltering, we have cool breezes and pleasant nights. That is, of course, on the highlands of Mexico. The summer is our rainy season. I have reason to believe that the breeding habits of most of the fauna here are affected by the delay of the rains, when that happens. I believe Mr. Walton noted a similar circumstance in regard to the deer of Texas. That may prove to be a clew. AZTEC.

San Luis Potosi, Mexico, July 24.

Minnesota Non-Resident Law.

In our issue of July 27 a correspondent wrote that the Minnesota non-resident law was not given in the Fish Commissioner's compilation of the law, and had not been approved by the Governor. This, it should have been said at the time, was an error. The Commissioner's compilation does not give it, but it was approved by the Governor April 25, and is contained in the *Game Laws in Brief*, which compilation, by the way, has proved in many instances even more reliable than official publications. The Minnesota law exacts a hunting license fee of $25, but only from residents of such other States as make non-resident discriminations.

Game Bag and Gun.

A MOOSE PARADISE.

It has long been conceded that to bring to bag a moose is the goal of ambition for the great majority of big game hunters in our region, but few have attained thereto, owing to the scarcity of the quarry and the difficulties to be met with in hunting it.

We have, however, a "soft spot" here in Nova Scotia for which we will claim the title of a "moose paradise," so as to be upsides with our friend "Prowler" and his "caribou paradise." Of course we cannot guarantee a moose to any one, but there is a fair chance, and even should a man fail, could he fail to be pleased with our beautiful autumn weather and the rest, recreation and pleasure of a few weeks in camp, such as was enjoyed by the principals in the following narrative.

We left Shelburne bright and early on the morning of Sept. 15 and tramped to the foot of Lake John. Our canoe, provisions, baggage of various kinds all having gone on ahead per the Shelburne county ox team express; we caught up on them about ten miles on the road, in time for dinner. Then leaving the main coach road we struck a wood road for the remaining twelve miles into the lake. I think the less said about that tote road the better. Certainly it was not macadamized. Imagine for yourself a buckboard wagon with a birch bark canoe and lots of dunnage strapped on, the patient ox team ahead, the patient (?) driver at one side, the front wheels stuck in a mud hole, the rear ones elevated on a fallen tree or stone, the prospect of a repetition of the scene for some ten miles or so in uninterrupted succession, and I am sure you will join with me in saying there is lots of pure, unsullied enjoyment in a moose hunt.

After such a pleasant day we arrived about 6 P. M. at the foot of the lake, and at once started into camp. The ox team express and driver set out again after supper and an hour's rest, with the understanding that they were to be back for us in two weeks. Now, as we have got rid of strangers, we can describe the party.

First and foremost must come our guide "Frank," a full-blooded Micmac Indian, who has been in at the death of many a lordly moose, a perfect hunter, and one who is acquainted with nature in all her varied moods. She yielded to him at his bidding every necessity. Where an ordinary man would have starved or frozen to death he found an abundance of all things needful. An adept at calling, which he learned in youth by endeavoring to imitate the cow moose herself, his was no second-hand learning, gained from a brother woodsman. But he shone particularly at a still-hunt. He says himself, I know some can call better than me, but I am the best at a still-hunt. What an amount of study it must have taken to be able to tell almost at a glance the age of a track, or the sex of the animal which imprinted it, whether it was "traveling" or only cruising around a little. And then when we got near the fawn how easily he knew from the formation of the country where the moose lay. So much for our guide.

Next comes Ned, a rather light chap, but an old and enthusiastic man in the woods; and lastly the writer, strong enough and enthusiastic enough, but fearfully liable to strong and sudden attacks of buck fever when game is in sight.

After taking leave of our driver, the last vestige of civilization, we had another "snack" of supper and turned in, needless to say we slept as only tired men could sleep.

Next morning bright and early we were up, and after a splendid breakfast of partridge, shot the previous evening, and some trout, fresh from the lake that morning, we embarked in our birch bark and paddled away rapidly up the lake, the sun shining brightly, the lake as calm as a millpond, the deep green of the spruces, the varied tints of autumnal color in the hardwood trees, the rising ground surrounding the lake, the image of which beautifully imprinted on the glassy surface, made a picture which did indeed prove restful and refreshing to eyes, for a whole year, used to city scenes.

Traveling in a canoe has often been called the poetry of motion, and truly we thought so that morning. However such ease and luxury could not last, for here we are at the first portage, over which we have slowly and laboriously to lug both canoe and dunnage. We arrived at the end of our journey in time for dinner; and our hopes were raised by numerous signs of moose, although none very fresh. We were also much tempted to use our guns on both partridge and rabbits on our way over, but as we were now in good game country it was deemed expedient to make as little noise as possible. Again on coming in view of Lake Randy, at the end of the portage, we found the blue wing duck very numerous feeding in the sedge around the lake. After dinner we embarked again and oh! what a commotion our appearance did cause among the feathered tribe; crossing the lake we entered a stillwater about two miles long, and as the country on either side was admirably adapted for moose, we paddled up very cautiously, watching closely for the quarry. However, although sign was very numerous and recent, we saw no game. Leaving the stillwater and crossing another small lake, we arranged our camp for the night.

About 5 P. M., the wind having fallen completely, we took the canoe and paddled some distance up the lake to a small open bog, and tried to call, but were unsuccessful, although we were answered by a bull a long way off. As he would only come a little and then go back, we concluded he was already with a cow.

The following morning being cold, rainy and blowing, we were late of breaking camp, and while crossing our second portage heard a cow call and the bull answer some little way ahead. The wind was right, blowing down from them to us. Ned being still back at the camp, Frank and I started off on a still-hunt; but misfortune seemed to follow us, because on reaching the vicinity where we heard the call we found ourselves surrounded by a dense thicket of spruce, and no signs or sounds of the moose. Frank then sounded the bull call or challenge to fight. The sound had hardly escaped from his lips, when *wough! wough!* came our answer, accompanied by a crashing and breaking of boughs that, I can assure you, was calculated to frighten any one but a trained hunter. I at once threw up my rifle and awaited his appearance through the dense bushes, my inexperience of the vitality and power of the moose giving me courage to stand directly in his path and wait. Frank, however, ran aside to a stout tree, intending to get a side shot. However, a slight air at that moment carried the scent to the moose and all noise instantly ceased (to my astonishment, you may well suppose), and although the Indian immediately broke through in the direction where the moose was, he never saw it nor heard it, so quickly and quietly can they get away when they feel so inclined. It afterward transpired that Ned, coming on our trail (unfortunately without his rifle), saw both cow and bull cross some 50yds. in front of him. So ended our first chance of a shot.

I should say, however, to show how thick was the cover, that on measuring we found the place where the moose turned was only eleven paces from where I stood.

Our unsuccessful still-hunt took up a goodly part of the forenoon, so that on reaching the end of our portage we concluded to go into camp for the night, as it was blowing and raining, altogether a most disagreeable day. Toward evening we went down to the lake and spent about an hour trolling for big trout, and had some splendid sport; we reserved two only for our supper and let all the others go.

In the morning Frank awakened us before daylight. As there was not a breath of wind, quietly and I may say coldly we picked our way out to the adjacent bog, and after stowing ourselves away as comfortably as possible in a small clump of hackmatack trees waited for the breaking of day. As soon as it became light enough, Frank made a call—oh! such a call! would that I could describe it, once heard, never to be forgotten; so utterly unlike anything we had ever heard, the early morn, the stillness of the air and woods, and our expectancy all conducing to enhance the mystery of it again. After a twenty minutes' pause he called again. Still no answer. Again he called just as the sun was showing through the tree-tops when "wough! wough!" came the answer from the woods about a mile away. How eagerly we scanned the fringe of bushes for a glimpse of him; how we examined our rifles again to see that they were ready, though we knew they were; how we strained every nerve to hear or see anything. As he drew near, every now and then striking his antlers on the trees, we were seized with an extra bad attack of fever, which usually attacks men in like circumstances. However, all suspense comes to an end and so did ours, for now he comes out and skirts round the fringe of bushes on the edge of the woods, alternately appearing and disappearing. Finally he edges toward us, and getting nearly over to the track we came along. "Heaven grant he may not cross it," or good-bye moose. Soon he came about 200yds. from where we were and stopped, evidently trying to get a scent of his fair enchanter—or of danger. He seemed very suspicious, and as at that moment he presented his shoulder to us, I took advantage of it and sent a hollow-pointed .50-110-300 Winchester ball. Almost at the same moment Ned fired with his .45-90, and like a flash that animal made off into the bushes. I got another shot at him as he disappeared, and we immediately gave chase, as I was satisfied my first shot had taken effect. On reaching the point where he disappeared, I waited for Frank to come up. He said that he was afraid we had missed, as he could find no blood signs, and the tracks were quite plain and strong. However, I was so sure of my shot that we followed on and came upon him about 300 yards away. I would not like to say how many steps I took to cover the intervening space, nor would I like to say how loud I shouted. Suffice to say I reached him, and found him lying in his tracks, no sign of a struggle; each hoof in its last print. Ned came up, and after a lot of handshaking and good-natured rivalry as to whose shot had killed him, we proceeded to skin him at once. We could only find one bullet hole and from that there was scarcely a drop of blood. After getting off the skin and head we cut off some steak and returned to camp for breakfast. How juicy that steak did taste, and how we enjoyed it!

After breakfast Ned and Frank returned to the field of action, while I was doing some needed work about camp. On getting through I shouldered my rifle "Injun style," *i. e.*, butt over my shoulder and holding by muzzle, picked a piece of spruce gum and was slowly, contentedly and happily making my way over the bog, when on looking up, to my intense astonishment, I saw on the edge of the woods 200yds. away a second moose eyeing me with as much astonishment as I saw it. We both concluded to act at the same moment, the moose bounding away into the woods with a fearful crashing and I shooting after him. As before, I followed up and was gratified to find blood on both sides of his track. I now found Frank running after me, attracted by the shooting, and we followed that moose over bogs and barrens and sticks and stones and windfalls and every barrier conceivable, till I was utterly exhausted, but never got a sight of him, although we found he had lain down several times. Finally we concluded to leave him, as we would have to hurry anyway in order to get the one shot in the morning out of the woods without spoiling; in fact, we did almost lose the head. On reaching the spot where the moose was standing when I first saw him we found two distinct clumps of hair, showing that the ball went through some portion of him.

We now cut up and quartered our moose and prepared the meat for carrying out. When we opened the chest box of the animal we found it full of blood, we cleaned it out and saw that the bullet (a hollow point with brass cap) had gone clean through the rib next to us when we shot, had then spread, and torn its way through the lung, cutting off the large bloodvessel at its junction with the heart (so accounting for internal bleeding), and splintered the rib on the other side completely, in fact just ground it up, and the ball itself was lying under the skin. We found the little brass cap from the bullet in the blood, thus establishing my right to the honor of killing my moose.

After cutting it up and arranging it in bundles to carry, we started back over our track to the foot of Lake John. Ned then started out to the settlement for a team to take out the meat. In the meantime Frank and I returned to camp, which we reached at dusk, completely fagged out. Next morning before daylight we were away again with the rest of the meat. The morning was so windy we were unable to call. On arriving at our destination we found a man and team waiting for us, having traveled all night, so we loaded up the team with the moose and saw it start out. Ned had not come back, owing to other engagements.

As it was now 1 o'clock we paddled to the outlet of the

lake, where there was a good camping ground, and put up a temporary shelter for the night. What a beautiful spot! The lake on one side, the river rushing down at our back, and a beautiful green sward stretching out at our feet, an abundance of grand old trees, good wood and good weather, made indeed an ideal camp.

Next morning being Sunday, we did not do any hunting. After breakfast we paddled away up to the head of the lake, some six miles or so, to visit McKay's lumber camp. We found the men, as usual on Sundays, all half asleep and taking things easy all round. Sabbath is there truly a day of rest. They of course pressed us to stay and have dinner with them, which we did. Life and grub in a lumber camp are not just what they are cracked up to be. Take, for instance, our dinner on Sunday. It consisted of salt codfish, boiled potatoes and tea sweetened with molasses. What grand fare for the woods! Their bread certainly is very good, and several loaves which we got from them proved a most welcome addition to our stores. After dinner they got up a shooting match for my benefit, and the excitement for a time waxed very warm. I endeavored to keep out of it, but finally had to shoot. I had grave doubts as to my ability to plug a nail at 40yds., especially with such a critical audience. Fortune favors the brave, though, and my first shot fortunately struck home, and I modestly declined to shoot again. As I well knew, I could not expect another such fluke. The following morning we returned to where we had originally camped, started into some new country and spent ten days partly exploring, partly hunting, and principally enjoying ourselves. Perhaps at some future time I may put on paper how we spent those days, the ducks, partridges and rabbits we shot, the small animal life we saw and the tantalizing glimpses we occasionally got of moose and bear.

Our time was up and the 1894 hunt was ended. We can but look forward to another equally successful one in 1895, which, if all goes well, we will narrate for the benefit of FOREST AND STREAM readers. TIAM.

HALIFAX, Nova Scotia.

CHICAGO AND THE WEST.

The Week's News.

CHICAGO, Ill., Aug. 1.—The four prominent events in the current week for the West are the death at Chicago of the great jurist, author, naturalist and sportsman, Hon. John Dean Caton; the preliminary victory of the sportsmen in their suit against the Merritt cold storage house at Kewanee; the progress of the "war" fake at Jackson's Hole; the renewed attempt of a railway to get a right of way into the National Park.

The Death of Judge Caton.

The death of Judge John Dean Caton was an event of sad interest to a country wider than Chicago and its environs. Illinois had no greater son, the nation no better. FOREST AND STREAM readers will welcome some mention of the life and accomplishments of this distinguished, venerable, honorable and honored man, who was great in all things that he did.

John Dean Caton was born in 1812. He came to Chicago from Oneida Co., N. Y., in 1833, far in advance of the furthest Western railway. At the time of the great Chicago fire he was nearly 60. At the time of his death he was 83. He knew Chicago from the days when the wildfowl swarmed where now great granite buildings rise. A struggling young lawyer in the first years of his citizenship in Chicago, 1833 to 1835 (he tried the first jury case ever tried in Chicago), in 1842 he went to the Supreme bench. For 22 years he was a member of the Supreme Court, most of the time Chief Justice. Always a man of affairs, he steadily engaged in great business enterprises, accumulating large amounts of land and great holdings in telegraph and other stocks. During these years he was more or less a sportsman, and one enjoying to the utmost the great possibilities of this region for sport. He was well acquainted with the pine woods north of Chicago. His was one of the early canoes on the once famous and now nearly fotgotten Brulé. Not more sportsman than naturalist, he loved as much as his own luxurious home the well-stocked deer park at Ottawa, Ill. Here he studied and wrote about the *Cervidæ* as no other man has done. In the late years of his life he was interested in the subject of the elephant, and at the time of his death had nearly finished a treatise on the ivory-bearing elephants.

Judge Caton used often to relate with much amusement stories of his life in the primitive days of Illinois. In one of his very first cases it was understood that a client was hunting for a lawyer. Mr. Caton and his rival attorney both wanted the client, but did not want to be unprofessional. They were both poor, and had to eke out their practice by carrying chain for a surveyor. They departed for their day's work, one lawyer on each end of the chain, agreeing that neither should urge his services on the client. They were in the depths of an alder swamp when they heard the client approaching through the grass and heavy cover. He could not see either of them, and neither spoke, but Judge Caton dropped the chain pins together once or twice, making a noise toward which the client steered, so that Mr. Caton got him. He often laughed at this in later years, as illustrating the methods of the early days.

In those times the lawyers had to "ride circuit," and Springfield, the home of Lincoln and other great men, was much their Mecca. The long journey from Chicago to Springfield was done by stage road, and in winter it was a hard experience. In the springtime, however, it was most pleasant, and one can only read with interest the description of such a journey in the days when Illinois, Chicago and her sons were all young together.

"A four-in-hand, with splendid horses, the best Troy coaches, good company, the exhilaration of great speed over an elastic road, much of it a turf of grass, often crushing under our wheels the most beautiful wild flowers; every grove fragrant with blossoms, framed in the richest green; our road not fenced in by narrow lanes, but with freedom to choose our route; here and there a picturesque log cabin covered with vines; boys and girls on their way to the log schools, and the lusty farmer digging his fortune out of the rich earth. Everything fresh and new, full of young life and enthusiasm, these June trips to Springfield would, I think, compare favorably even with those we make to-day in a luxurious Pullman car."

The last time I saw Judge Caton in a business way was at his Chicago residence, in 1890. Even then he was showing his weight of years, but the tremendous vitality natural to him still animated his tremendously large and rugged frame. He was then suffering from a weak foot, and his eyes, which later failed him almost completely, troubled him at that time so much that he complained he had to have FOREST AND STREAM read to him. He was working then on an article which he said he would send to FOREST AND STREAM, and which I believe was sent. He could no longer write much and worked by dictation. In manners Judge Caton seemed dignified, but courteous and easy. His was no pseudo-aristocracy. His conversation was frank, pleasant and cheerful, and he was a delightful man to interview. He told laughingly of his last trip into the pine woods with his friend Mr. John Stockton, and remarked that he always got wet, but was never hurt by it. "If you ever get wet through," said he, "be sure to dry your clothes upon you, and don't change them at once for dry clothes. You are not so apt to take cold if you dry out the wet clothes without taking them off."

Judge Caton was in his day a tireless sportsman, a fine shot and a most observing student of things afield. His "Antelope and Deer of America" would alone have assured him recognition, and we believe that it was in matters of sportsmanship and of natural history that he took his chief pride and main enjoyment.

In 1893 Judge Caton had an operation performed which helped his eyesight a little, but he could not read any longer. In 1891 a daughter died. In 1892 his much beloved wife, companion of his days since 1835, left this earth. The year after that Judge Caton had a stroke of paralysis. Since then he has gradually and gently sunk

JUDGE JOHN D. CATON.

away, until at 9:30 of Tuesday morning, July 30, the end came, and he passed away, full of years and full of honors, after a life replete with all that makes life most desirable and admirable.

Cold Storage Defeated.

There is some more news from the contradictory and complicated situation of game protection in Illinois, out of which there may yet come some rather startling news of one sort or another. The case brought against H. Clay Merritt, proprietor of the notorious Kewanee freezer, has been decided against the cold storage man and in favor of the sportsmen of Illinois and of the country. Of course, however, this is only the first round of the fight. Defense appealed to the Circuit Court. If they lose there the case will go to the Supreme Court, and it may be some time before it reaches decision. The Supreme Court of Illinois being on record in the Magner case, the sportsmen should win at the last, errors and omissions excepted. It is altogether sure that this case will not lag as did all the earlier cases of the sportsmen against cold storage. The case is very simple on its stipulations. Merritt admits under oath and in court having such and such quantities of game in possession. The contention is only whether he can own for all the year as property the game he has acquired. This is the great fight in which all the country of sportsmen is interested. No more important case has come up in recent times.

It was supposed that the justice suit would be the hard place of the fight, as heretofore not even a warrant could be obtained against Merritt, let alone a decision. Justice Pyle, an old man, 60 years of age, is an old friend of Merritt, but after sleeping on his decision opened court next day and rendered for the State, telling Merritt it was a hard decision for him to give, but that he thought the law demanded it.

The prosecution of this case was in the hands of F. S. Baird, appointed from the law committee by the Illinois Association, and Mr. Chas. K. Ladd, of Kewanee. State's Attorney Emery C. Graves did not take charge in the case, as erroneously reported elsewhere. Defense was represented by attorneys Keep, of Chicago, and James K. Blish. Mr. M. R. Bortree, president of the National Protective Association, assisted in the prosecution, he and Mr. Baird being associated in the case from the first.

In open court and under oath Mr. Merritt admitted he had in possession 1,740 dozen quail, 120 pair redhead ducks, 90 pair mallard ducks, 240 pair teal ducks, and 5,280 partridges, making a total number of 27,060 birds.

There has been a great deal of misunderstanding and misrepresentation in regard to this case. The *Sporting journal* of this city, recognized as the official organ of the trade, this week states that Merritt was fined $23,600. It has been stated that he could be fined as much as $676,500, etc., etc. I sincerely trust he will be fined the limit, but duty to truth compels the statement that he was not fined at all. In this I think prosecution made a mistake—which, however, can be and should be at once rectified by another action, based on Merritt's own sworn admissions; but Attorney Baird tells me the only case brought was one to determine the ownership of the game. The justice ruled the birds should be sold at lawful auction in twenty-four hours. Defense took appeal and replevined the property. The bond exacted by the justice was for $10,000. Nothing was done toward putting the fine clause of the game statute in operation. Prior to this suit Blow, the warden making the seizure, had made two small seizures from this same freezer. These he sold under the statute to J. Herr, of Chicago. The great bulk of the game, therefore, now remains in the freezer at Kewanee, and Merritt is responsible for it or its money value.

Thus do all things come around to FOREST AND STREAM. Last winter Mr. Blow and his organ were howling against the wrong of persecuting cold storage men who had legal property in game. They both thought the proper caper was to go out in the field and protect it before it was killed—anywhere, everywhere, all over the country. Mr. Blow thought he could do this. But now Mr. Blow goes back entirely on this doctrine, fancies there is more notoriety and more fees in going after the cold storage people. He has had a change of heart. It troubles his organ, the *Sporting journal* to stay with him, but it also forgets its recorded position and hustles into the new line laid out by its pilot in protective matters.

FOREST AND STREAM has been right on these protective matters all along, so it does not have to change its doctrine. It is very likely that to-day FOREST AND STREAM is the only paper having the facts of all the news in these protective entanglements clear down to the bottom, and if necessary it will in time print all this news clear down to the bottom, hurt whom it may; only it will not make any movement which it conceives to be injurious to the cause of protection.

From Warden Blow FOREST AND STREAM would withhold no credit to which he is properly entitled. To him belongs the honor of being the first warden ever to get into a Kewanee freezer, and to start a case which, if successful, can clean out later some or all of the Chicago freezers, ten to one more infamous than that at Kewanee. But let it be suggested to Mr. Blow that he weary not in well doing. The best thing he can do now is to bring actions against Merritt and get him fined as much and as fast as he can.

The Illinois Association has perhaps forgotten the treatment it has received at the hands of Chas. Blow, Game Warden. For my part, I do not forget it, and am slow to think a man soon to be taken into council who has derided and defied that council. The suggestion may have little weight, yet I suggest that the Illinois State Sportsmen's Association advise its attorneys to bring action under the full statute against Merritt and have him fined, besides taking away from him his game. This is the second string and the proper string to the bow. This action can be brought independently of Blow, and without using him as a witness at all. Merritt has furnished the evidence under oath himself. The case is agreed. Now, if Merritt has been doing an unlawful act, let there be no dangerous compromises, but let him be punished for it under the law, in all lawful ways, and that as speedily and severely as possible, and in such way that the sportsmen of Illinois can claim the credit for it, and so find themselves in position to do still more practical and decisive fighting in the future. Let the Illinois Association be sure that the eyes of the country are more than ever upon it at this juncture. I feel sure that the result will please the sportsmen of America.

Merritt testified that he got little game from Illinois, but that most of it came from Iowa, Nebraska, Kansas and Dakota. His business is over for this season. Attorney Baird says that if he attempts to start up it must be under the care of a warden on the platform, who shall open every express package coming in or going out.

Sunday School and the "War."

A level-headed dispatch from Pocatello, Idaho, sums up the situation on the Indian "war" fake about right when it points out the fact that a Baptist Sunday-school picnic of little Idaho children was in progress at the time, the said picnic being held in the heart of the "hostile" country. Still the "war" will stretch the legs of the troops, and mayhap leave a little money in the hands of the settlers, who have before now not been averse to having Uncle Sam send troops into a country far from a market. If eventually the truth about illegal game killing by whites and Indians in the Jackson's Hole country be brought to light, the cause of game protection will at least not be injured, and that is about the only benefit reasonably to be hoped out of all the hullabaloo—unless we should remember the space-money the fake correspondents have secured.

Park Railroads Again.

The old, old attempt to get a railroad into the Yellowstone Park is to be resumed, it seems. The information in this comes by way of the daily dispatches from Omaha, Neb., and reads: "Omaha, Neb., July 30.—It is the purpose of the Burlington to ask Congress for a right of way through the Yellowstone Park, agreeing in consideration of such right to keep up the track in a perfect manner and to give all lines desiring to enter the park the use of the Burlington tracks at a certain yearly rental to cover the cost of the maintenance of the road, as will be required by the Government, and to pay the interest on the investment, with charges for wear and tear of the property.

"It is confidently expected that one of the first bills introduced in the next Congress will be a measure granting the Burlington a route through the nation's big preserve, to be surrounded with all the restrictions the unusual prayer warrants. Once into the park it is believed the Burlington will build into Montana and open up to civilization a comparatively new country."

New Game Country.

News is current that a railroad is to be built across Siberia, 5,000 miles in length. This should open up new

game country, though I am not sure it comes properly under the head of "Chicago and the West."

Strange Death of Hunting Dogs.

Advice from Warsaw, Ind., to Mr. Moran, of Montgomery Ward & Co.'s gun department, states that his two hunting dogs, Domino and Brownie, both died shortly after a recent day's hunting on woodcock. A veterinarian said the trouble was from the dust of weeds lodging in the throat. The throat of each dog was entirely raw throughout its length. Strangely enough, Mr. Wm. Werner, of this city, has also lost two dogs from exactly the same cause. He had a purchaser for the dogs, who said he would take them if they did well in the field. Mr. Werner and he took the dogs and hunted them one day on woodcock in upper Indiana. The next day they were both dead, their throats raw and sore as noted in the Warsaw dogs. Is it possible the pollen of some poisonous plant does this? E. Hough.

909 Security Building, Chicago.

CORRALING ANTELOPE IN CALIFORNIA.

We had camped late in the evening on the shore of Lake Elsinore. Our tent was the regulation tent of California—the starry sky. Near the center it was patched with the silvery disk of the moon, supported on one side by the bristling heights of the Santa Ana range and on the east by the towering crown of San Jacinto, on which through the clear air the snow lay gleaming. The coyote sang our lullaby, to which the burrowing owl played his somniferous interlude; while the red fox barked his approval, in which the 'poorwill, pitching about in the night above, heartily concurred.

By the time the rugged hills were pictured in the placid face of the lake the next morning we were in them looking for deer, for at this place the plain was too flat to hunt antelope. Nearly a thousand feet we climbed upward, but saw no fur except that on the little chaparral hare, whose woolly tail flickered here and there across our path. Everything was as well adapted for feeding or spending the day as a reasonable deer could wish, but where the soft purple of the vetch still trailed over the golden green of the sumac we saw no hair glisten in the rising sun. Nor where the white spires of the sage towered above the yellow bloom of the lucerne, or the orange floss of the dodder wove its shining whirls around the snowy top of the wild buckwheat, could we see the sun glitter on anything like horns.

As we sat down to muse upon our luck, my companion said: "What are those little dots away off there on the plain? They seem to change from white to brown and then to white again. They can't be sheep."

Some two thousand feet below us, and nearly three miles away, were some dots of changing color on the great brown plain that on the farther side curled upward into low rough mesas, and on the south swept away in a long valley toward Mt. Palomar. Here and there a grove of sycamores nodded from some wash or ravine, and there a bunch of live oaks stood darkly green at the mouth of a cañon or solidly massed in little basins in the tumbling hills. But the greater part of the land was robed in sun-dried grass, and rolled in swells so gentle that game could see a long way over the highest of them.

"Antelope," I replied. "I know that band of old. There are about fifty of them, and unless you catch them in the hills you need not waste time with them."

"They are going to the lake for water," said my friend after we had watched them for a while. There was little comfort in that remark, for miles of the edge of the lake were all open and about as flat as the plain. But still we watched them.

Where the long green arms of the wild gourd spread over the brown carpet of alfileria and clover they paused for a moment to nibble the dry feed and then went on at a steady pace. The green pods of the astragalus sprawled over the plain among its green leaves, but they stopped not there, nor where the chilla hung out its woolly leaves and on its tall stalk shone in tier on tier its heads of soft lavender flowers. On they went, becoming more distinct in outline as they approached the lake. Soon horns could be made out, but it was probably fancy's eye, for the distance was still great. But no horns look so nice as those seen by imagination when you know they are there; like the horns in pictures of deer half a mile away.

On moved the band of antelope toward the water, and we could plainly see the kids play and the larger ones stop and nibble something, scan the landscape for danger and then move on. Could we believe our eyes, or were they really headed for the tongue of land that ran out nearly half a mile into the lake? Surely they would not go out on that when there was water so much nearer. Yet at this time they were little disturbed here, for the range of the game was so great and so little of the country was rolling enough that besides myself but one other person ever troubled them. On the point was some green grass and along the edge of the water little mud, and mud is something antelope admire no more than the domestic cat if dry land is just as convenient.

By the time we had concluded our reasoning the antelope were actually on the base of the point and headed for its end. If they should go to the tip and we could get well up the point before they could see us, would they take to the water or try to run past us? If the latter, how many would our repeaters upset in the operation? Such were the questions we discussed as fast as the breath left in us from our speed down the gulch would allow.

There was little time to waste, for antelope, like deer, linger little at water in this country. Hot and breathless, we were soon on the plain and the antelope were on the end of the tongue of land. Across the water we saw them loom in the mirage formed by the smooth surface like ghosts on stilts, some 40ft. high, a floating haze of white and cinnamon mounted on long strips of white. Some were turned upside down, some pulled out lengthwise, some expanded in all directions, some had swelled bellies and others dropsical legs. Stooping low, we soon reached the place where the point joined the main body of the plain. The further down the point we could get before the game started the better, for it was gradually narrowing. So keeping on one side and stooping low, we started for the end as fast as we could go without getting too much out of breath or too nervous to shoot when the time should come.

Not far had we gone when some of the keen eyes of the keenest-sighted of all animals saw us, though we were several hundred yards away and had the advantage of considerable mustard and arrow grass between to make the air quite hazy. Instantly there was commotion in the band of antelope. All stopped drinking and huddled together for a moment, then scattered out a bit, and then all stopped with heads turned toward us. Though there was not one chance in a thousand of their taking to the water (for it was over a mile to swim to land at the nearest point), we felt some fears and dropped as much out of sight as possible. Brightly pictured against a background of smooth water they stood for a moment with white and cinnamon sides aglow with the morning sun in an air so clear that we could plainly distinguish the black curved horns of the larger antelope.

But not long did they stand at gaze. Like a meteor the white of a big buck shot over the background of water where it was darkened by the reflection of the chaparral-clad hills, and in a twinkling he was skirting the shore line of the point with the whole band strung out in line behind him. The kids made as good time as the rest, their little legs now flickering lines of white, now blending with speed into a soft gray haze, while the old ones rolled along with that low easy canter whose speed is so deceptive. It was plain they intended to run past us, and equally plain that if we expected to hit any of them we should have to do some rapid running. For where we were the tongue of land was some 200yds. wide, while the game was not 500yds. away and skimming like the wind the purple of the sage along the shore, while the gold of the sunflowers along their path blended into orange by the swift passage across it of the white and cinnamon of the game.

Over the big white trumpets of the stramonium we sprang, and under our flying feet the dark blue of the larkspur fell never again to rise. Yet the distance across the point seemed painfully long, while the distance of the antelope from the part of the shore where they would pass us seemed alarmingly short. But a moment ago we would have given little for a guarantee of half a dozen, and now it began to look as if we should be glad to get one. We strained every nerve until the bright purple of the pentstemon and the soft lavender of the phacelia almost blended as we skipped over them. Yet our pace seemed miserably slow beside that of the intended victims that were scattering the light blue flowers of the iris and the golden cups of the summer tulips at a rate more alarming than ever.

Vainly the pink racemes of the snapdragon bent beneath our speed, and the rich glow of the scarlet larkspur streamed by us like fireworks. Vainly the burrowing owl bobbed his head and cleared our path, and the meadowlark vacated the top of the milkweed on which he was singing. The chaparral cock, losing confidence in his nimble legs, stretched out his wings and long tail and sailed gleefully out of our way, followed by the large hare whose gray ears bobbed above the red and purple of the horsemints, and by the cottontail whose snowy appendix flickered out of sight among the mustard stalks. Everything seemed afraid of us but the antelope, and they came on with pace smooth and soft as that of time itself.

As we reached the middle of the tongue of land they came down the shore line as if shod with the whirlwind. Sixty or seventy yards long a line of white and yellowish-red undulations, gentle as those of the summer sea, gliding along the shore about 100yds. ahead of us. Above it glittered black horns, some curved inward, some a little outward, some a little backward, while below it a haze of nebulous white obscured the lake beyond. While we were trying to shorten the shooting distance a few yards more there was a sharp *skr-r-r-r-r-r-r-r*, and with head some 2ft. high over the center of the coil a yellow rattlesnake some 5ft. long and as thick as one's arm rose right in our path about 6ft. ahead of us. There are few more startling sights than this, and though the danger is not as great as that of being struck by lightning in any Eastern State, such a surprise jars the nerves more than a thunderbolt that shivers a tree within 20ft. of you. As we stopped and sheered aside at the same movement, I landed with one foot in a badger hole and my companion ran against the sharp needles of a prickly pear. By the time we had collected our scattered energies, the antelope were sailing over another 100yds. and were already well past us. All our hopes of "corraling" the band by heading off and confusing them having vanished, speed of fire was our only remaining chance of getting even one. My companion, who was not as well educated on rattlesnakes as I was, turned his fire first upon the snake so as to make sure of that, and left me to open the ball.

Turning the sights of the rifle some 10ft. ahead of the leading antelope I pulled the trigger. A distinct whop followed the report of the rifle and the water flew from the surface of the lake beyond and went skipping away over its glassy face. But there was no break in the line. It only seemed to hug the earth the more closely and glide more softly. But the kids were falling to the rear, though the filmy haze made by their little legs seemed thinner than before.

Bang! went the rifle of my companion, who had finished the snake at the first shot. The smooth surface of the lake was again broken in half a dozen places as the ball skipped over it, but the line of antelope seemed only to flatten and straighten, with the kids falling more to the rear, though the haze of their legs grew still thinner.

Bang! bang! went two more shots, one from each rifle and almost together; but the water flew from the lake again and the line seemed to move, but more gently, with the kids falling still further behind.

That soft and deceptive speed, that no man can conceive who has not seen it through the sights of a rifle, left us no time to calculate distance. We were so demoralized by our run and by the snake that speed of fire was our only hope. Bang, wang, slam, bang, went our repeaters as fast as we could work the levers. A black curved horn flew from a head, a whirl of white and brown went over, a distinct whack came back on the air, and the rest of the line, hugging the ground more closely than before, sailed along more smoothly, with the kids falling still further behind.

But we had not come so far to be satisfied with one, and again the rifles woke the echoes of the hills beyond and the balls went gliding over the lake. And still the line went on the more swiftly and smoothly, and was soon blending into brownish gray, through which white rumps were softly undulating. Before we knew it we stood with empty rifles, wondering whether the whole were not a beautiful dream, when suddenly there was a little disorder in the orderly array now fast fading into mirage. Something seemed to turn over in a hazy vision of gray, something like a leg rose for a second above it, and as the scudding line dissolved into haze there was a whitish spot upon the shore behind it that was not there before.

T. S. Van Dyke.

"GAME BIRDS AT HOME."

"Game Birds at Home" is the title of Mr. Theodore S. Van Dyke's latest work. In it he treats of quail, woodcock, ruffed grouse, pinnated grouse, sharp-tailed grouse, wild geese, American cranes, plover, California quails, Wilson snipe, salt-water birds, wild turkeys, and a chapter is devoted to "Days in Illinois," which vividly portrays the abundance of animal life in that State in years gone by. Mr. Van Dyke attempts more than the title of the work implies. He deftly interweaves the emotions of the hunter, the manner and thrill of pursuit, and the dog's aid in seeking, all embellished by the circumstances of season, foliage, color, habitat, lights and shades, thus adding an interest which is absent in such works as are dryly and plainly descriptive. The killing and desire to kill form but an incidental part of the whole and are treated with all the refinement of the higher sportsmanship. At times one feels that the coloring is too uniformly high and alike and the imagery too severely studied. The following excerpts, the first describing wild goose shooting, will give an idea of the author's spirited style and realistic descriptive powers:

"If not very careful you may be too late to shoot. Vain is any thought of stopping the wagon to allow you to take aim. The driver could not stop it in time if he would, and he will have his hands full to stop it in time to save your bones anyway, for the horses are in runaway speed. You must hold yourself in place and shoot as best you can before too near the center of the flock. You must be a good shot from a running horse or wagon, and quite able to keep your balance, mental as well as physical. Amid a general slam-bang-rattle-ty-bang you toss the gun to your shoulder, catch a glimpse of the end in line with something like revolving gray, and pull the trigger. For a second it seems as if the universe were whirling around you as one of the great birds falls with heavy thump on the back of one of the horses, with another gyrating almost into the wagon, while hundreds more are climbing with clamorous throats toward the dome of heaven as you rush on beneath at a pace that is quite alarming."

And of the ruffed grouse:

"Who can forget the feelings with which he first heard the mysterious drum of the ruffed grouse throb through the bursting woods of spring, or later from the dark mountain side, where the soft pink and white of the rhododendron light up the dark jungle of its leaves, or where the leaves are falling through the haze of Indian summer, or as sometimes heard even in the noon of night, in the depths of the great forest? And who ever failed to love him from the moment he first caught a glimpse of his fanlike tail as the graceful bird flashed amid a maze of crimson and gold, or pierced like a shaft of light the green tangle of the cat-brier swamp? And who does not feel that he has lived when, after many vain shots, he sees the brown wings come whirling out of the leaves through which they were roaring at a speed that has no equal among birds of the woods?"

The work contains 219 pages, and is beyond question a valuable addition to the literature of the higher sportsmanship.

This Man had no Trouble.

Editor Forest and Stream:

I noticed in your issue of July 20 Mr. C. M. Starke's tale of woe about his trials and tribulations and impositions in getting a moose transported in Maine.

Permit me to say that my own experience does not bear out Mr. Starke's representations, for in that same year I made a trip to Maine for moose and on my return found no annoyance whatever in transporting my game. None of the train hands refused to handle it. Nobody told me I must ship my moose by express. I did not have to fee any one to lug the carcass from platform to car. In a word, I had not the slightest intimation of a shadow of suggestion of trouble of any kind, and I might add for Mr. Starke's satisfaction that I had no moose nor caribou nor deer nor any other game. Dick of Connecticut.

Another Game Commission Chairman Next Year.

Ithaca, N. Y.—Senator Donaldson, that mighty hunter beloved of game dealers and market-shooters, was so successfully hunted for among the swaying sycamores of Saratoga, Schenectady and Washington counties last week that he won't return to grace the halls of legislation the coming Senatorial term. Senator Donaldson didn't even win in the primaries of his own county, Saratoga. All of which is so satisfactory that the sportsmen of the Empire State can well afford to "wait till the clouds roll by." That "possession of game out of season" clause in the Donaldson law is bound to defeat the eloquent gentlemen who fathered it. M. Chill.

Vermont Quail.

Swanton, Vt.—It may interest you to know that quail have appeared in this vicinity. Mr. Noyes Burton, who has a farm just north of here, says he has been hearing "Bob White" night and morning for some time, reminding him of Kansas, where he has a ranch; and one day recently he saw ten. These birds were put out in the town of Highgate, Vt., last year, by Mr. N. P. Leach, a resident of the town. They endured a severe winter without any artificial protection. Wheelock.

Quail in Doddridge County, West Virginia.

Jake, do you notice any quail about your place this year?

Quail?

Yes, quail—partridges.

O, pat-ridges. No; th'aint a one. Th'wuz a great big flock uv 'em used 'round there last yer, but a big hawk got to usin' on 'em, an' I guess he got every durned one uv 'em. Chas. W. Walker.

Game Laws in Brief.

The *Game Laws in Brief*, new edition, now ready, August 27, has new game and fish laws for more than thirty of the States. It covers the entire country, is carefully prepared, and gives all that shooters and anglers require. See advertisement.

Camp-Fire Flickerings.

"That reminds me."

A GOOD story relating an experience of a Boston party in the Maine woods came to me the other day. The two gentlemen in the case had gone into the woods intending to enjoy two or three weeks' fishing at one of the Maine sporting camp resorts. Procuring a guide they started in on the trail, intending to reach the camp by night. When darkness came they found themselves hopelessly lost. By good luck they finally discovered an old logging camp, and making themselves as comfortable as possible on the log floor, they retired to rest, tired and hungry beyond expression. One of the gentlemen (a tenderfoot in the woods) suddenly awakened his friend and the guide, declaring that he could not stand the smell pervading the old camp. His companions could smell nothing and advised him to go to sleep and give them a chance also. Again and again he awoke complaining bitterly of the smell which no one could detect but himself. As it was raining hard outside he was compelled to remain inside, and all hands passed a miserable night owing to his complaints. The strange odor from which he suffered alone was incomprehensible to the others, but in the morning they resumed their search for the right path, finally found it, and arrived at their destination about noon. After a dinner and a short rest, they prepared to go fishing, and then the secret of the mysterious odor came to light. It seems that our tenderfoot sportsman, never having used a fly and having some doubts as to his ability to compete with his friend in the number of trout taken by this method, had fortified himself before leaving home with a good sized box of angle worms to use as bait. The box he had tied up in his pack, and on undoing the latter to get at his tackle the cherished box of bait came to view in a terrible state of decomposition. The smell was awful, and as the aforesaid pack had made his pillow in the old logging camp the night before, the secret of his discomfort was exposed. His disgust was comical beyond measure, and to this day any mention of the much abused angle worm is passed over by him in silent contempt. HACKLE.

Sea and River Fishing.

BOSTON AND OTHER PARTS.

EX-GOVERNOR WILLIAM PITT KELLOGG, of Louisiana, looking every bit as young as when I used to meet him in Chicago ten years ago, has been spending a few days in Boston, visiting Commodore Miller, of the Charlestown Navy Yard, who is a relative. The Governor used to be a great fisherman, and I find him as enthusiastic in that direction as of yore. He has just returned from a trip to northern Canada, and speaks in the highest terms of the sport he has had. The region he visited is away back to virgin soil, and he mentions the muscallonge and bass fishing there as superb. The muscallonge in particular run to very large size, and are of that bulldog variety which fight to the bitter end. He captured one big fellow weighing 17½lbs. on a 6oz. rod, and says there was sport enough in that little experience to satisfy the most ardent. In a few days he will leave Boston for another trip to the same waters, and expects to eclipse all his previous records this time.

G. F. Curtis and brother, of Boston, have just returned from the Adirondacks, where they have been fishing the Fulton Chain of lakes. They liked the country so well that they will return at once and resume their interrupted recreation. Mr. G. F. Curtis took one trout weighing 3lbs. 5oz., besides several others of less weight, and hopes to do even better on this trip.

Professors G. S. Lamson and J. C. Rolfe, of Ann Arbor University, Michigan, have been fishing in the White Mountains of New Hampshire, near Waterville. A letter from Prof. Lamson received about two weeks ago stated that the fishing was amazingly bad, but I have since learned through Prof. Rolfe that the last days of their stay gave them great sport. In that country it is nearly all stream fishing in rapid water, and the taking of a trout weighing one pound provides quite as much sport as the capture of a three-pounder in the quiet waters of a pond; 1½lbs. was their largest fish, and he gave Prof. Lamson a royal good fight before he was finally landed. The two gentlemen are now outfitting for a camping trip into the Moosehead region. They expect to be gone five or six weeks. Guides will be secured at Kineo, and from there they will start into the woods, finally coming out near Jackman. All the best ponds will be visited, and I hope to hear when they return to the city in September that success has attended them from the very start.

W. K. Churchill and Mr. Bird, of Walpole, leave in a few days for the Moosehead region. They expect to be away nearly three weeks and being well acquainted in that section (having been there several times before), will do well without doubt. The very best kind of sportsmen, they delight in the woods, and enjoy every moment of the time. Even when at home they often find time to visit a comfortable camp which they own near some good bass and pickerel ponds down on the Cape.

Rarely have I witnessed such a complete exodus of people from the city as is taking place in Boston just now. The vacation season is at its height, and it is truly wonderful to note the increased interest in fishing among all classes. Hardly a man or boy goes away without some sort of an equipment for some kind of fishing. During the past week it has seemed that everybody who could get a rod or line has been on the move. Nearly everywhere along the coast they have had good luck. At Swampscott the tautog have been coming in nicely. J. T. Soutter, of Boston, has been down there visiting his friend, John Mason Little, for a few days, and together they have had some excellent fishing. Mr. Soutter leaves the first of the coming week with Capt. Philip Little for Lake Memphremagog. Black bass fishing and brook trout in the streams adjacent to the lake is the object of the trip. The old bridge at Wareham, on the south shore, from which so many fishermen have cast a line in years gone by, is again proving its worth as a stand for the capture of small striped bass. Dr. Richardson, of Boston, captured an 8-pounder there a few days ago, and others are doing well. Very light tackle is used, and the place is one of the finest spots along the coast when the small bass begin to school.

C. H. Edson, of Boston, whose family is summering at Buzzard's Bay, goes down quite frequently and always has a try at the fishing, generally with good success. Judge R. O. Harris manages to spend a day or two at the bay pretty often, but is not able to go nearly as often as he would like to owing to his inability to get away from business. G. H. Eddy, of Boston, known among his friends as a lucky bluefisherman, has gone down to Harwich, Mass., to visit his friend, C. A. Hall. Bass fishing in the ponds near Harwich is a part of their plan, and no effort will be spared to capture some of the big ones lately reported as inhabitants of the waters of that section.

Bass fishing at Lake Winnepesaukee, N. H., is now at its best. The vacation people lately returned from there have had very good luck and report an unusual number of anglers at the numerous fishing points around the lake. J. E. S. Pray and wife, and G. B. Hoyt and wife, of Exeter, L. G. Hoyt and wife, of Kingston, and Chas. Burr Towle and wife, of Council Bluffs, leave for the lake in a few days for a two weeks' trip. Most of the party have been there together for several seasons, and have quite a record as successful bass fishermen among those who have been going there year after year. Brown's Hotel, on Long Island, will be their headquarters. The best fishing grounds are close to the island, and as they will be at it early and late good scores may be looked for. F. W. Wellman, of Lowell, is quartered at the lake. He has his horses up there, in fact drives up from Lowell. Mr. Wellman's father was an angler of the very best sort, and the son is a worthy descendant of his sire. He has been in Boston during the last week replenishing his tackle, and has a color from sun and wind that will never be worn off until the January thaw. Squam Lake, but a short distance from Winnepesaukee, is his favorite fishing place, and he finds great pleasure in fishing in deep water there for big pickerel and perch.

The Chapman party, consisting of L. D. Chapman, Dr. A. R. Brown, Frank Tibbetts, Dr. W. P. Defries and I. H. Caliga, all of Boston, have returned from Nantucket in high feather over the good luck which attended their trip. A good score of bluefish was made, the honors as to numbers being fairly well divided. Capt. Swain was their skipper, and most of the fishing was done near the "rips" off Great Point. Recognizing that no well-conducted fishing party should be started without a Jonah, Mr. Chapman was selected as the unlucky individual and had to stand a lot of good-natured chaffing during the early part of the day. As the hours wore on this gradually ceased, for a very good reason. The Jonah was getting the fish, and when he finally landed one of 11¼lbs. (scale weight after return to shore that night) ample apologies poured in on all sides, and a new victim was looked for who could better fill the bill.

C. S. Anthony, auditor of the Fitchburg R. R., and Myron W. Whitney, the great singer, have each made a lucky strike in bass fishing during the past week. Mr. Anthony's good fortune occurred at a pond near Keene, N. H., where he captured one big fellow and several others of less weight. Mr. Whitney has a summer home on Long Pond near Plymouth, Mass., and among the bass which fell victims to his skill was one which weighed a plump 4lbs.

E. A. Hitchcock, of St. Louis, whose trip to the Nepissiguit after salmon was mentioned in FOREST AND STREAM a short time ago, has arrived in Boston very much pleased with his outing. The fishing was highly satisfactory, in fact much better than expected. H. C. Litchfield, of Dame, Stoddard & Kendall's, who has helped equip Mr. Hitchcock and his brother, Hon. Henry Hitchcock, with fishing tackle for several years, was the recipient of three fine grilse (through the courtesy of Mr. H.), which were much appreciated. The three fish weighed about 9lbs., and were real beauties.

Squeteague fishing near Warren, R. I., in the Warren River, an arm of Narragansett Bay, has been wonderfully good during the past week. Moses Childs, of Warren, took twenty in one morning a few days ago; and Dr. Hall having occasion to cross the river to see a patient, dropped a line overboard, and while rowing had a strike, and landed one of 3lbs. Some Boston parties will probably go down in a few days, without they get word that the fish have left the river.

The fame of the Megantic Club seems to be spreading to many distant places, and FOREST AND STREAM in its mention of Megantic Club notes has aided greatly in making the club known to sportsmen everywhere. W. H. Barrett acquired knowledge of the club through FOREST AND STREAM at Paris, France, and within a few days has left Boston for a tour of the preserve. This gentleman has fished extensively abroad, and now that he has come so far to make the Megantic trip, deserves success.

Dr. A. R. Brown, of Boston, leaves for the preserve next week. He is a friend of Dr. Geo. Ainsworth, and the two men will, I believe, visit the different club camps together.

The witch hazel divining rod, which was procured to locate water at the Megantic Club house, has performed its mission with glory and honor in spite of the amusement and ridicule excited by its use among many members. During the first trial the wand doubled up at a particular spot into which a well was driven. The result was an abundance of elegant spring water at a temperature of about 48°. Who says a witch hazel wand is no good now? HACKLE.

Death of an Angler in the Woods.

PASSAIC, N. J., Aug. 4.—*Editor Forest and Stream:* In a letter received last week from my wife, who is on the St. Regis River, near Spring Cove, in the Adirondacks, I learn that the skeleton of a man was found in the woods near there, on an old trail which has not been used for four or five years. It had evidently been there a long time, as the flesh was entirely gone and the clothing decayed. A rod, basket, bait box, and rusty purse containing $59 were found near the remains, which would indicate that the man was some sportsman there on a vacation. The proper authorities were notified, and they went in and brought the bones in a box. What disposition was made of them I do not know, as I learned no further details.

It occurred to me to write these facts to FOREST AND STREAM, not knowing but thus the friends of the missing man might possibly learn them. Undoubtedly there are people somewhere who are still grieving over his disappearance. ARTHUR F. RICE.

AN INCIDENT OF PEEWAUKEE.

ONE day, along in the latter part of June, I wrote a piscatorial friend and crank of Decatur, Illinois, that I contemplated a trip on my wheel to some of the excellent fishing resorts of Wisconsin. By return mail I received letters from three members of a club of which I had formerly been a member, who clamorously insisted that I do nothing of the kind, but that I meet them at the Illinois Central depot on the following Sunday morning and accompany them to Peewaukee Lake, Wis. The Decatur contingent consisted of the brothers R. (Dick and Will), Lew G., Rass H., and Dr. R., every man a thoroughbred and all expert anglers except "Rass," who needed instruction and got it. We were determined to be on hand for the early morning fishing on Monday. Our train left Milwaukee at 9:30 P. M. and arrived at Hartland after ten. We routed out the liveryman, reached the lake shortly after eleven, pitched our tent and were in bed by midnight.

Our camp was in a little grove at the lower end of the lake, controlled by a character known to the fishermen of Milwaukee as "Bill Hendricks." "Bill" makes a specialty of catering to camping parties, feeding all comers at the nominal price of twenty-five cents a head and generally on the fish they catch themselves. Nevertheless "Bill" is a good fellow and no man can beat him frying fish—not even the man who catches them.

Will R. and the Doctor had an experience that I believe is worth recording. They were casting live frogs in the hope that the wily (I believe wily is the proper word to use in this connection) bass would so far forget himself as to "bite" at them. After repeated casts the Doctor had a strike, but was pained a moment later to find it was no longer attached at the other end of his line. Mr. R. was just ready to cast, and at the Doctor's request cast at the spot where the walking delegate had recently ordered the strike. His experience was exactly like the Doctor's; he got a strike, but no fish. In the meantime the Doctor had reeled in and found his frog gone. A moment later Mr. R. raised the end of his line from the water and found that his own frog was not only intact, but that a second frog was hooked on below the one originally placed there.

The bass had evidently taken the Doctor's frog, and seeing Mr. R.'s a moment later had undertaken the task of gorging "two at a time," with the result that the first one was hooked out of his mouth and he lost both of them. The Doctor, commenting on the incident later, remarked that it was very strange and worth recording in the FOREST AND STREAM, but that he would a "durned sight rather have caught the fish."

Altogether we had a most enjoyable time, although we did not catch as many fish as we could have wished. The beauty of the lake and its surroundings, combined with the almost perfect atmospheric conditions, however, more than compensated us for our lack of luck. As you well know "it is not all of fishing to fish."

Next year we are going further north, where we can get some trout fishing; we are all fly-fishermen; and bait-casting, while well enough in its way, does not exactly fill the bill with the man who delights to cast the fly.

REX PISCATOR.

CHICAGO, Ill.

THE LEAP OF THE BASS.

AND now the veteran Mr. Hallock enters the lists with an unique theory that the bass leaps from the water to shake off a louse or beetle. This may well be. All or many old soldiers can remember how at times they would have outjumped the record, if they had thought of it, to rid themselves of the marauding and exasperating grayback. They couldn't run away from it, and when on the march they couldn't stop to go hunting. But whether or not Mr. H. is correct there are some sentences in his article which seem to be contradictory. He says, "The arching rod, which is bearing, all the time that the fish holds on to the water, a much heavier strain than the dead weight of the fish"—and just below, "to lessen the strain on the line so as to prevent the suspended dead weight of the fish from breaking tackle or tearing the hook out." If the rod bore a heavier weight than the dead weight of the fish, then why should the dead weight of the fish break the rod?

And again he says, "The bass holds hard until his strength is exhausted, when he relaxes, of course; whereupon he becomes immediately conscious of a diminished tension of the restraining force"—and leaps to shake off the tormentor. Of course Mr. H. meant "eenamost" exhausted; but bass don't wait, as a rule, until that time to jump. They jump a long way before they exhaust, and I don't believe the lift of the rod tempts them to leap. If it did, they wouldn't have time to do anything else. And he says, "Of course the fish comes out of the water with his mouth open." Maybe it's "of course" in the case of a "small mouth," but in the case of the other fellow he'd have so much water in that cavern of his that his momentum would be cut off in its prime.

The truth of the matter, I suspect, is that we all follow the movement of the fish with the rod, when the fish leaps, just the same as we do when it is in the water, instinctively. We keep a judiciously taut line. A fish has sense same as a horse. If the latter gets a bumblebee in his mouth he doesn't shake his tail. And I don't believe a fish reserves all his shake for his aerial demonstration either. I suspect if we could see a fish in his struggles in the water we should see shakings there too. The hook is in his head and he shakes it to get it out. He'd be extremely foolish if he didn't. Much more so than "Pottawottomie's" bass, which, after he had shaken the horrible thing loose, turned round and tackled it again. He was a bigger fool than "Thompson's colt." After all, where would these fishermen have a bass go, if not into the air? Ever think of it? He can't get away from the abominable thing in the water. That's where he got it. Is there any other place for him to go?

Let's get back to hoopsnakes. O. O. S.

Potomac Notes.

THE Potomac water is again clear of mud and the bass have been biting fairly well. Members of the Woodmont Club have had good fishing during the past week. Mr. W. H. Gulick is high rodsman with a 5lb. bass and several 2-pounders. Drs. Harbin and Thompson and son, of the same club, have been fishing with fair success.

The Anglers' Club, at the Great Falls, have not been able to do much as yet owing to unfavorable conditions

of the water, but are looking forward daily to making good catches. Messrs. Otterback and Schneider were up Wednesday, July 31, and caught eleven. Messrs. Coburn and Einstein anticipate a good outing this week.

Some very good reports come from forty miles up stream about Point of Rocks and Tuscarora. At the latter place Messrs. George Barr and P. T. Hall caught eighty-five bass this present week. B. A. BEAN.

WASHINGTON, D. C., Aug. 2.

A SUMMER OUTING.

OPELOUSAS, Louisiana.—The city man who delights in outdoor sports pines, when summer comes, for a vacation—a needed rest from business ties. So it is with the man in the country.

Last summer, being in ill health, I determined to spend a week or more on the banks of a clear, placid stream, fifty miles west of here. A party, consisting of four besides the writer, made all arrangements for the trip, and one damp Sunday evening—the 13th of August—we left the familiar scenes of home and town, and journeyed toward the setting sun.

That evening we drove seventeen miles, and spent the night at the home of Mr. T. C. Chacheré. Before day the next morning we had coffee and prepared to leave. Our route then turned northwest until we struck the Chataignier road, which led us soon to Bayou de Canne, which bayou is skirted by a forest. After emerging from this woods we entered Mammou prairie. A description of this prairie would not be amiss.

Mammou is a prairie about thirty-five or forty miles in length, and from twelve to fifteen in width. It runs north and south, sloping on the east toward Bayou de Canne and on the west to Bayou Nez Piqué. This prairie is an immense track of land, dotted here and there by the homes of the native creole population, who of late years make a living by the production of rice and raising cattle and ponies. In the last few years, however, many people from the North and West have settled here and plant rice. The homes of these Northerners and Westerners can easily be distinguished from those of the natives, for the homes of the two first always consist of two stories and the stable or barn is usually larger than the dwelling, whereas the creoles' houses are most always one-story buildings and only small stables are to be seen. This prairie was once the home of thousands of prairie chickens (pinnated grouse), but when people began to settle there the birds were all killed off.

But to proceed with the narrative of our trip. We arrived at Bayou Nez Piqué at about 12 o'clock. After crossing the bayou we were in Calcasieu Parish, and near a small store. Here we stopped to rest our horses and refresh the inner man. We were at this place about two hours and then left, as we wished to reach Oberlin (a new town on a new railroad). Here we were in a town without hotel accommodations and not a place where we could rest our tired bones, except on the cold, wet ground. I strenuously objected to this, for I had been sick all the summer and was still feeling bad. But the Messrs. Clements, rice buyers, came to our relief and offered us the use of their bachelor quarters, they being at their summer camp on the Calcasieu River. We of course accepted their kind offer and proceeded to the house.

In the morning we left in the rain and proceeded to the Calcasieu River, which was three miles away. The rain continued to fall, and when we arrived at the old camp things, or prospects, looked gloomy enough. It had been raining for over a week, and the other party camped there were disgusted, as the river was too high for fishing. Our arrival caused a change in the weather, for that night the wind set in the right quarter, and when morning dawned the sky was clear and the river fell rapidly.

I have omitted the names of those in our party, and it would be best to mention them now before I get so tangled up that it would be too late. Joe G. was the champion fisherman and cook of the party; his brother, Lee G., the champion lazyman; Pel F., the boss grumbler; Jack C., the undaunted braggart, and the writer—well, it will not do for a man to give himself a bad name.

As I have previously said, the river began to fall rapidly, and Joe G. began to get nervous with equal rapidity. We did not know what was the matter with him, for he acted like an escaped lunatic. Finally our suspense was ended. Joe announced that he was going fishing. We laughed at him, for we thought that the river was too high; but Joe knew better, for according to his own words he had not been fishing all these years for nothing—he had learned that catfish bite in high water.

So Joe, attired in a pair of jeans pants, a check shirt and a wide-brimmed hat, sallied forth, armed with several hand lines and tempting bait to haul out a fish. Joe is always lucky, and he did not fish in vain. We had fish for supper that night. Joe caught it, cleaned it and cooked it, and we acted as spectators to the cooking, and when it was completed we helped to eat it. I am afraid we did such things the most of the time.

Occasionally we would go hunting, but excepting a few squirrels and doves there was little to hunt.

One day a man who worked near our camp went to Oberlin. On his way back he saw three deer in the woods, a short distance from us. The law protecting deer was in force, but Joe and myself determined to go out and see if we could not get a shot, even if the consequences might be bad for us. We struck out for the woods, armed with Winchester repeating rifles. Arriving at a thickety slough, we agreed to separate, Joe taking the east side and myself the west, and to hunt north. We proceeded in this way for a half mile when Joe called me, and on crossing over to his side he informed me that he had seen a small doe get up out of the thicket about 300yds. away and run toward the north. We hunted for her trail, but failed to find it, and were compelled to return to camp with the conviction that we had not broken the law.

A short time after this Pel and Jack went out in these same woods to kill squirrels. They were almost in gunshot of several dwellings and did not expect to find large game. I was at camp, lying down in a hammock, and I heard them shoot three times. I paid no attention to it. In a few minutes they came running into camp puffing like two porpoises. I inquired of them the reason of their haste, but they were too nervous and excited to reply immediately. Finally they managed to tell me that they had jumped a deer in the woods and shot at it about 70yds. with No. 7 shot, and said they had hit it "very badly."

Day after day passed and our food as well as money was getting low, and we concluded to return home. We concluded, however, to have one more fishing, and that one must be taken on Ten Mile Creek, a tributary of the Calcasieu.

So the day before we left for home saw us up and stirring at 4 A. M. We intended going in a large hack, and to get across the river we had to strip off, lead the horses and then haul the hack across. The river was still pretty deep, and the ford where we crossed was up to my shoulders, and I am 5ft. 10½in. The current was strong and it almost swept us off our feet, but we managed to get across without any mishaps. Then we traveled ten miles and found ourselves on the banks of the most beautiful stream we had ever seen. Ten Mile Creek is not over 40ft. wide in its widest places, and its depth varies from 1 to 14ft. The banks and bed of the creek are composed of pure white sand, and the water is so clear that you can easily see the bottom in 14ft. of water. I am told that the purity of the water is wonderful—a goblet full having been left standing for twenty-four hours, and at the end of that time there was no sediment at the bottom of the vessel.

We fished with minnows as bait, and the black bass bit well. At 1 o'clock we had caught about sixty, besides several perch, cats, and one caspergou. A rough road, ten miles long, lay between us and camp, and we wisely concluded to leave, for we did not care to ford the Calcasieu in the night.

I left Ten Mile with regret, for, having always been a lover of nature, I found new beauties on which to feast my eyes. There silence reigned supreme; there nature's handiwork lay in all its grandeur. I sighed, as I often have done, those lines of Cowper's:

> "Oh, for a lodge in some vast wilderness,
> Some boundless contiguity of shade."

But all pleasures have an end, so we left this peaceful spot where rippling waters make music for the silent hills, and returned to the bustle and noise of camp.

That night was the last of our trip. The next morning we prepared so as to leave about 4 P. M. Everyone had clothes to wash, lines to take in, horses to feed, etc., and when 4 P. M. came we had just completed our work, and were ready to bid farewell to Calcasieu and return to home and to work.

We traveled seventeen miles and camped. By 2 P. M. the next day we were at home once more. Each and every one of us felt healthier in body and mind, especially myself. I left home sick, and began to improve at once. I have not had a sick day since then.

I am a poor writer, and have described but few of the pleasures we had on our trip. Every man who loves nature, and delights in hunting and fishing, can easily picture to himself the delights we experienced on our summer outing. T. ANDERSON JACKSON.

NEW ENGLAND WATERS.

BOSTON, Aug. 2.—Mr. L. A. Aspinwell is just in from his vacation on the coast of Rhode Island. Scup fishing he has found to be excellent, having landed 135 in three hours' fishing on one trip and over sixty at another trip. Mrs. Aspinwell took fifty scup at one trip. They describe the fishing as rare sport, but their faces are as brown as one can well imagine. At the mouth of Warren River they had fair sport with tautog, getting some fine fish. Bluefish they found to be scarce in that vicinity, but in the neighborhood of Block Island and Vineyard Sound they learned of several good catches.

Friends of Mr. Henry W. Dodd, who is very popular in the stock market, have been congratulating him on the capture of a 62½lb. codfish, which fell to his hook somewhere between Saturday and Monday last and was safely landed. Mr. Dodd's office is at No. 40 Water street, and on Monday an acquaintance wrote: "My Dear Mr. Dodd, that cod knew there was no water on the Montana line, but he read somewhere '40 water' and so the Old Harry caught him."

After all the trouble in getting started the party for Loud Camp, Bonny River, New Brunswick, will leave Boston this week for that point. The party is made up of Mr. and Mrs. E. Waldo Page, Mrs. S. C. Loud, Miss G. C. Loud and Mr. A. I. McLauthlin. This is Mr. McLauthlin's first trip to the New Brunswick trout waters and he is anticipating a great deal of pleasure. Others who have been there before have put matters in such a light that a much-earned vacation is likely to be a happy one. The trout fishing is reported to be excellent.

More reports of good salmon fishing are in order. Mr. Ed. R. Wharton, of Newport, with a friend, has fished the Upper Restigouche preserve of Mr. Archibald Rogers, of New York, with the splendid catch of seventy-four salmon and nine grilse in twelve days. This is declared by salmon fishermen to be something like the catches of former days in that celebrated river. My informant understands Mr. Wharton's preserve to be above that of the Restigouche Club.

Mr. Charles B. Barnes has fished the Grand Cascapedia this season and made a catch of twenty-two salmon.

Mr. Charles A. Clarke is at home from his spring fishing trip. This trip means more to Mr. Clarke than to most men. In the first place, he takes about five weeks every season, adding more of success to the catches of many years. Starting for the Rangeleys soon after the ice went out, he tried the fishing there with good success. Then he went to the upper waters of the Rangeley system, finally bringing up at King and Bartlett, where he went down the Spencer. He regards this as the ideal spot for big game. Personally, he saw deer till he thought it a task to take pains to look at them. He saw a big moose in the neighborhood of Flagstaff, where he stopped on his way home. He mentions another gentleman, who was at the Big Spencer region at the time he was there, who, with his guide, saw thirty deer in one day. Mr. Clarke asked them if they would not make it twenty-nine, and they allowed that they would, but would not "take off another deer—not even a half one, and make it twenty-eight and one-half."

There are few men that have fished for more years than Mr. Clarke, and few that are always working for the new and novel more. This time he satisfied himself that pickerel can be taken on the fly, and with a good deal of sport. At Flagstaff Pond he landed twelve pickerel in one day, and every one on the fly. He mentions working hard to complete his dozen; but he was bound to accomplish that feat, and he did it. He used the scarlet-ibis, and describes the catching of the pickerel as good sport.

Mr. N. G. Manson, with his friend, Ezra P. Howlett, is out from Camp Leatherstocking, Lake Molechunkamunk. He describes the trip as a delightful one, though they did but little fishing. On the way out from the South Arm they were just behind a cow moose and two calves, which they had the pleasure of seeing, though only a glimpse was caught. The deer are more plenty than ever, in the opinion of everybody Mr. Manson talked with.

Mr. J. Parker Whitney made a flying trip to New York last week, stopping in Boston. He is spending the summer at his Mosquito Brook camps, Lake Molechunkamunk. He mentions the surroundings of that region as more beautiful than ever. For one season at least the lake is being kept full of water by the Union Water Power Co., and the shores are rapidly improving.

Aug. 3.—Mr. John Fottler, Jr., is back from the St. John's at Gaspe, P. Q., where he and Mr. I. W. Adams own what would seem to be a most excellent salmon right. Mr. Fottler was accompanied by his wife and children, as usual. For his guests he had Mr. Arthur Barney and wife. Mr. Adams's guests were Mr. Henry Sampson, of New York, and Mr. Barbour, also of New York, and well known in the manufacture of thread. When Mr. Adams left the river, which he was obliged to do earlier than he wished, Judge Gray, of the Supreme Court, with his most estimable wife, came in. Mrs. Gray did that which few ladies have ever done. She hooked and killed a big salmon without aid. The Judge also took a number of fine fish. Mrs. Barney killed a salmon that had been hooked for her, and Mrs. Fottler has several times accomplished this feat. The party had taken, when Mr. Fottler left the river, upward of 100 salmon and a great many fine trout. But it is a rigid rule of that preserve that no fish shall be taken that are not wanted in camp or to send or take to friends. No fish are allowed to be taken to be wasted. Often more fish might have been taken, but they were not needed and so fishing ceased.

But at times the fishing was dull, owing to the extremely bright weather. For many a day no salmon would rise. At such times the salmon could be seen in the pools—great, noble fish. Mr. Fottler counted a great number that were not taken. He feels sure that over 200 salmon are left as breeding fish—a very good stick indeed. Twenty years ago, according to guides and fishermen, if fifty or seventy-five fish could be counted at the close of a season left in the pools, it was thought to be a great many. This shows how the fishing has increased under protection and care. One great advantage this river has. The owners have bought off all the netters below them, and one of the principal netters formerly they have hired as a protector. Mr. Fottler believes that this plan is working most admirably. Since he first went on to the river in 1891 the fishing has more than doubled. He is greatly delighted with their river. He comes back to business having gained in flesh and learned to pole a canoe through the rapids, even where the river falls at the rate of 25ft. in a mile. But one catastrophe, that came near being a serious one, is set down to the credit of the gentlemen of the party. Fortunately the ladies went around the bend and the terrible eddy below, or were able to pass it in safety. But the canoe in which was Mr. Fottler was upset and drawn under the logs and driftwood that partly cover the eddy in the bend—drawn under so hard that it took two men a couple of hours to get it out. The men in the canoe were unceremoniously dipped, and they had to cling to the driftwood for life or be drawn under, where went part of their rigging, their fish and some of their clothing. They worked to the shore more dead than alive through the seething water and logs and driftwood.

Mr. Edwin C. Stevens is back from Lake Dunmore, Salisbury, Vt., and has broken the record for big pickerel. He brought home a pickerel on Wednesday that weighed 8½lbs. This monster he caught the day before. He was fishing with a small trout for bait. He has never heard of a bigger pickerel, though the lake is noted for big ones. The fish was on exhibition at 18 Central street all day the day after Mr. Stevens's return and attracted a good deal of attention. SPECIAL.

The World Do Move.

TOLEDO, O., July 27.—*Editor Forest and Stream:* Toledo is a city of something less than 150,000 souls. It is noted as being the second largest railroad center in the United States, and from the fact that the principal occupation of the majority of the adult male inhabitants is fishing. Many of them, it is true, follow other callings enough of the time to provide groceries, shelter and wearing apparel; but if you scratch a banker, a jeweler, a newspaper man, a railroad employe or a grain dealer, ten to one you find a fisherman. Going fishing is a necessary and serious affair, and not to be interfered with by minor matters. Witness the following card, which is taken from the advertising columns of one of the leading newspapers, where it appears in some two inches of bold display type:

C. L. LEWIS,

The Photographer,

Will be out of the city this week and return Saturday, the 27th.

GONE FISHING.

If this is not conclusive evidence that Toledo is an enterprising, progressive town, freed from the narrow and antiquated traditions of the musty past, where the people know what they want to do and then go and do it—why then, we don't know where enlightened public sentiment is to be found. "The world do move."

To FOREST AND STREAM,
New York City.

HINTS ON ANGLING IN CANADA.

Editor Forest and Stream:

Striped bass, or, as they call them in this country, "bar," are rather plentiful at present in the St. Lawrence, where they run up as far as the Isle of Orleans. The French Canadians fish for them in rough weather and heavy water with heavy hand lines, and consider it good sport. At Isle Madame, some thirty miles below Quebec, a party of four took 187 fish in this manner in a single tide one day last week.

From Lake St. John I learn that the ouananiche fishing in the Grande Décharge continues good, the fish being naturally somewhat smaller than those taken in June, but still affording admirable sport. It is evident that there is much yet to learn about the movements of these fish. In the end of August last they surprised the guides and old habitues of Lake St. John by rising at the fly in the lake itself, especially in the vicinity of the Island House, and at a time when the rising fish were supposed to be well up the river. This year the end of July has seen a large number of them taken both with fly and spoon near the Island House, and several days ago a catch of five was made with the fly in front of the village of Roberval. For the next three weeks, however, I counsel anglers who desire the best form of the sport to take canoes and guides from Roberval and ascend to such localities of the northern tributaries as they may advise. During the last ten days of August and the first half of September no better place can be found for ouananiche than the vicinity of the lower falls of the Metabetchouan. It is during that season that the woods and waters of northern Canada are probably seen to their best advantage. The midsummer plague of flies has then become a thing of the past, and while the weather is usually soft and balmy right up to the end of September and exceedingly pleasant for camping out, nothing can surpass the loveliness of the forests in their autumnal tints. This is, too, the season of all others for trout fishing in Canada, when the largest and reddest of the trout of the fountain rise freely to the angler's lures.

The last of the salmon fishermen will soon have returned from the northern rivers, but some went down even upon the last trip of the steamship Otter. Excellent reports have been received from all the north shore streams, especially from the Natashquan, the Moisie and the Trinity. The run of sea trout has been very large this season and so was the size of the fish. Some of the largest I have ever seen, 8 and 9lbs. in weight, were sent me early last month from the Trinity by Messrs. Edson Fitch and J. D. Gilmour, of this city.

E. T. D. CHAMBERS.

QUEBEC, Aug. 2.

NOTES FROM FISHING WATERS.

Correspondents are invited to send us notes of fish, fishermen, fishing conditions and fishing facts, so that they may reach this office on a Monday.

MOUNT KINEO HOUSE, Moosehead Lake, Kineo, Me., July 30.—We enclose you under separate covers photograph of eleven trout taken about fifteen miles west of Moosehead Lake by S. H. Watts and G. A. Worth, weighing 36½lbs. They are all brook trout and ranged in weight from 2½ to 4½lbs., all being caught in about six hours' fishing. Does not this catch average higher than any taken in the Rangeley Lake district? MOOSEHEAD.

TROUT LAKE, Wis., July 31.—Having seen your notice at Camp Franklin Hotel, that fishers were requested to report their luck to your paper, I take the liberty to write to you this letter: I came here July 20. Have been fishing, more or less, every day, and with pretty good success. I have been catching daily from eight to fifteen fish, consisting of salmon trout, pike and bass, weighing from 2 to 18lbs. July 30 I caught a monster salmon trout, weighing 18lbs.; it is 3ft. long and very well formed and proportioned; it is the largest trout caught this year. July 29 I caught a 7-pound muscalunge. All these fish were caught on hook or spoon and line. D. G.

ASBURY PARK, N. J., Aug. 2.—Ocean fishing at this point is not up to June in interest to the angler. Other than an occasional bass and a few kingfish the sport is rather tame. Dr. H. P. DeVoursney, of New York city, 15¼lbs.; George W. Savage 19 and 20lbs. respectively, James O'Brien 10½lbs., are all the records given us in two weeks past that are worthy of note. In consideration of this fact attention is turned to the rivers and bays, where good catches are being made daily.

In company with Dr. DeVoursney and two friends I visited Barnegat last Thursday evening; fishing the tides we took in 80 weakfish. Night fishing for these trout of the salt water is most enjoyable sport when properly conducted. Fish with neither float nor sinker; allow the bait to pass out with the tide until a distance of 50ft. or a little more is obtained there; block the reel with the thumb; the force of current will raise the leader and bait to the surface. When the rise is made it is done in the same manner as his compeer of the brook and lake practices, "all in a rush," and with comparatively light tackle the sport is A 1. It is only in the night, when quiet is the order of things, that this system can be successfully practiced, as during the day they feed more at the bottom. Then a float and lightly-leaded line is the proper combination.

LEONARD HULIT.

NEWPORT, Vt., July 29.—Mr. Geo. Schaefer, who is staying at Owl's Head Hotel, Lake Memphremagog, succeeded in landing on July 27 the largest lake trout of the season, weighing 22lbs. This same gentleman also landed two smaller fish, weighing 12lbs. each. The former fish Mr. Schaefer will ship to Holyoke, Mass., for his brother fishermen to admire. 12, noon—He has just returned from a three-hours' fish with six lake trout weighing 60lbs.

A Big Muscalonge on a Light Rod.

DURING the latter part of last month Messrs. Von Lengerke & Detmold received the following letter from Mr. Benjamin R. Gould, of this city, dated Gananoque, Ontario, Canada, July 19: "I inclose in this letter a bass hook and single gut leader, bought at your store, with which I yesterday landed a muscalonge on the St. Lawrence River, about eight miles from here. The fish was caught on an 8oz. lancewood rod bought from you by Mr. F. P. Delafield last Saturday. It weighed 41lbs. 9oz. four hours after being taken from the water. I played it for an hour and a quarter, during which time it nearly bit through the ganging on the hook, as you can see. There has never been any such fish caught here on a light rod before, and it speaks well for your tackle. We have had him photographed and will send you one of his portraits when we get them." To land a 41lbs. 9oz. muscalonge on an 8oz. rod and single gut leader is of course a record for the tackle used, but there must also have been the right man in the right place—at the butt of the rod.

The White Bass.

CHICAGO, Ill.—In FOREST AND STREAM of July 27 "Hackle" speaks of the white bass and quoting his informant says "they resemble the black bass in every respect but color." The white bass is very common in the streams of the Mississippi valley, but resembles the black bass but very little. The body is much more oval and the mouth much smaller. The color in clear water is a silvery white, marked on the sides with a number (seven I think) of dark horizontal lines, the lower two or three of which are interrupted or incomplete. On the Illinois River at certain seasons of the year they are taken in large numbers, generally with a small spoon. The best places to fish for them is at the Government dams at Campsville, Meredosia or just below Pekin. They are not gamy, but if you want to catch fish, and go at the right time, you can get a surfeit of white bass at the places mentioned.

Nov. 11.—Hempstead, L. I.—National Beagle Club of America, fifth annual trials. Geo. W. Rogers, Sec'y, 250 West Twenty-second street, New York.

Nov. 18.—Eastern F. T. Club, at Newton, N. C. W. A. Coster, Sec'y, Saratoga Springs, N. Y.

Nov. 25.—Continental Field Trials Club's quail trials at Newton. P. T. Madison, Sec'y, Indianapolis, Ind.

Dec. 2 to 4.—High Point, N. C.—Irish Setter Club's trials. Geo. H. Thompson, Sec'y.

THE DOG'S IMMORTALITY.

ALBANY, N. Y.—*Editor Forest and Stream:* Among the many good things so pleasingly presented each week in the columns of FOREST AND STREAM, the review of the Rev. Charles Josiah Adams's book on the immortality of the dog excited in particular my interest. The title of his book, "Is Man Alone Immortal?" gives the key to the matter treated of in the text. The Rev. Mr. Adams's plea for the dog and the dog's immortality present a depth of human feeling and liberality of ideas of which there are none too much in the world of to-day.

In your issue of last week there were quoted some sayings which were intended to be thoughts of wisdom briefly stated, and which were attributed to a clergyman. Your comment on them was that his sentiments, so expressed, were different from those expressed in the work first mentioned, that is, "Is Man Alone Immortal?"

When two good men differ so positively on the same subject, one on which they are thoroughly conversant and therefore qualified to teach others, how is the ordinary reader to form an opinion? He is either mystified or at a halt, or gives up the matter as being beyond his comprehension even if he have the time to struggle with the intricacies and contradictions presented by opposing arguments. When on the same matter there is yes and no, one must be wrong.

Nevertheless the whole matter is most interesting, even if vague and unconvincing. The Rev. Mr. Adams, as I understand his evidence—for by introducing certain matters to substantiate his views they are evidence—attempts to prove that because the dog has certain traits and powers in common with man, such as joy, sorrow, anger, fear, sympathy, affection, memory, reflection, etc., that therefore the dog is immortal. This conclusion seems to me to be arbitrary in a manner, as the premises he lays down do not warrant his conclusion, since all his premises are of mortality alone, while his conclusion is immortality.

To the just, the observing and the intelligent man it is easily apparent that men and dogs and many other animals have many things in common. In the life of all animals there is much which is homologous. Their manner of living or dying is much the same, while they manifest many psychical similarities. The evidence introduced is to establish a truth, and as it is introduced as evidence, it is proper to analyze it, so that its soundness can be established or its weakness demonstrated.

As I understand the Rev. Mr. Adams's contention, he attempts to prove that the dog has the same organic life as man, and that his mentality, as proved by intelligent action, is much the same as is that of man. Granting the similarity of physical life and manifestation, I think there is such a wide difference in the mentality of man and dogs and man and all the lower animals as to destroy all analogy from which to draw so broad a conclusion. The circumstances which match each other are too few and too unimportant for the conclusion, and there are many circumstances in man's mentality which have no counterpart in that of the dog. For instance, the power of speech is absent in the dog; the imagination, whose grasp is but little short of infinity in man, is absent in the dog. The latter so far as we know has neither conception nor longing for a future state. All the beliefs of savage or civilized man, running so far back in the past that they are beyond history or tradition, show that there was an innate feeling or concept of immortality prior to teaching or evidence; and that there has always been a wide gulf between the mentality of man and the mentality of the lower animals. The dog being deficient in the powers of imagination and being of an inferior intelligence, which precludes his understanding the glories of a future life, and being qualified by his instincts to lead solely an animal existence—for the qualities he possesses have all a direct use in his animal existence with no reference to a future life—he, from the absence of the qualities of imagination, of abstract reasoning and innate inspiration, may be cut off from the immortality which man claims as his exclusive and distinguishing superiority over all animals.

The imagination of man, which soars through the boundless realms of the universe, is of no material benefit to him in this world; therefore, as nothing is made in vain, it must be taken as an ethereal bond which unites him with immortality. As the dog is devoid of imagination, and as his qualities are all useful in his efforts to exist and therefore have a direct use to him in this world, no sound conclusion can be drawn from them as to a life hereafter. They are all material qualities, and from such it is not sound deduction to argue infinity.

It is possible that my remarks concerning the innate and spiritual belief of man, existing in all lands and all ages, may have been too exclusive, since the dog entered into the religious belief of the Indian's hereafter, in that he was a companion in the ghostly land where phantom deer ran in the shadows and light of phantom woods and fields, the spirit land which he called the "happy hunting grounds." The hieroglyphics on the old Egyptian monuments prove that the dog was considered as being an animal of more than passing importance, and his place was not inconsiderable in the heathen mytholog.

Taken from any point of view, the subject is one of much more than common interest, and is well worthy of more earnest investigation and discussion.

My own aim in writing this is not to show that the Rev. Mr. Adams's argument is wrong, but rather to show that there is a great hiatus between his premises and his conclusion. I trust that he may write more fully on this subject, for I think he is recognized as the ablest and most fearless of its champions. EGO.

Irish Setter Trials.

PHILADELPHIA.—*Editor Forest and Stream:* The secretary of the Irish Setter Club, Mr. Geo. H. Thomson, has already claimed dates for the club's fourth annual trials. In order for those interested to know what it is proposed to do, I would submit the following programme, and if any charges are desired I trust the views of those interested will be made known at once:

The plan under consideration is as follows: To hold field trials for Irish setters only, at High Point, N. C., on Dec. 2, 3 and 4, immediately following the Continental trials at Newton. Two stakes to be run—an All-Age and a Derby. The prizes to be sweepstakes, in addition to such others as we may be able to secure. The entrance fees to be $10 to enter and $5 to fill in each stake (not $5 to enter and $10 to fill). Derby entries to close say Oct. 1, All-Age Stake to close say Nov. 15. There to be one judge, and the trials to be run under practically the same rules as those of the Continental field trials. It will take perhaps a couple of weeks to decide these questions; but thereabouts, or soon after, the trials will be properly advertised and entry blanks issued. In the meantime, Irish setter owners will know what to prepare for. They have ample time to prepare both their Derby and All-Age entries, and they can send their dogs at once to the trainers.

The time of holding the trials was purposely fixed soon after the Continental trials so as to allow the handlers who are coming to Newton to go a few miles further and run a dog in our trials. There are many trainers who, if they only would, could readily add one or two Irish setters to their strings and run them at the Irish setter trials at High Point. I have a sort of an idea that there are a good many handlers that know of say one good Irish setter, not, of course, good enough to run against the English setters, but sufficiently good to put all other Irish setters into the shade, and I do hope they will bring him along. We will do our best to give him a fair show, and will not begrudge his winning. Our prizes of course will not be as good as we would like, but they will be as good as we can possibly make them. We want the aid of every one to make these trials a success and ask all to help.

G. G. DAVIS.

Important To Collie Breeders.

HEMPSTEAD, L. I.—*Editor Forest and Stream:* Mr. J. Pierpont Morgan, Esq., offers the following special prizes for competition at the Bench Show of the Westminster Kennel Club in 1896: A Silver Cup to cost $50, for the best American-bred collie, born in 1895, exhibited by a member of the Collie Club. A free service, by either Sefton Hero or Rufford Ormonde, to the best bitch in the open class owned by a member of the Collie Club, and the same in the novice and puppy classes. A bitch winning in one of these classes cannot compete in either of the others, the service going to the next best bitch.

A. D. LEWIS, Secretary of the Collie Club.

Continental Field Trials Club.

INDIANAPOLIS, Ind., Aug. 3.—All of the entries in the Continental Field Trials Club Chicken Derby have been carried through second forfeit except C. G. Stoddard's English setter Chloe S. and H. R. Edward's English setter, Harwick. I made a mistake in entering Dr. O. Totten's pointer Sappho in this Derby, as the dog was not intended to be entered. This leaves 48 still in the stake. P. T. MADISON, Sec'y-Treas.

POINTS AND FLUSHES.

Hydrophobia and Rabies.

If any evidence of the popular fallacy concerning hydrophobia and rabies were needed, abundance of it can be found in the daily papers, from the beginning to the end of summer time. The popular belief seems to be unalterably fixed on hot weather and rabies being related to each other as cause and effect. It seems to be useless to reiterate, in season and out of season, that hot weather is not productive of rabies in the dog; that there are more cases of that disease in cold weather than in hot weather, though at any time the disease is extremely rare; that most of the so-called cases of rabies are not rabies at all, but are nervous diseases from which dogs suffer in hot weather—however often all this may be repeated, the public at large holds to its old and cherished beliefs that the reign of the dog star has some baneful effect on dogs, though the dog star has no effect whatever. If a dog has a fit, or is suffering from any violent nervous disease in hot weather, the average citizen is pleased to class all such different diseases under one head—madness.

All the authorities are unanimous in that the disease can be transmitted only by inoculation from a bite, or by having the virus placed directly in the blood by mechanical means. There is a popular error concerning the effects of the disease in dogs. One is that the dog cannot drink water; that indeed the sight of it will make him furious and bring on a convulsion of madness. The authorities maintain that such is not the fact. Dogs suffering from the disease have been known to drink water, and have shown no fear of it. In man it is conceded that the effects are different, as when suffering from the disease he shows a fear of water. It then is called hydrophobia. The disease when in the dog is called rabies.

It is said that the disease is very rare in hot countries, and in Constantinople and other Mahommedan cities, where the dogs act as scavengers, ill and foully fed and worse housed—conditions under which one would think that rabies would flourish—the disease is almost unknown.

As the dog is quite as likely to have the disease in cold as in hot weather, the numerous laws and precautions put in action in the summer time are due to ignorance of the true cause and status of the disease. The extra precautions do much to excite alarm, which is the parent of exaggeration. Though in fact no more dogs go mad in summer than in winter, one rarely reads of such an occurrence in winter time, while the newspapers mention cases innumerable in summer, which goes to show how fright and fancy, founded on ignorance, will cause silly exaggeration.

Nor does the disease come on suddenly and spontaneously, as is commonly supposed. It can only come from the virus directly inoculated in the blood, and then a number of days are required for its development. Dogs have been subjected to the most thorough tests, many of them cruel, such as a prolonged hot temperature, extremes of temperature, restraint, starvation, suppressed sexual appetite, etc., but none of them have ever been known to cause the disease; so that it may safely be said that it is never spontaneous.

The poison is dormant a longer or shorter time after it enters the blood of the dog, generally a few days, though on this point authorities disagree, some stating that this stage of development is six to ten days, others a longer time. Ashmont says: "The two extremes in a dog, which have been reported, are, the shortest, one week; the longest, eight months." At what period the dog can at first communicate the virus by bite is not determined. Every bite is not necessarily followed by a development of the disease in the person or animal bitten. It is said that about sixty-seven per cent. of dogs bitten develop the disease, though Youatt gives it as being much less. He says: "The following observations and experiments respecting rabies, by Dr. Hertvich, professor at the Veterinary School at Berlin, are worthy of attention. (1) Out of fifty dogs that had been inoculated with virus taken from a rabid animal of the same species, fourteen only were infected. (2) In the cases where inoculation had been practised without effect, no reason could be assigned why the disease should not have taken place. This consequently proves that the malady is similar to others of a contagious nature, and that there must exist a predisposition in the individual to receive the disease before it can occur. In one experiment, a mastiff dog, aged 4 years, was inoculated without exhibiting any symptoms of the malady; while seven others, who had been inoculated at the same time and place, soon became rabid. Several of these animals had been inoculated several times before any symptoms showed themselves, while in others, on the contrary, once was sufficient. (3) It appears that in a state of doubtful rabies one or two accidental or artificial inoculations are not sufficient to create a negative proof of its existence. (4) The disease has never been communicated to an individual from one infected by means of the perspirable matter; this, therefore, is a proof that the contagious part of the disease is not of a volatile nature. (5) It does not only exist in the saliva and the mucus of the mouth, but likewise in the blood and the parenchyma of the salivary glands; but not in the pulpy substance of the nerves. (6) The power of communicating infection is found to exist in all stages of the confirmed disease, even twenty-four hours after the decease of the rabid animal. (7) The morbid virus, when administered internally, appears to be incapable of communicating this disease; inasmuch as of twenty dogs to whom was given a certain quantity not one exhibited the least symptom of rabies. (8) The application of the saliva upon recent wounds appears to have been as often succeeded by confirmed rabies as when the dog had been bitten by a rabid animal. (9) It can not now be doubted that the disease is produced by the wound itself, as was supposed by M. Girard, of Lyons, not by the fright of the individual, according to the opinion of others, but only from the absorption of the morbid virus from its surface. (10) Several experiments have proved to me the little reliance to be placed on the opinion that in those dogs who become rabid after the bite of an animal previously attacked with this disease the contagious effect of the saliva is not continued, but only exists in those primarily bitten. (11) During the period of incubation of the virus there are no morbid, local or general alterations of structure or function to be seen in the infected animal; neither are there any vesicles to be perceived on the inferior surface of the tongue, nor any previous symptoms which are found in other contagious diseases. (12) This disease is at its height at the end of fifty days after either artificial or accidental inoculation; and the author has never known it to manifest itself at a later period. (13) It is quite an erroneous idea to suppose that dogs in a state of health are enabled to distinguish, at first sight, a rabid animal, inasmuch as they never refuse their food when mixed with the secretions of those affected."

The symptoms after inoculation, as described by Youatt, are as follows: "The early symptoms of rabies in the dog are occasionally very obscure. In the greater number of cases there are sullenness, fidgetiness and continual shifting of posture. When I have had opportunity, I have generally found these circumstances in regular succession. For several consecutive hours perhaps he retreats to his basket or his bed. He shows no disposition to bite, and he answers the call upon him laggardly. He is curled up and his face is buried between his paws and his breast. At length he begins to be fidgety. He searches out new resting places; but he very soon changes them for others. He takes again to his own bed, but he is continually shifting his posture. He begins to gaze about him as he lies on his bed. His countenance is cloudy and suspicious. He comes to one or another of the family and he fixes on them a steadfast gaze as if he would read their very thoughts. 'I feel strangely ill,' he seems to say; 'have you anything to do with it? or you? or you?' Has not a dog mind enough for this? If we have observed a rabid dog at the commencement of the disease, we have seen this to the very life." The author then goes on to mention the stages of delirium—springing at phantom enemies furiously, watching suspiciously inanimate bodies, though a word from his master dispels his illusions and restores his mind momentarily. But wildness and terror of imaginary foes return, and he ferociously springs forward to meet them. His countenance changes; he is anxious, or inquiring, or threatening, according to his temperament. The eyes are bright and dazzling—fiery. Great restlessness sets in; a shifting from corner to corner; rising up and lying down; fixing his bed with his paws; shaking it with his mouth; raking it in a heap, then trundling it out of the kennel. He reaches eagerly for some imaginary lost thing.

He shows more than usual affection for his owner. Vomiting sometimes sets in; the appetite is depraved; the sublingual glands become inflamed. The froth so often described as covering the mad dog's mouth is entirely fabulous. The saliva becomes scarcer, adhesive and thicker. He tries to remove it with his paws. Suffocation threatens. His thirst is great. In dumb rabies the jaw and tongue are paralyzed. The spinal cord is affected. The howl and bark are seldom heard. The voice is hoarser. He has a longing to wander. Living things in his path he snaps at. If he is naturally ferocious he seeks combat. If he is seen in time he dies generally from violence at the hands of some one; or if he is not seen he dies soon from the violence of the disease. In any event the disease has well developed stages, comes on with symptoms which are unmistakable and never comes in the violent, spontaneous manner as commonly supposed.

A pathetic story of a dog's intelligence and devotion to his master is told in the columns of the daily press. Charles Gillen was in Montana in the Big Horn country purchasing sheep and cattle. About two miles from a ranch his revolver, which he carried in his "chaps," was accidentally discharged, the bullet penetrating through his body. He fell from the saddle in a faint. When he revived he ordered his trained shepherd dog to drive his horse to McVey's ranch, the nearest ranch to him and the most convenient from which to derive assistance. The dog seemed reluctant to leave his master, but on being scolded he started the horse toward the ranch. On the way the horse got mixed with a band of horses, the dog cut him out and ran him in a gallop to the ranch, where he attracted attention to himself and the riderless horse. The dog by his manner showed that he desired to lead the way back. The dog's haste was so great that the horseman, who had mounted to follow him, had difficulty in keeping him in sight. The wounded man was still alive when the party reached him.

No business was transacted at the meeting of the National Beagle Club of America, held on July 30. Six members were present. Mr. George W. Rogers, the secretary, writes us as follows: "It is hoped that as many members as possible will attend the adjourned meeting on Aug. 13, as the committees for the coming field trials at Hempstead, L. I., will be selected."

There is a big black and white Newfoundland dog strutting around Columbia street, which is being fed with cookies by all the children in the neighborhood. He became a hero Monday by jumping into the Atlantic basin, at the foot of Sackett street, and hauling little 8-year-old John McGuinnis from the water. The dog's name is Grover. Grover was taken to the basin by his master for his daily bath. After the dog had his swim and was trotting up the street behind his master there was a cry from the boys on the dock. The McGuinnis lad had been pushed overboard by one of his playmates. Hammerstadt, followed by the dog, rushed back to the dock. The boy was struggling in the water, far from the pier. Grover plunged into the basin and swam to the boy. Not being able to grab the lad at first the dog pushed him under the water. When the boy came up again Grover caught hold of his jacket and started to tow him ashore. Young McGuinnis reached over and put his arms about the animal's neck. Although a swift current was running at the time the dog continued steadily to the dock and landed his burden safely. Grover has never before acted as a life saver. He is an intelligent looking dog and has a noble head.—*Union and Advertiser.*

Reports of cases of dog poisoning are numerous in the neighborhood of Mount Hope in the Twenty-fourth Ward. Fifteen were poisoned last week. August Loucks, of Anthony avenue, lost a St. Bernard valued at $500; Chas. Peterson lost a valuable Newfoundland and J. Mark a collie.

An adjourned meeting of the National Beagle Club of America will be held at the rooms of the A. K. C., 55 Liberty street, Tuesday, Aug. 13, at 3:30 P. M.

From reports in the daily press we learn that Dr. F. W. Kitchel, Perth Amboy, famous as a dog fancier, is doing good work as president of the Society for the Prevention of Cruelty to Animals. He was recently officially quite active in bringing to prosecution a man who had inhumanly treated some horses. The conviction resulted in a fine of $25.

Dr. J. S. Niven, well known as a bench show judge and fancier, made a brief call in Forest and Stream office on Thursday, Aug. 1, a few hours before his departure for England. He will be absent about a month. He informed us that the Montreal show promises well.

"The Rules, Standard and Stakes of the American Fox Terrier Club" is the title of a most artistically arranged work, full of information. It contains a list of officers and members, rules, points of the fox terrier, a list of winners of the Grand Challenge Cup, and the conditions of the numerous stakes. Harry W. Smith, Sec'y, Worcester.

White Wonder, the bull terrier sold to English purchasers some time since, is dead. A *post mortem* showed that a cork lodging in the dog's stomach was the cause.

There are men who confound malicious cruelty with fun and humor. The following is a case in point: "I've a great scheme," said an ingenious Orange county man to a New York *Sun* reporter. "There's no patent on it, either. It is just a cat and dog teaser, and it beats anything I ever saw for the purpese. I got an old stove zinc and laid it on the ground near the back door. Then I put a wooden bucket of milk on the zinc. In the kitchen I've got a battery of two gallon cells and a four-inch coil with a vibrating circuit breaker. One wire is connected to the zinc plate and the other terminates in a piece of metal in the milk. You just ought to see the effect. A cat comes along, smells the milk and goes for it. She just touches the milk with her whiskers and looks puzzled when the slight, tingling shock is felt. Then she returns to the attack, and touches her tongue to the surface of the milk. Her hair rises then and she emits a yell of rage or pain as she springs away from the pail, and then turns to look back at it. I have seen the same cat take two shocks within as many minutes, and then act as if she wanted to try it again, but didn't dare to. With dogs it is different. The dog steps upon the zinc, lops his long tongue in the milk, and then turns a back somersault. He wants no more than that, but tucking his tail between his legs streaks out of the yard as quickly as possible. If you want to try it you needn't use a whole pail of milk. Just take a crockery dish and it will answer just as well. Milk is cheap up our way, you know, and I took the first thing that came handy."

The Canadian brethren are not without legal troubles in respect to their dogs, similar to those of the States. From the Toronto *Globe* of July 27 we clip the following: "A case which worked some hardship for one owner, but which may result in ultimate benefit, occurred last night. Mr. James Douglas, the well-known Irish setter fancier, was walking along Adelaide street with Toronto Blaney at his heels when the city dog-catcher gathered the dog in. No attention was paid to Mr. Douglas's statement that he had a kennel license, though the constable on the beat and Dr. Campbell supported him. Blaney was carted off to the pound and shut up with a lot of worthless curs, where he may contract mange or some other disease, and just now the dog is being got into condition for the bench shows. Mr. Douglas pays $10 for a kennel license for his few registered dogs, and he intends to find out if this gives him any protection for them. He will put the matter into the hands of his solicitor this morning and the result will be that holders of kennel licenses will find out where they stand."

The following is an extract from the letter of an Anglicized Japanese, whose innate love for field sports struggled with inadequate language to express it. We are indebted for it to the kindness of our correspondent, "Dick of Connecticut:" "The English setter are of spiritedly much workers which are largest in broadness of the fields which they in eminenced search for the 'Bob White,' which is the name called the really quail. The sportsman who is much knowledge of the setter makes of rejection to the pointer which has many friends. Setters and pointers which in difference of hair only, and then of much alike all the same. The fun of much catching the quail are grand excitement. He is a very fly fast, and the man which shoot quick without catching the brown study, and the quail he in a heap of featchers is died in the atmosphere. The dog he is then said, 'Fetch,' and he arriving with the bird tenderly. The sportsman which in his retrievement of the dog makes sometimes of fifty and one hundred larger of quails in a best day. The man though of shoot for nice sport, of sell his game sometimes which his friends call bad inconsiderate, yet when he gives it away it is then appellation the refinement. The gun and dog give much walk, and nobility of health beyond eyes brightness and glowingly color. It is what of also the American exclaim nature's beautiful."

"Papa!"

"What is it, Johnnie?"

"I read a poem in my school reader which spoke of 'dogs of high degree.'"

"Well?"

"Papa, does that mean Skye terriers?"—*Pittsburg Chronicle.*

Mr. J. B. Stoddard, under date of Aug. 1, writes from Oak Bluff, Man., that he has a large string of Derby entries and is working early and late to get them in shape to start. He says that he finds birds none too plentiful. Through the kindness of the Government officers the Continental Field Trials Club will have the same courtesies shown those who enter from the States as are shown to the home clubs under similar circumstances. Much interest is manifested and the trials promise to be a great success.

Mr. Wm. Ellery Bright, of Waltham, Mass., will judge Boston terriers at the R. I. S. F. Association's bench show. Gordon setters will be given the same classification in the prize list as are given to English and Irish setters.

The enterprise and energy of the Swiss Mountain Ken-

nels in importing the St. Bernard Leed's Barry is a noteworthy event in the canine world, at a time, too, when dog interests are quiet. That he withstood the hardships of ocean travel so well is a matter for congratulation. His weight indicates that he is of the big fellows.

The premium list of the Rhode Island State Fair Association is now ready for distribution.

Chas. W. Tway, Michigan City, Miss., announces in our business columns that he can board and train four more dogs. 19 Manning Arcade, Toronto, offers cockers. E. H. Bragg, N. Sidney, Me., offers beagles. Warwick Kennels, Bridgeport, Conn., offer English setters. M. M. Cheney, Bennington, N. H., offers coon dog. Box 2181, Boston, Mass., wants well broken setter or pointer. Dr. J. L. Cornell, Centreville, Md., offers Chesapeake Bay dogs.

English Setter Type.

BRIDGEPORT, Ct.—*Editor Forest and Stream:* Breeder, in your issue of Aug. 3, tells some plain truths when he says: "Many of our breeders began breeding as they might begin any new venture, merely buying a couple of dogs and commence breeding;" but he hits them rather hard when he says if their breeding proved a failure, the pedigrees were a success, and they just sold pedigree with dog attached. How true this is of most any breed taken up by Americans, except perhaps the cocker spaniel, which breed perhaps of all others is a credit to the American Spaniel Club and its supporters; for these show a type and family likeness not approached by any other breeds exhibited at our shows.

If this can be attained by the united efforts of breeders interested in cockers, why cannot it also be accomplished by breeders of setters? And what has been the means of producing this effect? To no small degree, I believe (and I am open to correction if wrong), it has been brought about by their persistent and united efforts in naming a number of judges who were united on the type desired, and encouraging bench shows to appoint one of their number by the awarding of special prizes if the bench show committees appointed a club judge.

Why cannot this be done with the English setter? It can, if those interested in the welfare of the breed would get together, meet each other half way, drop the dog politician and formulate a standard, if one does not already exist, and then judge by it irrespective of who owns the dog, or whether he be the owner of one or a hundred.

"Breeder" says that I cite the judging at New York this year as an example of the disregard of type. I think not. If I mentioned any year it was in 1890. This past year I think "Breeder" or any one else who saw the first four dogs will say they showed type, and English setter type at that. They might have been placed different, but nevertheless they were all dogs fit to hold either one of the four positions one or the other of them held; but I did say there were many different types shown, and it is this lack of unity on what is the proper type that is responsible for it; for each man apparently adheres to his own and must think when he enters his dog that he is somewhere near a typical setter and stands a chance of winning, or why expend his good money for entry fees?

Now my reason in writing my first letter was, as stated, that I had read letters from breeders of setters in which they said that there seemed to be no uniformity of type; and when knowing of a dog winning at one show and well aware of the type of said dog, they were all at sea by the decision on the same dog competing at other shows, under a different judge; and if my letter will be the means of causing a discussion that will cause the lovers of English setters to take one small step in the direction of improving the present state of things *re* English setter judging, I shall feel that it was not written in vain. If such gentlemanly correspondents as Cinna, Muss-Arnolt and Breeder, with others of the same mind, will discuss it in the same spirit, it will be a starter to obtain what I think is a looked-for and desired improvement of the beautiful English setter. ALBERT.

Leed's Barry.

THE rough-coated St. Bernard Leed's Barry arrived in Philadelphia per steamship Southwark on Saturday, Aug. 3d, in fine condition, and feeling none the worse for his voyage. He is a large dog with immense bone, and when weighed on reaching the kennels tipped the scale at 185lbs. He is grandly bred, being by County Member (Lord Bute—Myra II.), out of Court Beauty (Scottish Prince—Forget-me-not). He has been shown but four times, having won six firsts and one special. The English *Stock-Keeper* of June 14 says of him:

"Leed's Barry is one of the biggest dogs on the bench; immense bone; grand legs and feet; proper length of body, and one of the best movers possible. He has an immense skull, deep face and flews; a little indent below the eyes would improve him."

SWISS MOUNTAIN KENNELS.

Manitoba Field Trials Club.

MANITOU, Man., July 29.—Kindly make the inclosed correction in the club's list of Derby entries. The correct number should be fifty-five. The following dogs are not eligible: Selkirk Dan, Selkirk White, Selkirk Belinda—not having paid first forfeit. JOHN WOOTTON, Sec'y.

Yachting.

NO DATE is yet set for the trial races, but Mr. John Jacob Astor has presented a very elegant cup, costing $2,000, for the winner.

THE admission of a few newspaper men with the large crowd of visitors to the Herreshoff Works on the occasion of the attempted launching of Defender a few weeks ago would have been a cheap piece of courtesy that would have cost the builders nothing and have done no harm to the yacht. Now that she has been in the drydock, a far better place for inspection than the Herreshoff shop, where one could not get far enough away to see her as a whole, but could only examine one part at a time, she has been sketched and photographed by any number of persons. There is, fortunately, a natural limit to the extent to which secrecy can be maintained, or probably yachtsmen would not even be allowed to witness the races.

Corinthian Y. C.

MARBLEHEAD—MASSACHUSETTS BAY.

Saturday, July 27.

The second championship race of the Corinthian Y. C., of Marblehead, was sailed on July 27 in mixed weather, rain, calm and hard squalls, the times being:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Gladys, W. P. Fowle	00 00	2 34 38	0 00 00
Tomboy, W. S. H. Lothrop	00 00	2 40 00	0 00 00
Crystal, S. Gleason	00 00	2 29 35	0 00 00
SECOND CLASS.			
Susie, J. F. Cole	28 06	2 46 23	2 45 47
Ariel, J. Barrett	26 02	2 49 00	2 46 44
Marena, D. H. Follett, Jr.	29 01	Withdrew.	
THIRD CLASS.			
Apukwa, E. T. Tefft	22 04	2 43 40	2 41 22
Exit, A. H. Higginson	21 04	2 51 10	2 47 23
Reaper, H. P. Benson	24 01	Withdrew.	
Bonita, C. O. Hood	20 06	Withdrew.	
FOURTH CLASS.			
Koorali, R. C. Robbins	23 01	2 28 53	2 28 37
Egeria, R. F. Tucker	23 05	2 30 47	2 30 47
Magpie, A. W. Stevens	22 04	Withdrew.	
CLASS A.		Handicap.

Eugenia, I. S. Palmer	0	1 11 55	1 11 55
Rita, W. H. Rothwell	3	1 19 45	1 16 45
Vagrant, W. Harvey	2	1 22 06	1 20 06
Juanita, W. Whitman, Jr.	2	Withdrew.	

Exit was sailed by Mr. Ward Burton.

Mandeville Y. C.

MANDEVILLE, LA.

Saturday, July 20.

THE annual regatta of the Mandeville Y. C. was sailed on July 20 in bad weather, a clear morning being followed by several hard squalls with rain, the win l being very strong at times with a heavy sea. There was a large fleet of entries, but many of the yachts gave up, the finish being timed:

Louise W.	5 10 00	Nymphae	5 12 49
Alice	5 02 40	Minnie S	5 14 45
Adrienne	5 06 48	Rosie G	5 17 00
Twanta	5 07 12	Honorine	5 17 05
Florence	5 09 35	Nyanza	6 02 00

The winners were:

Schooner—Adrienne, elapsed time, 3:11:18.

Cabin Sloops—First class, Maggie, carried away the end of boom and split jib and did not finish; second class, Florence, elapsed time 3:24:05; third class, Twanta, elapsed time 3:32:10.

Open Sloops—First class, Nyanza, elapsed time 4:24:50; second class, Alice, elapsed time 3:24:29, corrected time 3:24:29; Nymphae, elapsed time 3:35:30, corrected time 3:33:33.

Catboats—First class, Minnie S., elapsed time 3:35:40; Barton B. did not finish; second class, Louise W., elapsed time 3:21:20, corrected time 3:21:20; Honorine, elapsed time 3:36:10, corrected time 3:33:11; Ellen D. and Daisie B. did not finish; third class, Rosie G. won, Lady Sarah did not finish; fourth class, Helen M. won.

During the night a heavy gale set in from S.E., a number of yachts dragging anchors. The little auxiliary Lillian F. was badly damaged and Twanta went into the yacht club wharf, damaging herself and the wharf as well.

Wellfleet Y. C.

WELLFLEET, MASS.

Saturday, July 27.

THE Wellfleet Y. C. sailed a good race on July 27 in a fresh southerly breeze, the times being:

FIRST CLASS.

	Elapsed.	Corrected.
Florence, Williams & Kemp	1 51 18	1 19 58
Cornell, L. D. Baker	1 55 14	1 21 46
Hornel, James Delory	1 56 14	1 24 37
Princess, I. W. Linderkin	1 55 32	1 26 10
Eddie, James Wiley	2 00 48	1 31 06

Cornet, John A. Lawrence	1 38 39

Cape Cod Y. C.

ORLEANS—CAPE COD BAY.

Saturday, July 27.

THE second race of the Cape Cod Y. C. series was sailed on July 27 in a strong S.W. breeze, the times being:

	Elapsed.	Corrected.
Wave Crest, D. L. Young	1 22 12	0 57 23
Dolphin, O. H. Davenport	1 24 31	0 55 48
Henrietta, R. R. Rich	1 32 09	1 01 10
Little Daisy, Fulcher Bros.	1 38 36	1 07 30
Sea Fox, Charlie Smith	1 37 42	1 11 22

Valkyrie III.

THE official register of Valkyrie III. gives the following particulars of the yacht: Her owner is Windham Thomas Wyndham Quin, Earl of Dunraven and Mount Earl, of Dunraven Castle, Brigend, Glamorgan. The length from fore part of stem under bowsprit to the after side of the head of the sternpost is 100.70ft.; main breadth to outside of plank 25.50ft., depth in hold from tonnage deck to ceiling amidships 11.70ft., tonnage 120.21. Official number 104,630, signal letters N. V. P. G.

NEW YORK Y. C. CRUISE, 1895.

THOUGH nominally shorter than usual, covering but a week, the annual cruise of the New York Y. C. is actually planned to cover two weeks, the actual cruising occupying the first week, while the second is given up to special races off Newport for prizes given by members of the club, and under the management of the regatta committee, Messrs. S. Nicholson Kane, Chester Griswold and Irving Grinnell.

Throughout the first week the fleet was favored with pleasant weather, and in each case with enough wind to make a good race with an early finish, in fact, the club met with remarkable luck on the long run to New London, with a free wind, in marked contrast to the hard hammer to windward over the same course in 1891, which delayed or disabled so many of the fleet.

The opening race for the commodore's cups was sail'ed under very favorable weather conditions. The first run was made in quick time, allowing a full afternoon and evening in New London. The run to Newport was lively and interesting; the long day at that place gave the crews time for rest and preparation for the Goelet cup race. This race was sailed under very satisfactory conditions, in clear, bright weather and a true breeze, and the run to the Vineyard was made with a fresh and favorable wind. The last run on Monday was delayed by a fog, but was finally made in a good sailing breeze and clear weather. The cruise throughout has been free from rain, storm or fog, the weather has been neither too hot nor too cold, and the winds have been ready whenever they were wanted.

The racing contingent of the fleet has not been notably large, the schooners have shown up best, with such good boats as Lasca, Emerald, Amorita, Elsemarie, Mayflower, Merlin, Constellation, Marguerite, and the smaller Loyal and Neaera.

The single stick fleet, apart from the larger class, has been but small, and of all sizes: Katrina, Queen Mab, Hildegarde, Wasp, Uvira, Gossoon and Norota; hardly two in a class.

The long-looked-for reappearance of Jubilee and Volunteer has at last taken place, and with the result that many looked for. Volunteer's owner has satisfied the curiosity of yachtsmen by racing her in a new rig against Defender and Vigilant, and she has shown that she is in no way equal to them. A good deal of allowance must be made for both boats in that they have steel bottoms in place of the smoother metals, they are in honest cruising trim, with no steam tenders, only one outfit of sails and spars, and these none of the best, and with their crews berthed and fed aboard. Volunteer is carrying the largest rig of the fin-keel Pilgrim, her mast having been moved forward three feet this year.

As for Jubilee, the attempted improvement has been done in a half-way manner that could only prove a failure. The hull has been lengthened on the waterline forward, the deck being unchanged; the mast has been left where it was originally, near the middle of the boat, and the old sails and spars have been retained, with some new blocks and gear. What the yacht needs is a new sail plan, with a larger mainsail, the mast further forward, and considerably less foresail; such changes, with some new sails and spars and gear to carry them, would have made her much faster than the added 3ft. of bow, and would still have earned her a good allowance of time. With her present sail plan, sails and gear, she is much inferior to the Herreshoff boats to admit of any test of her model; on the whole, her performance in the Goelet cup races was not bad, when these obvious deficiencies are taken into account, and the long-disputed question of the merits of her model compared to Vigilant's is as far as ever from a solution, as much so as the other question, why her owner has done anything with her without doing a good deal more.

Perhaps the most interesting of the schooner fleet is Lasca, a comparative newcomer after a year's absence abroad, in which she has covered some 10,000 miles under canvas with her owner aboard. Her fine appearance has been generally commented on throughout the fleet, and in her coat of black she is one of the handsomest schooners now afloat. The contrast in looks between her and some of Mr. Smith's newer boats is most marked, the latter, not over handsome at best, showing up very poorly beside this fine ship. We have been very loth to accept the conclusion pointed out by some recent prize winners, that it is necessary to make a boat indubitably and unmistakably ugly in order that she should be fast, and it is a pleasure to see a ship like Lasca a stylish vessel in hull and rig that can hold her own with the later productions. Further than this, in these days, when all else is sacrificed for speed in light weather, it is encouraging to see a yacht just off a long ocean voyage, with racing sails freshly bent, winning in such a race as that to the Vineyard and coming within some seconds of the Goelet Cup.

With her new bow, Emerald too must be classed among the handsomest as well as the fastest of the schooners, and no one grudged her a second successive Goelet Cup.

The steam fleet is large this year and greatly improved by the presence of some handsome imported yachts, notably the Watson boats Sapphire, Hermione and Zara; these, with Sultana and White Ladye, show up the home built craft to very poor advantage.

Commodore's Cups.

GLENCOVE TO HUNTINGTON BAY.

Monday, July 29.

ALL day Sunday and on Monday morning yachts made their way to the rendezvous in Hempstead Bay until a very large fleet was assembled, most of them bound for the entire cruise, or at least to Newport. After a meeting of captains early on Monday morning, the signals were set for a start at 1 P. M. for the opening race of the cruise, for three handsome cups given by Com. Brown—one for all schooners, one for the 90-footers, and the third for the smaller single-stickers. The course was from off Matinnicock Point around a mark one mile S. by W. from the bell buoy on Green Ledge, Norwalk Islands, then back five miles over the same course to a mark, and from there to the finish off Eaton's Point; 21 nautical miles. The wind was fresh from S.W., a steady clubtopsail breeze. The starters were:

SCHOONERS.

	Racing length.	Time allowances.
Lasca, John E. Brooks	93.17	Allows.
Emerald, J. Rogers Maxwell	89.51	1 20
Marguerite, H. W. Lamb	83.48	3 41
Iroquois, H. C. Rouse	82.24	4 14
Elsemarie, J. B. King	75.60	7 12
Amorita, W. G. Brokaw	74.82	7 35
Loyal, B. F. Sutton	64.50	13 11
Neaera, H. K. McHarg	59.33	16 34
FIRST CLASS SLOOPS.		
Vigilant, George Gould	Not meas.	....
Defender, W. K. Vanderbilt, E. D. Morgan and C. O. Iselin	Not meas.	....
SLOOPS, CUTTERS AND YAWLS.		
Hildegarde, James C. Bergen	Not meas.	....
Queen Mab, Percy Chubb	63.28	1 17
Wasp, Lippett Bros.	54.97	7 03
Mineola, August Belmont	54.20	7 40
Ventura, Dr. Geo. E. Brewer and Wm. Williams	Not meas.	....
Harriet, Greacen Bros.	Not meas.	....
Awa, A. De Witt Cochrane	46.89	14 05

Defender and Vigilant being still unmeasured, they were matched to race without allowance.

The start for the single-stickers was given at 1:45, the first boat over, as usual, being Queen Mab, followed by Vigilant, the latter running up to the weather end of the line, while Defender crossed to leeward, but with more way on. The schooners started at 1.50, Lasca going over promptly after the 'gun. All set balloon jibtopsails and spinakers, the schooners also setting balloon maintopmast staysails. The times at the Green Ledge mark were:

Defender	3 31 11	Wasp	3 42 50
Vigilant	3 31 40	Elsemarie	3 43 30
Lasca	3 40 10	Mineola	3 46 20
Emerald	3 40 35	Iroquois	3 49 20
Amorita	3 40 40	Marguerite	3 49 35
Queen Mab	3 42 45		

The next leg was but 5 miles, dead to windward, the times at the turn being:

Defender	4 17 45	Queen Mab	4 39 27
Vigilant	4 19 25	Wasp	4 41 00
Emerald	4 29 20	Elsemarie	4 41 25
Amorita	4 31 10	Marguerite	4 43 05
Lasca	4 34 30	Iroquois	4 44 10

The final reach to the finish off Eaton's Point was quickly made, the finish being timed as follows:

SCHOONERS.

	Start.	Finish.	Elapsed.	Corrected.
Lasca	1 50 48	5 02 36	3 11 48	3 11 48
Emerald	1 50 03	4 57 25	3 04 22	3 03 02
Marguerite	1 55 00	5 13 06	3 18 06	3 14 25
Iroquois	1 53 24	5 14 42	3 21 18	3 17 04
Elsemarie	1 53 29	5 12 12	3 18 43	3 11 31
Amorita	1 52 04	5 00 43	3 08 39	3 01 04
Loyal	1 55 00	5 25 04	3 30 04	3 16 53
Neaera	1 55 00	5 28 33	3 33 33	3 16 59
CUTTERS—90FT. CLASS.				
Defender	1 47 24	4 42 56	2 55 32	.. .. ..
Vigilant	1 47 22	4 44 43	2 57 21	.. .. ..
SMALLER CLASSES.				
Wasp	1 47 56	5 16 06	3 28 10	3 21 07
Queen Mab	1 46 34	5 11 26	3 24 52	3 23 35
Mineola	1 49 36	5 25 59	3 36 23	3 28 43
Hildegarde	1 50 00	5 25 54	3 35 54	3 35 54

Ventura	1 48 13	5 32 43	3 44 30
Awa	1 47 55	. . ..	. . ..
Harriet	1 47 57	. . ..	. . ..

Amorita beat Emerald 1.58, Elsemarie 1.27, Lasca 10.44, Marguerite 13.21. Loyal 15.49, Neaera 15.35, and Iroquois 16.00. Defender beat Vigilant 1.49 elapsed time. Wasp beat Queen Mab 2.18, Mineola 7.36 and Hildegarde 15.47. The winners of the cups were Amorita, Defender and Wasp.

First Squadron Run.

HUNTINGTON BAY TO NEW LONDON, 73 MILES.

Tuesday, July 30.

Tuesday morning broke with a fine breeze from S.W., the course to Bartlett's Reef, just outside New London Harbor, being E. by N.; the start was off Eaton's Point and the finish off New London Light.

All hands were up early, the start being signaled at 6:40, Queen Mab going over at 6:40:52, followed by the little Norota 3s. later. Club topsails were set with balloonjib topsails. Only 26 yachts started in the race, but a very large fleet got away early without regard to racing. Before the start Ramona's main throat halliards parted, dropping the boom and smashing a skylight, but they were soon repaired, and she sailed a good race with Constellation. Vigilant started on the weather end of the line, with her long jibtopsail set, while Defender, to leeward, had a balloonер up. Vigilant was the better canvased in the freshening wind and rising sea, and held the newer boat all day. The conditions were exceptionally favorable and a magnificent race was made, the average speed of the leading boat, Constellation, being 13.9 knots; Vigilant's being almost the same. Off Bartlett's Reef Defender was something over 2m. ahead of Vigilant, but she gave up here and was towed in by the steam yacht Hermione with her steering gear disabled. She claimed to have finished the race, but the official circular called for a finish off New London Light, a few miles further in, where all the yachts were timed.

The accident to the steering gear was caused by the heating of the sleeve on the main shaft which carried the quadrant pinion and the intermediate gears; the strain caused the main shaft and the sleeve to beat until they bound, so that the whole gear refused to work. The yacht went up the harbor and men from the Morgan Iron Works were busy all night in making repairs, Mr. N. G. Herreshoff being summoned from Bristol by telegraph to help. The fleet was timed:

SCHOONERS—CLASS 1, OVER 95FT.

	Start.	Finish.	Elapsed.	Corrected.
Constellation	6 48 41	11 25 15	4 36 34	4 36 34
Ramona	6 47 36	11 39 45	4 43 09	4 41 56
Brunhilde	6 50 00	11 57 11	5 07 11	. . ..

SCHOONERS—CLASS 2, 85 TO 95FT.

Montauk	6 47 25	11 59 10	5 11 45	. . ..
Lasca	6 46 47	11 35 15	4 48 28	4 48 28
Emerald	6 48 10	11 33 05	4 47 55	4 43 52

SCHOONERS—CLASS 3, 75 TO 85FT.

Ariel	6 49 42	11 45 08	4 59 30	4 59 26
Marguerite	6 47 58	11 55 21	5 07 23	5 07 23
Iroquois	6 50 00	11 53 09	5 03 09	5 01 37
Elsemarie	6 47 05	12 01 43	5 14 38	5 03 55

SCHOONERS—CLASS 4, 65 TO 75FT.

Amorita	6 49 06	11 59 47	5 10 47	5 10 47
Shamrock	6 50 00	12 12 00	5 22 00	5 19 26

SCHOONERS—CLASS 5, UNDER 65FT.

Loyal	6 47 05	12 20 18	5 33 13	5 33 13
Neaera	6 47 05	12 33 54	5 46 49	5 36 33

CUTTERS—CLASS 1, 80 TO 90FT.

Vigilant	6 51 08	11 31 45	4 40 37	. . ..
Defender	6 51 41	Did not finish.		

CUTTERS—CLASS 2, 70 TO 80FT.

Katrina	6 42 39	12 02 05	5 19 26	5 19 26

CUTTERS—CLASS 3, 60 TO 70FT.

Hildegarde	6 42 14	12 16 05	5 33 51	5 33 51
Queen Mab	6 40 52	12 16 18	5 35 26	5 31 32
Clara	6 44 43	Disabled.		

CUTTERS—CLASS 5, 50 TO 55FT.

Eclipse	6 41 50	12 29 24	6 15 34	6 15 34
Wasp	6 41 29	12 47 03	6 05 34	6 05 34
Mineola	6 41 56	1 10 51	6 28 55	6 27 01

CUTTERS—CLASS 6, 40 TO 50FT.

Ventura	6 43 45	1 48 10	7 04 25	7 04 25
Gossoon	6 41 06	1 18 34	6 37 28	6 37 28
Norota	6 40 55	1 53 19	7 12 24	6 53 36

The winners are:

Schooners—Class 1, Constellation beat Ramona, 7:22; class 2, Emerald beat Lasca, 4:36; class 3, Ariel beat Iroquois, 2:11; Elsemarie, 4:29, and Marguerite, 7:57; class 4, Amorita beat Shamrock, 8:39; class 5, Loyal beat Neaera, 3:20.

Cutters—Class 1, Vigilant won; class 2, Katrina, walkover; class 3, Queen Mab beat Hildegarde, 2:19; class 5, Wasp beat Eclipse, 10 00, and Mineola, 21:27; class 6, Goosoon beat Norota, 16:08, and Ventura, 26:57.

On the run Clara lost her topmast and bowsprit and was towed into Greenport, Norota and Ventura lost some light sails and Montauk took a bad knockdown. A fatal accident happened on the steam yacht Embla; John Griffin, a fireman, stepped from the fire room to the engine room for fresh air, being unwell, and staggered and fell into the crankpit, where he was very badly cut about the head. The yacht hurried to New London, where he was transferred to the Memorial Hospital, but he died in the evening.

Volunteer, with Capt. Aubrey Crocker in command, was at anchor when the fleet arrived.

Jubilee came into New London in the afternoon with three of her port shrouds gone, after nearly losing her mast. A squall caught her off Race Rock, and the aluminum bronze turnbuckles on three of her four main shrouds on the port side snapped off, the fourth stretching badly, but still holding. The mast was held only by this shroud and the runner; the main halliards were cut and the sail lowered as quickly as possible.

The afternoon was enlivened by a very severe rainstorm.

Second Squadron Run.

NEW LONDON TO NEWPORT—40 MILES.

Wednesday, July 31.

Wednesday morning was anything but promising; however, the sun came out early with a light S.W. wind, and as the distance was but 40 miles, the start was not made until 11:10:00, Queen Mab crossing at 11:10:59. A very large fleet started, but most of the yachts went inside of Fisher's Island; the course for the racing division was from New London Harbor by Race Rock, 4 miles, then E. ½ N. to Point Judith, 26 miles, and then N.E. 10 miles to the Dumplings, off Newport. The presence of Volunteer lent additional interest to the largest class, this being her first appearance under a racing flag as a 90ft. cutter, all of her racing since she was lengthened to 90ft. in 1891 having been done under a schooner rig. Vigilant was unfortunate in splitting from the boom to the second batten about three cloths in from the leach just before she crossed the line. The tear was repaired while under way, though with some difficulty, and she sailed the course. The run was made mainly under spinakers, which were shifted from starboard to port off Point Judith. The wind was light and fluky, favoring the boats inshore. Defender sailed very fast in the light weather. The fleet was timed:

SCHOONERS—CLASS 1, OVER 95FT.

	Start.	Finish.	Elapsed.	Corrected.
Constellation	11 18 07	4 05 51	4 47 44	4 47 44
Ramona	11 15 57	4 10 31	4 54 34	4 53 48
Brunhilde	11 19 35	4 56 56	5 37 21	. . ..

SCHOONERS—CLASS 2, 85 TO 95FT.

Alcæa	11 16 25	4 21 59	5 02 34	5 02 34
Merlin	11 16 23	3 57 14	4 40 51	4 40 16
Lasca	11 15 57	3 56 10	4 40 03	4 39 24
Mayflower	11 17 43	3 53 30	4 35 47	4 33 40
Emerald	11 18 39	3 58 22	4 39 43	4 36 32

SCHOONERS—CLASS 3, 75 TO 85FT.

Ariel	11 15 57	4 11 21	4 55 24	4 55 24
Marguerite	11 18 05	4 14 10	4 56 05	4 56 05
Iroquois	11 17 20	4 11 47	4 54 27	4 48 29

SCHOONERS—CLASS 4, 65 TO 75FT.

Amorita	11 19 50	4 11 54	4 52 04	4 52 04
Elsemarie	11 16 29	4 11 07	4 54 38	4 54 32
Shamrock	11 16 29	4 17 48	5 01 19	4 59 43

SCHOONERS—CLASS 5, 65FT. AND UNDER.

Loyal	11 16 13	4 22 23	5 06 10	5 06 10
Neaera	11 18 05	4 24 36	5 06 31	5 00 06

CUTTERS—CLASS 1, 80 TO 90FT.

Defender	11 20 32	3 26 42	4 06 10	. . ..
Vigilant	11 21 55	3 26 07	4 18 12	. . ..
Volunteer	11 22 50	3 52 15	4 30 15	. . ..

CUTTERS—CLASS 2, 60 TO 70FT.

Hildegarde	11 11 18	4 07 49	4 56 31	4 56 31
Queen Mab	11 10 59	3 59 30	4 48 31	4 46 05

CUTTERS—CLASS 5, 50 TO 60FT.

Wasp	11 11 00	3 55 40	4 44 40	4 44 40
Mineola	11 11 16	4 11 38	5 00 22	4 59 11

CUTTERS—CLASS 6, 40 TO 50FT.

Uvira	11 12 15	4 19 06	4 06 51	4 06 51
Norota	11 11 08	4 29 19	5 18 11	5 07 00

The winners were: Schooners—Class 1, Constellation beat Ramona, 6.04. Class 2, Mayflower beat Emerald 3.52; Lasca, 6.44; Merlin, 7.36; Alcæa, 29.52. Class 3, Iroquois beat Ariel 11.55; Marguerite, 12.36. Class 4, Amorita beat Elsemarie, 12.28; Shamrock, 17.30. Class 5, Neaera beat Loyal 6.04. Cutters—Class 1, Defender beat Vigilant 12.02, and Volunteer 24.05. Class 2, Queen Mab beat Hildegarde 12.26. Class 5, Wasp beat Mineola 14.31. Class 6, Uvira beat Norota 9s.

Newport—Goelet Cup Race.

Friday, Aug. 2.

It has usually been the case that the Goelet cup race was sailed on the arrival of the fleet at Newport, but this year the arrangements were such that the fleet laid over Thursday at anchor, giving more time for preparation for the great race of the year. Nothing was done on Thursday, the races for the Owl and Gamecock colors were set for the afternoon, but were postponed on account of the choppy sea. A meeting of the regatta committee was held, but as Mr. Willard had gone to New York for a day no action was taken on the Vigilant–Defender protest. The Loyal protest against the classification of the committee in the June regatta was taken up, and it was decided to offer a special prize of $200 for a race between Loyal and Neaera to be sailed over the course for the Goelet cup next day.

Friday was clear and warm, the sky slightly overcast in the early morning and with a light S.W. wind. The start was set for 10:30 off the Brenton's Reef Lightship. The committee had discussed the question of a new course, an equilateral triangle, but finally decided to hold to the old courses, the "Block Island" and the "Sow and Pigs." The entries were as follows:

SCHOONERS.

Marguerite	H. W. Lamb.
Merlin	W. H. Forbes.
Amorita	W. G. Brokaw.
Neaera	H. K. McHarg.
Mayflower	W. A. Gardner.
Emerald	J. R. Maxwell.
Lasca	J. E. Brooks.
Constellation	Bayard Thayer.
Loyal	B. F. Sutton.
Elsemarie	J. B. King.

CUTTERS.

Wasp	H. F. and R. L. Lippitt.
Vigilant	G. J. Gould.
Defender	W. K. Vanderbilt, C. Oliver Iselin and E. D. Morgan.
Queen Mab	Percy Chubb.
Jubilee	C. J. Paine.
Volunteer	J. Malcolm Forbes.

Of these, Wasp and Queen Mab did not start.

The flagship Sylvia anchored off the lightship at 10:50 and set the signals for the Block Island course. The first leg southwest, one-eighth west, 13½ miles to a mark one mile from Block Island; the second leg northeast by east, three-quarters east, 18 miles to a mark two miles from West Island Light, and the third leg west by north, one-eighth north, 6½ miles—38 miles.

A wait was made for the tug in charge of Supt. Neils Olsen to get a good start with the markboats, and at 11:20 the first gun was fired. The start for the cutters was at 11:30, Defender crossing but 33s. after the gun, close by the lightship on the north end of the line. Just under her lee was Volunteer, while Jubilee followed a little astern. Vigilant had come for the line with the others, but at the last moment hung back, wearing around and starting nearly 4m. after Defender.

Five minutes later the start for the schooners was given, Neaera crossing first, followed by Amorita, Lasca and Elsemarie. The four cutters crossed on starboard tack, Defender at once going about and standing inshore. Most of the schooners also stood inshore, Constellation and Merlin alone holding to the eastward.

The wind was moderate from S.W., the water smooth, and the first leg was a beat with clubtopsails and small jibtopsails set, out to Block Island mark. The cutters very soon dropped all the schooners, and Defender opened out on her class. The order soon became Defender, Vigilant, Jubilee, Volunteer; while the two-stick division was led by Lasca and Emerald.

At 1:30 the markboat was surrounded by a large fleet of steam yachts, steamers and tugs. Defender came up on starboard tack, if anything overstanding a little. Her spinaker boom was lowered to starboard before she rounded, and the sail was soon run out in stops, being broken out very promptly. Vigilant made her last tack near the mark, but was slow in gathering way. Her crew were very smart with the spinaker, breaking it out as she passed the mark. Jubilee's crew did poor work with the spinaker; the lift was evidently cast off carelessly and the boom fell into the water, only good luck preventing it from breaking.

The times at the mark were:

	Start.	Elapsed.
Defender	1 40 25	2 04 52
Vigilant	1 46 29	2 11 57
Jubilee	1 59 08	2 18 50
Volunteer	1 57 45	2 27 11
Lasca	2 15 00	. . ..
Emerald	2 17 00	. . ..
Amorita	2 25 00	. . ..

Elsemarie, Marguerite and Merlin not timed.

It was now a run of 18 miles to the West Island mark with a moderate S.W. wind and smooth water. Defender gained on Vigilant and Jubilee did also. The times at the West Island mark were:

Defender	3 44 10	2 30 45
Vigilant	3 55 45	2 09 16
Jubilee	3 57 08	2 07 00
Volunteer	4 14 50	2 17 00

Defender jibed at the mark and trimmed sheets for the reach home, but before she had been for two minutes on her new course, her hollow gaff broke in two places, a big piece falling out of the middle. She was kept on her course under headsails for a time, but finally took a line from a tug. Her main sail and clubtopsail were both torn. This mishap left Vigilant an easy winner, the times being:

	Start.	Finish.	Elapsed.	Corrected.
Vigilant	11 34 32	4 38 09	5 03 37	. . ..
Jubilee	11 31 09	4 41 00	5 12 51	. . ..
Volunteer	11 30 39	5 00 04	5 29 29	. . ..
Defender	11 30 33	Disabled.		
SCHOONERS.				
Emerald	11 37 54	5 21 18	5 43 24	5 33 01
Lasca	11 36 48	5 19 24	5 42 36	5 34 38
Amorita	11 36 30	5 35 13	5 58 43	5 37 01
Mayflower	11 40 00	5 40 24	6 00 24	5 50 05
Marguerite	11 40 00	5 52 12	6 12 12	5 57 33
Elsemarie	11 37 34	5 58 33	6 20 54	5 59 11
Merlin	11 38 21	5 46 51	6 08 30	6 00 35
Loyal	11 38 25	6 25 17	6 46 52	6 15 01
Neaera	11 36 22	6 31 38	6 55 16	6 17 20

Constellation did not finish.

Vigilant and Emerald win the Goelet cups, this being the second won by Emerald; and Loyal beats Neaera in the special race.

Defender was taken in tow by the tug Gaspe and went at once to Bristol, where her new 105ft. boom and a new Herreshoff mainsail to fit it were awaiting her, with a new gaff 61ft. long. These were shipped during the night, and the yacht was towed back to Newport early in the morning, in time for the run to the Vineyard.

Third Squadron Run.

NEWPORT TO VINEYARD HAVEN.

Saturday, Aug. 3.

Saturday proved to be another pleasant day, bright and sunny, with a good breeze, S.S.W., freshening in Vineyard Sound. The course was from off Brenton's Reef to a finish off West Chop Light, Vineyard Haven, 38 miles. Many of the yachts were under way early, the racing division waiting until 10:40, when the start for the smaller cutters was signaled from the Sylvia, Queen Mab crossing at 10:40:31, followed by Hildegarde, Wasp, Uvira, Katrina and Norota. The schooners were started at 10:45, Lasca leading the way. The big cutters were started at 10:50, with a two-minute limit. Defender went over very promptly; but Vigilant, though at the line in time, wore and stood back, as though waiting for Volunteer, some distance away. The result was that Vigilant was handicapped 52s and Volunteer 53s.

While Vigilant carried her No. 1 jibtopsail, Defender and Volunteer carried No. 2. Jubilee was at the line, but ran out to windward before the start, with working topsail set. She did not cross, but started alone about the same time as the others, but some distance to windward. Most of the yachts carried No. 1 or No. 2 jibtopsails, but Ramona was content with nothing less than balloon jibtopsail and balloon maintopmast staysail. She carried them for just a quarter of an hour when the clew of the balloon jibtopsail tore away and the sail parted company with the foot and leach ropes. She was run off her course and the sail taken in. Queen Mab held the lead for a good part of the first hour, and then she gave place to Defender. Vigilant took in her big jibtopsail and set a smaller one, which in turn gave place to the baby. The other yachts also shifted to smaller jibtopsails as the wind increased, only Lasca carrying a No. 1 over the course. The only times taken at the Vineyard Sound Lightship (Sow and Pigs) were:

Defender	12 19 00	Vigilant	12 23 00
Lasca	12 23 00		

The order was: Defender, Vigilant, Lasca, Emerald, Constellation, Alcæa, Queen Mab, Katrina, Volunteer, Ariel and Hildegarde.

With a stronger breeze the fleet ran through Vineyard Sound to the finish off West Chop, where the steam yacht Sheerwater was waiting to time them. The official times were:

SCHOONERS—FIRST CLASS, 95FT.

	Start.	Finish.	Elapsed.	Corrected.
Constellation	10 47 25	2 02 47	3 15 22	
Ramona	10 46 27	2 10 33	3 33 06	3 32 24

SECOND CLASS—85 TO 95FT.

Lasca	10 46 06	2 06 52	3 20 46	3 20 10
Emerald	10 46 59	2 15 56	3 28 57	3 26 00
Merlin	10 50 00	2 25 19	3 35 19	3 34 46
Alcæa	10 48 08	2 26 06	3 37 28	3 37 28
Mayflower	10 50 00	2 25 40	3 45 40	3 42 47

THIRD CLASS, 75 TO 85FT.

Ariel	10 50 00	2 21 29	3 31 29	3 31 29
Marguerite	10 49 40	2 25 14	3 35 34	3 35 34
Iroquois	10 50 00	2 29 37	3 39 37	3 38 44

FOURTH CLASS, 65 TO 75FT.

Amorita	10 49 02	2 28 52	3 39 50	3 39 50
Elsemarie	10 50 00	2 30 27	3 40 27	3 40 22

FIFTH CLASS, 65FT. AND UNDER.

Loyal	10 48 33	2 47 27	3 58 54	3 58 54
Neaera	10 47 20	2 59 33	4 12 13	4 06 17

CUTTERS—FIRST CLASS.

Defender	10 50 37	2 02 11	3 11 34	. . ..
Vigilant	10 52 00	2 09 58	3 17 58	. . ..
Volunteer	10 52 00	2 25 02	3 33 02	. . ..

THIRD CLASS, 60 TO 70FT.

Queen Mab	10 40 31	2 43 20	4 02 49	4 00 34
Hildegarde	10 41 17	2 48 05	4 06 48	4 06 48

SIXTH CLASS, 40 TO 50FT.

Norota	10 44 06	3 31 13	4 47 07	4 36 46
Uvira	10 43 42	3 24 28	4 40 46	4 40 46

MIXED CLASS.

Katrina	10 44 05	2 29 15	3 45 10	3 45 10
Wasp	10 41 42	3 01 32	4 19 50	3 57 24

Constellation beat Ramona 17m. 2s. Lasca sailed a fine race, beating Emerald 5m. 50s.; Ariel beat Marguerite 4m. 5s.; Amorita beat Elsemarie 9m. 32s., and Loyal beat Neaera 7m. 23s.; Defender beat Vigilant 6m. 24s. elapsed time, the two being still unmeasured; Queen Mab beat Hildegarde 6m. 14s.; Norota beat Uvira an even 4m., and in the mixed class Katrina beat Wasp 12m. 14s. The race was a perfectly fair trial, the course and wind being equally favorable to all.

Sunday was spent idly in harbor, the fleet dressing ship at noon. The flying of winning flags is becoming quite a fashion, and long strings were displayed by Amorita, Wasp, Loyal and Queen Mab.

Monday morning was fair and sunny, with a moderate S.W. wind in the harbor. Many yachts left the fleet on Sunday and more made an early start on Monday morning. The orders from the flagship were for a start at 8 o'clock, and the racers were under way by 7:30, but a dense fog rolled in from Vineyard Sound and the yachts returned and anchored. Queen Mab was under way about the harbor, picking her way between the yachts, under cat rig, her mainsail and clubtopsail, the headsails being in stops.

About 11 o'clock the fog lifted and a start was make at 11. The wind was ahead through Vineyard Sound, a moderate breeze with smooth water. The times of the run were:

SCHOONERS—CLASS 1, OVER 95FT.

	Start.	Finish.	Elapsed.	Corrected.
Constellation	11 52 25	4 54 50	5 03 25	5 03 25
Ramona	11 52 14	5 25 05	5 32 51	5 32 09

CLASS 2, 85 TO 95FT.

Merlin	11 52 12	5 10 29	5 18 17	5 18 17
Emerald	11 53 11	4 48 17	4 55 06	4 52 42

CLASS 3, 75 TO 85FT.

Ariel	11 50 41	4 53 25	5 07 44	5 07 44
Marguerite	11 50 51	5 19 15	5 28 24	5 23 24

CLASS 4, 65 TO 75FT.

Laura	1 39 55	1 19 20
Swan	Did not finish.	

The Lake Y. R. A. Meet, 1895.

The annual meeting of the Lake Yacht Racing Association of Lake Ontario, founded in 1884, was held in connection with the Lake Sailing Skiff Association, and at one place, instead of the usual circuit, including a full week of racing at Burlington Bay, Hamilton, on the Canadian side of the lake. The two associations are made up of the following clubs:

Lake Yacht Racing Association: Bay of Quinte Y. C., Belleville; Oswego Y. C., Oswego; Queen City Y. C., Toronto; Rochester Y. C., Charlotte; Royal Canadian Y. C., Toronto; Royal Hamilton Y. C., Hamilton; Victoria Y. C., Hamilton.

Lake Sailing Skiff Association: Picton Boating Club, Picton; Royal Canadian Y. C., Toronto; Royal Hamilton Y. C., Hamilton; Royal Toronto Sailing Skiff Club, Toronto; Victoria Y. C., Hamilton.

The programmes of the two were as follows: Yacht races:

Monday, July 15.—Course windward or leeward and return, first class, 42ft. class, 37ft. class, 27ft. class.

Tuesday, July 16.—Triangular course, 32ft. class, 27ft. class, 22ft. class.

Wednesday, July 17.—Triangular course, first class, 42ft. class, 37ft. class, 27ft. class.

Thursday, July 18.—Course windward or leeward and return, first class, 42ft. class, 32ft. class, 22ft. class.

Friday, July 19.—Course windward or leeward and return, 37ft. class, 32ft. class, 22ft. class.

Saturday, July 20.—Triangular course, Walker cup, race for all classes.

The prizes will be as follows: Each first class and 42ft. class race, $60 to first, $30 to second, $15 to third, $10 to fourth; each 37ft. class and 32ft. class race, $40 to first, $25 to second, $10 to third, $5 to fourth; each 27ft. class and 22ft. class, $25 to first, $15 to second, $10 third, $5 to fourth.

For the Walker cup race the cup is valued at $250, and the association will add $250 in cash, divided as follows: $80, $50, $40, $30, $20, $15, $10 and $5. Open to all classes this year, but hereafter will be an annual race for the class to which the yacht winning it this year belongs.

Entries for all races must be made with the secretary of the club to which the yacht belongs, not later than Thursday, July 11, and be by him sent to the honorary secretary of the L. Y. R. A. (E. H. Ambrose, Hamilton, Ont.), by whom all entries must be received not later than Saturday, July 13. A measurer's certificate must accompany each entry.

If the leading yacht in any class race has not finished at 7 o'clock, the race will be decided on the last completed round.

If the leading yacht in the race for the Walker cup shall not sail the course in five hours the race will be decided on the first round, but, in that event, if the leading yacht on the first round shall not have sailed that round in 2½ hours the race shall be resailed subject to the same conditions.

Sailing committee for the meet: Aemilius Jarvis, chairman; E. H. Ambrose, J. E. Burroughs, George E. Evans, J. F. Monck.

Skiff races: Thursday, July 18—20ft. class, 18ft. class, 16ft. class. Friday, July 19—20ft. class, 18ft. class, 16ft. class. Saturday, July 20—20ft. class, 18ft. class, 16ft. class. All skiff races will be sailed over a triangular course. The prizes will be $15 to first, $8 to second and $5 to third in each race.

The first day's racing was to windward and back, with a moderate N.E. breeze, the course being 5 miles out, sailed twice by the larger boats and once by the 27ft. class; 20 and 10 miles respectively. The times were:

FIRST CLASS.

	Finish.	Elapsed.	Corrected.

Illaway and Eclipse did not finish.

VICTORIA YACHT CLUB.

Three classes of skiffs also raced over a course inside Burlington Bay, the times being:

Started at 10 o'clock, 17 starters:

16FT. CLASS.

	Finish.	Elapsed.
Gracie, Toronto	1 04 00	3 04 00
Restless, Hamilton	1 05 30	3 05 30
Zephyr, Hamilton	1 05 55	3 05 55

Started at 3 o'clock, 3 starters:

20FT. CLASS.

Bessie, Toronto	4 47 45	1 47 45
Myra, Toronto	5 01 30	2 01 30
Alliance, Toronto	Did not finish.	

Started at 3:10, 7 starters:

18FT. CLASS.

Alonquin, Toronto	5 47 20	2 37 20
Zononi, Hamilton	5 57 55	2 47 55
Elva, Hamilton	6 29 20	3 19 20

On Friday the wind was variable in strength and direction, with a squall in the afternoon. The races were for the 37ft., 32ft. and 22ft. classes, with 3 classes of skiffs. The yachts sailed 4 miles to windward and return, twice around for the 37 and 32ft. classes and once for the 22ft. class. Ko Ko led her class, but was disabled in the squall, as was Eva in the 32ft. class. The skiff Upstart was entered with the 22-footers and won. The times were:

37ft. class started at 2 o'clock. Corrected time—Vivia, Toronto, 3.35.19; Dinah, Hamilton, 3.45.00.

32ft class started at 2:10—Alert, Hamilton, 4.24.11; Vedette, Toronto, 4.32.17; Erma, Toronto, 5.10.02; Nancy, Hamilton, 5.12.30; Nadia, Lotus, Echo and Eva, of Hamilton, and Norma, of Kingston, also started.

22ft. class started at 2:20—Upstart, Toronto, 2.16.20; Scallawag, Hamilton, 2.26 04; Caruli, Hamilton, 2.28.01; Isis, Oswego, 2.31.01; Carita, Charlotte, 2.31.46; Illaway, Hamilton, 2.34.41; Enid, Toronto, 2.36.42; Ko ko, Toronto, 2.43.40; Midget, Hamilton, 2.45 21.

The Lake Sailing Skiff Association races came off over a triangular course on the bay side and resulted as follows:

16ft. class started at 10—Viva, Picton, 2.13.10; Gracie, Toronto, 2.19.54; Bernice, Toronto, 2.25.00; Isa R., Toronto, 2.27.10; Zephyr, Dottie, Sandfly and Wanita, all of Hamilton, also started.

20ft. class started at 3 o'clock—Bessie, Toronto, 2.19.20; Myra, Toronto, 2.23.21; Alliance, Toronto, did not finish.

18ft. class started at 3:10—Frou-Frou, Toronto, 2.34.20; Ethel, Toronto, 2.31.30; Algonquin, Toronto, 2.32.15; Elva, Hypathia, Ellia and Lenoni, all of Hamilton, also started.

On Saturday the yachts started for the Walker Cup, but failed to finish within the time limit, the race being postponed until August. The meet was a success throughout, the only drawback being the absence of the American division of the fleet, very few American yachts being present. The visitors were most hospitably treated by the Hamilton yacht, both of the Royal Hamilton and the Victoria Y. C., something being devised for every evening. The complete record of winners is as follows:

First class—Vreda, three firsts; Winnetta, three seconds; Condor, one third.

42ft. class—Zelma, three firsts; Aggie, three seconds.

37ft. class—Dinah, two firsts and one second; Vivia, one first and two seconds.

27ft. class—Sylvia, two firsts and one second; Sybil, one first; Mirage, one second and one third; Salola, one third; Nox, one second; Maud B., one third.

32ft. class—Alert, two firsts; Erma, one first, one second and one third; Echo, one second; Vedette, one second; Nancy, two thirds.

22ft. class—Ko Ko, two firsts; Upstart, one first and one second; Eclipse and Scallawag, one third; Frou-Frou, Enid and Caruli, one third.

Quincy Y. C.

QUINCY—BOSTON HARBOR.

Saturday, July 27.

Following the Hull Y. C. series, the Quincy Y. C. finished out the week very appropriately with an open race on Saturday, sailed in a good southerly breeze, with a hard squall from S.W. thrown in. The times were:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Harbinger, W. F. & C. F. Bache	28.03	2 05 00	1 36 12
Beatrice, J. Cavanagh	25.06	2 10 50	1 39 18

Joker, E. W. Putnam, Jr	20.02	Did not finish.	

FIFTH CLASS.

Alpine, C. J. Souther	17.07	1 34 37	1 05 01
Fantasy, Wm. Allerton	16.08	1 48 39	1 17 53
Vision, Geo. Crane	. . .	1 37 46	. . .
Evadene, R. M. Bonner	18.03	Did not finish.	
Nachita, G. E. Hills	16.09	Did not finish.	

SIXTH CLASS.

Wildfire, H. A. Keith	17.06	1 33 22	1 03 39
Sphinx, Arthur Keith	17.06	1 36 10	1 06 27
Sunbeam, H. B. Faxon	16.05	1 42 38	1 11 33
Imp, L. A. Horton	16.01	1 43 29	1 11 55

SEVENTH CLASS.

Nabob, H. W. Friend	. . .	1 24 02	1 24 02
La Chica, C. V. Souther	. . .	1 24 37	1 24 37
Nike, C. F. Jacobs	. . .	1 27 56	1 27 56
Spinster, L. W. Clark	. . .	1 28 03	1 28 03
Bessie Lee, A. E. Schoaf	. . .	1 28 44	1 28 44

EIGHTH CLASS.

Tantrum, F. D. Perkins	14.11	1 40 53	1 07 43
Primrose, Grey & Ware	14.06	1 43 18	1 09 25
Cutty Sark, M. M. Torrance	14.05	1 47 25	1 32 24

The winner in Class 6, Wildfire, is just 21 years old, this being her first race in a long time, though she was once a flyer.

Duxbury Y. C.

DUXBURY, MASS.

Saturday, July 27.

The third regatta of the new Duxbury Y. C. was sailed on July 27 in a S.W. breeze that freshened from a light air until a number of boats were reefed. The times were:

SPECIAL CLASS.

	Length.	Elapsed.	Corrected.
Fedora, E. P. Wadsworth	17.00	2 27 59	1 36 16

CYPRUS.

Spurt, Kenny & Walsh	1 40 00	1 03 56
Rogue, L. H. Balch	Did not finish.	

THIRD CLASS.

Flirt, William Hitchcock	1 17 02	0 59 56
Cheetash, George Stone	1 21 43	0 56 31
Voodo, William Balch	1 38 21	1 12 39
Romadillo, E. P. Durland	Did not finish.	
Fly, Herbert Noyes	Did not finish.	

FOURTH CLASS.

——, L. Lunt	0 57 05	. .
Elsie, T. French	Did not finish.	
Isla, D. H. Page	Did not finish.	

Raccoon parted her throat halliards, but still won.

Hull Y. C. Regattas.

HULL—BOSTON HARBOR.

July 24, 25, 26.

THE Hull Y. C. sailed a series of three open regattas on July 24, 25 and 26, with a large number of entries and well-filled classes, including many of the best boats of the large and growing fleet about Boston harbor. The races were open to all yachts of under 37ft. sailing length, enrolled in an organized yacht club and regularly entered with the secretary of the local Congress of Regatta Committees, which was recently organized to secure harmony in the racing arrangements among the clubs. The Hull Y. C. made every effort to entertain visiting yachtsmen, and the three days' racing passed off most successfully save for the lack of wind on the final day. The presence of the 30-footers Salmon and Ashumet from Buzzard's Bay, the former sailed by Messrs. H. J. and Ward Burton, owners of Onawa, with such boats as Harbinger, Beatrice, Satanic, Gleaner and Rooster, made keen racing in every class. The first race, on July 24, was sailed in a rather light S.W. wind, the times being:

CLASS A.

	Length.	Elapsed.	Corrected.
Ashumet, C. H. Jones	35.02	3 36 05	3 01 14
Salmon, W. E. C. Eustis	33.02	3 39 33	3 02 32
Handsel, J. R. Hooper	31.09	3 43 19	3 04 39

Wee Wee	....	Withdrew.	

The third day found almost a flat calm and though the yachts started but one finished within the time limit, the little Rooster coming home with but 4s. to spare. The race will be re-sailed.

Hull Corinthian Y. C.

HULL—BOSTON HARBOR.

Tuesday, July 23.

THE Hull Corinthian Y. C. sailed a race on July 23 for knockabouts in the regular class and for boats not over 24ft. l.w.l. with no bowsprit, the jib being tacked to the stemhead. The 21-footer Romance unshipped her bowsprit and entered under a staysail forward in the second class. The wind was fresh from the north and a good race was sailed, the times being:

FIRST CLASS.

	Elapsed.
La Chica, J. J. Souther	1 21 40
Nabob, H. W. Friend	1 23 12
Hobo, T. W. King	1 24 27

FIXTURES.

AUGUST.

9-23. A. C. A., 16th annual meeting, Bluff Point, Lake Champlain.

SEPTEMBER.

Red Dragon fall regatta, Delaware River.

A. C. A. Meet.

MEMBERS of the A. C. A. who intend going to camp this year are urgently requested to purchase their tickets at No. 413 Broadway (N. Y. C. & H. R. R. R. Co. ticket office) as early as practicable, so that the transportation committee may be informed of the exact number from this vicinity. It is proposed—should the response warrant it—to have a special sleeping car attached to the train leaving Grand Central Depot at 6:25 P. M. Friday night, the 9th inst., solely for the accommodation of the members of the A. C. A. and their friends. To do this it is necessary to have eighteen tickets purchased on or before Wednesday, the 8th inst., so that the car may be ordered in time. Members of the A. C. A. are cordially requested to co-operate in this plan.

A. C. A. Membership.

ATLANTIC DIVISION: Howard Jerome Hildt. Eastern Division: Chas. B. Damon, Cochituate, Mass.; Frederic B. Knapp, Boston, Mass. Central Division: Geo. H. Harris, W. H. Williamson and Geo. J. Keyes, Rochester, N. Y.

Rifle Range and Gallery.

Revolver Shooting at the Bisley Meeting.

LONDON, England, July 22.—The Bisley meeting finished on July 20. There was no rain all the meeting till the last day, and then it made up for it by raining hard most of the day.

The meeting was one of the most successful that has been held there. There was a great deal of wind almost the whole fortnight, which prevented the 50yd. revolver scores equaling those made by Mr. Winans last year, when he had two consecutive scores of 41 in the military and target revolver series. Still several records were broken. Below are details:

Military revolver, series 1, target moving at the rate of a slow walk at 20yds. distance, 2in. bullseye: The former best on record was 41 out of a possible 42. Mr. Winans was leading for this with a score of 40 until the last day, and then finding that he needed 2 more points to put him ahead for the military revolver aggregate prize (having made a bad score in military series 4), began shooting again and made the first highest possible ever recorded in any of the moving or disappearing targets at Bisley.

We inclose the full-sized diagram of the score with 7 shots on the bullseye, the seventh shot being fired after he had won the competition in order to make a record of as many bullseyes as he could consecutively; his eighth shot was a 6, so he stopped shooting. The bullseye he made after winning is the highest one on the diagram.

Military series 2, target appearing and disappearing at intervals of 3 seconds at 20yds., 2in. bull, was won by Mr. Winans with the best on record score of 41.

For series 3, 6 shots in 12 seconds at 20yds. on a 2in. bull, Mr. Winans

SCORE

was leading with a score of 38 out of a possible 42, equaling his last year's best on record, but as said above, in order to improve his military aggregate scores he shot again, first making 39 and then a still better 39, all the shots being in the bull or almost touching it on the right edge. This won the prize and is the best on record for this series.

The next military series 4, 6 shots at a stationary target, only two entries allowed, was won with a score of 42 by Capt. Heath, Mr. Winans having a blow-off on account of wind, which spoiled his scores.

Military series 5, 50yds. target, was won by Mr. Winans with a score of 40.

Target, or "any," revolver series 1, at a moving target, was divided between Mr. Joynt and Mr. Winans with equal scores of 40.

In series 2, disappearing targets for any revolvers, no less than three competitors made a score of 41, Messrs. Winans, Joynt and Pritchard, they dividing first prize.

For any revolver, series 3, 6 shots in 12 seconds, Mr. Winans put all except his fourth shot in the bullseye, scoring with that a 5, total 40 out of a possible 42—the best on record.

Series 4, stationary target, 20yds., only two entries allowed, Lord Cairns won with a highest possible score.

Fifty yards, target revolver, was won by Lieut. Pritchard with a score of 39, two points less than Mr. Winans's record score, the latter scoring one point less. As said before, the wind was too high for good scoring at 50yds.

The military revolver aggregate was won by Mr. Winans with a score of 193, Mr. Joynt coming next with one point less. The any revolver aggregate was won by Mr. Winans with a score of 196, Mr. Joynt being second with six points less. The revolver grand aggregate, constituting the revolver championship of England, was again won by Mr. Walter Winans with a score of 389, Mr. Joynt (the revolver champion of Ireland) being second with seven points less.

The only score of 42 made in revolver pools this year was made by Mr. Winans, who also made top score at his first entry in the Winans competition for revolvers at an advancing target. This ran from 50 p to 15yds., the six shots to be fired during the run. Mr. Winans thought this would be a practical shoot, so gave the prize. He shot the first entry at it ever fired, scoring a 6 at the first shot and all bullseyes the remaining shots, scoring 41, which remains the best on record. This trophy was won by Lieut. Chitty (champion revolver shot of India) with a score of 39, Mr. Winans waiving his claim to taking a prize in a competition given by himself.

The great feature of this year's revolver shooting has been the number of Smith & Wesson revolvers used at Bisley.

Till the present year there were not more that some three competitors using that make of revolver, but this year, although the actual number will not be know till the report is published—about Christmas—it is known that many, if not almost all, of the top scores were made with them, all the best shots using them almost without exception. Mr. Winans used a Smith & Wesson and U. M. C. ammunition: Mr. Joynt a Colt with Eley's ammunition, both black powder. Lord Cairns used both a Colt and a Smith & Wesson: we believe his highest possible score was made with the latter. Lieut. Chitty used a Colt.

There seems to have been some danger in using smokeless powder in rifles at this meeting. One competitor using Cannonite in a Lee-Metford rifle burst the breech and injured an eye. It is thought he had a bullet strip and leave its envelope in the barrel the previous shot. A competitor with a double-barreled hunting rifle, who won the cup for that style of shooting, had a striker blow out with Cordite powder, the striker passing through the brim of his hat, and another badly strained the breech of a similar rifle in the same competition.

Hay Hurst, of Canada, won the Queen's Prize for rifle shooting. As the party of Canadians carrying him shoulder high in a chair passed Mr. Winans's cottage, they cheered the Stars and Stripes fluttering on the gable. The cheers were returned with interest by Mr. Winans's party, who were sitting on the piazza watching the finish of the competition.

Cincinnati Riflemen.

CINCINNATI, O., July 28.—The following scores were made by members of the Cincinnati Rifle Association at their range to-day. Conditions: 200yds., off-hand, 3lb. trigger pull, rifles under 10lbs. weight, standard target, 7-ring black. Scores:

Gindele	8	9	8	10	10	8	8	10	8	8	8—87
	8	6	10	10	7	7	6	10	10	10	10—84

Pacific Slope Riflemen.

SAN FRANCISCO, Cal., July 28.—The attendance at Shell Mound Range to-day was light. It was "bullseye day" with the Schuetzen clubs. Most of the German marksmen who went to the great shoot at Glendale Park, L. I., were present and receiving the congratulations of their shooting friends. Following are the scores of the Columbia Club all comers' contests:

Rodgers medal, 50yds., standard target, for ladies only, 22-cal. rifles: Mrs. L. J. Crane 97, Mrs. Nichols 89.

Kuhule medal, 200yds., any rifle: Dr. L. O. Rodgers 85, G. Schultz 80.

Blanding medal, pistol, 50yds., S. Carr 96, Dr. L. O. Rodgers 94, C. M. Daiss 91.

Several of the enthusiastic Columbians are away summering, hence the few entries. ROEEL.

Revolver Shooting in England.

LONDON, England, July 26.—Owing to the Bisley rifle meeting, no scores of any account have been made at either the North or South London rifle clubs' revolver competitions lately, so they are not worth detailing. The totals for the revolver championship of the North London Rifle Club are not made up yet. For the South London the following are in the lead:

Walter Winans 319, Knapp 290, T. W. Heath 305, E. H. Howe 280, J. Howard 271.

Trap-Shooting.

All ties divided unless otherwise reported.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Aug. 8-10.—ROME, N. Y.—Tournament of the Rome Gun Club; targets. W. P. Rayland, Sec'y.

Aug. 9-10.—NEW ORLEANS, La.—Tournament of the Inter-state Association, under the auspices of the Louisiana Gun Club; $200 added money.

Aug. 14.—MARLIN, Falls County, Texas.—All-day shoot of the Marlin Gun Club.

Aug. 15.—WHITE PLAINS, N. Y.—All-day shoot of the White Plains Gun Club; live birds and targets. Chas. H. Banks, Sec'y.

Aug. 15.—ELKWOOD PARK, Long Branch, N. J.—Opening tournament at targets; 100-target handicap race, $10 entrance.

Aug. 16.—WELLINGTON, Mass.—All-day shoot of the Boston Shooting Association.

Aug. 19.—PADUCAH, Ky.—First annual tournament of the Paducah Gun Club. T. J Moore, Sec'y.

Aug. 20.—WEST END, N. J.—Hollywood championship, 100 live birds, $100 entrance, 30yds. rise. Entries close Aug. 13, to J. S. Hoey, manager.

Aug. 20-23.—HOLMESBURG, Pa.—Pennsylvania State Sportsmen's fifth annual tournament, under the auspices of the Keystone Shooting League of Philadelphia. John C. Shallcross, Sec'y, Frankford, Pa.

Aug. 27.—SPRINGFIELD, O.—Second monthly tournament of the Home City Gun Club; targets; professionals barred.

Aug. 27-29.—CHARLOTTE, N. C.—Tournament of the Interstate Association, under the auspices of the Charlotte Gun Club.

Aug. 28-29.—FREDERICK, Md.—Two days' tournament of the Frederick Gun Club, at targets.

Aug. 29-30.—SHERBURNE, N. Y.—Tournament of the Sherburne Gun Club.

Aug. 29-31.—HOT SPRINGS, S. D.—Hot Springs Gun Club's second annual tournament.

Aug. 30-31.—CHICAGO, Ill.—First monthly shoot of the Cook county Trap-Shooters' League. Chas. Grubbs, manager.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed.

Saturday afternoon practice shoots are common enough in the vicinity of this city, but such shoots rarely bring out the members of the different clubs in any sort of shape. Why don't more clubs follow the example of the Peekskill and Newburgh Gun Clubs, of New York State, and of the Passaic and Maplewood Gun Clubs, of New Jersey? With such clubs as the Climax of Plainfield, South Side of Newark, Brunswick of New Brunswick, Boiling Springs of Rutherford, Elizabeth of Elizabeth, Endeavor of Jersey City, Union of Springfield, etc., all in New Jersey, series of inter-club team contests should be more numerous than they are. A team contest, 10 or 12 men a side, forms the nucleus for a good day's sport, besides creating more enthusiasm among club members than a dozen practice shoots.

The "Hollywood Championship" at live birds, under the management of J. S. Hoey, manager, of Hollywood, West End, N. J., is announced for Aug. 20, at 11 A. M., on the Hollywood Shooting grounds. The conditions governing are: 100 live birds, $100 entrance, 30yds. rise; entries to close on Tuesday, Aug. 13; five entries to fill; 50% to the first, 30% to the second, 10% to the third, with 10% to the club; post entries, $150, will be received up to noon on the day of the contest. Up to Aug. 5 Mr. Hoey had received three entries.

Fred Hoey arrived in this city on Sunday, August 4, after an extended tour through Europe. He has tested the quality of the birds at the Gun Club, London; at Monaco, Paris, Rome and Aix-les-Bains, and has brought back with him a high opinion of those birds as flyers. On the whole, his trip may be described as a most successful one, Hoey having shown the Europeans that there are Americans who can shoot live birds. It is said that he contemplates a return to the Monaco grounds in 1896.

A curious coincidence occurred in a sweep shoot at Dexter Park, L. I., on the afternoon of July 30: The sweep had six entries and six different brands of nitro powder were used. The contestants and their powders were: L. H. Schortemeier, E. C.; M. Herrington, W. A.; J. H. Richmond, Walsrode; Dr. G. V. Hudson, American Wood; W. E. Hogan, Schultze, and J. H. Voss, DuPont's Smokeless.

A recent issue of the Pittsburg, Pa., *Dispatch* contains some particulars of a team match that was to be decided, according to the above authority, on Aug. 8. The race was stated to be for five-men teams from clubs in Ohio, West Virginia and Pennsylvania, 50 targets per man. A trophy was to be donated by the Herron Hill Gun Club, of Pittsburg, under whose auspices the shoot was to be held.

H. M. Federhen, Jr., Secretary of the Boston, Mass., Shooting Association, has issued a programme of an all-day shoot of the Association at Wellington, Mass., on Friday next, Aug. 16. On this date one of the programme events will be the five-men team championship contest for the *Shooting and Fishing* trophy. Besides a team for the home club, teams for Worcester, Mass., and other clubs will compete.

A notice is given elsewhere of the Interstate Association's programme for the Charlotte, N. C., shoot on Aug. 27-29. There will be quite a delegation of shooters from this part of the country, who will journey to Charlotte for the sake of showing their appreciation of the sportsmanlike qualities of the promoter of that tournament—Col. J. T. Anthony.

Capt. Money has been showing the English trap-shooters that we know how to break targets over here. The Captain held up his end with the boys, winning quite his share of the purses. The club he shot with was the West Kent Gun Club, of Eltham.

The organization of the Cook County Trap-Shooters' League will be a good thing for trap-shooting in Chicago. The example of the Chicago trap-shooters might be followed in several localities with much resultant benefit to the sport.

That was quite a team race last Saturday afternoon at Chicago. Teams of 18 men from the Eureka and Garfield Gun Clubs, of Chicago, Ills., met, each team shooting at 450 targets. The Eurekas won by 6 targets—370 to 364.

Next week will be a very quiet one in the trap-shooting world, judging from our list of fixtures. The Pennsylvania State shoot at Holmesburg Junction is the main attraction for the week following.

Long races are becoming much more popular as the degree of expertness of shooters increases; 25 and 50-target races will be much more common next year than they were this season.

We understand that the Climax Gun Club, of Plainfield, N. J., will in all probability give a two day's tournament toward the latter part of September; first day—targets, second day—live birds.

The Boiling Springs Gun Club, of Rutherford, N. J., realized quite a little sum at their shoot on August 3, held for the benefit of the cyclone sufferers at Cherry Hill, N. J.

The opening day at Elkwood Park, N. J., is to be Aug. 15, when a special programme is offered, as per a note that appears elsewhere in these columns.

The Home City Gun Club, of Springfield, O., announces that it will hold its second monthly tournament (professionals barred) on Tuesday, Aug. 27.

On July 27 the Menominee (Mich.) Gun Club defeated the Green Bay team in a match at 30 bluerocks per man by the score of 186-164.

It looks as if one was going to meet the regular old Interstate crowd at Charlotte: Heikes, Van Dyke, DuBray, U. M. C. Thomas, etc.

A gun club will be organized shortly at Faribault, Minn. The club is expected to start with a good membership.

The Sherburne, N. Y., Gun Club will hold a two-days' tournament on Aug. 29-30.

Ralph Trimble, of Covington, Ky., showed his quality at the Lafayette, Ind., shoot, reported elsewhere. EDWARD BANKS.

Albert Lea Gun Club.

ALBERT LEA, Minn., July 25.—Scores given below were made at the annual tournament of the Albert Lea Gun Club, which was held yesterday and to-day under the management of W. H. Fay. Some of the best shots in the State were in attendance, and the tournament was a complete success in every respect. As will be seen by the scores, some excellent shooting was done, Duke in the last three events on the first day breaking 48 out of 50. Scores:

Cook County Trap-Shooters' League.

CHICAGO, Ill., Aug. 5.—*Special to Forest and Stream:* The trap-shooters of Cook county, Ill., formed a permanent organization tonight under the title of Cook County Trap-Shooters' League. The officers elected were: President, R. S. Mott; Vice-President, E. E. Fox; Secretary, W. F. DeWolf; Treasurer, Dr. C. W. Carson; Governing Committee, E. B. Knott and C. B. Richards.

The League will hold monthly shoots for trophies. The first shoot will be held Aug. 30-31, under the management of Chas. Grubbs, of Montgomery Ward & Co. The first annual tournament of the League will be held during Thanksgiving week.

The League is composed of 25 clubs, with a total membership of 600. Its organization should be a great help to target-shooting in this city. E. HOUGH

WESTERN TRAPS.

THE DROPPER DROPPED ON AGAIN.

CHICAGO, Ill., July 31.—It has always been my belief that the practice of crooked shooting was something to be laid partly at the door of weak-minded managements as well as crooked-minded shooters, and I have thought that a few examples made of crooked shooters would be worth pages of resolutions in programmes. Following hard upon the Chamberlin shoot, in which two shooters were disqualified for dishonest shooting, comes word of the second case on record where dropping has been punished. I am indebted to the *Tribune*, of Chicago, for the following report of the Princeton, Ill., tournament, which briefly states the incident referred to as below:

"The eighth annual tournament of the Princeton Gun Club July 30 was attended by seventy marksmen from various towns of the State, in addition to local teams. Many of the contestants materially lowered their records. Winship, of Putnam, after breaking 23 birds in the single 30 shoot, was ruled out, the referee claiming he had been induced to miss the next bird for the sake of capturing a full second money."

The above is all the news at hand of the occurrence, and I do not know of Winship personally. It seems to show, however, that there is one more management which is not disposed to hearken any longer to the old-time query: "How are you going to prove it?" Any management or any shooter who knows much about the tournament game can see it and know it in at least some of its most flagrant forms. Very often it is only a question really of "How can you help seeing it?" After a while we shall hear more of managements who believe their own eyes and who are not scared about acting on such testimony.

It appears that Princeton shoot must have been a good one. In many events there were over forty entries. The scores:

Team shoot: Sheffield 100, Neponset 99, Princeton 95, Kewanee 91, out of a possible 120.

Championship gold medal: Studley, of Neponset, won, score 30 out of a possible 30; Bacon, of Henry, second, score 29.

Fifteen singles: J. F. Wagner, of Princeton, won, score 15; Studley, of Neponset, and Alexander, of Sheffield, tied for second.

Twelve singles: The following broke 12 each, dividing the first prize: Brown, of Princeton; Kopp, of Kewanee; Wagner and Stewart, of Princeton, and Winship, of Putnam.

Twenty singles: The following broke 19 and divided: Parchen, of Ohio; Bacon, of Henry; D. Word, of Henry; Huckins, of Neponset, and Brown, of Princeton.

Fourteen singles: Studley, of Neponset, won, scoring 14.

Ten singles: Winship and Alexander tied, scoring 10 each.

Twelve singles: Snow, of Neponset, won, scoring 12.

Twenty-five singles: Huckins won, scoring 25; Baker and Studley second, scoring 24 each.

Five doubles: Huckins won, scoring 9.

EDDIE MANAGES.

Eddie Bingham, of the hand-loaded shell department of Montgomery Ward & Co., will in a couple of days put a few hundred weight of "Yellow Label" shells in his carpet bag and start for Lake Geneva, Wis., where the Lake Geneva Gun Club have a two days' shoot, Aug. 2 and 3, which Eddie is to manage. Montgomery Ward & Co. give a fine gun case for best daily average the second day. An attractive little programme is offered and the event will of course be smooth and pleasant. Targets thrown at 2 cents.

CARRIES A CHIP.

The Garfield Gun Club, of Chicago, carries a large, fat chip on its shoulder. Aside from the team contest with the Eureka Gun Club, noted elsewhere, it is after Eureka about the State championship at targets, and wants to shoot a race, 5 men teams, at 50 singles and 25 pairs, for the silver cup now held by the Eureka men.

GOOD TIMBER.

The other day Charlie Grubbs (also of Montgomery Ward & Co.'s loading department, by the way) was trundling merrily down Madison street on his little bicycle, when a big horse, driven by some gay gentleman, reared up and plunged, throwing one forefoot across the frame of Mr. Grubbs's machine. The weight of the horse's front legs came on Mr. Grubbs and the machine jointly. The latter bucked and sprung, throwing its rider, but escaping with only slight injury. Mr. Grubbs carries a big black spot where the hoof hit him, but is not complaining any. It would seem that both he and the wheel are made of good timber.

BLESS ITS HEART.

I am credibly informed that a while ago a Chicago paper known as the *Game Dealer's Friend* accused some English and American sporting papers of beating it in getting out tabulated trap reports. The *Friend* is understood to holler, "I saw it first." Bless its heart, FOREST AND STREAM was the first paper to boil scores, the first to run news fresh (as it always does), the first to tabulate scores, the first to give daily tournament averages, the first to see the value of getting in all the events and getting them quickly though briefly, the first (and only paper) to get out graphic trap type for live-bird reporting—in short, the first to do the sort of thinking which has made it universally recognized as the first trap paper of this or any other country. If FOREST AND STREAM were beaten, I don't know whether it would whine or not; probably not, but we can't tell for sure until it is beaten, and that looks a long way off.

EUREKA—GARFIELD.

CHICAGO, Ill., Aug. 3.—The team race this afternoon between the Eureka and Garfield gun clubs, both of Chicago, turned out to be one of the pleasantest affairs of the season. The weather was delightful, the Eureka Club grounds were never in better order, and the members of both clubs turned out in force, each man resolved to do his best. It was thought at first that it would be difficult to fill club teams of 18 men each, but there were enough good men on hand for each club, with plenty to spare. The utmost jollity and good feeling prevailed, and the only thing to mar the pleasure is the thought that it is a good while till Aug. 24, when the return match will be shot at Garfield grounds.

These two clubs, Eureka and Garfield, are the two most important target clubs in Chicago, if not in Illinois, the gun club of Pekin, Ill., being next in annual number of targets thrown. Both clubs are made up of high class amateurs, numbers of professional and business men being found in each. Garfield Club includes six physicians on the roster, and talks of changing its name to the "Garfield Medical Association." Between the two organizations there has long been friendly rivalry. Last year there were two team races, both of which were won by Garfield Club. Affairs were partially evened up to-day by the winning of the Eurekas. Now comes the return race of 1895, and some time before snow flies the two clubs will shoot a race for the State championship and the *Shooting and Fishing* silver trophy. The conditions of this will be 5-men teams, 50 targets, 30 singles and 10 pairs.

The conditions to-day were 25 singles per man, every man expected to do his duty. Some of them did and some of them didn't. The squads were shot in sandwich fashion, first a Eureka man, then a Garfield at the score. This allowed a checking up on results at the end of each squad, and much of the time the excitement was high. At the end of the first squad Eureka felt glum, but gathered heart later, in spite of the fact that some of its best men, like Charlie Willard, Eddie Bingham and Big Grubbs, were in the firing line. Garfield kept hammering at the targets pretty steadily, and at the end of the fourth squad, or 24 men out of the 36, the score was 360-all, or 240 scored for each club. Then each club told what it was going to do in the last squad, for which each had saved its gait. But it was in squad No. 5 that the race was won and lost, Eureka going ahead there 5 birds. In the last squad Garfield put up the veteran Abe Kleinman, the expert Capt. Skinner and the reliable Henry Tefft. Eureka produced Old Hoss Stannard, the merry Oswald von Lengerke and the ready old-timer Atwater (who had not shot a gun for two years, but nevertheless took to it kindly). The Eureka men managed to gain every bird in this squad round and went out winner by 6 birds.

There was only one straight made, that by M. C. Patterson, of the fields, admitted before the shoot to be the best looking man on the grounds, and after the shoot to be both the best looking and the best shot. Mr. Patterson had backed his score against that to be made by Mr. Stannard and much interest followed the shooting of the latter, but though he shot coolly and pluckily as usual, he could only make 24.

The shooters met at 12:30 at Von Lengerke and Antoine's store and proceeded to the grounds at seventy-ninth and Vincennes avenue almost *en masse*. Eureka grounds were packed with a lively crowd—increased on the outskirts by a large number of admirers of the national game, who watched with noisy approbations the efforts of two rival scratch nines who share the Eureka grounds, sub-leasing from that club. Mr. Peter Warnimont refereed the races very ably and satisfactorily, and Messrs. Carson and DeWolf scored. Mr. DeWolf is secretary of the Eureka Club. A number of ladies were present and also some interested spectators, among these Mr. Garth, of Galesburg, a shooter of enthusiasm.

Before the race a practice sweep at 10 birds took place with general entry, and after the main event was concluded sweeps at 15 birds were shot until dark. On the whole it was one of the most enjoyable little afternoons in every way that one has seen for a long time, and the only wonder is that such events are not held oftener, they are so pleasant. There was plenty of fun, Messrs. Patterson and Von Lengerke contributing well in their Dago and monkey specialty, which never failed to convulse the spectators. Following are the scores of the event:

Eureka.

Morgan	1	1	0	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	—24
Stannard	1	1	1	1	1	1	1	1	1	1	1	0	1	1	1	1	1	1	1	1	1	1	1	—24

JUVENILE CHAMPIONSHIP.

The juvenile championship shoot at live birds, set for this afternoon at Watson's Park, did not materialize, only master Alfred Bisson appearing. Master Charlie Burr, of Michigan, wished time to practice a little. Master Clarence Long, of Lafayette, Ind., did not respond. Master Guy McDonald, of Chicago, did not appear. Master Bisson says he is willing to shoot any or all these at a later date if they will set it.

RECOVERED HIS GUN.

Mr. De Wolf, hon. sec. of the Eureka Club, had the experience last month of having a bright and obliging female domestic, who tried to make home pleasant so far as good cooking and sweet manners would suffice. Unfortunately, the said domestic had a sweetheart, and the sweetheart was what the wicked policemen call a crook. The domestic one day handed her sweetheart a lot of Mr. and Mrs. De Wolf's personal effects, including Mr. De Wolf's new shotgun. The sweetheart "soaked" the gun, as the policeman say, at a pawnbroker's shop. Mr. De Wolf made what they call a "squeal," and a gentleman known, as I understand, as a "fly cop," took the case in hand, arrested the nice domestic and her sweetheart, and last week recovered for Mr. De Wolf his gun, as good as new. Over this he was to-day rejoicing very much. This is the only instance on record where a Chicago detective ever detected anything. E. HOUGH.

909 SECURITY BUILDING, Chicago.

The Question of "Proper Angles."

CAZENOVIA, N. Y., Aug. 1.—*Editor Forest and Stream:* Noticing your article in the last number of FOREST AND STREAM, on "proper angles," reminds me of many such instances where the shooter *ought* to call for another target, but does not do so for the reason that some other participant has accepted and broken one thrown in a like manner There is no more unfair way of shooting than at known traps, unknown angles. I have attended a great many "meets" since this system was adopted, and at *every one* this throwing of targets at angles against all rules has always been done. It is often laid to the home club or the management, yet in almost every instance it is the trapper's fault. He gets tired of hearing, "Dead," "Dead," and makes up his mind that it is about time that some one of the shooters dropped a target. Lock your traps, do everything you can, coax, scold and d—, etc.; it is all the same to him. He soon learns to put the "thrower" a little ahead of the arm, the target upon one edge of the roll, etc., etc. Why, when we had our company's shoot here, we had to take the boys out of the factory before we could break it up. Then all went smoothly.

It would be all right if every one should get the same rasper that his neighbor did—but he doesn't. You must make shooting difficult by difference of angles, elevation and speed, but serve all alike. At the Saratoga tournament the distance from No. 5 trap of set 2 was 55yds. from No. 1 of set 1, and yet I saw target after target from that No. 5 go over the above-mentioned No. 1, 30ft. in the air. When it is remembered that both these sets were parallel, do you wonder that many did not shoot. Traps in reversed order is far fairer for all, and I wonder it is not used in preference to known traps, unknown angles. WILL H. CRUTTENDEN.

In substance we indorse all that Mr. Cruttenden has said in his above communication. But the doing away with unknown angles would, in our estimation, do away with a very important portion of inanimate target shooting. In known traps, unknown angles, and in unknown traps, known angles, we approach more nearly to field shooting than in any system hitherto devised and generally practised at tournaments. In both there is a great element of luck. Trap-shooters who are also fond of shooting quail or ruffed grouse will bear us out in this. Who does not remember a time when he has had quail after quail rise to him, even in brush, in an accommodating manner? A few minutes afterward he gets one of those "raspers" that Mr. Cruttenden refers to. That's the empty shell not accounted for; and that's very often the cipher on the blackboard. As a matter of sport, we approve more highly of unknown angles and the expert system than of any other system, even traps in reversed order, where all the conditions are known. There would be very little sport in going up to one's dog's point in a patch of ragweed if one knew exactly what line of flight the quail would take when flushed.

And it's so in target shooting. This very element of luck, the uncertainty as to what one is going to get in the way of an angle, is just what has made unknown angles a popular sport in sweepstake shooting. In a long race, say 100 targets, we think luck is generally pretty fairly distributed. But where angles are changed every time, and in a 10 or 15-target event, it not infrequently happens that one shooter draws a succession of easy ones, while the man behind him consequently draws a succession of quarterers. The present way of doing things—*i. e.*, making the trappers change the angle every time—is altogether wrong. Suppose No. 1 draws a right-quarterer, it is 99 chances to 1 that the pivot man will get a straightaway or a left-quarterer. Instruct your trappers to change the angles *frequently*, not *every* time, seems to us the better plan.

Our only objection to unknown angles is in a team race, such as those of the New Jersey State League: five men team races, 25 targets per man, unknown angles. On these contests, nine in number, each of the nine clubs that compose that organization giving one of the tournaments, depends what is known as the State club championship; at least, such it is conceded to be. Under such conditions, FOREST AND STREAM predicted last February, and later developments have proved the correctness of that prediction, that there would be danger of dissatisfaction with the manner in which the targets were thrown. We think Mr. Cruttenden's theory for "raspers" is more than plausible, but we can't expect everybody, on the spur of the moment, to agree with us.

Opening of Elkwood Park.

PHIL DALY, JR., of Long Branch, N. J., writing under date of Aug. 1, says: "I wish to claim Thursday, Aug. 15, as the date on which we will hold, at Elkwood Park, Long Branch, N. J., a 100-target handicap race, $10 entrance. Other sweeps will also be shot. Shooting commences on the arrival of the 12:10 train on the P. R. R. The handicappers will be: Major J. M. Taylor, Jacob Pentz and Edward Banks. Entries, accompanied by $2 forfeit, should be sent to T. H. Keller, P. O. Box 92, New York city."

Elkwood Park is a new place so far as trap-shooting is concerned, but it possesses every requisite to make it one of the best equipped shooting grounds in the country. Phil Daly, Jr., is the moving spirit in the new undertaking, and it is Daly's desire to see the Grand American Handicap of 1896 brought off at Elkwood, where the shooters will be well looked after and everything done to make the greatest live bird event of the year an unqualified success.

IN our figures on the standing of the leaders in the present series of New Jersey Trap-Shooters' League contests we inadvertently overlooked the average of the Elizabeth representative, Aaron Woodruff, who has shot in five contests, scoring 16, 19, 19, 20 and 24, a total of 98 out of 125, making his percentage 78.4, equal to that of Geoffroy and Warren Smith. That the Elizabeth team is one likely to give trouble to the other teams may be gathered from the following averages of the five regular representatives of that club:—Williams 85.6, Hebbard 84.8, Parker 83.2, Astfalk 81, and Woodruff 78.4. These totals give a team average of 82.6.

Binghamton Gun Club.

BINGHAMTON, N. Y., Aug. 1.—The following sixteen 10-target events, unknown angles, entrance $1.50, were shot to-day by members of the Binghamton Gun Club:

Hobbie	5	10	9	9	7	7	8	8	9	8	8	9	8	7	8	9
Boss	7	7	9	6	5	6	7	7	6	9	9	8	10	10	8	7

H. W. B.

Lafayette Gun Club.

LAFAYETTE, Ind., July 25.—The ninth annual tournament of the Lafayette Gun Club closed to-day with the going down of the sun after three successful days' shooting held at the club's park. Lafayette is one of the wealthiest cities in the United States, considering its population, and its enterprising and wide-awake gun club has been a source of pride for many years. The club members may well claim to have the best equipped and best located grounds in the State, while the sky background makes target shooting pleasant to old and young alike. At this shoot we saw good scores made by men of sixty-five and again by young men of only sixteen summers.

A visit to the trap house revealed a curiosity. Almost everything that has been invented in the trap-shooting line may be found there. A set each of Ligowski clay pigeon traps, Peoria blackbird and bluerock traps, together with targets for each. The oli clay pigeons were a curiosity, so long have they been out of date. Add to this several devices for trapping live birds and all manners of pulls, wire, rope, electric, etc., and you have a combination that shows a progressive club of long standing.

The present officers are hard working good fellows. Alca Livingood, president, and Louis Krauss, secretary, handled the cash, kept things moving and shot in every event, making good scores. John E. Long did the greater part of the refereeing in excellent style, while "Uncle Nate" Long with his 11lb. 10-gauge Smith, using brass shells, proved a combination hard to beat. Mr. Whit Thompson, ex-president and a member of the executive committee, was on hand all the time.

W. Tramp Irwin, of Peoria, was employed as manager. He was kept busy during the three days keeping traps in order, watching the trappers, hustling squads, etc. Ten traps were used—five bluerock and five Peorias. Peoria blackbirds were used in both sets.

The weather was very good for the most part. It was cool and cloudy the first two days, with threatenings of rain. Yet the rain did not fall and the targets were easily seen, as they were thrown just above the fence and at a distance of about 50yds. To-day was brighter and slightly warmer, but yet fine, a good rain having fallen last night. Winners of first money in two events were handicapped to unknown angles during the remainder of the day. Thus a number of the shooters were shooting at unknown angles most all the time.

Ralph Trimble missed but 18, "Partington" 20, Gamble 27 and King 30 during the three days, winning in their order the prizes for highest averages. Trimble did not have his own shells during the first day, and lost more on that day than on the other two.

The scores made each day were as follows:

First Day.

Events:	1	2	3	4	5	6	7	8	9	10		
Targets:	*10*	*10*	*15*	*15*	*10*	*15*	*15*	*20*	*10*	*15*	Shot at.	Broke.

Great interest was taken throughout the shoot in the winning of the averages. Partington was ahead up to noon to-day, when the young man from Kentucky tied him. During the afternoon Trimble lost but two, while Partington lost four. No. 7 of the second day do not count in the averages, hence the totals do not agree with the averages as given in another place. The young man who was barred at Cleveland was present, and from his shooting here it seems altogether probable that young Thomas can go up against any sixteen-year-old boy in the United States. It was regretted that he had to go home through indisposition and could not be present the last day.

J. Long	Burgess	Dupont	Rival.
Garland	Spencer	Dupont	Rival.

Look the scores over and see what a soft snap the amateurs have when they meet and shoot against each other with the professionals left out.

The most exciting contest was the State badge shoot, 50 targets. Scores: two 49s, three 48s, two 47s, one 46, two 45s, three 44s, etc. Grube and Gambell had a shoot off that was a shoot off. Gambell insisted on shooting at 50 targets, and it was a fortunate thing for the club that they had two sets of traps.

When the clouds had rolled by Grube and Gambell were tied again with 47; thus they had each broken 96 out of 100. After quite a bit of delay and chattering it was agreed to shoot another 100 targets. Out of the first 25 each scored 24; in the second 25 Gambell lost 3 and Grube 1, leaving two ahead; third 25 Gambell lost 4 and Grube went straight, and the race was virtually settled. But Gamble rallied and smashed out 24 to Grube's 22. The total of last 100 was Grube 95 and Gamble 91. Grube won the medal last year on 46 and can now be styled champion of Indiana. The shooting of Gamble is remarkable; he is a man of small stature and quite crippled with rheumatism. He has taken to shooting for recreation, and he must dearly love it when he will stand up for 200 shots in succession and score 187 out of the 200

INJUN.

Trap at Little Rock.

LITTLE ROCK, Ark., July 27.—On July 12 Dr. J. H. Lenow and W. R. Duley shot a match at live birds; conditions, 25 birds per man, American Shooting Association rules to govern. This match resulted in a tie, each scoring 16. There not being enough birds on hand to shoot off the tie, it was agreed to shoot a similar match as soon as the pigeons could be procured.

The second match took place to-day, and this time Duley was the victor. The Doctor jeopardized all his chances of winning by losing his first five birds, the fifth one dead out of bounds. Duley in the meantime had scored 3 out of his 5, a lead the Doctor was never able to overcome, Duley eventually winning the match by 2 birds.

The Doctor is not at all satisfied with the results and desires to shoot Duley another race, while Duley is quite as anxious as the Doctor, and another match will likely take place in the near future. The match was purely a friendly one, the consideration being the price of the birds only. The scores below tell how it was done:

First Match.

PAUL R. LITZKE.

Greenville Gun Club.

GREENVILLE, Miss., July 26.—The regular weekly shoot of the Greenville Gun Club was held to-day. D. M. Porterfield, representing Fred J. Waddell, of Chattanooga, Tenn., Southern agent for DuPont's Smokeless and Hazard's "Blue Ribbon" powders, was our guest. Mr. Porterfield made the best average of the day—95 5 per cent.; of course he used the powders which he represented, none other being good enough for him. Scores:

No. 1, 20 singles, unknown angles, $2:

Porterfield	01111111111111111111—19	L Y Kerr	00111101110110101100—14

R. H. MCHIE, Sec'y.

Michigan City Gun Club.

MICHIGAN CITY, Miss., July 25.—The Michigan City, Miss., Gun Club held its regular weekly shoot to-day. Some good scores were made considering that this is the club's first season. Tway is shooting a new Greener and is not up to his regular form, although at 20 singles and 5 pairs he smashed 27 out of the 30; Hardaway turned out 25 straight and Aldrich was not far behind. Our first annual tournament will be held on Sept. 5, and all sportsmen are cordially invited to attend. A good time is guaranteed. The events programmed for that date are ten, they range from 15 to 25 targets, entrance $2 per race. The Michigan City Gun Club also desires to meet any team of four men in a team race at 25 targets per man on that day. The club's team will be Chas. W. Tway, W. P. Hardaway, M. L. Brewer and J. M. Aldrich, with W. F. McCarley and W. Wheeler alternates. Programmes will be ready for mailing about the 15th, write for one to the secretary. Below are the scores made to-day.

Tway	11110011111111111111111110—22
Aldrich	11111111111111101110111110—22
Hardaway	11111111101111111111101111—22
P. ewitt	01111100110101010111011111—17
Robinson	01000001011101101000000011—11
Dr Phillips	00101101100010111111111011—16
Brewer	11011000000000100010001001— 8
Love	11000001000001000010000000— 5
Small	00110101111011111111111011—19
J C Robinson	01010011110100000111011001—12
Maples	11000001000001100000000110— 7
Moody	00000000100100000000110000— 4
Farrell	11110111011101101111111101—20
Leary	01010111011001111111111010—17
Lewis	00000000100000w— 1

Remember the Michigan City, Miss., tournament, Sept. 5.

When you want to have a good time attend the Greenville, Miss., shoots. Of course you know Mr. McKie, Van Meter, Arnold, Keller, Alexander and Percy. If not, you don't know the make-up of gentlemen and true sportsmen.

Brewer, of Lamar, Miss., and McCarley, of Jackson, Tenn., go to Dakota after chickens next month.

The Michigan City Gun Club will be represented at the interstate at New Orleans by Charles W. Tway.

A letter from C. C. Emery, of Solomon, Ill., says: "I will be on hand at the Michigan City tournament Sept. 5.

J. N. Aldrich and W. P. Hardaway, of Michigan City Gun Club, are shooting their Winchesters at a winning pace. Look out for them.

Look out for the undersigned at your tournaments with his new Greener and bright red sweater bearing the inscription "E. C.—Empire."

C. W. TWAY, Sec'y.

Peekskill vs. Pansy.

PEEKSKILL, N. Y., Aug. 2.—Fourteen members of the Pansy Gun Club, of Kingston, N. Y., were the guests of the members of the gun club of this place to-day, a team race between the two clubs being the object of the meeting. Among the visitors were Smith, H. Meyer, Cable, Weston, Cramer, Shaffer, Kenyon, Van Gaasbeck, Hume, Broadhead, Cohen, Merrinew, Marantette and Pfieger. During the morning, the Pansyites having arrived at 10, practice was indulged in until noon, at which hour the members of the two clubs adjourned for lunch at the Eagle Hotel.

After lunch, at 2 P. M., an 8-men team race, 25 targets per man, known angles, was shot, Peekskill winning by the score of 169-144, a victory of 25 breaks. The home club was short three of their best shots, but still made an average of 84.5 per cent. The weather was beautiful; in fact, one could not wish better conditions for target-shooting.

Score of the team race was as follows:

Peekskill.

Halsted	11111111111111111111101111—24
Mason	11111111101111111111111111—24
Everinghim	11111111110111101111111111—23
Loder	11111101111111111111111111—23
Dain	11111101111111101001110111—20
Southard	01011011111101101111111111—20
Armstrong	01011011110110111111011111—19
Lent	00110001010111111111110111—16—169

Pansy.

Van Gaasbeck	01111111111110111111110110—21
Smith	11111101110110111111111101—21
Cable	11101111110101111111111011—20
Cramer	11111C01111011111110110111—20
Meyer	11101011110101111100111011—18
Humer	11011011111100111001111001—17
Weston	00010010101011011111111111—16
Kenyon	01011010000101001010111100—11—144

From the above it will be seen that Halsted and Mason led with 24 each, Everinghim and Loder being close second with scores of 23. Van Gaasbeck and Smith were top scores for the Pansy Club with 21 each, the average of the Pansy team being 72 per cent.

The day's sport was brought to a close with a miss-and-out at live birds, Captain Dain, of Peekskill, winning the pot of $12. Score: Dain 4, Cramer 3, Halsted 2, Cable 2, Smith 1, Marantette 1, Van Gaasbeck 1, Mason 1, Meyer 0, Hume 0, Broadhead 0, Shaffer 0.

Live Birds for Memphis.

IN a personal letter to Mr. Hough, the Chicago representative of FOREST AND STREAM, Mr. T. A. Divine, president of the Memphis Gun Club, gives the following information in regard to the live bird prospect at his city. It will be a personal pleasure to many of his friends to hear that his health, poor in the early summer, has improved very much. It is hardly news to say that Mr. Divine was re-elected president of the Memphis Gun Club. He writes:

"There were laws in Tennessee that prevented the shooting of live birds. During the last Legislature we had a bill passed repealing all laws prohibiting the shooting of live birds at the trap, and making it possible for chartered organizations to have live bird matches, where they would use the birds for food. Therefore the following named gentlemen applied for a charter for the gun club to be known as the Memphis Gun Club, with the following chartered members: J. C. Neely, Jr., W. P. Halliday, Jr., F. P. Poston, W. F. Allen, A. B. Duncan, J. S. Walker, Fred. Schmidt, Irby Bennett and T. A. Divine.

"The regular annual meeting of the Memphis Gun Club should have been held in May, but owing to the wish of the club to disorganize the old association and reorganize under a charter, the organization was not perfected and the election of officers not held until the 24th of July, at which time the club held a very enthusiastic meeting, nominating and electing by acclamation T. A. Divine, President; J. C. Neely, Jr., Vice-President; A. B. Duncan, Secretary and Treasurer. Mr. Halliday, the old secretary, found it impossible, on account of his growing business, to act as secretary and treasurer, and asked to be relieved.

"I doubt whether we will ever have as big a tournament again as we had this year, but our club, which consists of fifty-one prominent citizens of Memphis, are determined to give the delegates who come to the American Trap-Shooters' Association convention in Memphis, May 12, 1896, a reception which they will certainly appreciate. During that week we contemplate having our tournament, a part of which will be devoted to live-bird shooting. We have already in view several matches between prominent shots over our grounds in the winter. We have made arrangements with an excellent purveyor to furnish and handle all the birds at our shoots, and I am glad to say that we will have no trouble in making plenty of bird matches, and good ones. Memphis at one time was the great central point for live-bird shooting, and there is no reason why it should not be the neutral ground upon which the Eastern and Western crack shoots should meet and try their prowess."

Bedford Rod and Gun Club.

BEDFORD, Ind.—The following scores were made this afternoon by members of the Bedford Rod and Gun Club:

No. 1, 25 targets, unknown angles:

Thompson	10000100000010010011101100— 9

F. M. D.

Home City Gun Club.

SPRINGFIELD, O., July 30.—The first monthly shoot of the Home City Gun Club, of this city, was held to-day, and proved a grand success, 42 shooters taking part in the various events on the programme. The traps were screwed up to the top notch, and the targets thrown as far and as fast as possible; the angles were acute and all unknown; all of these conditions, together with the strong wind that was blowing, made it hard to make big scores.

The next monthly shoot will be held on Tuesday, Aug. 27. All the events will be 15-target events, $1 entrance, all professionals barred, four moneys.

Scores in to-day's events were:

Events:	1	2	3	4	5	6	7	8*	9	10	11	12
Targets:	10	10	15	10	25	20	25	10	15	20	10	10

* No. 8 was shot under the Novelty rule. HUGH L. FORD, Lieut.

Trap in Texas.

MARLIN, Falls County, Texas, Aug. 2.—The Marlin Boating and Fishing Club held a meeting yesterday evening at the Camp Rouse to elect officers, etc., for the ensuing year. The secretary and treasurer's report showed a balance of cash in the treasury of $93 50.

Dr. D. P. Robertson was unanimously elected president; E. K. Herring was also unanimously elected secretary and treasurer; W. H. Jones and E. R. Emery were elected first and second vice-presidents, respectively, by ballot. The executive committee for 1894-95 was re-elected.

A number of changes were then made in the rules and by-laws. The most important of these changes was the restriction as to the number of fish caught, the same to be fifteen of any kind, not to exceed ten bass, trout or white perch by any one member and his family on any one day; and the number of days in the week—any three except Sunday. The rule was also set aside which reserved Thursdays for ladies exclusively.

A part of the Marlin Gun Club had a practice shoot yesterday evening as follows:

No. 1, 10 bluerocks, known angles: H. G. Rush 7, T. H. Ligon 10, T. E. Hubby 7, C. W. Rush 7, F. W. Stallworth 6, W. W. Turner 6.

No. 2, same: Rune Lanis 5, H. G. Rush 7, T. H. Ligon 9, T. E. Hubby 9, C. W. Rush 7, F. W. Stallworth 6, Will Lenoir 8, W. W. Turner 3.

Mr. T. E. Hubby says the organization of a new gun club in Waco is rapidly being perfected. THE NEWSMAN.

The Championship of Kansas.

AN effort is being made to establish a *bona fide* champion at live birds in Kansas. Mr. W. W. McIlhany, secretary of the Business Men's Gun Club, of Weir City, Kan., acting under instructions from his club, has issued the following circular letter with a view to bringing out the ideas of the shooters in Kansas upon this point:

"WEIR CITY, Kan., Aug. 1, 1895.—Dear Sir: Several times in the past year or two different representative shooters throughout the State have considered the project of establishing a trophy which shall represent the individual championship of Kansas at live birds, and of bringing about a contest of this nature.

"To prove such a shoot not only feasible, but desirable, one has only to talk a few minutes with the different shooters assembled at any tournament.

"There is at present no prize or trophy the possession of which authoritatively entitles the holder to the championship of the State at live birds, and while the by-laws of the Kansas State Sportsmen's Association provide for such a prize, the conditions under which it is to be contested for are such that no real test of skill is involved, owing to the small number of birds to be shot at; besides, no provision is made for subsequent contests, so that if any prize had ever been given there would be but small satisfaction in winning it under the lax conditions prescribed.

"Such a contest should be at 50 birds, but if the number of entries in the initial contest should be too great, the race might be reduced to not less than 30 birds. It is hardly possible from one set of good live-bird traps to shoot more than about 1,300 birds in two days. As some preliminary practice should be indulged in, at least during the morning of the first day, twenty-five to thirty shooters would use 1,300 to 1,500 birds even after reducing the championship race to 30 birds. This question, however, as well as others of like nature, can be settled later and in their proper turn.

"It is the purpose of the Business Men's Gun Club of Weir City to perfect arrangements heretofore contemplated and to bring about the contest on the 16th and 17th of October, 1895. The plan upon which the Club desires to proceed is briefly this:

"Assemble the shooters at Weir City on the dates and for the purpose mentioned. As an inducement for the shooters to enter such a contest and as a fitting emblem to represent its live-bird champion, the Club at Weir City will present the State with a Diamond Badge, with a guaranteed intrinsic value of $100.00. Trap all birds in the Championship race, at the lowest possible actual cost, and add to this price for birds a sweep of about $5.00. Shoot under American Association Rules, and conditions agreed upon, without handicap, giving first money and the trophy to the best score and dividing the purse into not less than five moneys.

"The design selected for the trophy is a solid gold watch charm, heavily studded with diamonds, and is something which can be worn if desired without giving its owner the appearance of a country equine on dress parade.

"In connection with the championship contest the club at Weir will provide a set of target traps and will also endeavor to furnish live birds sufficient to give all contestants some preliminary practice.

"All arrangements of details, both in the preliminary contest and in all subsequent challenge events, will be let to those whom the assembled shooters may select to perform this duty. And in order to make this contest authoritative with the least possible expense, it is the desire of the Business Men's Gun Club, subject to the approval of shooters throughout the State, that a meeting be held at Weir City on the evening of Oct. 15 for the purpose of completing all arrangements for State trophy contests.

"Before issuing programmes or going further with the work we would be pleased to hear from you and have you express your approval of the proposed contest, and to offer any suggestions which will help to make the shoot both successful and satisfactory. Let us hear from you at once."

Draw to this Pair.

COL. ANTHONY AND THE INTERSTATE.

THE eighth of the '95 series of the Interstate Association's tournaments will be held at Charlotte, N. C., on Aug. 27-29. We have received advance copies of the programme, with a request attached that FOREST AND STREAM will make a note of the same.

Without going into details, such as giving an account of Charlotte and its gun club, we will just mention, for the benefit of the few trap-shooters who don't already know it, that Charlotte is the home of Col. J. T. Anthony. That fact of itself is enough to satisfy all shooters that they are going up against a square game, and a good one, when they put in their appearance at Charlotte. The programme doesn't say anything about Col. Anthony; it isn't necessary that it should - pretty nearly everybody knows the colonel. It just tells us what Charlotte is and what her possibilities are. It also tells us all about the grounds of the Charlotte Gun Club in Latta Park, concluding that portion of the programme with the following: "The Charlotte Gun Club in extending this invitation to all shooters feels that it has some claim to make on them at the same time, having had representation at all of the great as well as most of the smaller shoots that have taken place for the last two years. We think we should meet with a large and full response at this tournament, assuring each and every one a good time and hearty welcome."

Perhaps the most interesting portion of the programme is that which concerns itself with the handicap system that will be in force at this shoot. This handicap is a modification of the one now used by the Interstate Association. The programme says:

"The Interstate Association, ever mindful of the promotion of the best interests of trap-shooting, has decided at this tournament to waive the existing rule regarding 'that class of shooters known as experts,' thereby placing all contestants on the same equal footing. The handicap will be applied to those who win or divide first money, in any event, and continue in a place for money in the next event which they enter; failing to win they return to the amateur class again, thus handicapping the shooter only as he wins. It must be conceded that nothing could be fairer than this."

The events scheduled for each of the three days are five 15-target events, $2 entrance, and five 20-target events, $3 entrance. Ten dollars is added to the purse in each 15-target event, $15 to the purses in the 20-target events. On the third day an extra event is inserted in the programme—a team race, three men to a team, all men on a team to be for the same State, 25 targets per man, unknown angles (of course), $10 per team, $25 added to purse. This last sum makes the total of added money for each day just $400. Two sets of traps will be used, the traps being in position for practice on Monday morning, Aug. 26. A special rate of a fare and a third has been secured over all lines in the Southern States Passenger Association. Headquarters for shooters will be the Central Hotel and the Bedford Hotel. Ammunition shipped in advance to the Justice Hardware Company will be delivered on the grounds. Any further information that may be desired can be obtained by addressing Archie R. Stokes, Secretary, Charlotte, N. C.

Boiling Springs Gun Club.

RUTHERFORD, N. J., August 3.—The shoot held under the auspices of the Boiling Springs Gun Club, for the benefit of the Cherry Hill, N. J., sufferers in the cyclone disaster of July 13, took place to-day. Nineteen shooters took part in the 10 events, among them being "Wanda" (Mrs. M. F. Lindley), who has recently taken to target shooting. The scores made were as follows; all events being at unknown angles:

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	15	10	15	15	10	15	15	15	15	*25

JOHN T. MURPHY, Sec'y.

Pennsylvania State Sportsmen's Association.

THE programme for the Pennsylvania State Sportsmen's Association's fifth annual tournament is to hand. This tournament will be held on the grounds and under the auspices of the Keystone Shooting League, of Philadelphia, Pa., on Aug. 20-23. These grounds are located at Holmesburg Junction (Pennsylvania R. R., New York division), thirty minutes' ride from Broad street station, Philadelphia.

The Keystone Shooting League has this year made a decided change in the programme of events usually scheduled for this annual affair. It has provided one set of traps devoted entirely to the decision of the State events and of sweepstakes open only to members of the State Association. It has also provided for a set of traps on which sweepstake events, open to all, shall be shot. The change is a good one.

The programme for Aug. 20-21 on the open traps contains seven 20-target events, $2 entrance, and one 50-target event, these two 50-target events making the E. C. Powder Company's trophy event of 100 targets. All these events, as well as the eight 20-target events scheduled for Aug. 22, the third day, are at unknown angles. The E. C. powder cup is a handicap race, the handicaps ranging to 110; handicaps will be announced on the grounds on Aug. 20. The open events on the live bird traps on Aug. 23 are: No. 1, 7 birds, $5; No. 2, 10 birds, $10; No. 3, 7 birds, $5; No. 4, 10 birds, $10.

The traps set aside for State events will be kept busy each day. The programme for August 20 contains six 20-target events, $2 entrance; a 25-target merchandise event, $1.25 entrance, with 30 prizes advertised; and the 50-target individual championship of the State for the Wm. Wolstencroft & Sons' trophy. August 21 will see the decision of the contests for the American Wood Powder Company's trophy—three men teams, and the Harrisburg Shooting Association's trophy—six men teams. On this day six 20-target races open to members of the State Association only will be shot. On August 22 there will be six 20-target races shot under similar conditions; the Reading trophy—five men teams—will also be shot for on this day, as well as a 25-target merchandise event with 28 prizes for competition. Live bird day, August 23, will see the contests for the Williamsport trophy—individual championship of the State, and for the L. C. Smith trophy—three men teams. There will also be a 7 bird $5 event, open only to members of the State Association.

The above comprises a lengthy programme, the successful carrying out of which will redound greatly to the credit of the management of the tournament. The Keystone Shooting League is a popular organization, comprising as it does among its members such men as: "Jimmie" and "Billy" Wolstencroft, Harry ("Father Time") Thurman, J. W. Treadway, Joseph Thurman, R. A. Welch, H. "Landis" David, Frank Kleintz, John Rothacker, Enoch Miller, Al. Rust, etc. The fifth annual tournament of the State Association, held under its auspices, should, therefore, be a success in point of attendance of shooters, not only from Pennsylvania, but from Jersey, New York, New England, Maryland and points South.

All sweepstake events, given 15 entries, will be divided into five moneys—30, 25, 20, 15 and 10; under 15, four moneys. This system will permit, if there are 15 entries, of those making 16 to get in for money. A note on page 8 of the programme states: "All sweepstake shooting will be governed by the Pennsylvania State Sportsmen's Association rules." We note, however, that in the sweepstakes open only to members of the Association some of the 20-target events are at known angles, while others are at unknown angles. Hence we conclude that the sliding handicap, heretofore in force at all similar gatherings of this Association, has been abolished.

Meadville Gun Club.

MEADVILLE, Pa., July 24.—This shoot was not well attended, but the scores are unusually good. We have at least ten other members whose averages are fully up to the average of the six shooters making the scores appended. We hope to be able to turn out an expert or two in time. It will be noted that H. A. Johnson made his first 25 straight and the first 20 on his second string, being practically 45 straight. Out of 75 he scored 71. The entire shoot of the day, including the event at doubles, averages for each man but a trifle under 80 per cent. Scores:

No. 1, club shoot, 25 targets, 15 at known angles and 10 at unknown angles:

H A Johnson	1111111111111111111111111—25
Hayes	1110111110111011011011110—19
Lashells	1111110011111011010010110—17
Krider	1100101011111101111110101—18
Prenatt	1111011111111101111111100—21
Decker	1010111100110111101111101—18

No. 2, 25 targets, unknown angles:

H A Johnson	1111111111111111111101111—24
Hayes	0111110111101101111011011—20
Lashells	1110101100111111111111111—21
Krider	1111011011000111111111001—18

No. 3, same:

H A Johnson	1111111011111011011111111—22
Hayes	1111101011111011111111111—21
Prenatt	1110111001111011111111111—21

No. 4, 5 pairs: Hayes 8, Lashells 7, Prenatt 6, H. A. Johnson 5.

MEADVILLE, Pa., July 31.—The following scores were made at our club shoot to-day:

No. 1, club medal shoot, 25 targets, 15 at known angles and 10 at unknown angles:

Baker	1011011011001011101010101—15
Lashells	1011111011100111110011000—16
Decker	0111110111111001111011101—19
Belton	0011111111011111111111111—22
Krider	0001101111110011001111001—15
Reisinger	1111011111111111101111101—22
Hayes	1101111111111011111111111—23
Leberman	1111111111101111111000101—20
Carskadden	1111101111111111111110111—23
Dunn	1110110100110100011010011—14
H A Johnson	1111111111011110111010011—20

No. 2, 25 targets, unknown angles: H. A. Johnson 23, Hayes 24, Lashells 17, Belton 19, Krider 21, Reisinger 23.

No. 3, same: Lashells 18, Hotchkiss 12, Dunn 14, H. A. Johnson 23, Krider 25, Belton 20, Reisinger 19. CHOKE-BORE.

Altoona Gun Club.

ALTOONA, Pa.—A more disagreeable day has not been seen on Wopsononock Mountain in months than to-day, when the Altoona Gun Club held its semi-monthly shoot. Only a few braved the elements which were almost black as night. Flashes of lightning at different periods made the sight a most remarkable one. The feature of the shooting was the work of Fay, who is a novice at trap-shooting. The scores:

No. 1, 10 targets, unknown angles: Killitts 5, Fay 5, Westley 1, House 5, Sands 8.

No. 2, same: Killitts 8, Fay 7, Westley 1, House 6, Sands 8.

No. 3, medal race, 25 targets, known angles:

Killitts	1111111101111010110011101—19
Fay	1111111111110001111111101—22
Westley	0000000000000000010011111— 6
House	1110110101001100111110111—17
Sands	0110111101101111111111100—18

Fay won the gold medal, Killitts the silver, and Westley the leather.

No. 4, walking match, 10 targets: House 4, Fay 7, Killitts 6.

GRANT.

PUBLISHERS' DEPARTMENT.

Southern Railway Company.

THE Southern Railway, Piedmont Air Line, announce to-day the following rates from Washington to Atlanta, Ga., account of the Cotton States and International Exposition. Washington to Atlanta and return, on Tuesday and Thursday each week during exposition, rate of $14 for the round trip, good to return within ten days. Every day during exposition, rate of $19.25, good to return twenty days from date of sale, also return trip rate of $26.25, good to return until Jan. 7, 1896. This is the lowest rate ever accorded any similar exposition, and as the Southern Railway has started out with the lowest possible rates the exposition is a sure success.

Bargain.

GEORGE H. BURTIS, of Worcester, Mass., the well-known manufacturer of fine flies, must be a man with a generous heart. In our advertising columns he announces that he will send a first-class .32 or .38cal. double-barrel revolver to any sportsman for about half price, and samples of his flies free of charge.

"Hunting and Fishing along the Northwestern Line"

is the title of a booklet recently issued by the Chicago & Northwestern Railway. It is profusely illustrated, and gives information in detail concerning the best hunting and fishing grounds in the West and Northwest. Copies will be mailed free to any address upon application to W. B. Kniskern, General Passenger and Ticket Agent, Chicago & Northwestern Railway, Chicago, Ill.—*Adv.*

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where WE get back a good deal more than cost of catalogue and postage.

ABBEY & IMBRIE,

18 Vesey Street, New York City

MARSTERS HAS WORMS.

Sand Worms, 12c. per dozen. White or Blood Worms, 25c. per dozen.

I am with you again with lower prices for Fishing Tackle. I find by experience that putting down the prices and increasing the quality, increases my business every year.

One lot of Split Bamboo Fly and Bass Rods will be sold at 98c. until all are sold. These Rods are all nickel mounted, solid reel seats, beaded butts, silk wound. Extra tip. Complete in wood form and cloth bag, and will give satisfaction. Lengths and weights of Fly Rods are: 9ft., 6oz.; 9½ft., 6½oz.; 10ft., 7oz.; 10½ft., 7½oz.; 11ft., 8oz. Reel seats below hand. Lengths and weights of Bass Rods are: 8½ft., 9oz.; 9ft., 10oz.; 9½ft., 11oz.; 10ft., 12oz.; 10½ft., 14oz.; reel seats above hand. Any of the above rods sent by mail on receipt of price and 30c. extra for postage.

No. H.—A special lot of hard rubber and nickel, raised pillar, multiplying reel, with balance handle and side spring click, 40yds., 68c.; 60yds., 78c; 80yds., 88c.; 100yds., 98c. Any of the above reels sent by mail on receipt of price and 10c. extra for postage.

No. E—Special lot of hard rubber and nickel, raised pillar, click reels, 40yds., 48c.; 60yds., 58c. Sent by mail on receipt of price and 5c. extra for postage.

No. C—Special lot of extra fine nickel plated, raised pillar, multiplying reels with click and drag, and screw off oil cup, 40yds., 58c.; 60yds., 68c.; 80yds., 78c; 100yds., 88c.; 150yds., 98c.

Single gut leaders, mist color, 1yd., 20c. per doz.; 2yds., 40c. per doz; 3yds, 60c. per doz. Double gut leaders, mist color, 2yds., 75c. per doz. Hand twisted treble gut leaders, 3ft long, 10c. each, 90c. per doz.

A special lot of Trout Flies at 15c. per doz. Sent by mail, 1c. per doz. extra for postage.

A special lot of Bass and Pickerel Spoons at 5c. each. Sent by mail, 1c. extra for postage.

All kinds of Hollow Point best quality hooks, snelled to single gut, 10c. per doz.; double gut, 15c per doz.; treble gut, 20c. per doz; four-ply, 25c. per doz. Sent by mail, 1c. per doz. extra for postage.

300ft braided linen reel lines on blocks, 40c.; 300ft. hand made linen reel lines on blocks, 9 thread, 38c. Sent by mail, 3c. extra for postage.

Brass box swivels, all sizes, Nos. 1 to 12, 15c. per doz. Sent by mail, 1c. per doz. extra for postage

THE DIFFERENCE.

Five minutes' inspection of a list of game seasons printed in a Western paper last week discloses 29 blunders. Further study would no doubt reveal as many more.

To put out a misleading list like that is hardly short of criminal. A game law compilation must be accurate, accurate, accurate. That is the characteristic of the *Game Laws in Brief*, which has made it the accepted standard authority and the safe guide followed by the sportsmen of this country. It takes time, care, money, persistence, to keep the *Brief* absolutely reliable; and it requires also some appreciation of *the responsibility* assumed when one undertakes to give reliable information and not johnny-jump-up misinformation. All dealers sell it for 25 cents.

WHY DID

The Knoxville Gun Club, the Dupont Co., the Inter-State Association, the Grand Rapids Gun Club, Louis Erhardt & Co., J. F Schmelzer & Sons Arms Co., the Ohio State League, the New York State Association, the Arkansas State Association, and hundreds of other Clubs and Associations all use Blue Rock Targets, Expert Traps, and North's Electric Pulls at their tournaments?

WHY DID a few other Clubs that used other targets, traps and electric pulls (with wire pulls on the side) wish they had used Blue Rock Targets, Expert Traps, and North's Electric Pulls?

Because they are the only Targets, Traps, and Electric Pulls that give Entire Satisfaction.

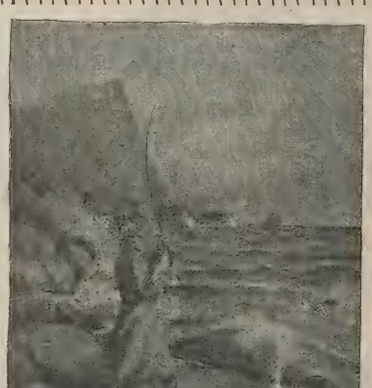
FOREST AND STREAM'S OUTDOOR SCENES.

FROM ORIGINALS IN WATER COLORS AND OIL, PAINTED EXPRESSLY FOR THE FOREST AND STREAM.

HE'S GOT THEM.

AS PREMIUMS.

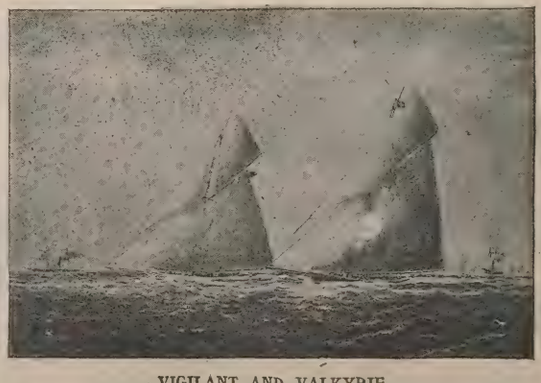


We have prepared as premiums a set of four beautiful and artistic reproductions of original paintings of realistic outdoor scenes. The art work is the best obtainable in New York; the pictures are rich in effect and are intended for framing. They are done in 12 colors. The yacht race is from an oil painting; the others from water colors. The scenes are shown in the small cuts herewith. The plates are 14¾ x 10in. The pictures are sent both to **new** subscribers and to **old** subscribers upon renewal, on the following terms:

Forest and Stream *one year and the four pictures*, $5.
Forest and Stream *6 months and any two pictures*, $3.

If subscribing for 6 mos. designate by title the two pictures desired. Single pictures will be sold separately, price $1.50 each, or the set, $5. Remit by express or postal money order, payable to Forest and Stream Publishing Co., 318 Broadway, New York.

The pictures are sent by mail, postpaid, wrapped in tube.



Copies of them may be seen at this office, and inspection is invited.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

SLINKS, SUCKERS AND TRILBIES.

IN her naïve story of taking the big muscalonge Mrs. Farrington notes that the St. Lawrence River boatmen call the pickerel "slinkies." This appears to be a form of "slink," meaning a sneak. It is admirably descriptive of the way a pickerel and others of his kin take the bait. They sneak cautiously and hesitatingly up to it and then make a dash. Slink, slinker and slinky are good words applied to fish or to men. There are lots of them.

The term sucker, meaning a beat or fraud or swindler, who shirks his part of the expenses, has sometimes given as its origin the sucker fish, perhaps because the species is so looked down upon. But this figure of speech comes to us from the worthless growth of vegetation known as a sucker. In his "Holy and Profane State," published in 1640, the English divine, Thomas Fuller, uses this word more than once, and always in such a way as to show the deriviation of the expression. Thus commenting upon the maxim, "He that eats cherries with noblemen shall have his eyes spirted out with the stones," he says, "If thou payest nothing, they will count thee a sucker, no branch, a wen, no member of their company." Thus it appears that the human sucker is an ancient if dishonorable member of society; and the term sucker is a good word, whether applied to fruit trees or to men.

They used expressions in every-day speech and in the pulpit in Fuller's time that would shock polite ears in these more fastidious days. Fuller said what he meant and said it bluntly so that everybody might hear it and understand it. Some of the robust forms of speech of that age might well enough be revived in our own. They certainly would be more acceptable than the frivolous and puerile slang affected by some of the public speakers of the day. Bishop Fowler, in a lecture in New Jersey last week on Abraham Lincoln, told his audience how tall Lincoln stood "in his Trilbies." He won a cheap laugh with this, but in the winning showed his own want of appreciation of the diginity of his theme and gave the key-note of it unworthy treatment.

THE CARP AS VERMIN.

A CORRESPONDENT presents this problem and asks for its solution: A pond containing six acres, which is used as a reservoir for drinking water, is infested with carp. The bottom is so uneven that a drag net cannot be employed. The fish were introduced under the hallucination that they would be a desirable addition to the water. They are now recognized as an abominable nuisance. How shall they be exterminated?

In smaller bodies of water, which are not connected with others inhabited by useful species, carp may be destroyed by liming. In a Long Island case which came under our observation, a private pond had been stocked with carp, which thrived and multiplied and effectually despoiled the pond of its usefulness and beauty. They rooted like hogs among the water lillies and other vegetable growth, destroying it and keeping the water continually stirred up and disgustingly dirty. They waxed fat on the ruin they wrought but were themselves good neither for sport nor for the table. Other expedients failing to clear them out, the pond was partially drained and then barrels of lime were thrown into it. Afterward, the water being drawn off, heaps of autumn leaves were spread over the bottom, and subsequently the mold, mud and carp skeletons were dug up and carted away for fertilizing. Then the pond was reflooded; and the owner now rejoices in a piece of water stocked with black bass. He has had his little carp experience and has paid for it.

The fact is that the carp is in many instances proving itself to be a costly and dangerous fish. If the facts were known it would probably be shown that there are scores of cases similar to this Long Island instance, where the introduction of the carp has been a gigantic mistake; and unfortunately it often happens that the waters so infested are of such extent or are so connected with other waters that a remedy may not be applied so simply and effectually as it was here. The best cure for carp is prevention. To keep the first fish out is to forestall the necessity of waging war upon them when they are in.

Fish and Game Protector Chas. A. Shriner has recently directed the attention of the New Jersey Fish Commission to the proposed introduction of tench, a fish of the carp family, into the waters of that State by the National Fish Commission. "We have in this country," he says, "a good variety of indigenous fish, whose distribution and propagation would supply not only sport for the angler but food for all, and it seems to me very injudicious to introduce into our waters to the exclusion of our native fish European fish which nobody here seems to appreciate. I would suggest that something ought to be done toward informing the people of New Jersey of the probable evil effects of the introduction of the tench."

On the other hand Commissioner MacDonald, of the United States Fish Commission we believe recommends the carp and tench as desirable species, and under his direction the Government is distributing these fish throughout the country.

THE PERE MARQUETTE POACHERS.

THE Pere Marquette Fishing Club, of Michigan, has been described in our columns. It owns some seventeen hundred acres of land, on which are several lakes and the stream of Kinne Creek from source to mouth. The club is extensively engaged in trout breeding; and the product of its hatcheries is distributed not only to the club's own waters, but to the public waters of the district. Notwithstanding this, the members have been annnoyed all summer by poachers, who at length became so bold as to defy the club and to declare that they would fish in the club waters as much as they pleased, and when and where they pleased. Proceeding against them, the club caused three arrests and sought a conviction under the criminal law, on the ground that the club was engaged in hatching and propagating fish, and that it was a misdemeanor for any one to take trout from waters used for such purposes, this being provision of the Michigan statutes. The defendants had sconce enough to employ a smart local lawyer, who by his eloquent tribute to the virtues and hardships of the poor down-trodden Mossbacks and by a violent and high-faluting assault on the kid-gloved city sportsmen (for the learned gentlemen always picture the man from town as wearing kids) succeeded in carrying things all his own way; and the jury acquitted without leaving their seats. Three trials resulted in defeat for the club; then a fourth arrest was made and proceedings were instituted for trespass. A conviction was secured, with six cents and costs of $40 imposed as the penalty. All this has stirred up an intense feeling against the Pere Marquette Club, and the members are naturally apprehensive of lawlessness and damage to their property.

Reprisals have been made. The trout breeding pen of the club hatchery was broken into the other day and some 200 of the large breeders taken out. This was at a time when the fish were beginning to get heavy with spawn, and every one of them would have furnished from 500 to 1,000 eggs to stock the stream in Lake county, for, as we have said, the Marquette's trout growing is conducted not for its own benefit alone, but for the advantage of the public waters in the neighborhood. Hundreds of thousands of eggs have been put into streams over which the club has no control and from which the members can reach no direct personal benefit.

As a result of the club's stocking of waters outside of the preserve there is actually open to the public more good fishing than there would have been if the club had never been formed. The people of the neighborhood cannot plead that they are deprived of fishing privileges. Local fishermen and those who profit by the coming of anglers from outside to Baldwin and other fishing centers, all alike owe something to the club, and an enlightened policy would be to co-operate with the Pere Marquette managers for the common good of all. We should think that there must be in the better element of Lake county a recognition of these conditions, and we shall watch with interest the outcome of the present difficulties.

IN PRINT AND IN THE FIELD.

OUR correspondent, "Dick of Connecticut," who criticises the act of a writer who tells of having shot game out of normal range, takes us to task for having printed the original story, or for having given it without what he is pleased to term an editorial reprimand. To which it may be replied that it is not the place of one who happens to be in a position of advantage, such as an editor enjoys, forever to be harping and scolding and criticising and moralizing and laying down the law to his contributors. Nor can he be so finicky as to put into print only such conduct and opinion as might belong to the ideal and sublimated individual who exists in fancy or in fact as "the true sportsman."

If the truth were known it would probably be recognized that the man of the gun and his brother of the rod, whose doings are told in the columns of a sportsmen's journal, live and move in a higher plane of sportsmanship than the great army of gunners and fishermen of real life. We see in print only the better side. Much of that which is contended for most strenuously and with never-failing earnestness in type is thrown to the wind in actual practice. Some folks who talk the loudest about game protection when they are in town, where there are only brick walls and English sparrows about them, forget their high principles and blaze away like fiends bent on promiscuous slaughter when they are out among game birds and chippies. This, after all, is only a natural manifestation of human nature. It is more easy to preach than to practice; to tell how brave one would be than to face the enemy without shaking knees; to talk than to do.

There is, however, no question that principles of sportsmanship are making progress. For instance, this very question of shooting at game so long as it may by any possibility be struck by a chance bullet, although far out of accurate range, is one on which there has been a growing sentiment. Turn back to the hunting stories of only fifteen years ago and read of the men who on the Western prairie would blaze away at bunches of antelope, "pumping lead," as they were pleased to describe it, after the fleeing bands so long as the victims were in sight, and necessarily wounding and maiming creatures which they could not hope to gain possession of, nor about whose purposeless suffering did they appear to have the slightest twinge of conscience.

It is one of the most difficult things in the world for any two men who use the gun to agree upon a definition of the word "sport" or to unite on the exact point of what is legitimate or illegitimate, sportsmanlike or unsportsmanlike, manly or brutal; but the standard is higher to-day than ever before; and will be higher to-morrow than to-day.

SNAP SHOTS.

THE comments of "O. O. S." on those Florida tourists who slaughtered quail that they might outdo the scores made by previous butchers were anticipated some time ago by our own comments on the very occurrences of which he so reasonably complains. The last Legislature provided that no person may lawfully kill more than fifty quail in one day. Such a restriction is not very much of a hardship on the average man nor on the average woman, unless one happens to be as bloodthirsty as were those Philadelphia folks.

We print to-day another complaint from a Boston man who thinks that he has been imposed upon by having been compelled to pay expressage on his dog. Most railroads going to a game country concede to the passengers the privilege of free carriage of his dogs in the baggage car if the animals are properly crated. For more than two dogs a sum is charged, and this is regulated by a fixed tariff. On some roads every dog is charged for at the rate of 25 cents or 50 cents for each division over which it goes, so that a fee is required to be paid every time baggage-men are changed. Even where a tariff on dogs prevails, correspondence with the general passenger agent will sometimes insure special arrangements by which a sportsman going to the shooting grounds may obtain a pass for his dogs to and from destination.

The Sportsman Tourist.

TO LAKE TEMAGAMINGUE.

The near approach of my next outing brings reminiscences of my last and reminders of my debt to Forest and Stream and its readers.

If you will turn back a year and a half, you will find in the canoe columns of the Forest and Stream a very interesting article by "The Chief," entitled "Away up North." It proved to me particularly interesting and led to a lengthy and kindly correspondence with "The Chief" (Mr. H. K. Wicksteed), and later with Mr. C. Rankin, chief factor of the Hudson's Bay Co. at Mattawa, and with Mr. Wragge of the Grand Trunk Railway at Toronto, all with a view to planning a trip to the region lying north of Lake Nippissing and the Canadian Pacific Railway.

Everything being arranged, my wife, who is known to readers of a former article of mine, in your paper, under the pseudonym of "Jim;" our black cocker "Jerry," who also had a conspicuous part in that article, and the writer, left New York one evening by the New York Central for Niagara Falls and thence proceeded to Toronto.

Mr. Wragge was exceedingly kind, as were all officials of the Grand Trunk Railway. Mr. Francis of the engineers' department kindly corrected our map of the region to be visited, to agree with their latest survey.

That evening found us in a sleeper en route for North Bay, where we made connection the next morning with the westward bound Canadian Pacific train. The same train taking us to Sturgeon Falls had brought our two guides, canoes, outfit and provisions from Mattawa, and the hour's run to Sturgeon Falls was pleasantly spent in making acquaintance with the guides and outlining the trip. We stopped at the McGrath House, whose proprietor facilitated matters a great deal, and a busy three hours spent in unpacking and repacking made us ready, and with our canoes and goods in a wagon we started for the Sturgeon River, a short mile away, and left civilization behind us.

We were met at Sturgeon Falls by a third guide, who had been telegraphed for as an afterthought; so we eventually started as a party of five, and the dog. Going about two miles up the river we camped for the night, spending the remainder of the afternoon in sorting and rearranging the luggage. The next morning our real start was made.

The Sturgeon River for the first nine milles, up to Sandy Falls, is a broad, deep, sluggish stream of brownish-colored water and uninteresting scenery. Above the falls, and for five miles further to Smoky Falls, the river is more rapid and quick water was struck several times, sometimes requiring short portages.

We met several large flat-bottomed boats, loaded with hay and grain, with crews of lumbermen on their way to camps in the interior, and were much interested in their methods of hauling the big boats up the rapids.

We camped at the head of Smoky Falls. During the evening four Indians with a canoe came over the carry and continued their journey to the village. They had come since morning from the H. B. C. post on Lake Temagamingue, a distance of sixty miles.

An early start in the morning and four miles brought us to the mouth of the Tomiko River. Here, over a carry, we had our first shooting, getting, with Jerry's help, four partridges, three of them falling by Jim's skill, and soon after a couple of ducks were shot.

Never shall I forget the Tomiko. From Sturgeon River to Tomiko Lake (nine miles) it was fairly good going and rather interesting; above that point and as far as Tilden Lake it was hard work and monotonous. It is a narrow stream of black, still, mist-covered water with low alder-fringed banks back of which could be seen a low marshy country. It is broken by ledges of rocks which crop out just sufficiently to render portages frequent. Not a fish jumped, nor was there other sign of life except great hornets' nests hanging from the alders on either side of the river, and frequently large owls sitting on dead trees that would allow us to approach within a short distance and then with heavy flight betake themselves further up the stream. The weather was damp and warm, and the atmosphere and surroundings recalled descriptions of African and South American rivers, and one would not have been surprised to have seen great snakes hanging from the trees, and crocodiles and hippopotami floating about in the water. Three days were consumed in going the twenty-seven miles of the Tomiko, including its twenty-seven portages, and it was Saturday afternoon when we came out on beautiful Tilden Lake, where we spent Sunday.

Monday morning found us again en route, and from this point on our journey was not hard. Our days were spent about as follows: breakfast was over and camp struck usually about seven o'clock, and we would work along making what progress we could, here and there picking up a partridge or duck; dinner wherever twelve o'clock found us, and continuing along we would make camp about five o'clock. Except on the Tomiko we camped on the shores of a lake every night. By seven o'clock it was dark, but all work would be done and we would sit about the fire, listening to hunting, logging and voyaging stories by McGregor in Scotch-American or by Pillon in his more musical and interesting French-Canadian; or, with our reflector, hunting and camping lantern lighted (an exceedingly good and powerful lantern made by the R. E. Dietz Co. of New York), we would read the few books we had brought, and half-past eight or nine o'clock would find us ready for our tent and the rubber air bed, which we found very convenient where camp was broken so often, and which assured us always a sound night's rest.

Thus we journeyed through a succession of beautiful lakes—Tilden, Pine, Poplar, Marten, Wicksteed, Boyce, Redwater, Rabbit, White Bear and Temagamingue—nearly all connected by fairly navigable streams.

The exceeding low water doubled the number of portages, which, however, were always short, and sometimes made hard bits of travel, especially during the first half of our journey, where there were no trails or only those cut last year by the survey party, and which had become overgrown. This often necessitated our taking the bed of the stream, either over rocks and boulders or across marshy, grassy stretches barely covered with water and mud feet deep.

The region traversed between the mouth of the Tomiko and Rabbit Lake has never been lumbered, and except as mentioned along the Tomiko the forest is primeval, the shores of the lakes and streams being well wooded.

It is a country not visited except in winter by Indian hunters from the H. B. C. posts, and we did not meet a soul till Lake Temagamingue was reached. The country looked full of game, and although we saw but one deer, tracks of moose and deer were very frequent along the shores. Partridges and ducks were very plentiful, and our larder was nearly always stocked.

We caught black bass in every lake visited—they were abundant, took any bait and in most of the lakes were gamy and would run evenly from 2½ to 3lbs. Pickerel and wall-eyed pike (doré) were often caught weighing 4 to 5lbs., and Jim landed one most beautiful golden wall-eyed pike weighing nearly 7lbs. He is still in Boyce Lake, for having plenty of fish on hand we let him go after admiring him to our hearts' content.

Saturday night caught us at the head of the northeast arm of Lake Temagamingue, and we camped over Sunday on a beautiful point from which the view was enchanting—islands of all sizes on every side and stretching down the lake until they limited the view at perhaps a distance of two miles. This lake has been well described by "The Chief," and I will simply indorse him and add that the bass are exceedingly gamy owing no doubt to the water being so clear and cold.

Monday afternoon we made the H. B. C. post on Bear Island, and passed a few hours very agreeably with the factor, Mr. Turner, and his interesting family, afterwards going into camp on an island just below the post.

The next morning we started on our return journey and by easy stages through Cross and Red Cedar lakes, down the Temagami and Sturgeon rivers, reached Sturgeon Falls—the only incident worth recording being an exciting run down six miles of rapids and quick water.

CAMP AT TILDEN LAKE.

Thus was our journey completed and a summing up showed we had visited fifteen lakes, ten rivers, made sixty-seven portages and covered a distance of 197 miles in fourteen days.

With one or two exceptions the lakes and rivers were very enjoyable, some of the lakes being as beautiful as any I have ever seen, notably Boyce, Tilden, Rabbit and Temagamingue.

The rivers are narrow and winding with closely wooded banks, and the falls and rapids which necessitated portages are picturesque and serve to vary the monotony of the voyage.

While portages were numerous they were all short, only one of two miles and the larger number perhaps 100yds. each.

The country is undulating and covered with forests.

We saw no large game, but there is every evidence that it exists there and could be obtained by more energetic and persistent hunters than our party consisted of.

Partridges and ducks were plentiful, and black bass, pickerel and doré could be had at any time in any quantity and were very gamy.

It is a country but little known to sportsmen as yet, but cannot remain so much longer and is well worth a trip.

The Hudson's Bay Company at Mattawa will furnish everything needful for any length of time, charging a moderate rental for canoes and camping outfit, and but little, if any, advance on New York prices for provisions. It has more or less control of a number of woodsmen and hunters, and the selection of guides can be very safely left to the chief factor, Mr. Rankin.

Of our guides, one, Gus Pillon, an Indian, has been described by "The Chief." We cannot agree with him fully in his estimation of Pillon's character, as he showed to us nothing but good temper, courtesy and a desire to please.

We can also speak very highly of John McGregor, a Scotchman. Both of these men were recommended by "The Chief" and Mr. Rankin.

The third man, David St. Eloi, who claimed to be pure French, but looked like a half-breed, I cannot recommend at all. He was disobliging, discourteous, had a bad influence on the other men, and was altogether a most undesirable man.

I shall be very glad to give what information I can to any one proposing to visit that region. F. W. G.

New York.

ON THE UPPER MOLALLA.

When Ira Moody died, several years ago, I felt that nobody else could ever take his place in the Molalla country. He was so thoroughly familiar with that country and its sporting resources, so companionable, so whole-souled and generous-hearted that I had come to regard Moody and the Molalla as inseparable if not quite synonymous. But the spirit of my old friend went away to that unknown and silent shore from whence no traveler returns, while the old Molalla goes right on night and day just as of yore, fretting and murmuring, only that now it seems to whisper: "Men may come and men may go, but I go on forever"—a sort of lullaby to the ashes of dear old Ira, mingling in the dark union of insensate dust in that country he loved so well. Peace to those ashes!

But Fay is a big boy now, and I am glad to say that he is proving himself a worthy son of a worthy sire. He is a great big chip off the old block. He is over 6ft. tall, well proportioned, with eyes and hair that would make a Sioux brave turn green with envy; brave, prudent and honest. Fay is all right, and then, too, he is full of the fire and ambition of youth. You know that age knocks a good deal of that out of a fellow. By the way, I wonder if sportsmen grow old like other people. Expect they do, although possibly not quite so fast. I find myself interrogating myself about that matter considerably here of late, particularly since our return from the Upper Molalla country.

Can it be that I am getting old? I feel stiff and sore, and my bones rasp and grind in their sockets as if they needed new packing and a fresh supply of oil. But then it was a long, hard trip over rough mountains and stony trails. There was a time when no four days' trip, no matter how rough, could break me up in any such way. Mead says it all comes from getting fat and lazy. But I am neither to any great extent; and besides, a fellow that is nothing but skin and bones has no right to sit in judgment on fat people. Probably the fact of the matter is that I have arrived at that stage of my existence when I can endure more rest than I could twenty years ago. I know that the trails seem more rugged and the mountains look more formidable than then, and I find less malicious envy in my heart when some other fellow, like Mead for instance, succeeds better than I with the rod or gun, as was the case on this trip to the upper waters of the Molalla.

A letter just at hand from my good friend "O. O. S." puts it plainer than I can. I know the other boys will pardon me, and I hope he will excuse the liberty I take in quoting from that letter, for he describes some symptoms with which many of us are getting quite too familiar. He says: "I find this summer that I am less able by far to endure fatigue than ever before. Whether it is owing to some temporary indisposition or weakness, or whether it is something come to stay, I know not. That will appear later; I opine that it is the latter, however, and that the ability to endure which has always been mine in a remarkable degree is gone forever. It don't hurt, though, as I once should have supposed it would. Age dulls the sensibilities, which is a kind provision of an all-wise providence. I begin to think latterly what a happy experience it would be if I could be set down by the side of some fine trout stream, with adjacent lakes handy for bass or other fish, where I could pitch my tent and without great exertion enjoy timely sport like the old fellows have done (and do) whom I have looked upon with feelings of amusement and with perhaps a tinge of pity, that they could not, with us young and brawnier sportsmen, climb and row and tramp and rejoice in the bounding enjoyment of undiminished manhood. I begin to appreciate their position now, and am content with less and less; if not content, the edge of disappointment and unsatisfied ambition is not so keen. Have you begun to feel any such symptoms?"

I guess I have, Brother Smith; but I'm not going to plead guilty. The boys will have to prove it on me. Here's an alibi right here in this trip to the Upper Molalla, and I'm going to tell you all about it.

You see, Fay had written that if we (that meant me and my running mate, Mr. J. Roberts Mead) would come out, he would take us to a part of the Molalla country that his father had never shown me and perhaps never knew much about himself. Youthful vigor had made a point

that was too seductive to be successfully resisted by us, and so we went.

In fact, we were both very glad to go, and now one of us at least is very glad that we are back in reasonably good condition, ordinary wear and tear excepted. Mead injured one of his legs pretty seriously, which affords me considerable quiet satisfaction. He has less to say about fat people in general and "the old man" in particular.

We each took a pack; Mead said his weighed 50lbs. and mine 30, but I did not see them weighed and am disposed to raise a question of pivilege. However, I will acknowledge that I afterward found that some things had surreptitiously found their way into my pack that were more bulky than weighty. I like a nice little harmless joke as well as anybody, but carrying a great big stuffed duck over a long mountain trail to a trout creek is not such a joke as I can fully comprehend or appreciate. If it had been a nice, fat, edible duck, properly stuffed, or even a sleek mounted specimen for the Molalla children to admire, I might have borne my burden with fortitude if not with pride.

But the idea of carrying a great big, measly, moth-eaten taxidermic miscarriage, stuffed with cotton and old rags that had been booted and batted about Mead's office for years—and carrying it too over the Cascade Mountains one of the hottest of hot July days, with the honest perspiration cutting gullies along down my backbone, with the perpetrator of the outrage at my elbow condoling and sympathizing while maliciously enjoying and knowingly adding to my distress—this was a little too much for human nature to bear complacently. When I reached for my six-shooter Mead declared that Billy Newman did it, but I shall always think that Mead was an accessory before the fact. Billy had gone back to Scantogrease when we returned, which looks bad for him and adds weight to Mead's argument.

By starting early and driving hard we reached the Molalla early in the afternoon, and found Fay awaiting us with a fresh team. In half an hour we were off down across the Molalla River and up over the divide in a direction never before taken by me. Fay thought that we ought to take some "crawlers" or husk-worms from the river, as we could find no kind of bait in the North Fork and there was no use fishing there without bait. That was an old story with us, and so we decided to go without the "crawlers." Naturally we thought that a trout that wouldn't take a fly in a stream where there were no "crawlers" or other "bait" was too poor for use. We drove about eight or nine miles over a fair mountain road, until at last we had to leave the team and take to the brush. In packing in we frequently lost the dim old deer trail, but finally, after a four-mile tramp, arrived at our destination on the banks of the North Fork of the Molalla. We struck the stream further up than I had ever been before, and the surroundings were delightfully entrancing. The Molalla is the prettiest trout stream I ever saw, and this was the prettiest part of the Molalla I had yet seen. It seemed hardly possible that we could have left Portland in the morning to find ourselves at early evening in such a country. Heat and dust had disappeared as if by magic, and the sweet, balsam-laden ozone seemed so deliciously invigorating. With packs and trappings off we laid ourselves down on the mossy rocks and drank deep of the icy waters of the lovely North Fork.

Then we sat there in the cool evening air and surveyed our surroundings. Great precipitous mountains covered with gigantic pines, spruces and firs almost shut out the sky, while the North Fork danced among the boulders at our feet merrily and buried itself in a sleepy pool below; and then, as if awakening from a midday dream, started fretfully off around the bend, soon lost to us except in our imaginations and misty anticipations. We could only guess whether there were trout hidden there; but we were both ready to gamble on it, for such water must of necessity bear fruit. While pretending to enjoy the grand mountains and magnificent scenery my eyes constantly reverted to that sleepy pool, and Mead's quick eye soon detected me. There are some good points about Mead. He is self-sacrificing and generous to a remarkable degree and besides he evidently regarded this as a good chance to square himself on the duck question, the which he can't. "Well, old man," said he, "it is getting late, and while Fay and I unpack and start a fire may be you had better yank a few trout out of that pool down there for supper."

Mead is the best man on earth, I know he is; bless him.

In less time than it takes to tell it I was at the head of that sleepy pool with a string of three flies and my 6oz. rod. There is a sensation peculiar to anglers. It is the thrill of anticipation that comes with the first cast into unknown waters. One's rod seems to stand out like a great big interrogation point and a strange medley of equivocal answers seems to lie buried in the pool, held in abeyance by the mute waters, until the interest and anxiety of the angler is drawn so taut that he fairly quivers all over. On this occasion my suspense was of short duration. I needn't tell you how I cast, or where I cast, or anything about the gold-sprinkled living arrows of the white water. You've all been there. A double rewarded my first cast and my second, and then singles until fifteen lovely mountain trout lay in my basket, plenty for supper and breakfast, and all out of that one pool. I like pool fishing. It's just about as my friend Mead says: anybody can catch trout in riffles, but it isn't everybody that can catch them out of still pools, with the fly. However, in waters like the North Fork anybody can catch trout any place, for they haven't yet learned that "all is not gold that glitters." The boys were just ready to cook the trout when I returned to camp. That made it nice, for trout never taste better than when fresh from the stream. And then, too, bless the man that invented bacon! Is there anything else that can give fried trout such a delicious flavor?

Mead had arranged our packs in pieces of sail cloth, each about two yards square, with eyelets at each end; and these joined together made a very decent tent, open at both ends of course, but a good protection from the heavy mountain dews. With plenty of nice cedar browse for a mattress and two pairs of double blankets for a bed, we were well fixed for the night; and after the usual smoke and chin music we turned in, happy and contented as only anglers on a pretty mountain stream can be, and full to the muzzle of sweet anticipations of the morrow. The old, old story. But neither Mead nor myself went off to sleep, as we pretended to, for there is always a charm and enchantment about a strange forest at night that keeps a fellow awake unless he is very tired. We talked but little, but doubtless we were both thinking about the same thoughts.

A dying camp fire always gives the forest a sort of ghostly, ghastly appearance that sets a fellow to thinking sober thoughts. Never yet have I lain down at night on the banks of the Molalla without pondering on the past, the present and the future of that lovely country. And when the flickering camp fire paints its images back in the forest among the shadows, how easy it is for the imaginative mind to draw mental pictures of the drowsy past. One can almost hear the stealthy tread of the moccasined feet and the smothered voices of the dusky races that once roamed there, but are now gone forever. The night wind that steals softly down the dark cañons and through the great treetops seems to moan a sort of gentle requiem over the ashes of the half-forgotten tribe of the Molallas. And sometimes I find myself wishing that the great mute boulders had tongues, that they might tell us of the joys and the sorrows, the hopes, the loves, the fears that have passed in life's solemn review at their feet. But they are silent. The book is sealed. "Out of eternal silence did they come! into eternal silence have they gone!" We doze off into dreamland, when a sudden surge or eddy in the atmosphere brings all the voices of the night to our yet listening ears from far down the mysterious, dreamy cañon, and again we are wide awake. The roar of the waters sounds like the coming of a mighty wind, awe-inspiring, and the confused and commingling sounds of the night impress one with the notion that all nature has awakened in dread of some dire, impending calamity. But softly and almost imperceptibly the tumult and commotion die away, and again nature and you are asleep.

"Get up, you lazy rascal, if you are going to fish with me," is the next thing I hear, and I roll over and glance out to see broad daylight and Mead with the steaming coffee-pot in his hand. Mead never over-sleeps. I often wish he would. Particularly did I wish so this morning, for I didn't feel very skookum. But after a good bath in the Molalla and a good breakfast placed where it would do the most good, I was ready to give him the best I had in my shop. That was a great day we had with the trout among the pools and rapids of the North Fork. It was one of those days that a fellow embalms and puts away in memory's abode for future reference. Everything was at its best—air, water, trout, fishermen. The boulders were larger and more frequent than on the lower Molalla, and the stream was, of course, wilder, more rapid and more difficult. But all these difficulties and disadvantages were more than offset by livelier rapids, prettier pools and more numerous trout. And the trout were all fine and fat. They didn't need "crawlers" in their business, for there was never greater variety nor more prolific insect life. All the winged insects of the country and some that were not winged seemed to have gathered at the North Fork for a picnic, and the trout seemed to be having the best of the picnic. Twenty dozen, in round numbers, of lovely mountain trout running from 7in. to nearly 1ft. in length rewarded us for that day's work. We fished back to camp in time to properly clean and care for our catch before dark. We had no difficulty in keeping these trout and bringing them home in excellent condition. Carefully cleaning them, we packed them in fresh, damp moss, and placed them at the shaded mouth of a shallow cavern where the air seemed to draw in and out like the breathing of the ice king.

There were many pretty scenes and happy incidents of this day's fishing that I cannot ask space to tell about or attempt to describe. Wherever there was sand enough to show the imprint of feet there were deer and "varmint" tracks. Judging from appearances there was plenty of big game as well as fish in that neck of the woods. Mead can get along faster than I can and often does so. On one occasion he had forged ahead to a considerable distance, clear around a big bend. While intent upon my flies, forgetful of my surroundings and unconscious of the fact that I was alone, there came a succession of resounding shots that nearly startled me over into the pool. Bang, bang, bang!! bang, bang, bang!!!

Hurrying forward as fast as possible, expecting to find something dead—even if nothing more than Mead—I soon heard his voice, which in the noise of the stream and the rattle of my boots on the gravel sounded like a call for help. I strained every muscle and soon rounded the bend out of breath and my heart thumping against my side as if it would burst through. There sat Mead on a log. "Ha, ha, ha; he, he, he," the villain yelled as I came up, "you ought to have seen his nibs run."

"Nibs what? nibs who?" I asked as fast as I could get breath enough.

"Ha, ha, ha; he, he, he! I'll back him against anything in the Cascade Range in a ten mile up-hill heat. Ha, ha, ha," was the answer I got.

"Now look here, Mead," said I, getting serious and a little mad, "out with it or I will throw you in the drink and no more foolishness about it."

"Well," said he, "I found that I had got ahead of you and sat down here on the bank to wait for you, when I heard a crackling in the brush over on the other side of that deep pool. I watched and listened when pretty soon a bear, a little fellow, stuck his snout through the brush and looked around. Then I quietly got out my six-shooter and cut loose. At the first shot he started back up the mountain as if the devil himself was close after him. At the second shot he let out another notch, at the third another, and so on clear up the mountain, and as he went over the crest he had quit running and had commenced to fly. I tell you that fellow is a dandy in a hurdle race. You just ought to have seen him go; ha, ha, ha; he, he, he!"

The prettiest scene of the day was right where we turned back toward camp. At the foot of a long, tumultuous rapid was a lovely cascade. Right out in the center of the cascade, right where the water started in its descent, sat an immense boulder that would weigh many tons. It divided the stream and quite a body of water went each side of it. On the perpendicular face of that boulder, overlooking the falls, a couple of water ousels had built their peculiarly formed nest of moss, clear out of reach of prowling varmints. It was nearly as large as a bushel basket and the old birds seemed to appreciate the fact that their fortress was impregnable, for they were very bold and seemingly fearless. It was a delightful place to raise a family of young ousels, for they had such a good opportunity to study the beauties of nature before they left the home roof. I wish somebody would tell me how the little fellows get out of such places when it comes time to shirk for themselves. I have seen them after they have got out and before they could fly, but have never yet learned how they do it. Perhaps they slide down into the swift water and wade out on the bottom as the old birds can and do. A wonderful bird is the water ousel. I should think he would get lonesome away in these solitudes, but they seem to enjoy their hermit-like life. Wherever you go on these mountain streams you will find him and he always seems glad to see you. His harsh twitter is music and his impudent manners entertainment to the lone fisherman on the romantic stream.

Fay had gone back home and was to come up and help us out next day. We passed a pleasant night and Mead fished next day until about noon with good results, but I lay around camp and took it very easy. Yes, I can endure more rest than Mead can, but he'll get there by and by. As it was, we had all the fish we cared to carry out and were both well satisfied with our trip to the upper waters of the Molalla.

On the way home next day, road agents held up the incoming stage less than ten minutes after it had passed ours going out. Everybody seems to think that Mead' big white cowboy hat is all that prevented a double hold up, and it looks reasonable. But appearances are against him. He isn't half so terrible as he looks, and we would have been dead easy game for the agents if they had only known it.

S. H. GREENE.

PORTLAND, Oregon, July 23.

WITH A BURRO TRAIN.

It is not often that a Californian will risk an extended trip into the mountains with an untried "tenderfoot," for much of the pleasure of a sojourn depends not only upon the staying qualities of a companion during the rougher experiences on the route, but also upon whether he adapts himself to the experiences in a companionable way. I was fortunate enough to enjoy my first mountain trip in the company of one comparatively young in years, but old in mountain experience, and it came about by an accidental acquaintance.

Judge H. H. Rose, an ardent hunter and mountain climber, whose skillful use of rifle and 12-gauge has placed his name more than once at the head of the list of southern California experts, always on the lookout for anything new in bird life, one day brought in a beautifu specimen of blue grossbeak which found its way into my collection, and at the same time I made the acquaintance of one of the closest observers in California.

A month later, on June 27, four burros heavily laden with supplies, followed by two hob-nailed individuals, might have been seen winding their way along the old trail which commences at Sierra Madre and ends seven and a half miles distant at the top of Mount Wilson, 6,500ft. high. From this point to the West Fork of the San Gabriel River, four and a half miles below, the mountain lies at an angle sufficiently steep to prevent the loose earth and stones from rattling down, and the trail, a mere path in the shape of a continued letter S, allows you and the train to slide down between rows of stunted manzanita, greasewood and mountain lilac, whose jagged points soon wear great holes in the gunny sacking in which blankets and provisions are packed for protection. From the foot of the trail to the mouth of Cottonwood Cañon (or Cut-off Cañon, as some call it, because this route avoids the older and more indirect trail over the ridge to the west) is a mile, and darkness overtook us before we made camp, fortunately, for there is no knowing what the Judge would have attempted in his ambition to show a tenderfoot what a Californian considers a fair day's work.

The burros were turned loose up cañon to graze, for if allowed to work back they might continue on the back trail and leave us in the lurch. Our camp-fire soon illuminated the arches of the water beeches which canopied the stream.

After supper of bacon, hot coffee and bread and butter, we spread our blankets on as smooth a spot in the trail as we could find, and turned in, with the beeches for a tent. We were too tired to sleep; the Judge's hip troubled him and the stones and sticks troubled me, but just as I managed to go off into a doze was suddenly aroused by a loud "Get out of that!" from the Judge and addressed to a civet cat, an animal which appeared, in the light of the milky way, to be shaped somewhere between a coon and a fox, that was prowling among the packs for meat, and nearly wandered over my feet. This incident drove away all thoughts of sleep, and we spent until daylight relating incidents of previous trips.

The finest fishing in the Sierra Madre Mountains is found along the San Gabriel River and its branches, and none furnishes the sport equal to that of the West Fork. Before dinner I wandered along the stream in search of specimens and came across a pool in which ten handsome trout could be counted. A hook and line tucked away in a vest-pocket for just such an emergency was quickly adjusted to a willow wand cut near by. No grasshopper could be found, but a burro near by furnished a tuft of hair which was loosely tied with a white string to the shank of the hook. This was let down with the current from above, but no bite from the pool after several attempts. Casting it into the riffles below, a trout was instantly landed, and with the anal fin I soon had five of the beauties out of the pool.

Following the little feeder up Cottonwood Cañon two miles, crossing at intervals on the boulders while the burros splashed through, the trail suddenly diverges and strikes right up a huge spur or hogback leading directly to a high range running east and west parallel to the main range. Hour after hour we plod, stopping every dozen steps to regain breath. Finally the ridge is reached and we have a view of the valley of the Little Tehunja and an entirely different watershed from that of the San Gabriel. This stream flows westerly, finally losing itself in the great San Fernando Valley to the west. The trai continues eastward along the range to the beginning of a spur, down the ridge of which we drop in rapid stages, the last half mile diverging into a dry cañon. We had been over four hours exerting violently in an extremely

hot sun, and the water at the mouth of the cañon was hailed with delight by the burros as well as by ourselves. A mile up the Tehunja we went into camp on the sands after fastening the animals along stream with cinch ropes, where they fed quietly all night. Tracks of deer cut up the sands in every direction, and there would be no difficulty in securing a blacktail any morning or evening by watching the side cañons down which they came from their sleeping places in the dense brush on the ridges.

Up the Tehunja two miles further the valley forks, and we turn up the Left Branch but immediately leave the bed of the stream and rise gradually over a series of outlying flanks of real mountain, the trail constantly getting steeper until the last mile it invites a constant scramble in which animals seem lost in the dust and brush. Our packs suffered on this trip more than any other part, because the cinch ropes had trailed in the stream during the night and loosened as they dried during the day—result, we lost one sack of 25lbs. flour en route, which dropped into the thick brush or rolled out of sight down the mountain. The top of the ridge separating the Little and Big Tehunja is heavily timbered with pine of two species, one a huge towering, well proportioned in trunk and limbs, with small cones; the other a smaller tree with long needles and a great cone 10 to 14in. in length and of several pounds weight, four of them filling a large grain sack. The ground is free from underbrush and covered with a green growth of bunch grass and numerous flowers, including the Mariposa lily, which here reaches its perfection of beauty. The northern slope of this ridge drains into the Big Tehunja; in fact, the headwaters begin among the pines at our camp. Deer are very plentiful, and in the valley along the streams a great variety of birds not seen in the lower valleys, that usually nest in Oregon and Washington, were taking advantage of the altitude and raising their broods. Every half mile or less great broods of the mountain partridge scattered before us, and we could hear the old birds, with their beautiful flowing plumes, calling them together after we passed. One brood of eighteen half-grown chicks were loth to leave the trail, and many of them fluttered on to the bushes just beyond and eyed us curiously as we rattled by. We camped again in the sand, which we find more comfortable than anything the mountain growth can supply. Near by a huge pine tree acknowledged a girth of 20ft. by cinch rope measurement, being one-third larger than that old landmark "the big pine" of the San Gabriel.

A mile below camp the cañon suddenly narrows and blocks the way. In consequence the sand has accumulated, making a flat, moist floor, in which grow clumps of willows and bunches of coarse grass. The open spots here were cut up by deer tracks as though a flock of sheep had passed that way. Where the cañon narrows the trail ascends the side of the mountain, circling down again to where a branch enters, which we cross, and continue up to the ridge beyond—nowhere as steep as our previous ones—for two miles, and then descend into the beautiful Chillejo (pronounced Chilláho) Valley, with its open, park-like reaches and grand old trees—a natural succession of deer parks, and much frequented by deer, as the sign in every direction indicated. A huge track of a mountain lion further evidenced the fact that deer meat was plentiful. We continued up the valley two miles to a little log cabin under the spreading branches of a great live oak, where the birds enlivened the air with their song by day and the owls and 'poorwill visited us by night; here we made our permanent camp for ten days. The patient little burros have won the respect of their fellow voyageurs and at once kick up their heels at the prospect of a period of idleness among rich feed and pure water. They wandered all over the valley during our stay, and we met them in our tramps fully five mile from camp, but a few days before we came out they returned to camp and were easily kept there by an occasional potato or onion from our ample stores.

Although in a decided rattlesnake country the clatter of the burro train ahead had warned away all snakes en route, but we were destined to have our first experience in that line shortly after the first meal in camp. Our table was of hewed logs, with a pile of loose rocks on one side and a box on the other for chairs. While resting after dinner a beautiful male of the violet green swallow circled about, and as I wished a skin of this bird I rushed to the table for my collecting gun, and right in front of the stone seat under the table, not 18in. from my feet, lay a lively rattler with seven rattles and a button who had evidently enjoyed the protection of the rocky seat while we had enjoyed the restful upper portion while seated at dinner. Thereafter the Judge, a good story-teller, was often interrupted about the time he reached the climax with the startling question, "Did you look under the table?"

The head of Chillejo Valley with its numerous branches penetrates to the very top of the ridge, forming the watershed toward the desert, and we spent many days exploring the different cañons, often resting at the pass where the hoofs of cattle driven in from the desert side in past years, but now driven out by the Government, have cut deep trails toward the desert.

A great level gray plane stretches off to the north until interrupted by blue mountains in the distance, colored by a scrubby growth of sage and cactus. In the middle, like a dried lake bottom, lies a yellow shining shimmering sea of sand with two great finger-like arms pointing to the west. Here there is absolutely no vegetation and the air fairly boils with the heat. On days when the regular breathing of the desert is interrupted and the rush of sea air over the mountain passes is diverted, the hot air rushes in like a blast from the furnace, and even at our elevation of over 7,000ft. the birds sit with open mouths and drooping wings until the usual breathing of the desert is resumed.

A couple of days were spent with lunch and water bottle exploring to the north of Mount Waterman and about the base of Mount Winston, where the unfortunate L. C. Winston was lost last fall. A small monument beside the trail of loose stones calls attention to the point of divergence, while on the mountain slope above a pine stripped of its branches, with a bright tin can on top, marks almost the spot where his body was found nine months to a day afterward.

On this side trip we saw fresh tracks of mountain lions.

The journey out was without particular interest. Having reduced our supplies it gave us an extra burro to carry us across the deeper fords lower down and an occasional lift after a weary walk.

Instead of returning over Mount Wilson from the mouth of Cottonwood Cañon, we continued east down the west fork of the San Gabriel River and enjoyed magnificent fishing all the way, although it was much curtailed by our catching only enough for camp use.

We stopped at the beautifully located cabin of the Pasadena Bait Club two days, eighteen miles above Azusa, where I had to call upon the superior marksmanship of the Judge to secure me a specimen of the white-throated cloud swift which nested in the 500ft. cliff opposite the cabin.

Here the burros, dissatisfied with the scant picking of the cañon, raided the camp in a body. They upset a can containing a dozen eggs carefully packed in oatmeal and held for some special banquet, and ate the mixture. They licked the board table under the tree until it looked cleaner than we had found it. Knocked the cover off a kettle of boiled potatoes and ate them all, leaving the kettle in the same condition as the table—licked clean. Upset a pint bottle of vinegar, kindly leaving us a teaspoonful. Rolled a bottle of chow chow on to the rocks, ate up two dish rags and chewed up over half a dish towel. Chewed on a box of 100 parlor matches until the matches went off and then left them partly burned on the ground. This last act was probably one of Muggin's, our fool burro, judging from the way he twitches his mouth this morning. I call him our fool burro because the Lord takes care of fools and infants, and he seems to be doing fool tricks all the while and safely escapes. If he happened to pass a hornets' nest over the trail just as likely as not he would take a nip at it, and trusting in the Lord would slide into the brush ahead, leaving the other three burros and two men to run the gauntlet. But to return to the raid. They picked up a paper in which a lot of snelled hooks had been wrapped and chewed it until the points protruded from the sodden mass, then wandered over to my table, consisting of a box nailed to a tree where ornithological specimens were prepared, poked the arsenic and other eatables about, but refrained from gorging themselves; but they did eat up a pile of fish intestines and bird bodies which we had saved intending to put strychnine therein for the benefit of a wildcat that had visited the camp the previous night in a noisy manner.

At the new club house, seven miles from the mouth of the cañon, we found nine members performing the ceremony of opening the house, and besides giving us ragged, unshaved tramps a hearty welcome, they gave us a parting song, which rang in our ears long after the camp-fire had grown dim.

Our last camp was six miles from the mouth of the cañon, and the walk out and the tramp along the highways of eight miles more to the burro corral at the foot of the trail in the hot sun of July 17 was not spiced with anything but a dogged determination to everlastingly stick to it until we reached there.

If a tenderfoot of the right sort happens this way I would like to try that first day's tramp over again with him.

FRANK S. DAGGETT.

PASADENA, Cal.

YELLOW-JACKETS, BLUE-BERRIES AND A BUCK.

OKANOGAN, July 11.—*Editor Forest and Stream:* In Capt. Kendall's admirable article on the characteristics of the flag-tailed deer, he speaks of the inclination of the different members of the deer family to hide. I will mention a few cases that have come under my observation.

In September a few years ago, some Indians came by my place on their way to the huckleberry patch, and wanted me to go along. Not being busy enough to refuse to take a trip up into the mountains, I went. Of course I understood they wanted me more for what grub I would take than for my company. I had been to the patch the year before; the bushes were plenty, but berries were few, but the Indians claimed that now there was a good crop.

We started about 2 P. M., and intended to go up my creek some eight miles, then next morning take a demijohn of water and make a dry camp on the huckleberry ridge. I asked the Indians if there was any water down on the north side of the mountain where that big deer trail went. They said no; they had been all over the mountain; had killed deer and gathered huckleberries ever since they had been children, and always come and camped one night, then went back to the creek. I laughed at them.

Now, an Indian is a good deal like some of us, they don't like to be doubted or made sport of, so to end the argument they said if I was so smart I had better go and find water, at which they all laughed at my expense.

As we had picketed our horses that night we got an early start. The men started ahead in order to hunt, and told me to come with the women and children. When all were ready I struck out ahead, while the others kept close up. As I went up the ridge I began to put up grouse, which I kept shooting until I thought we had enough. But not so with the Indians. They never get enough grouse. Everything was going nicely; the women were talking and laughing as well as the children. The sun had got up to where it was making it warm for us as well as for our horses. I crossed a little flat and my horse began to kick and stamp. I did not have to be told that he had stepped into a yellow-jacket's nest. He went out on the run. A woman came next. I hollered to her; but it was too late. Her horse came tearing through the brush after mine. She was laughing and hollering. It was fun for her. A little girl was riding a big brown horse. He had all their camp and cooking outfit on. When he struck the nest there was a snort, a cloud of dust; and he went out of there bucking. Of course the little girl, being the last thing on, was the first thing off. Then came things in a hurry—pots, kettles, pans, lard buckets and everything but the saddle. He threw the little girl near the nest. She was screaming. The women and the rest of the children were screaming with laughter. I jumped from my horse, ran in and picked up the girl, carried her out and put her down. She had been stung a number of times, but was not hurt any by her fall. The horse was caught as soon as they had got through with their fun. A few of the kettles had fallen near the nest. The women wanted me to get them. I told them, no. I had got the girl and they would have to get the things. One woman ran in and grabbed the kettles, but the jackets were on the war path and charged. She got stung once, which caused all hands to laugh as well as the little girl.

Everything in readiness we again started on and reached the ridge without further mishap. We found the bushes loaded down with fine large berries and it would surprise most any white person to see how quick the Indian children got away from their horses and went to gathering and eating berries. I tied my horse and being huckleberry hungry was soon as busily engaged as the rest; with this difference, that I soon filled my bread basket. Then I told the women that I would go down on the side of the mountain and find the water. I followed down the big trail about a half-mile to where it forked. I took up to the right and soon came to a swale about 50yds. wide and 200yds. long. On the farther edge was a nice running spring. I scooped out a place for my horse to drink. Then I went back and told the Indians, who were much surprised. The men had come in without any game save a few grouse they had killed with rocks; and as all hands had got pretty well filled with berries for a starter, we went down to where we would camp near the spring.

I rode up, tied my horse, threw off my saddle and went to the edge of the brush in the swale to peel a piece of bark to make a spout to catch water in a bucket. On looking in the grass and weeds I saw a very large pair of buck horns with the velvet still on. On close examination I could see the head and the outlines of the body. I moved right back to where I had unsaddled, picked up my rifle and walked back to where I could see the deer's head; and it was like finding the different animals on a puzzle card. But by standing still I soon saw the deer's eye. I raised my rifle and shot it about 2in. above the eye. One of the Indians wanted to know what I had shot at. I told him I did not know, but to go into the brush and see. He went in, and when he saw the deer he called one of the men to help him drag it out. Well, that deer thought it was hid.

LEW WILMOT.

JOHN PHOENIX'S OWL STORY.

Editor Forest and Stream:

The man who has not read Lieut. Derby's "Phœnixiana" has an enviable pleasure in store. Those of my fellow readers of FOREST AND STREAM who are familiar with his sketches may have observed an instance, shown in Dr. Van Dyke's article, "Old-Fashioned Fishing," in the August *Century*, of the re-incarnation of an old, old camp story in a new dress.

Derby was one of the earliest American humorists. How many engineers have laughed over his "Official Report of a Military Survey and Reconnoissance of the Route from San Francisco to the Mission of Dolores," published with other sketches by Appleton & Company in 1856. The volume is before me. Let me recall the preface, so characteristic of the author.

"This book is merely a collection of sundry sketches recently published in the newspapers and magazines of California. They were received with approval separately, and it is hoped they may meet with it on their appearance in a collected form. When first published the author supposed he had seen and heard the last of them, but circumstances entirely beyond his control have led to their republication.

"The author does not flatter himself that he has made any very great addition to the literature of the age by this performance, but if his book turns out to be a very bad one he will be consoled by the reflection that it is by no means the first, and probably will not be the last, of that kind that has been given to the public. Meanwhile, this is, by the blessing of Divine Providence and through the exertions of the Immortal Washington, a free country, and no man can be compelled to read anything against his inclinations. With unbounded respect for everybody, the author remains, JOHN PHŒNIX."

"SAN FRANCISCO, July 15, 1855."

The FOREST AND STREAM has shown that for many ages and in many lands the story has been current in varied forms of the man in the hollow tree who emerged therefrom by holding on to the tail of a bear. Among Derby's sketches is one giving either the genesis of Dr. Van Dyke's owl story or possibly the version current in 1855 of an older legend.

Here is the story in its two tellings:

From the Century Magazine, August, 1895.

"The rain patters persistently on the canvas; the front flaps are closed and tied together; the lingering fire shines through them, and sends vague shadows wavering up and down; the Governor is rolled up in his gray blankets, sound asleep. It is a very long night for the boy.

"What is that rustling noise outside the tent? Probably some small creature, a squirrel or a rabbit. Rabbit stew would be good for breakfast. But it sounds louder now, almost loud enough to be a fox—there are no wolves left in the Adirondacks, or at least only a very few. That is certainly quite a heavy footstep prowling around the provision box. Could it be a panther—they step very softly for their size—or a bear perhaps? Sam Dunning told about catching one in a trap just below here. (Ah, my boy, you will soon learn that there is no spot in all the forests created by a bountiful providence so poor as to be without its bear story.) Where was the rifle put? There it is at the foot of the tent pole. Wonder if it is loaded.

"'*Waugh-ho! Waugh-ho o-o-o!*'

"The boy springs from his blankets like a cat, and peeps out between the tent flaps. There sits Enos in the shelter of a leaning tree by the fire, with his head thrown back and a bottle poised at his mouth. His lonely eye is cocked up at a great horned owl on the branch above him. Again the sudden voice breaks out:

"'*Whoo! whoo! whoo cooks for you all?*'

"Enos puts the bottle down with a grunt, and creeps off to his tent.

"'De debbil in dat owl,' he mutters. 'How he know I cook for dis camp? How he know 'bout dat bottle? Ugh!'"

From Phœnixiana, 1856.

"Many years since, during the height of the Florida war, a company of the 2d Infantry made their camp for the night, after a rainy day's march, by the bank of a muddy stream that sluggishly meandered through a dense and unwholesome everglade. Dennis Mulligan, the red-haired Irish servant of the commanding officer, having seen his master's tent comfortably pitched, lit a small fire beneath a huge palmetto, and having cut several slices of fat pork from the daily ration, proceeded to fry that edible for the nightly repast.

"In the deep gloom of the evening silence reigned unbroken but by the crackling of Dennis's small fire and the frizzling of the pork as it crisped and curled in the mighty mess-pan, when suddenly, with a tremendous 'whoosh!' the leaves of the palmetto were disturbed, and

a great barred owl, 5ft. from tip to tip, settled in the foliage. Dennis was superstitious—most Irishmen are—and, startled by the disturbance, he suspended for an instant his culinary operations, and, frying-pan in hand, gazed slowly and fearfully about him. Persuading himself that the noise was but the effect of imagination, he again addressed himself to his task, when the owl set up his fearful hoot, which sounded to the horrified ears of Dennis like *'Mo-cooks-for-you all!'* Again he suspended operations, again gazed fearfully forth into the night, again persuaded himself that his imagination was at fault, and was about to return to his task, when accidentally glancing upward he beheld the awful countenance and glaring eyes of the owl turned downward upon him, and from that cavernous throat in hollow tones again issued the question, *'Who! who cooks for you all!'* 'God bless your honor,' said poor Dennis, while the mess-pan shook in his quivering grasp and the unheeded pork poured forth a molten stream, which, falling upon the flames, caused a burst of illumination that added to the terrors of the scene, 'God bless your honor, I cooks for Captain Eaton, but I don't know, sir, who cooks for the rest of the gintlemen.' A burst of fiendish laughter followed from those who had witnessed the incident unseen, and 'Dennis's Devil' became a favorite yarn in the 2d Infantry from that time forth."

H. S. D.

THE THOUSAND ISLANDS.

HERE we are slowing up at Clayton, a pretty little village on the American side of the St. Lawrence River, about twenty miles from Lake Ontario. We alight from the train and take a "bus" to the Hubbard House, a most comfortable and homelike hostelry, the headquarters of many gentlemen who, like ourselves, have resolved "to go a-fishing."

It is early evening, and even before supper we must secure a guide for the morning. We were fortunate in happening upon one of the best, who assured us that he would have all things ready in the morning at 7 o'clock sharp.

So, resting our faith in our new found companion of a week to be, we turned our attention to a most satisfactory supper at one of the many tables, surrounded by bevies of ladies and gentlemen chatting over the day's catches of bass and perch and pickerel.

The evening is passed listening to fish stories, wonderful, yet possible, told by guests and guides on the great piazza. At 10 we turn in, full of finny expectations, and all night long visions of fisherman's luck dance through our heads.

Up at 6, we break our fast and take our tackle and step to the front of the hotel, where waits our punctual guide, Ed Paige, with a great basket of what turned out later in the day to be a fine lunch. Him we follow to his boat house, a two minutes' walk, and there he launches an elegant clipper skiff 20ft. long, and furnished with all the conveniences which twenty years of experience have shown to be desirable. We step carefully in and take our seats in the high-backed chairs. The tackle, our lunch, the "lunch" for the fish, and all things else are quickly and snugly arranged aboard. The guide steps in and deftly sets the mast, the sail unfurls its white wings, and in a moment more we are speeding up the river before a spanking breeze, under a bright sky, over sparkling waters, in a glorious air, amidst enchanting scenery, toward our gamy victims waiting for us in Morgan's Bay, nine miles away.

After a glorious spin of over an hour the guide luffs up just under a rocky promontory, trips the mast, furls the sail and lays them carefully in the boat.

We string our rods. I have a 9oz. split-bamboo, 11ft. long, my son a slightly heavier rod of same length, made of greenheart and lancewood.

We drop overboard our lively minnows, and the guide slowly rows. In a minute what seemed to me a runaway locomotive struck my bait and made off down the river for Clayton. I let the thing go, simply keeping a taut line. The fish took 150ft. and then felt the strain of the rod enough to stop and investigate. For an instant he was still; then he made a mighty rush for the Canada shore, as if to butt his head with terrific force against the rocky promontory; but he saw his danger and stopped before dashing out his brains, and made up the river, somewhat slower, and a little uncertain what to do. All the time I was giving the fish the butt of the rod, keeping a taut line. Many a rush he made, everyone shorter and weaker, until I got him near the boat, and was startled to see such a monster pickerel. I coaxed him closer, but suddenly he darted under the boat deep in the water, and for an instant took most of my rod under the surface. The guide turned the boat and relieved the rod, while I coaxed the pickerel slowly to the top; he made two or three more rushes and sulks, but at last, when he was tired and dazed, the gaff of the guide lifted the beauty into the boat. Oh!

He was a channel pickerel 3ft. long and weighed 9lbs.

And so on Aug. 9, at 9 o'clock in the morning, nine miles from Clayton, on a 9oz. rod, in a nine minutes' fight, I brought to boat a 9lbs. pickerel which measured four times 9in. from the tip of his nose to the end of his tail. Great was our rejoicing.

The morning progresses; my son is catching bass and perch rapidly, and highly elated chaffs me for falling behind, until in self-defense I shoot at him the Latin fable of the prolific wolf who upbraided a lioness for bringing forth only one whelp at a time. "My son," said I, "the lioness replied: 'one, but a lion,'" and with a proud air I pointed to my pickerel; my proud heir saw the point and immediately subsided.

Until high noon the flap of our fish box occasionally shut over a handsome captive. Then, while the fish of the river are supposed to be taking their post-prandial nap, we seek the shore. The nose of the boat grates lightly on the pebbles. The guide steps out, pulls the prow well up on a stick laid transverse the keel and we carefully get out. Reclining on a moss-grown bank in the solid shade of heavily foliaged trees we watch the guide unpack the boat and prepare for dinner. Out came the great basket containing lunch and dishes, the bag with all the cooking utensils, the folding table and camp stools. We had landed at one of the many kitchens of the guides, and here is a fireplace made of two long rectangular stones placed parallel to and within 10in. of each other, ever ready to be heated up for the cheer of the first comer. In a moment dry, dead wood is gathered; the hatchet reduces it to proper lengths and sizes, and soon a fire is blazing, which burns to a mass of coals by the time the guide is ready. With great interest we watch the process of cooking, new and novel to one of us.

In half an hour from landing, the guide announces: "Gentlemen, dinner is ready," and gratefully we sit down to a meal fit for a king.

What is it? Clam chowder, baked bass, broiled chicken, a bit of fried pork, stewed and fried potatoes, boiled corn, omelette, rolls, chow-chow and coffee, with berry pie, a glass of iced milk, bananas and oranges for dessert. Good? I think so. Superb, splendid; never can mortal enjoy his dinner more than we did those Elysian lunches of a week on the St. Lawrence.

After dinner we withdrew to our mossy bank, and the guide, adding a piece of carefully broiled beefsteak, proceeded in a systematic and professional way to wholly wipe out the "surplus," together with the accumulated reserve fund of the beefsteak. This done, which was accomplished with zest and capacity, attributed to Senator Evart's hired man, the guide gathered up the impedimenta, repacked them snugly in the boat and called us from our dreamy laziness and restful stretching on the bank. We re-embark and are rowed to the water which the guide says, at this time of day for big bass, is the very best.

This is Morgan's Bay. Over what the guide calls a "scoop," making the sounding deeper, and giving to this well-known depression in the bottom, abounding in rocks, a high-sounding name, suggestive of "scooping in the bass," we stop and bait and watch the wriggling, shining minnows on our hooks, curious combination of faith and works—our faith and their works—as they go zigzag toward the bottom. In a minute I have a strike and the rheumatism is taken out of my rod by a fine bass of 1½lbs.

"I told you we would find them here," said the guide as he lifted this gamy one with his landing net.

"Heigho," said my son, who had been watching me capture the bass, "I guess I've caught on to a rock." The guide sits down to back up the boat when "No, steady," the boy says, in a voice unsteady with the tremulo of excitement, "I've got the boss bass, I think," and as his rod takes on a mighty bend he straightens himself in his chair, his lips compress, his color heightens, his eyes flash, and the contest begins. "Keep cool, my boy," I say, in a low, quiet tone, and instantly saw the break of his will power act upon him, and at the same time I saw the break of the willful bass, as he came rushing 2ft. out of the water and shook his jaws in a mighty effort to throw out the hook; but the boy with the greenheart rod is no green hand, and the line staying taut as a fiddle string, the bass fell back, still a prisoner, baffled in his first rush for freedom.

He immediately sets out down the river, apparently for Montreal, but the rod gets its back up at this proposed trip, and puts in a demurrer, and after a long and lively argument the demurrer is sustained. The bass being at liberty to amend tries again, this time for the shore, but he soon finds that his baggage is not checked for Canada, and with the fierceness and rage of a wounded and baffled Apache makes another break into the air; but the glorious spring of the rod is always on him, and he falls back, having to "fight it out on this line if it takes all summer." Now he darts up the river for Lake Ontario, ten miles away. The guide all the time has kept turning the boat so that the boy faces the bass; the reel sings again; then the tip shakes hands with the butt, and the rush is slowly stayed; some line is taken in before the next and last mighty effort; he makes another fruitless break and darts for the channel with the energy of despair, but it is short-lived; he is tired, and the rod does not register its best bend to stop him. He is slowly coaxed toward the boat; tries hard to go to the bottom, but is restrained; the net is already deep in the water, and slowly the tired fighter is guided to it; with a dexterous motion the guide passes it under him, and quickly lifts his majesty into the boat. The boy, relaxing his tension, gives first a great sigh of relief, and then, in delight, exclaims, "Beat that if you can, pa," and the guide, reading the scales, announces, "Three pounds and a half."

After three days of the wearing and tearing excitement of fishing, we were glad to take a rest, and were advised that no recreation from the work of fishing could be pleasanter than making the tour of the islands. Accordingly, we went down to the wharf at 9 o'clock in the morning and boarded the new Island Wanderer as she touched at Clayton in a bi-daily trip of "swinging round the circle." Securing comfortable camp chairs well forward on her upper deck, we settled ourselves for the leisurely and full enjoyment of a trip which we had been told was most delightful.

Swinging out from Clayton, we pass Governor Alvord's island close on our right and Prospect Park on our left, and make westerly for the channel between Grindstone at starboard and Wolfe, the largest of the 1,800 islands, being fifteen miles long and five miles broad, at port. In the channel we cross into Canadian waters, heading straight for Howe Island, lying between Wolfe and the Canadian shore.

The line between the United States and Canada does not follow the center of the river nor the ship channel, but winds and turns in a queer and tortuous manner.

Here the river is nine miles wide, but we soon turn due north and point for Gananoque, which is directly across from Clayton, and which is now hidden from us by a group of charming islands, which we pass through in a labyrinthine course, and touch at the ancient town. While at this dock and leaving it, we were fortunate enough to see an exciting race by a fleet of small sailboats.

We pursue our way down the river on the Canadian side, and are soon in an archipelago which it seems impossible to traverse without certain and immediate wreck. We turn quickly to the right, now to the left, and continuously wind our way through the changing channel, avoiding a rocky shore to starboard so narrowly that we start from our chairs to steel ourselves from the shock; then we seem sure to run on a jutting point to port, or to grind out the life of the boat on a half-sunken great rock, or to run her prow squarely on to an island and split her in two; but the hand at the helm guides our craft with unerring skill and keeps a few feet of air between her sides and the rocks, and, it is said, 100ft. of water between her keel and the bottom of the river.

So we go on, passing island after island of many forms and sizes; some are simply rocks, covered with cedars and lichens; others have been fashioned by the hand of man into earthly paradises. Beautiful cottages with broad verandas, lovely castles with tempting turrets and cosy corners, velvety lawns with plots of plants and profusion of flowers, are as numerous here as leaves that strew the Vale of Valombrosa. At every curve in our course and every minute of our trip new scenes of loveliness enchant us. It is a kaleidoscope of wondrous variety and beauty.

Now we approach the far-famed Alexandria Bay, at the head of which lies a large triangular island, indented with a bay on the north. It is called Wells or Wellesly Island, and resembles a huge arrow head pointing down the river. On it are three great hotels; on the left barb, Grand View Park, and on the point, Westminster Park Hotel.

These great caravansaries with adjacent cottages make this island very attractive and exceedingly popular with tourists. We touch at Grand View and then steamed for six miles along the arrow head to Westminster Park. We are greeted on the way by scores of skiffs fishing in the little bays which serrate the island; a warm wave of the handkerchief, a hearty salute of the hand, showed us that the enjoyment of successful fishing mellows the heart and raises the social temperature. As we saw, here and there, a gentleman or lady all absorbed in "playing" a fighting fish, we distracted ourselves with the still unanswered question: "which would you rather, take in from this deck the beauties of the river with your eyes, or from one of you boats with your rod?"

At Westminster Park we reach the most southerly point of our tour across the islands, and leaving it press easterly between islands across Alexandria Bay to the hotel of the same name, on the mainland. This is one of the largest and handsomest of the hotels, and is crowded with guests from all parts of the country year after year.

The environment of the great hotels is most delightful; green lawns sloping to the water's edge, threaded by winding paths and curving drives and shaded by oak, maple, hickory, hemlock or pine, cover a large part of the grounds; groups of groves, bevies of bowers invite restful reclinings; and all the surroundings are full of suggestions of dreamland peacefulness and universal enjoyment.

We continue our course up the river now, between and around charming islands as before, touch at the docks of three other great hotels, and then the whistle sounds for Clayton, the place of beginning.

Most reluctantly do we close our circuit of fifty miles, and as I descend from the deck and walk to the shore, this parody runs through my head:

> "The Thousand Islands are a place
> Of such enchanting mien,
> That to be truly worshipped,
> Need but to be seen."

After a week of delights in the vicinity of Clayton, we "reel in" and prepare for a trip down the St. Lawrence to Montreal. Of a morning, at 7 o'clock, we board the "Corsican," a large, high-decked steamer from Toronto, as she touches at Clayton; and bidding a reluctant adieu to scenes of many days' pleasure, we steam down through Alexandria Bay and soon have left behind "The Lake of the Thousand Islands." Thirty miles below we make a stop at Brockville, so named in honor of General Brock, who fell on Queenstown Heights in the War of 1812. It is a very pretty and thriving town. Our next stop is at Prescott, one of the finest towns on the St. Lawrence. Fort Wellington crowns one of its hills and by its quaintness and un-American appearance attracts our attention.

The city of Ogdensburgh is opposite Prescott, not far below; the Gallop Rapids prepare the traveler for the swifter and more turbulent Rapids of the Long Sault. These are a continuous rapid of nine miles, divided by islands in the middle. Steam is shut nearly off and we gallop along at the rate of twenty miles an hour. The surging waters present the appearance of breaking surf, and rolling and plunging and riding down hill by water produces a very novel sensation; in some of the passengers pleasure, and in others *mal de mer*.

Pleasantly situated at the foot of the Long Sault is Cornwall. The boundary line between the United States and Canada passes near this village and is marked by a flagstaff on one of the Islands. Below this the St. Lawrence is wholly within Her Majesty's Dominions. Near Cornwall begins the expansion of the river which is called St. Francis, and extends for forty miles to Coteau du Lac, where begins a very swift rapid two miles in length. The steamboat next enters Cedar Rapids, in which the peculiar motion of the boat settling down as she glides from one ledge to another makes the passage very exciting. Enormous boulders seem to guard the entrance of Split Rock Rapids; a timid person will hold his breath until this ledge is passed.

The steamer appears to be running straight upon it, but just in time, as by magic, she glides aside into open water. Quickly we pass through Cascade Rapids, full of white caps, cresting and foaming on its dark waters; here again the steamer pitches as if in a chopping sea. After passing the cascades, the river widens into Lake St. Louis, where the dark waters of the Ottawa by one of its mouths joins the St. Lawrence. Now from the deck we have a magnificent view of Montreal Mountain, thirty miles away. Nine miles from Montreal is Lachine on the north side, and Caughnamaga, the village of the praying Indians, on the south. Just below these towns we pass the manificent bridge of the Canadian Pacific Railroad. Soon the steamer glides down the river with increasing swiftness, denoting that a rapid is ahead; in a few minutes we rush into the first pitch of the Lachine Rapids, the most formidable of them all; and in silence imposed by awe of the situation, and the grandeur of the scene around, we run the rapids double flanked by frightful rocks, and draw a long breath of relief as we shoot into smooth and level water just above Victoria Bridge, the longest, largest and most costly bridge in the world, and passing under which we slowly steam to the landing at Montreal.

Montreal, a city of about 150,000 inhabitants, is built on low and level land about two miles wide, between the river and a considerable and very beautiful elevation called "Mount Royal."

The city is on an island of the same name, about thirty miles long and ten broad, and is at the head of ocean navigation and 620 miles from the sea.

Steamers and other boats which ascend the St. Lawrence River from Montreal pass around the various rapids through canals which have been constructed at great expense and which are now being deepened and widened. The harbor of the city is large and secure, and the quays,

built of limestone, are massive and unsurpassed in the extent and beauty of their unkroken line and stretch of continuous masonry for several miles. No unsightly warehouses disfigure the river front, but a broad terrace, faced with gray limestone, the parapet of which is surmounted with an iron railing, divides the river from the city throughout its whole extent.

Using the splendid carriage service of the city we make the regular tour of the town, seeing all of the public buildings and churches and convents and squares, and driving through the Mountain Park by an easy, winding, magnificent road, we suddenly reached the brow of Mount Royal, where before us this beautiful city lay; we spent much time in admiring the splendid view and in looking with a glass particularly at the bridge and river and Lachine Canal, and at the domes and spires of the grand and stately churches.

We came down from the mountain by carriage; we might have made both ascent and descent by cable car, which must be an interesting and exciting experience, but we did not do it because one of our party had a taste of such aerial riding at Niagara Falls, and cared for no more of it in this world. Had it been winter, some of us might have ventured upon the great toboggan slide on the mountain, and have flashed down while we held our breaths.

We visited many of the churches, which are noted for their beautiful architecture and for their interior ornamentation by frescoes, painting and statuary. St. Peter's Cathedral, whose dome is said to be an exact copy of the mighty dome of St. Peter's at Rome, is the largest of the churches, but by no means the most ornate or beautiful. All of the Jesuit and Roman Catholic churches are open at all times and strangers are welcome to visit them.

The hotels are large and elegant. The railroad depots are massive. The public buildings of the city are all exceedingly fine. Many of the dwellings with their beautiful surroundings are suggestive of the luxuriousness of millionaires; and altogether our experience in Montreal has given us the memory of a city beautiful for situation, handsome to look upon, healthful to live in, and full of joyous prosperity.

G. L. DANFORTH.

MIDDLEBURGH, N. Y.

Natural History.

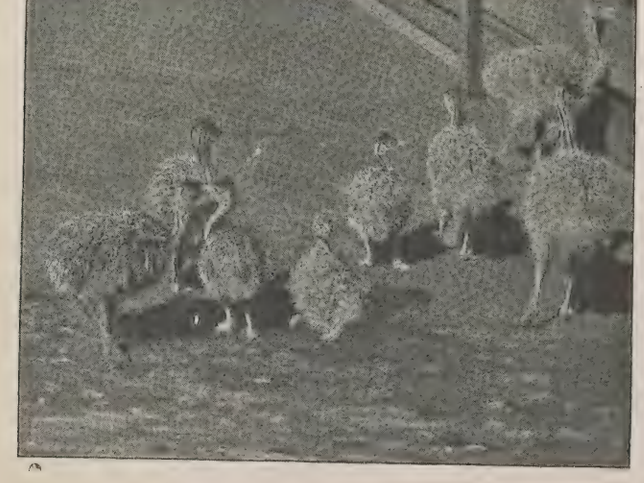
THE OSTRICH IN AMERICA.

MR. E. S. JOHNSON, manager of the American Ostrich Co., of Fall Brook Farm, San Diego County, California, supplies the following data in regard to the ostrich and ostrich culture in his State. The illustrations appended are probably the best ever made of the young and the adult specimens of the bird, and may be of interest to readers of FOREST AND STREAM. Mr. Johnson's little circular shows that the ostrich is singular in some of its habits, as well as in its appearance. It is curious to note that its period of incubation is two days shorter in California than in Africa—42 days in Africa and 40 in California. Verily, California beats the world! Mr. Johnson's statement goes on to say, among other things:

"In their wild state the hen at the approach of her maturity wanders away from her own troop in search of a male from some other troop, thus instinctively avoiding inter-breeding. She invariably makes the selection, and when made it is 'until death do us part.' The hen matures at about four, the cock at five years of age. After mating they prepare for housekeeping by scooping a nest in sand or loose soil, pushing with their breast bone and kicking out behind with their toes. The nest when completed is four feet in diameter and slanting to a depth of ten inches in the center, saucer shaped. Madam deposits one egg every alternate day until from eight to fifteen are collected. These are faithfully turned every day in order that the germ, which is held in place by a delicate spiral cord and always near the upside of the egg, may not become inactive and thus cause an imperfect embryo. The birds take regular turns at setting on the nest—the hen occupying it from 8 A. M. until 4 P. M., while the gallant male takes the sixteen-hour watch from 4 P. M. until 8 A. M. They are punctual about changing.

Mr. Johnson tells an amusing incident of how one wayward spouse, who tried to shirk going on the nest promptly, was brought to her senses by her lord and master: "In the same year and place above mentioned, and about two weeks prior to the hatching of the 'Doctor's' brood, Mrs. 'Doctor' became lax in her duties and failed to relieve her lord and master at the usual hour—8 A. M. For several mornings she did not take her place in the nest on time, delaying a little longer each successive morning, while the 'Doctor' fretted and shifted uneasily about, longing to straighten his cramped legs and to get his breakfast after the weary sixteen hours of warning and watching. When at last the sixteen hours had lengthened into seventeen he became enraged, and springing from the nest pursued his sweetheart several times around the paddock, interspersing good hard kicks, well laid on, with the running. Madam soon decided that a nest of beautiful eggs was her heart's desire, and to sit on them a glorious duty—a duty that she faithfully performed thereafter until the eggs were hatched."

"At six months of age the chick is first plucked. The



"CORBETT"—MALE OSTRICH.

plumes at this age are not of much commercial value, and are called *spadonas*. From this age on the bird is plucked every ten months, the feathers attaining perfection at the maturity of the bird. Twenty-six plumes in each wing are protected by floss feathers underneath and by three rows of feathers above, overlapping each other. Those in the row first above the plumes are called long black or long drab, according to the sex of the bird; next above, mediums, and top row, shorts. Besides the wing feathers the tails are also taken. Body feathers are not taken, but are picked up during the moulting season and used for cloak trimmings, collarettes, etc. An average feather bird yields 1¼lbs. of feathers at a plucking, those of the male being of a heavier quality and of more value than those of the hen. The difference is quickly seen in the barbs of the plumes of the male and hen, each separate barb being a complete feather in itself.

"In order to take the plumes when they are at their best—this time is just before they are ripe, and before they begin to look worn or frayed at their tips—the quills should be cut with a pair of sharp clippers (small pruning shears), about two inches from the socket. The stubs are left two or three months to ripen and can then be easily pulled without injury to the socket in the wing. In pulling stubs, care must be taken to pull them out straight, for if pulled with a twist the new growing feather will come with a twist and its value much impaired.

"In the operation of plucking, a long stocking-shaped hood is drawn over the head and down the neck, thus blinding the bird, while a small opening is left in the toe of the hood through which the beak projects to admit of breathing. When blinded the bird becomes passive and can be moved into a stall to prevent his moving forward, while the operators prevent him from backing.

"The kicking qualities of an ostrich are great, but he exercises the prerogative only when in the breeding season. They do not back up to one for that purpose, as has been often stated, but are thoroughly progressive in whatever direction they start. The kick is delivered either standing or running and has a distinct up and down stroke. The former is a pusher, the latter is a ripper, and woe to the party that waits for it. When in the immediate vicinity of an infuriated ostrich, a high board fence is comforting; lacking this one should be provided for protection with a 'scaffle'—a pole ten feet long with a forked end. One has an electrical moment in which to determine that nerve is more to be desired than an option on real estate, and the desire to keep that bird's neck in the fork and his feet ten feet away occupies one's mind to the exclusion of other interesting problems. If successful in resisting repeated charges in this manner, the adversary will lose confidence in his powers and edge away. One may then congratulate one's self with modifications, never forgetting to watch the bird diligently while in his presence. In plucking a breeding bird, it sometimes becomes necessary to pick a fight with him before he can be caught. He comes to the fence, delivers a kick or two, to the detriment of the fence and his toes, and his persecutor deftly catches a firm hold of his neck, just below the orifice of the ear, springs over the fence, bearing the bird's head to the ground, thus barring him from the upright position necessary in delivering a kick. A hood is then quickly drawn over the head with the other hand and pulled tight by a puckering string—the beak sticking far enough through to admit of breathing. When blinded in this manner, the most quarrelsome ostrich becomes docile, and can be pushed and plucked with entire safety."

OSTRICH CHICKS—ONE TO TEN DAYS OLD.

BREEDING BIRDS.

ABOUT BEARS.

THE last Maine winter was a favorable season for bears. They were able to travel about at their pleasure all the first part of the winter. The snow was not deep until after hibernating time and the weather was not extremely cold except one or two short freezes. Contrary to the common idea, bears are not governed so much by the cold weather or deep snows about denning up as by the abundance or scarcity of berries and other food. When berries are plentiful bears do not go to den even when we have early deep snows.

I once followed a bear track in a foot or more of snow, I think in the year 1847, from near my camp in township No. 4, Range 1, in Oxford county, Me., near Mooseluc-meguntic Lake, and being young and full of hunting gimp, I loaded myself down with a week's provisions and gun, ax, bear trap, bait, etc., etc., and started on the trail. I was a tenderfoot hunter then. I learned better later on. The bear was a very large one and he led me over mountains and through swamps and among the thickest, roughest tangle, over rocks, logs and tree tops, and to annoy me more when utterly exhausted and I sat down to rest the bear did the same, and when I started he would start. For the next three days I did not get sight of him, although I was often within gunshot of him. In the thick swamp the traveling was very tiresome and discouraging, and the nights cold and disagreeable camping, yet the bear made him a bed of balsams every night within the hearing of the sound of my ax while chopping night wood.

The fourth day I got enough of it, and made my way straight toward home, where I safely arrived—a wiser hunter than when I started out, my ardor for following bears to their dens being very much cooled off. I believe it to be a fact that a bear will never den up while pursued, but will at once go in when the pursuit is stopped.

Mr. Sargent, who lived near Umbagog lake, captured a bear alive and denned him in a hollow log in his wood pile. The next spring, in the last of March, he happened to think of his bear when he was chopping up his wood pile; and cut open the bear log, and found the bear frozen solid. The reason was that the log was not covered with snow. The den of the bear is almost always under the ground, under the roots of a turned-up tree, or in the openings of a hedge or some other dismal hole or cavern. For one-half the year the bear is isolated from the outside world, wrapped in hibernating slumber akin to death—it may be in the base of a mountain, in the depths of the wilderness, within the confines of a dreary cavern alone. What can we imagine more desolate and forbidding? But when the balmy air of spring blows its breath, the bear awakes to new life. He loses but little flesh during the long cold winter; and if he goes into den fat, he comes

out fat; he has scarcely breathed during the long exile. He does not leave his den all at once, but takes a walk for observation for a day and returns at night; and so on, perhaps for several days, until he gets somewhat accustomed to the outside world.

Mr. Artemus Ward, an old hunter in Millsfield, N. H., was out on a hunt a few years ago, late in the fall, and struck a large bear track in the snow. He at once gave chase and followed him for several days, and not seeing any prospect of the bear's stopping or of getting sight of him, and getting out of provisions and footsore withal, he left the trail and made his way to the settlements. Meeting Llewellen Peree, of the town of Mexico, Me., a day or two after, he told him of his adventure, and Peree thereupon offered to go and follow up the trail, and if successful to give Ward one-fourth of the proceeds. Ward agreed to it, and went with him to where he left the trail, and Peree started at once.

Peree followed on for two days, camping at night in the open air. At noon the second day the trail led over some big fallen tree-tops and piles of brush, and while climbing over these his footing gave way and Peree dropped down several feet into a deep, dark hole, and found himself facing a ferocious bear of the largest size, which at once arose on his hindfeet, and with a loud growl champed his teeth and made toward Peree, whose hair straightened up, throwing off his hat. The bear was nearly upon him when he drew a bead on it with his repeating rifle and pulled. The bullet struck the bear between the eyes, which looked like two balls of fire in that cavern, and the bear fell dead at his feet. One more jump of that bear would have fixed poor Peree. J. G. RICH.

BETHEL, Me.

Some Animals do not Challenge.

IN treating of the "deer's challenge" in FOREST AND STREAM of Aug. 10, Mr. A. McLain contends that deer do challenge, and, furthermore, that all animals challenge when preparing directly for battle. He maintains that, this trait being common to all animals, it is inferentially a trait of deer. He asks Mr. Walton if he ever saw any two animals come together for a fight without some kind of a challenge. I presume that he does not intend to limit a reply to any one person, therefore I venture some truthful remarks. There are domestic animals which fight without challenging. The greyhound runs and fights mute. They will fight each other or antelope or bears without a note of defiance or warning. Many breeds of dogs will fight a strange dog at sight without uttering the slightest sound. I have in mind a dog which was called a bull dog by his owner, though he was not one, but a strong active dog of the "business" type so commonly owned at one time by the rougher element of humanity. This dog would silently charge on any large dog at sight, and by a trick of colliding his shoulder amidship of his victim and knocking him down and over and over he gained such an advantage at the outset that victory was insured. With little dogs he was peaceful and even kind. Nearly all dogs of sharp temper and tried courage begin battle silently. The ill-tempered and cowardly sound a warning more to test the courage of their opponents than to challenge to battle. Rams and goats engage strangers of their kind in battle without any challenging notes. A species of animals may be very pugnacious and yet there may be cowardly individuals of that species. Such would rather trust to a challenge stampeding the enemy and thus avoiding a battle than to engaging in the battle itself. DICK OF CONNECTICUT.

Small Birds and Insects.

PHILADELPHIA, Pa., Aug. 3.—*Editor Forest and Stream:* Reading in your last issue Mr. "Von W.'s" article on "Small Birds," I would like to answer in the affirmative. I have found this year some species of *Lepidoptera* and *Coleoptera* in greater abundance than in former years, and have found also larvæ of some flies I never could find before.

Those who will gather cocoons as Mr. Cheeny describes in No. 4 (Jan. 26) of your very interesting paper will have no trouble in finding some on alder, apple, plum, cherry or elderberry bushes. But, safe to say, many will be disappointed when the time for metamorphosis arrives and ichneumon flies will make their appearance instead of the moth. These flies are plentiful, and will be more so next year unless the winter is favorable for our birds.

I have quite frequently noticed robins here, but the best place I know for all kinds of birds is certainly Five-Mile Beach, on the New Jersey coast. I haven't seen a canebrake yet, and never went through switch cane; but the way mosquitoes and catbriars are taking hold of a fellow there reminds him that his life belongs to the country and New Jersey is taking it piecemeal. The swampy conditions in some parts and the wonderfully twisted growth of branching trees are no doubt a great protection to the birds, which furnish the most interesting part of life on the island. H. HORNIG.

An Incident of the Spring.

OKANOGAN, Wash.—Did you ever take a drink with a snake or even see a snake drink?

I had been out grouse hunting one warm day and had got seven. As I was expecting quite a crowd next day I wanted a few more. Frank, the dog, had got quite hot. I kept around the mountain to where a spring came up from the rock and ran but a short distance. I had the year before scraped out a place large enough to water a horse or let the dog wallow in. So when I neared the place I made the dog come back, as I wanted the first chance at the water. I rode up, got off from the horse, lay down and drank until I wanted to get my breath. When I raised myself up I saw a snake drinking on the opposite side of the pool, which was not more than 18in. across. I rose up a little more and watched the snake until it got through. It did not seem to notice me until it finished; then it ran out its forked tongue and crawled back into the grass. It was striped and about an inch in diameter. I had had all the water I wanted, and after I had given the horse a drink Frank took possession of the pool. As soon as he was through we went on. I flushed a very large flock of grouse and soon had fourteen and stopped shooting. The folks came and were much pleased to find I had plenty of game, and that of the finest.

LEW WILMOT.

Game Bag and Gun.

MINNESOTA GAME AND FISH.

Editor Forest and Stream:

Being permanently located in a section of country which promises to rival Maine for moose and other large game, I take this opportunity to acquaint brother sportsmen with my surroundings. A glance at the map of Minnesota will show the reader the remoteness of Aitkin county and the country contributary to it. Being on the headwaters of the Mississippi, a boat built on the scow plan, to draw no more than two feet of water, will take one from Aitkin through a country as wild and picturesque as could be desired. Minnesota is credited with 10,000 lakes, and the greater portion of these lie in Crow Wing, Aitkin, Cass and Itasca counties, and vary from one-half a mile of shore to over 200. But these big lakes, Mille Lacs, Leech and Winnebagoshish, are poor fishing grounds. The smaller lakes, having better bays and inlets, are visited yearly by hordes of anglers.

The country to the northwest of Aitkin is practically virgin ground for big game; but, alas! the game law of Minnesota is so rigid no moose can be shot legally until Jan. 1, 1898. But every winter sees numbers of this noble game fall to the report of the rifle, and it is no uncommon thing to see its meat on sale at markets of bordering towns. All you have to do is to ask for "mountain sheep," pay the price and take it away.

Several Indian reservations to our north are vast domains of forest and water. Leech Lake Reservation, some seventy miles northwest, comprises 94,440 acres, or 147.50 square miles of territory alive with game, berries and fish. Plenty of bear. One half-blood Chippewa living at Kimberly told me, a few days ago, that he could take some bear hunter to a den only two days' time from Aitkin and guarantee him bear. He showed me three magnificent skins, trophies of a little hunt last Christmas. Moose are

A MINNESOTA CURIO.

frequent visitors almost to our village limits, four being seen four miles from town only last week. A half-hour's drive in the country will reward you with the sight of innumerable deer, while quail, grouse and duck are continually scampering away from the roadside.

A few days ago I met old Me-sog-na-day, head chief of the Sandy Lake Chippewas. He came into town with a sack of herbs, and in his hand carried a staff upon the tip of which was wound a piece of buckskin, and attached thereto were two feathers. One of these feathers told his rank, the other his band. When asked the prospect for the berry crop he waved his hand in a manner signifying fire, and we knew there was no hope to the housewife for jams from that neighborhood. When wild rice (*Zizania aquatica*) was mentioned his face brightened and his hand motion interpreted that there was a plenty. In fact this is an unusual year for rice, and while it now sells in the market for 10 cents per pound it will be so plentiful this fall that large quantities will be marketed and thus will bring the Indians quite a revenue.

The lakes about here have their peculiarities: a mile west is a lake a mile long by one-half wide from which only pickerel can be taken, a little further on is one from which only dogfish are taken, while on the opposite side of the railroad track is Bass Lake, where black bass are only to be had. Four miles west nestles one of the prettiest bodies of water in the State. Red Cedar Lake has seventy-five miles of shore, is 65 to 70ft. deep, is dotted with several beautiful islands. The resort is becoming quite lively now with campers. The lake abounds with black, rock and silver bass, croppy, perch, whitefish and pickerel. Occasionally wall-eyed pike, but they are scarce. The further end of the lake, in what is known as McGee's Cove, is alive with duck, and I have heard an occasional gun in that direction. Its report signifies that some camper or settler is enjoying young duck.

The early part of July I visited Clitheral, Otter Tail county. This section is within easy reach of the Twin Cities, and abundance of fine duck shooting is to be had in neighboring lakes and sloughs.

Now for a few curios. There are four rare specimens here in Aitkin. One is the white fawn of which I have spoken; another is in the possession of Mr. Marr, and is a triple deer antler (drawing accompanying this), *i. e.*, there are two main beams, and branching from one of these is a third beam as large as the others. The antlers are flat and resemble in some features the antlers of moose. Another curiosity is a pair of antlers, likewise of flat design, which contain twenty-eight points. I think this is a great curiosity, and if desired I will have them photographed for reproduction in FOREST AND STREAM. My fourth curiosity is my friend, George Lott, the Izaak Walton of the upper Mississippi country, and his aggregation, Dash, a very intelligent spaniel, and Span, equally as knowing a setter, and his split-bamboo cane and expert reel. I fished with Lott last week in Pickerel Lake, but his $25 rod and reel was a "hoodoo," while with my common 15-cent cane pole outfit I landed every fish caught that day, several large pickerel being among the catch. Now, Lott is celebrated as a wonderful angler, a beautiful fly-fisherman, but he can't hold a candle with an ordinary cane pole fisherman. But I give him credit of hooking the largest fish, which made a meal of 10ft. of his silk braided line and hook. I didn't stop to examine whether his fish had roots or bark on it, but give him the benefit of the doubt. Some day we are going to troll the Mississippi and endeavor to land the 5ft. muskallonge which has frequently been seen in this vicinity, and if we succeed in landing the prize the photographic camera will be used to perpetuate the feat.

If any FOREST AND STREAM readers are in doubt where to go to get all-round duck, geese, grouse, deer or bear shooting this fall, I will try and put them in a way where they cannot help but be satisfied. Lott and I will go with them.

Our Bass Lake Gun Club is getting bluerock shooting down fine now. F. J. S.

WHERE WILD PIGEONS FLOCKED.

"D. A.'s" SHOOTING at two pigeons and gathering eight, as told some time ago in our paper, reminds me of a puzzling shot at pigeons.

When a mere lad, just learning to shoot, one day my elder brother and I were out in the woods and discovered a large flock of pigeons in a low beech tree on the edge of the woods, just at the foot of a short, abrupt hill. Slowly and cautiously we crept to within a short gunshot, probably not more than 40yds.; carefully resting our guns across a convenient stump we took deliberate aim at the thickest of them and poured the deadly (?) contents of three barrels into them, my brother having a double gun and firing both barrels. Can you imagine the glow of triumph with which we contemplated the harvest we would make, and how the old father who still loves the gun would smile and say we had done well?

How many did we kill? Some time you have had a similar experience—or if not, you will have. Picture our sorrow and disgust when we found not one dead bird and only one cripple, which I secured with another shot. Perhaps some of the experts in the science of gunnery can explain how not less than 1,000 pellets of lead could go through that tree-top loaded with birds without accidentally killing some of them. I should judge there must have been more than 100 birds in the tree.

Though more than twenty-five years have come and gone, that hunting episode "haunts me still."

The earliest recollections of my hunting days are connected with wild pigeons, and for long years they were my favorite game. Many days I have sat on the big rock back of the old home and watched immense flocks passing over to their roosting place, and have tried to kill them with the boy's universal weapon—the bow and arrow.

My love for them came to me honestly, for my first shot at live game was at a single pigeon, and it was successful. With my father, brother and uncle I went to a nesting on Tug Hill, and well do I remember how the sky would be darkened by the myriads of birds that would rise from the trees at every discharge of a gun, only to settle back again as the noise died away. The rapid shooting soon exhausted the ammunition, but we had enough.

In later years I learned the difference between butchery and sport; and many happy days I have stood near an old dead tree on the edge of a buckwheat stubble and picked off single birds from the top of the tree. As I progressed in knowledge, I learned to take them as they flew in, but the years were few in which they stayed with us; and when in 1876 I left the old home in Northern New York to make a new one in Minnesota, pigeons in New York had nearly become simply a remembered delight.

In April, 1877, I went to Minnesota to live. At my first dinner at my boarding place I became an intent listener to a conversation between two gentlemen who had just returned from a shooting trip. They were describing the exact counterpart of scenes I had witnessed ten years before at the nesting on Tug Hill, in old York State. To say that I was delighted would not cover a fair idea of the joy with which I listened to their story. Again I had found God's country and the dear pigeons were not all dead; they had simply done what many wise men had done—"gone West." Here again I could enjoy the old sport and be happy. Alas! I did not know that what I had found was simply the last of them, and that this year was the end of the pigeons in Minnesota, so far as the old time abundance went; but my ignorance was bliss. At this time I knew nothing of the acres of ducks, the myriads of snipe, or the ten-fold pleasures of shooting chickens over a dog.

My first spring and fall outing days were devoted to pigeons, and with fair success. My last pigeon shooting was in September of 1878.

My friend R. and I started from home early one morning properly equipped for two or three days' outing. We headed for the Rice Lake marshes, a wild strip of country some fifteen miles north of Minneapolis. The country is in the main low and level, dotted all over with marshes, lakes and oak openings. We drove leisurely, hunting on the way, and stopping at noon to prepare a hunter's dinner from the game killed during the morning; at night we made our camp by the side of a beautiful pond surrounded by scrub oaks. After an early breakfast we packed our outfit in the wagon, and taking an old hay road were on our way across a marsh headed toward a promising piece of woods. A slow drizzly rain had set in and the prospects were for an off day.

The country in which we were is all alike for miles and miles, and a stranger in it is more liable than not to very soon want to know "where he is at." Such was my fate. Leaving our horse tied to a tree by the roadside, R. took the right hand side and I the left, agreeing to meet at the wagon in an hour's time. Very soon I found pigeons and killed two; I followed the flock and came upon more, again killing. I kept this up with varying luck until I had bagged eleven and began to think of returning to the wagon. "That's easy, I'll simply turn around and bearing a little to the right I'll soon be there." I did so, and ten minutes' walk brought me to the edge of a marsh, the boundaries of which I was unable to see in any direction. I canvassed the situation and decided that I was lost. I hadn't the remotest idea of where the wagon was or how to find it. Seating myself on an old log, I lit a cigar and tried to study a way out of it; useless. I couldn't do it, so I started walking a while in one way and then in another, zigzagging back and forth, but it was all useless. Get away from that marsh I could not. "Well," I exclaimed at last, "these confounded pigeons

lost me and now they can find me," and with that I began hunting pigeons as if I had no thought or care. I was successful, and after nearly two hours of hunting had added seven more birds to my load; just then spying a flock in a distant tree I carefully made my way toward them, and as I was preparing for the shot there almost underneath them I beheld the lost outfit. My exclamation of joy at the sight lost me the shot, but I had "just enough."

Some time after my arrival R. came up, having been gone nearly four hours. "Nice fellow you are," said I; "thought you were coming back in an hour." No reply. Can it be possible that the jolly, good-natured R. is angry with me for my non-arrival? Has he been here before and been waiting all this time for me? I questioned him as to his luck, but found him decidedly non-committal. Finally I said to him, "See here, R., no use in your being huffy; the facts are, I have been lost and could not get back here any sooner than I did." Ah! then once more did the smiles appear upon his genial countenance, and loud and long did the woods give back the echo of his mirth. When he could control himself, he explained that he, too, had been lost, and was overjoyed to find that I had been in the same predicament. Thirty minutes after leaving the road he had turned back toward it, but could not find it. After walking for nearly two hours he discovered that he was walking alongside of the road. It seemed that just above where he had left it the road took an abrupt turn to the left, and when he came back he had struck above this turn. He had not the consolation that I had, for he had seen only one small flock of pigeons, and they got away. It was my turn to laugh then, and I did justice to the occasion.

Our trip ended that night, and was my last experience with pigeons with one exception. The following year R. and I were driving one Sunday around Lake Harriet, now a part of the park system of Minneapolis, when I discovered a small bunch of pigeons in a tree near the road. I had a .32 Colt's revolver, and with it I killed a bird from the last flock of wild pigeons I have seen. EVERETT.

TRANSPORTATION COMPANY WAYS.

BOSTON, Aug. 8.—The indignation of sportsmen, visiting Maine and the East, is growing more pronounced every day concerning the treatment they receive from the Maine Central Railroad. This indignation is fast coming to light, in fact, and sportsmen, who are almost invariably business men, and men who influence travel and traffic, are avoiding that road and urging their friends to do so. Their influence may be small, and the officers of the Maine Central may feel like ignoring it, and trusting that, owing to the desirability of that road as a way for sportsmen to reach their hunting and fishing resorts, they will gradually begin to overlook the attempt to force their fish and game and dogs, as well as other paraphernalia, into the hands of the American Express Co., for that company to charge exorbitant prices for forwarding. But such is a mistaken idea. Sportsmen are submitting only as they are obliged to submit, in some cases quietly, and in others finding considerable fault, and are doing all they can to hurt the express company. Sportsmen do not forget that there is scarcely another railway or steamboat company in the country but what forwards the baggage, the fish and game, the dogs, the tents and camping goods of sportsmen in their baggage cars, free of expense, or at a moderate excess baggage, when above 200lbs. in weight—forwards these articles free, the same as did the Maine Central Railway till the celebrated order of last November was issued to its baggage masters.

A most striking case has just come to my notice. A Boston merchant who has been in business here for nearly thirty years, a sportsman by nature and instinct, a gentleman in every way, who always pays dollar for dollar and expects others to do the same, is just back from his spring fishing trip. His name is not given here, because it is not necessary to the illustration of the principle involved, but it can be furnished if either the Maine Central Railway or the American Express desires it. He has a cocker spaniel of which he is very fond. Besides intending to take him on his fall hunting trip he thought that he would take him on his spring fishing trip. He wanted the dog for company and to give him some knowledge of the woods. Fearing the new arrangements of the Maine Central he had a little cage made for the dog, and resolved to ask the railroads to check it along with his other baggage, which consisted of a bag and a very small trunk, the whole not weighing more than one-quarter of the weight of a single Saratoga, such as the Maine Central's Bar Harbor travel takes three or four of to a single passenger—and the road is glad to get the travel at that.

On starting, the Boston & Maine very politely checked the gentleman's baggage, little dog's cage and all—not only checked the cage, but asked for the dog, which was then at his master's heels, saying that good care should be taken of him. In this way the dog and cage went through to the gentleman's rail destination; since the cage bore the check of the Boston & Maine, the Maine Central did not see fit to trouble it, though passing over the line of the latter road from Portland up. But it was on the way out that the snag was struck. The gentleman first embarked on the Canadian Pacific. The baggage-master cheerfully and politely checked the little dog's cage down as far as Greenville, the junction of its line, with a road controlled by the Maine Central, I believe. The baggage-master here, also agent of the American Express Co., declined to check the dog's cage. He declared that his road was not going to check sportsmen's dogs any more. When remonstrated with by the gentleman he insultingly replied that he did not care for sportsmen any way; they were a class of travel that did not pay. Often they had to pawn their guns or fish-rods in order to get money enough to get home with. This was news to the gentleman. He reluctantly put his dog and cage into the hands of the express company. At Pittsfield, where the next change was made, on to the Maine Central proper, the baggage-master refused to check the dog and cage. He said that it was against the rules. When asked to show his rules, he turned his back and walked away. The dog and cage were again given over to the American Express Co. The express company got $2.50 out of the gentleman for transportation of his dog on the way out, when it was started free by the Boston & Maine on the way in, and went in free. He is aware that not another road in the country scarcely, except the Maine Central, would have insisted on his turning his dog over to the American Express Co. He very naturally feels that he has been unjustly treated, and for that reason he will hereafter go to his fishing and hunting resort via the Concord & Montreal and Canadian Pacific railways, avoiding the Maine Central altogether. He is also sending merchandise, in which he deals, by some other way than by the American Express. Now he recommends his customers to buy in larger quantities and have him ship by freight, and he keeps his freight off the Maine Central whenever it is possible to do so. SPECIAL.

NITRO POWDER.

Editor Forest and Stream:

Nitro seems to be the powder of the day, whether at the traps or in the field, and should any one stick to the old-fashioned black powder at a tournament, he is spoken of as a black powder fiend. About all the guns now advertised are spoken of as bored especially for nitros, and guaranteed when using the same. Are such guns tested with nitro in the same manner as formerly with black powder? Is there anything in the proof marks (of guns which bear such marks) to show they stood anything more than the ordinary black powder test?

I think I was the first to use a nitro powder to any extent at a large tournament. At the first Ligowsky clay-pigeon tournament, held in Chicago in the spring of 1884, I won the Ligowsky diamond badge against a field of seventy shooters. At the same place Ben Teipel and I killed fifteen live pigeons straight, shooting off a tie. Abe Kleinman spoke to me at the time, saying, "I never saw that powder do anything before." Since then I have used in trap-shooting a good many thousands of cartridges loaded with nitro powder.

The sportsman or trap-shooter of to-day can have his choice of a number of different brands of nitros, each of which is claimed to be the best, but is it as safe and reliable as black powder? I mean, of course, when properly loaded. Do any of the manufacturers claim it is? I know I cannot find a gun dealer who has practical knowledge of shooting who will tell me that it is. I have seen it act queerly at times; saw a gun blown to splinters not 50yds. from my house here. The gun in question was well made and apparently sound and safe. Some twenty-five shots of the same powder had just been fired in it and its owner wanted to try a shot at a target to see what the penetration was. The charge was 2drs. (I measured it myself) and 1⅛oz. shot. Fortunately the shooter shot from a rest and held both hands back of trigger guard. We picked up twenty-eight pieces of gun and did not find all of it then. Afterward I tried to make the same powder burst something and could not. Loaded an old flintlock musket with nearly half a pound with about a foot of wadding and touched it off with a match, and it did not do any damage.

Last fall I hunted ruffed grouse and woodcock a good deal with a man who used a popular brand of nitro; and occasionally his gun would sound like a cannon and kick like a mule. A young man in this neighborhood is getting ready for the fall shooting. He bought a new gun of one of our best makers. The first cartridge he shot in trying the gun was loaded with nitro (he did not load it himself) and it kicked almost out of his hands.

There is no question about there being many things in favor of nitro against black powder—light report, quickness, absence of smoke and dirt—but is it as safe as ordinary black powder? C. M. STARK.

DUNBARTON, N. H.

SHOOTING AT LONG RANGE.

Editor Forest and Stream:

"A Moose Paradise," published in FOREST AND STREAM of Aug. 10, has merit far above the ordinary descriptive article of camp life and the pursuit of large game.

There is one part of it, however, which sadly mars the whole, since it records an act which was flagrantly unsportsmanlike, one which was wantonly and unfeelingly cruel. The writer of it, "Tiam," says: "I saw on the edge of the woods 200yds. away a second moose eyeing me with as much astonishment as I saw it. We both concluded to act at the same moment, the moose bounding away into the woods with a fearful crashing and I shooting after him. As before, I followed up and was gratified to find blood on both sides of his track. I now found Frank running after me, attracted by the shooting, and we followed the moose over bogs and barrens and sticks and stones and windfalls and every barrier conceivable, till I was utterly exhausted, but never got a sight of him, although we found he had lain down several times. Finally we concluded to leave him, as we would have to hurry anyway in order to get the one shot in the morning out of the woods without spoiling; in fact, we did almost lose the head. On reaching the spot where the moose was standing when I first saw him we found two distinct clumps of hair, showing that the ball went through some portion of him."

To make my point clearer, it is necessary to mention that "Tiam" relates that this odious act occurred after breakfast, and that before breakfast he had killed a moose, off which he and his companions cut some steak, the quality of which he testifies to as follows: "How juicy that steak did taste, and how we enjoyed it!"

Now "Tiam" was not hungry when he mutilated his second moose, for he had eaten his fill of palatable steak, and there was abundance left. He confesses that they had great difficulty in saving the meat of the first moose, as some of it almost spoiled before they could convey it to the settlement.

He confesses that he shot the second moose 200yds. away when it was fleeing in cover—a distance at which he could have no certainty of killing it even if it stood immovably quiet.

Considering the last act of this somewhat irregular case, is it humane or sportsmanlike to shoot at a moose 200yds. away when the animal is fleeing through cover? In European countries such an act would be considered such a flagrant violation of the commonest laws of sportsmanship that the offense would be denounced as odious to the sight of all true sportsmen. There could be no possibility of a reasonably certain shot at 200yds. which would kill, but there were many possibilities of a cruel wound, which would result in a painful and lingering death to the noble animal, and also a waste of a large quantity of valuable meat. The latter apparently was the result in this instance. A magnificent animal was fatally wounded and left to die a slow and painful death from an act which came from a spirit of mere wantonness. "Tiam" utters no word of regret. The party had plenty to eat. They already had so much moose meat that it was saved with difficulty. The party had just had a good meal, so that none of the fiercer instincts of hunger were in action. The moose shot at was out of the range established by humane reasoning or the conventions of sportsmanship. Why was it done?

I would like to read the opinions of large game hunters on this matter, for information as to whether such careless and wanton destruction is after the manner of true and approved sport, or whether it was simply butchery.

DICK OF CONNECTICUT.

CHICAGO AND THE WEST.

CHICAGO, Ill., Aug. 9.—On last Monday a box marked "poultry" was opened by Warden Blow at the store of George T. Randall, commission merchant, 219 South Water street, and within were found a prairie chicken hen, eleven chicks and five turtle doves. All these were condemned and sold under the statute, and Randall was additionally fined $5 for each bird, $75 in all.

This is as it should be. When Warden Blow abandons his open-field theories and gets down to practical work with the game buyers, he will be doing some good and will be finding a wide field of activity. But what is not so good is the news that Warden Blow comes to members of the Illinois Association with the story that he has spent considerable money on the Merritt cold-storage case at Kewanee; that he can now get nothing out of it until it goes to the Supreme Court, and that unless the Association can raise him a little money to reimburse him on the Kewanee case, he will feel very much like settling the case with Merritt. I do not think the Illinois association should allow itself to be bluffed into raising money, but I do think and say that if that Kewanee case is settled now it will leave a taint on the sportsmanship of Illinois. Why did not and does not Warden Blow proceed against game-dealer Merritt precisely as he did against game-dealer Randall? Is not the one as liable to fine as the other? Are there favorites in this arresting business? And why talk of settlements and compromises in one case and not in another? The law is plain for Warden Blow. The closer he keeps to it the better it will be for him. The public will look with very small toleration on any settlement of the Merritt case. The Illinois Association can do nothing so good as to take hold of this case and fight it through, and it can win it if it does. If for reasons personal or otherwise it is not ready and anxious to fight this case, let it say so frankly, and frankly get out of the road. But it has now the chance of a lifetime to win a big fight, and one which will be of incalculable value to the sportsmen of America. It is almost certain funds enough can be raised to push this case; but money, if raised, should be expended by the Association's lawyers to cover actual expenses incurred or to be incurred.

From Indiana.

Mr. O. H. Hampton, of Indiana, one of the valued FOREST AND STREAM contributors, calls in with his son to say good morning once in a while, and to-day was one of the times.

From Abroad.

Mr. M. Harry Marlin, secretary of the Marlin Fire Arms Co., is in Chicago this week. Mr. Marlin says he has been in Europe for the past six months selling Marlin rifles to crowned heads. He dined with the Prince of Wales at Wiesbaden, and says the Prince drank only water, because that is the best kind of water there is anywhere, and nothing is too good for him.

Around Again.

Mr. Silvester, Western representative of the Winchester Repeating Arms Co., who has been dangerously ill, is now around again. He had a wrestle with what I believe they call his vermifuge appendix, a portion of the human form divine which seems to have been just thrown in for *lagniappe*, as we say in New Orleans, as a sort of bargain counter remnant. In fashionable circles this is always removed, I am told, because bargains are not believed in there; but Mr. Silvester let it live to fight another day and says he is all right now.

Another Gun Man.

Charlie Willard, of the Colt's Patent Fire Arms Mfg. Co., writes that he will leave Hartford soon for his Western circuit, and will be as far West as Chicago by the end of August. Mr. Willard's health also has been very poor for some time until within the past few weeks, but he says he is mended up and in good health again.

Spring Lake Bass.

From Mr. Chauncey M. Powers, of Decatur, Ill., I learn that the fishing at Spring Lake this year is better than was ever known. Two men went there from Pekin; one landed seven bass that weighed 27lbs., and the other sixteen that tipped the scales at 57lbs. These were all caught in one day.

A Portable Boat.

Every once in a while Chicago brings out some new idea in sporting goods. One of the late ones is the Kankakee portable boat, the invention of Charlie Heimbaugh, known for years as sportsman, club-keeper and warden along the Kankakee near Momence. Mr. Heimbaugh is a practical river man and has devised a practical boat under the conditions entailed in the demands of boat-condensing. The Chicago Metal Boat Co. make the boat and advertise it in the FOREST AND STREAM business columns. The boat is very compact and readily transported. A 14ft. boat when packed in its case makes a package 57×36×16in., which is readily carried in a buggy or light wagon and can be checked as baggage when traveling by rail. It retains its model, strength and durability, and is very simple in construction; can be put together in two minutes or less; all that is required is to place sections together and turn up eight thumb screws. The joints are made each with one tongued and one grooved brass casting, reaching from rail to rail clear across mid-section of the boat. The grooved casting is milled out to receive a soft rubber gasket 3-16 by ¼in. The milled slot holds gasket in place, and the pressure of the tongued casting on the rubber makes a perfect and absolutely watertight joint. The joints are held together each by four brass clamps, two at bottom of boat and one on each rail at top of joint. The boat is stiff and tight as

any clinker. If liked, tin air vessels can be stowed as seats in bow and stern, and then the boat is safer than the ordinary wooden boat, which it equals in every way. The sections rest nicely, not having bulkheads to interfere. All in all, it is a very useful thing for a sportsman's collection of supplies. E. HOUGH.

909 SECURITY BUILDING, Chicago, Ill.

An Indiana Dog's Point.

JACKSON COUNTY, Ind., Aug. 8.—We have excellent prospects for good quail shooting this fall. The section men on the railroad through here have just mown off the right of way. Their section is about six miles and they told me that they found nineteen quail nests, most of them setting and one or two hatched out, and one nest spoiled. We heard of a hen quail being caught by a neighbor's cat.

We have had rains lately which have saved the nests that are to hatch yet, for it has caused the grass to come up again, so that the track will not be burnt off until later in the fall. The engines fire it sometimes, but that will not be so liable to happen now. The men left small patches of weeds around the nests, and they report seeing the birds there all O. K. the next day. Every season the birds nest along the track. It is river bottom land all through here, and on most all corn is raised. This leads them to take to the track. Quite a good many are left from last season. I saw three coveys as late as March.

A little incident which occurred at the close of the quail season last fall may be a common occurrence, but it was new to me. Brother and I were out after quail, and it was what we call a good day, for it had rained the night before, and was misting a little that morning, but cleared before noon. We have a young common bred (part Irish, part Gordon) setter dog. Last season (his second year) we had found one covey in a hedge row right near the White River, and had stopped a few of them. If I am to say it myself, it's not every one who can stop the Indiana quail; they are goers from the very start. As we were hunting up very much scattered birds which had followed the fence both up and down, the dog came to a point. I walked up and flushed the bird and dropped it out on a piece of stubble about 30yds. off. Not being any more there, we sent the dog to retrieve, which he did, and had started back to us, when suddenly he came to a point again, right with the bird in his mouth. He finally moved up a few steps and we knew then the covey (as it turned out to be) were running. It was a great picture to us, but it lasted only about two minutes, for the dog at last half turned his head and glanced at us, as much as to say, "This is more than I can manage." So he dropped the dead bird from his mouth and again moved up, and finally became rigid, and when we walked up the finest covey rose. We stopped three of them before they returned across the river, which they did at the first flight. They must have just come across, as they were not there previously. We think that was a great sight. JOSEPH TAYLOR.

Washington State Sportsmen's Association.

SEATTLE, Wash., July 31.—*Editor Forest and Stream:* On the evening of Saturday, July 27, about fifty sportsmen, representing gun clubs located at Whatcom, Tacoma, Port Townsend, Auburn, Aberdeen and Seattle, gathered at the Hotel Northern, this city, and organized the Washington State Sportsmen's Association for the Protection of Fish and Game.

The meeting was marked for its enthusiasm and evident anxiousness on the part of those present to get to work immediately and do something toward the protection of fish and game, which are rapidly being exterminated here owing to the non-observance of the game laws.

The following officers were elected: President, Josiah Collins, Jr., Seattle; First Vice-President, E. E. Ellis, Tacoma; Second Vice-President, T. B. Ware, Spokane; Secretary and Treasurer, C. F. Graff, Seattle. The following Board of Directors was chosen: H. A. Griffin, North Yakima; E. A. Kimball, Tacoma; W. J. Pratt, Whatcom; L. B. Faulkner, Olympia; C. F. Treat, Seattle; F. H. Mason, Spokane; Wellington Clark, Walla Walla; W. A. Hardy, Seattle; W. E. McKee, Seattle; B. Jensen, Sprague; Charles Draper, Port Townsend; A. Williams, Ellensburgh.

The initial tournament of the Association will be held here some time in October under the auspices of the Seattle Rod and Gun Club.

A few days ago we succeeded in convicting a market-shooter, Eugene Dupont by name, and two French restaurants, the Maison Tortoni and French Arlington, of violating the game laws, the former for killing and the latter for having in their possession and selling. Dupont was fined $20 and costs, while the restaurants were let off with $10 and costs each.

These prosecutions and convictions have had the effect of stopping to a great extent the unlawful killing of deer, ducks and grouse, which has been going on here more or less all summer.

Much credit is due President Collins for his earnest work in the interest of game protection, not only on this occasion, but in the past, he having spent both valuable time and money in his efforts to uphold the rights of sports men. C. F. GRAFF, Sec'y W. S. S. A.

Don't Pull it Muzzle Foremost.

ITHACA, N. Y., Aug. 9.—At Trumansburg, this county, Thomas Kinsella was drawing in hay, and, having seen a woodchuck in the field, asked the hired man to bring him the gun when they were again in the vicinity of the house. The gun was brought and passed up, muzzle first, to Kinsella, who was on the wagon. Kinsella drew it toward him in this position, when the gun was discharged, the load striking him in the region of the armpit. The unfortunate man lived only a short time.

Last year, a short distance from the scene of the above accident, a young man seized the barrels of his gun near the muzzle, jammed the stock thereof into a burrow in an attempt to dislodge a rabbit; the gun was discharged, killing the indiscreet hunter instantly.

In connection with the above, Mr. Frank Feely of this city, tells me of a series of surprisingly lucky accidents in which he figured prominently. He was hunting snipe, caught his foot in a gnarled root, fell down with the gun under him, and while in that position both barrels were discharged. By a miracle, as it seemed, he came out without a scratch. Later on, in the sitting-room at home, he was proudly exhibiting the gun, unloaded as he supposed, to a visitor. The muzzle was, fortunately, pointed toward the floor when the unknown remaining load belched forth, tearing a hole in the floor big enough to let a Kansas jack-rabbit through, and breaking open in the cellar directly beneath a supply of canned fruit that would easily have fed ex-Congressman Tim Campbell's annual picnic.

Still later, in his office one day he was examining a revolver supposed to be unloaded, when an acquaintance entered and, in a spirit of play, grasped the pistol. During the friendly struggle that ensued, the didn't-know-it-was-loaded chamber let go its contents, the bullet sailing harmlessly up through the ceiling and into the space of an unoccupied garret.

Seemingly, as a fitting *finale* to all this, Mr. Feely took a loaded revolver, that had become so rusted that it would no longer revolve, to a neighboring tin-shop, fastened the weapon in a vise so that the muzzle pointed directly at a 6in. expanse of steel which the vise afforded, and began operations. A tinsmith presently came to his assistance, and by the use of a punch and hammer sought to loosen the solidly rusted parts. Suddenly there was a series of explosions, every chamber of the revolver discharging, the bullets striking the steel expanse of the vise and hurling fine particles of lead into the face of Mr. Feely and his assistant. No serious injury was inflicted, however. Mr. Feely dropped the revolver in an abandoned well, traded his gun for fishing tackle, renounced his faith in firearms, and for years has been known to the world and to the sons of men as an enthusiastic and devoted member of the tribe of Walton. M. CHILL.

Game Slaughter in Florida.

Editor Forest and Stream:

A friend has sent me an advertisement of the Tampa Bay hotels, on the back of which is a list (printed) of the amount of game shot near Tampa by guests, probably of the hotels. The following is the list: quail 1,352, snipe 1,252, doves 97, besides numerous hares, ducks and squirrels. All this in fifty-two days. But the point to which I desire to call attention is this: In thirty-three of these days a Mr. and Mrs. Bergner, of Philadelphia, slew of the above number 849 quail and 845 snipe. Shades of game butchers! All to see if they could not break the record, for it is noted one day that they broke the record, killing 283 snipe and 32 plover, another day slaying 184 snipe. Another 110 and as high as 127 quail a day. For shame! For shame! The sooner the solons of Florida limit the amount of game to be killed in one day the sooner they will begin to conserve the attractions of their State and prevent tourists from making shameful exhibitions of themselves. O. O. S.

Camp-Fire Flickerings.

"That reminds me."

The Judge's Story.

Editor Forest and Stream:

The discussion about buck fever has brought to mind the stories told by old deer hunters when I was a boy. I had a way of asking old soldiers and hunters questions until I got them either to telling stories or arguing; then I stood around and listened to the fun.

Judge W. H. Randall says, "I never had buck fever. The first deer I ever saw I killed."

"And you never had buck fever?"

"Well, I will tell you and you can judge for yourself. I was on a visit to a relative in York State, and he said to me, 'Go up on top of the hill back of the house and you will find a clearing in which I have some turnips planted; you might find a deer there.' I took the old muzzleloader and started, found the clearing all right, and stood for several moments looking over it from behind an old hemlock log. Well, sir, I had given up seeing any deer, when there, right in the middle of that patch, stood a doe and a fawn. I don't know how they got there, for there was not even a weed to obstruct my view of the patch. I rested the rifle across the log, took careful aim just behind the foreshoulder and fired. At the crack of my rifle the doe dropped.

"Now, I might have been a little rattled at that, for I don't know how I got over the log and to that doe—flew, I guess. Anyway I got there and bled her, and after I had admired her a while I began to hunt for the bullet hole. I hunted and hunted for that bullet and could only find a crease across its back just in front of its tail, that had scraped the backbone. Now, I did not aim for there and it was the only mark on the deer, so it must have paralyzed her for a moment; and if I had not got there in the short order I did she would have got away. I suppose the gun must have been a little rusty, for it was an excellent shooting gun."

"Where did you find your gun?" Pat, an old deer hunter, asked.

"Oh, about half-way between the log and the deer, and my hat between it and the log."

And old Pat grinned.

WEST VIRGINIA.

Grown in Texas.

WASHINGTON, D. C., Aug. 2.—*Editor Forest and Stream:* I have been much interested in the snakeology of Mr. Hough and have read every word you have published about the snake with the horn on his tail, the ones with legs, the one that was able to climb up the side of a tree and all others.

I send you a clipping from the *People's Advocate*, of Austin, Texas, setting forth a new species of snake. From its peculiar characteristics, I think it a direct descendant of the first snake mentioned in history.

Now that you have taken steps to complete the study of the pine nut bear, the fantail deer and other little-known animals and reptiles, I would suggest that this new snake be included. Quite a large reward could be offered for a specimen with the knowledge that if found the money would not be spent in vain.

The new snake tops all of Mr. Hough's old back-number chaps.

Here follows the yarn: "Coming from Bastrop by dirt road and reaching a point some two miles above Hornsby, my attention was attracted by a snake on the side of the road. I stopped the buggy to admire its dazzling beauty. It was about 2¼ft. long, with cylindrical body (unlike the rattler), and its belly a bright yellow. Running full length of its body were stripes of brown, green and red alternating. Its eyes were very dark green, with that staring expression usual with all snakes, as none of them are provided with movable lids.

"It made no attempt to escape, but remained motionless. I pinched off a crumb of bread from my lunch and threw to it, which it readily devoured; I repeated this several times with same results. I got out, and with my arm outstretched offered it a crumb from my fingers; it soon moved within reach and took the bread as humbly and politely as a scared stray dog would have done. I got in the buggy and moved off in a slow trot, when, after driving about 30yds., I was again astonished to see the snake on the side of the road endeavoring to keep up, and was a little in advance, with head raised and frequently looking back as it ran. I stopped, and to my utter astonishment it crawled to the front wheel, wound itself about the spokes, got in and coiled on the seat.

"I did not feel uneasy, as I am told that, as a rule, non-poisonous snakes run rapidly with their bodies straight as this one did; while poisonous reptiles move slowly and in a wiggling or serpentine shape.

"I drove on feeling proud of my new made friend, and attempted to place my hand on its neck; but the cold flesh caused the chills to run all over me. I had no gloves, but wrapped a handkerchief around my fingers and rubbed it down from its head, when it would brace its back against the pressure like a kitten.

"Soon after starting, and while the rubbing was going on, I noticed it stretching its neck over my lap in the direction of the lunch. I put my hand inside the paper bag to pinch off a crum, when suddenly it drew back and cavorted about on the seat, switching its tail against the cushion in great glee, not unlike a fice upon the return of his long absent master. Of course these capers were in anticipation of the lunch it expected to get.

"I was feeling extra proud of my prize, fully intending to place it in a zoological garden, but alas! as I was driving along by Radam's garden, a dog ran out barking, when the object of my admiration quickly sprang from the seat to the ground and disappeared through the pickets into the overgrown shrubbery inside.

"It was my intention to call it back, but then I didn't know what kind of a call to use."

Sea and River Fishing.

VERMONT LEAGUE.

THE midsummer meeting of the Vermont Fish and Game League took the form of an excursion to the Isle La Motte yesterday, reports the Burlington *Free Press*, and was in every respect a most enjoyable success. Many of the most distinguished men of the State are members of the League, and the invitations which were sent out included a number of others who, while they are not enthusiasts with the rod or gun, are nevertheless heartily in sympathy with the objects of the organization, which aims to make Vermont a paradise for the sportsman and therefore attractive to those from other parts of the country who live to commune with nature.

Hon. N. W. Fisk, the president of the club, and a prince among entertainers, was kept busy for some time receiving the greetings of his many friends. Dinner was served in two large connecting tents, which had been erected on the lawn near Mr. Fisk's residence. Three long tables extended through the tents at right angles to another table, at which were seated C. M. Wilds, of Middlebury, the toastmaster, with the following gentlemen at his right: Gov. Woodbury, ex-Senator Edmunds, Congressman Powers, Lieut.-Gov. Mansur and ex-Gov. Barstow. At his left were Senator Proctor, Congressman Grout, ex-Gov. Stewart, Frank Webb and Gen. J. G. McCullough. Others at the heads of the side tables were: President Buckham, Mayor Van Patten, ex-Gov. Page, Col. F. D. Proctor, Gen. J. J. Estey, Hon. G. G. Benedict, D. W. Robinson, Capt. H. E. Tutherly, Col. H. W. Allen, Col. H. W. Hall, Col. R. J. Coffey, Gen. T. S. Peck, Judge R. S. Taft, Hon. Olin Merrill and Hon. D. H. Lewis.

With such a galaxy of men accustomed to after-dinner speaking, something good was expected in the post-prandial exercises. The speeches were all of a very informal character, largely humorous, and the several speakers told stories at one another's expense and then got back at each other with some keen thrusts. Being in a lighter vein, they were speeches which lose much of their pointedness when put into cold, hard type.

Rapping for order, Toastmaster Wilds said: This banquet has been conducted entirely on fishing lines. The search for a presiding officer has been of this character. From an unsuccessful search for a large fish the officials have come down to one of the small fry. This place is historic you will find from those who follow me. It is accessible from all points of the globe. I commend to the Governor this lesson. Feed any who are disposed to make trouble. This island is capable of supporting all members of this League. The officers are to be congratulated on the success of this gathering. No other place could have been selected where so many eminent men would congregate as has been the case here to-day. In this distinguished galaxy of stars it is a difficult matter to find one that shines brighter than another, but it is fitting to call up the Governor first.

Gov. Woodbury said in part: I shall not attempt to tell fish stories, although I ought to be able to do so. My ancestor, John Woodbury, of Salem, was the first man to be elected to office in this country and no one by that name was ever since known to refuse an office. There are no candidates for office at this table because it is sometimes said aristocrats only sit at the head table and no aristocrats can ever hold office in Vermont. The office seekers are at all other tables. We have reason to congratulate ourselves on this gathering. We are happy and are furthering the interests of this League, which is doing much in the way of attracting summer visitors to Vermont. I hope the interest of the League will continue until we have a State that will attract people from all parts of the world.

Ex-Senator Edmunds was called up as a distinguished lawyer, an eminent statesman and an immortal fisherman. The Senator said in part: I wish we could stay here a week and catch fish. I am afraid that my friend's, the chairman's, failure to catch fish is because he has

devoted himself more to that other branch of the business to which he has referred. Fishing brings us into intimate relationship with our mother nature and therefore it is good to spend some time in that pursuit. I am glad that this League was formed and it has been a pleasure to me to be a member.

Senator Proctor was called up to tell the greatest fish story on record. The Senator got even with Chairman Wilds and said that the seemingly large fish which were suspended around the tent were but minnows as compared with those he had been in the habit of catching in Vermont brooks all his life. He thought that the work of this League was of an educational nature. It would make the law understood in all parts of the State, thus adding greatly to our prosperity.

Congressman Grout was called up as a man who had no embarrassment in telling the truth. Gen. Grout said he wanted to come because it had been promised that there would be no speaking, because he wanted to see how the members of the League would act when surrounded by plenty of water, and finally because he wanted to sit at the feet of these distinguished statesmen and fishermen and learn how to fish.

Congressman Powers said that the 6in. law drove him out of the fishing business. He did not come over here to tell any fish stories, but to see the good people of Grand Isle county, whom he praised very highly, saying that they remained at home and spent their time in acquiring useful information. These tables show the hospitality of this town and are an indication of what the ladies can do. Judge Powers said that he would like to stay in the country four weeks and get acquainted with the people.

Ex-Gov. Stewart was the next speaker. He told a humorous story and referred to his experiences in fishing among these islands. He found it an inspiration to come into these waters, drink in the pure air and get acquainted with the good people of these islands.

Gen. J. G. McCullough was the next speaker. He said he was a law-abiding member of the League, and since it had been announced that there was to be no speaking he could not break the rule. He told a salmon story which he obtained from Gov. Stewart, concluding with a humorous account of how the latter was rescued from drowning by being caught by his hair. Gov. Stewart thereupon stood up and showed his bald head, at the same time admitting the truth of Gen. McCullough's remarkable story. The latter then called attention to the fact that he alone of all the speakers had had his veracity vouched for.

Mr. Wilds then called up President Buckham to speak for the other side, the non-liars. President Buckham said he did not remember ever having been in such a distinguished gathering of congressmen, governors, ex-governors and future governors. He felt like a small fish among the great whales, and according to the laws of the State he thought he should be put back. One thing has been passed by on this occasion, that is the preservation of the song birds of our State. They form one of the charms of our State. President Buckham believed that one reason why birds do not sing as many days in this country as they do in England is that their songs are not appreciated. When we respond to a bird's song by whistling the bird seems to know that his song is appreciated. One of the things which we can do to increase the attractiveness of our State is to preserve and encourage our song birds.

MRS. FARRINGTON'S MUSCALONGE.

We are indebted to Mr. Wm. R. Farrington, of Poughkeepsie, N. Y., for the admirable photograph, which is here reproduced, of the notable muscalonge captured by Mrs. Farrington in the St. Lawrence River last September. In response to our request for particulars of the exploit, Mrs. Farrington sends us the following notes, from which it will appear that the fish should be credited to her as a trophy of skillful handling and presence of mind under conditions which would have flustered many a man playing his first big fish. She writes:

On Sept. 7, as beautiful a day as one could wish to spend on the St. Lawrence River, my husband and I were trolling in two boats, his guide being Leander Denny, and mine Ed Denny.

At 4 P. M. Mr. Farrington had killed nine pickerel, five of which weighed 40lbs., while I grew weary taking in my lines to remove grass and the smallest pickerel, often called "slinkies" by the guides.

At half past 4 we were about three miles from Clayton, working slowly over the ground which had just been covered by Mr. F. in his boat. Suddenly the bell attached to the trolling rod gave a very gentle alarm, and I said: "There is another of those little pickerel." But as I lifted the rod free it sprung back, so that I could hardly hold it. Ed with difficulty got the rod in the boat and handed me the line, saying: "Now look sharp, you've got a big fish."

I had out 200ft. of line and cautiously took in about 90ft., thinking the fish did not feel so very large. Just then he leaped out of the water, shook the spoon, took a header into the water, and was out of sight. Then came a shout of "Muscalonge!" from Mr. F.'s boat, and I realized that the monster would be mine if I handled him according to previous instructions.

He seemed quite willing to follow up my coaxing for a moment, then quite as determined to take everything his way. And so we played a most exciting game of give and take for twenty minutes. Then he came to the surface and was quite near the boat. I said, "Ed, did you ever see such a beautiful big fish?" Ed's voice sounded far off and tremulous as he said, "Now, don't get excited, Mrs. Farrington." But I did not intend to lose my head nor my fish either.

I finally succeeded in getting him close to the boat, and as Ed raised his club to strike, the muscalonge gave a plunge right under the boat, and we both thought he was off. But no! I felt of my line and he was there, but too tired to resist the strain of the line. As he came to the surface Ed killed him with a blow and lifted him into the boat.

About fifteen minutes later Mr. Farrington killed a muscalonge which weighed 15lbs. We sailed into Clayton with two white flags floating, causing great excitement, owing to the fact that my fish was the largest muscalonge ever killed by a woman.

Mrs. William R. Farrington.

Clayton, Thousand Islands, N. Y., Aug. 6.—Mr. W. R. Farrington, of Poughkeepsie, N. Y., a guest of the Hubbard House, while fishing here yesterday landed a 33½lb. muskallonge, the handsomest as well as the largest brought in this season and measuring 4ft. 1in. in length. Leander Denny was the guide. Mr. and Mrs. Farrington are among the most enthusiastic anglers visiting Clayton, and have had great success this last week with the black bass. Mr. Farrington also landed, on the 3d inst., a very fine specimen of a pickerel, viz., a 16-pounder.

That black bass fishing was never better on this part of the St. Lawrence River than this season is the verdict of a large number of anglers here, the sport afforded so far this year being excellent, and is doubtless due to a great extent to the splendid work accomplished by the Angler's Association in the suppression of netting and the enforcement of a strictly close season. J. G. F.

SEA, LAKE AND RIVER FISHING.

Boston, Aug. 10.—Baker's Island, off Salem Harbor, is an interesting place for those who like salt air and the sea in all its natural beauty. There is pretty good cunner fishing from its rocky shores, and Mr. E. S. Thayer, of Salem, who has fished nearly everywhere along the mainland coast, is very certain that good tautog fishing can be had, having demonstrated that fact on a visit to the island a few days ago, when he captured five tautog, the largest weighing 5lbs. He is going again, and the next time hopes to find some striped bass fishing also, as he feels sure they are in these waters.

There is no one who is summering along the south shore this season having a better time at the fishing than Dr. Maurice H. Richardson and A. G. Weeks, Jr., of Boston. Dr. Richardson is at it early and late, and has taken many bluefish and a number of small striped bass and squeteague. His son, a lad of 16 years, captured a 70lbs. shark the other day, an achievement over which he was naturally very proud. Good bass ponds are found a few miles inland, and Mr. Weeks visits them quite often. When ready to go the boat is placed on a wagon, and a drive of ten miles brings him to Sniptuit Pond. Four bass weighing 12lbs. and several of less weight was the result of a day's visit to that place recently, and nearly every trip is equally as fruitful. Nearly everybody who has fished at Buzzard's Bay has had good luck, and the season of '95 will be recorded as one of the best for years.

A party of five Western men made a day's record to be proud of a week ago while fishing off Great Point across Caydis Light, Nantucket. Seven sharks, the largest measuring 17ft., and ninety-one bluefish was the sum total of their prowess. The fun was fast and furious while shark fishing, with just enough danger to make it exciting. A strong breeze obliging them to sail under three reefs most of the time added largely to their pleasure, and they all want to know how much more fun could be crowded into one day than they had on that trip.

F. H. Talcott, of Boston, has fished in many waters, but he made the strangest capture of his life while trying for bass in Lake Pearl, Wrentham, Mass., a few days ago. It was a 25lb. turtle that accepted his tempting bait, and Mr. Talcott wants to know if any one has ever measured or weighed the amount of vitality in one of these fellows. He was as full of fight as a Corbett, and even after his head had been cut off so that it hung by a shred he still wanted to bite off a whole hand from his captors. Mock turtle soup has been voted a pleasant dish by Mr. T. in the past, but after cleaning the meat out of this fellow he concluded the shell was trophy enough this time.

The noted guide and trapper, Spof. Flint, of Colebrook, N. H., and his brother Fred Flint, proprietor of the Hell Gate Camps on the Dead Diamond, made so famous by the late Amasa Ward, have been spending a few days in Boston, visiting the sportsmen of the Hub, with whom they have a large acquaintance.

W. J. Reynolds, of Boston, has gone to the Upper Dam, Rangeley Lakes. He is an old pioneer in that region, this being his twenty-second consecutive year of fishing in the old and famous pool. Oct. 1 is the date of his return, and I hope his usual good luck will favor him with duplicates of some of the big trout he has caught in past years.

Herbert Dumaresq and Dr. Cecil P. Wilson, of Boston, have gone to the club house of the Sebago Club, at the lake of that name in Maine. Mr. Dumaresq is a member of the club, and during their stay of a few days will try by deep-water trolling to catch a salmon that will exceed in weight the 11-pounder captured by him last spring. Dr. Wilson will go on from there to the Megantic Preserve, where he will make quite a trip before returning to Boston.

Samuel Wax and Hugo Pinksohn, of Boston, have left for the Rangeleys, hoping to get some big trout during their three weeks' stay. On the way back they will stop for a few days at Belgrade Mills to enjoy the bass fishing. Mr. Wax was very successful there last year, and thinks it one of the pleasantest spots in Maine to visit.

Connecticut lakes is the destination and September the time planned for the trip of Dr. N. R. Hall, of Warren, R. I. The Doctor visited this region last year, and was so well pleased that he made up his mind to repeat the experience. This year he will spend most of his time at Second Lake, and contemplates making a camping trip from there to Camel's Rump Bog, where he hopes to get some good shooting. At all events, he declares he will not return until he gets a deer, and starting out with that determination goes a long way toward fulfilling the promise.

ST. LAWRENCE RIVER MUSCALONGE.

Weight, 41lbs. Length, 4ft. 3in. Caught Sept. 17, 1894, by Mrs. Wm. R. Farrington, of Poughkeepsie, N. Y. Edward Denny, Guide.

Many Western sportsmen *en route* to Eastern fishing waters stop over in Boston for a few days to put the finishing touches on their outfits of flies, leaders, etc. While engaged in this pleasant occupation it was my good fortune to run across three of about as genial types of the Western angler as one could possibly meet. They were William O. and J. C. Davie, of Cincinnati, and Chalmers Brown, of Indianapolis. Prince Edward Island was their destination, going first to Charlottetown, and from there into the country for stream fishing. Mr. Brown has been there before and guarantees to thoroughly initiate his two friends into the mysteries of the fishing of that region during the three weeks of their stay.

Chas. H. Tyler and R. M. Saltonstall, well-known Boston lawyers, left on Aug. 9 for a two weeks' camping and canoe trip. They will go to Moosehead, and from there to Chesuncook Lake, devoting the entire time to trout fishing.

G. E. Blackmur, of Auburndale, Mass., has gone on a three weeks' trip to Randall's Camps, located on the West Branch Ponds, head waters of the Penobscot. They say the trout actually tumble over each other there, so anxious are they to take the fly, and Mr. Blackmur intends to find out the truth of this assertion.

W. S. Baines, of Boston, one of the old fishing veterans in the region about Jackson in the White Mountains, has been quite steadily fishing the streams near there this season, but does not find his luck up to the usual standard of other years. He has heard of good fishing on the east branch of the Pemigewasset, and has gone back to the mountains intending to go there after it. Six or seven miles of the hardest kind of tramping through the woods each way might deter some men from such an undertaking, but Mr. Baines thinks little of that when visions of good trout fishing loom up before him.

While fishing in the Concord River, near Boston, a few days ago, M. Abbott Frazer and C. S. Burke captured eleven bass, the two largest weighing respectively 5¾ and 3 11/16lbs. In one instance, while the bait was lying still on

the water, a big bass came up clean out of the water and took the bait, going down in such a peculiar fashion as to excite both mirth and wonder. It is needless to say that this particular monster was finally lost, a fact which they are not over grieving about yet. HACKLE.

ST. LAWRENCE ANGLERS.

THE annual meeting of the Anglers' Association of the St. Lawrence River was held at Clayton on Aug. 7, President W. C. Browning in the chair. Secretary W. H. Thompson's report showed that the Association has a membership of 350, of which 250 are paying members. The Association has lost valuable members in Gen. R. U. Sherman, New Hartford; W. P. Carpenter, Utica; J. L. Hasbrook, New York; H. G. Wiser, Prescott. Several new members were admitted. Treasurer R. P. Grant reported as follows: On hand last year, $648.51; receipts, $546.88; disbursements, $349.08; balance on hand, $716.62.

The following officers were elected for the year: President, William C. Browning; First Vice-President, H. R. Heath; Second Vice-President, Charles R. Skinner; Secretary, William H. Thompson, Alexandria Bay, N. Y.; Treasurer, R. P. Grant; Executive Committee: A. C. Cornwall, G. H. Strough, R. H. Pullman, W. T. Bascom, G. T. Raferty, F. J. Amsden, R. E. Waterman, G. M. Skinner, C. G. Emery, O. T. Mackey, John Foley, Walter Fox.

Mr. Taylor said that there was a strong feeling on both sides in favor of establishing the park, and if it was done that the waters would be free and open the year around. He said the Canadian Government had already selected several islands which it owned to reserve for the purpose.

President W. C. Browning said that the matter was a national and not a local one, and that one condition demanded by the Canadians was the repeal or some special action in regard to the alien labor law as regards Canadian oarsmen hiring out to Americans. This was out of the question and could not be done. He maintained, however, that the law was not transgressed, inasmuch as the oarsmen made the bargain after coming to this country and not on Canadian soil. Mr. Taylor said that the oarsmen did not understand it so, and that until some official assurance was given them the Canadian Parliament could not consent to the establishment of an international park.

This subject of the alien labor law was the subject of discussion for the remainder of the morning session. The Canadian side was represented by Messrs. Smith, George Taylor and Mr. Cook. Among those who represented the American side were: Messrs. Browning, Thompson, Heath, Charles R. Skinner, Frank Taylor, Elon R. Brown and V. K. Kellogg, the district attorney in Jefferson county.

Messrs. Skinner, Brown and Kellogg have all made a study of the statutes on the subject of the alien labor law, and were unanimous in the opinion that this case did not come under the law, inasmuch as the oarsmen were hired on this side. These gentlemen finally convinced Mr. Taylor and his Canadian friends of the fact, and that the only satisfaction to be given would be the authoritative statement of the Attorney-General of the State and that of the Attorney-General of the United States upon the subject.

Reference was made to the Protective Oarsmen's Association of Alexandria Bay, which had been instrumental in creating a false impression of the law among the people on the other side. Mr. Thompson stated that a statement from all the hotels among the American resorts that Canadian oarsmen would receive equal favors with Americans had been instrumental in causing the $5 license fee to be removed.

Mr. Thompson said that he thought that the Canadians were ready to meet us half way in the matter, he also said that he thought that there was no necessity for action on the part of the Association, but that it should be left to the commissions to decide.

Mr. Taylor, of Gananoque, said that they would not demand a change in the law if the official statement was made setting forth their rights.

Mr. Thompson said that no action of the Association could change the United States law, but that the law should be understood, and that the Commissioners would settle this point, and that no action of the Association was necessary.

Upon the suggestion of Mr. Taylor, it was moved to appoint a committee of five to confer with the Commissioners representing the two Governments, and that the committee in the meantime secure the legal opinions of the Attorney-General of the State and of the United States upon the subject, and that they present it to the Commissioners.

Frank H. Taylor moved to amend by empowering the secretary of the Association with the right of having 500 circulars printed containing these opinions, and that they be circulated in Canada and posted about, and that they give the Canadian oarsmen assurance of protection.

The committee named were: W. C. Browning, Hon. Charles R. Skinner, G. H. Strough, Hon. Elon R. Brown and R. P. Grant.

The Association reconvened at 2:15, when Mr. Smith, the Deputy Minister, read the report of the status of the matter as it lay before the Canadian Commissioners.

Upon the motion of Mr. Heath, a committee of three was appointed to draft suitable resolutions in commemoration of the death of four members of the Association, who have died in the past year.

The subject of the stocking of the St. Lawrence River waters with muskalonge fry was brought up and discussed. A motion was proposed requesting the Legislature to instruct the State Fish and Game Commission to stock these waters with fry of St. Lawrence River muskalonge, instead of those of Chautauqua Lake, which are not as beautiful nor as gamy a fish as the native fish of the St. Lawrence, which is the most gamy and beautiful species of the fish, and is the original and true muskalonge, and the only one which has the spots.

The original motion was amended to include a vote of thanks to the Commissioners for the fry, and that they be requested to continue to supply fry from Chautauqua Lake until a hatchery could be established on the St. Lawrence River. A motion was unanimously passed that the Legislature be requested to establish a muskalonge hatchery on the St. Lawrence River.

President Browning appointed Messrs. Grant and Thompson as a committee to meet the Senate Commissioners at Watertown and entertain them.

A resolution was passed empowering the executive committee to appoint any and all committees necessary for all purposes, including the procuring of suitable legislation.

THE PROFESSOR AND THE CLUB.

IF the Professor prides himself on one of his accomplishments more than another it is his ability to cast his flies on a 9ft. leader. So proficient has the Professor become that he can easily drop his end fly on a bubble at a distance of 50ft. Not only is the Professor a model fly-caster, but he is well up in all the nomenclature and literature pertaining to the gentle art, and his paraphernalia is always of the most approved and artistic style. For instance, he will never use a line or reel that does not correspond exactly to the length and weight of his rod. Everything about his fly-fishing is truly artistic and poetic; and the Professor is devoted to the gamy brook trout only; bass, pickerel and other fish are vermin in his eyes, and furthermore, the trout the Professor catches must be caught by casting only; such a thing as allowing a line to run down stream and then to be reeled back is abhorrent to the Professor's idea of fly-fishing.

It was my good fortune to go with the Professor on a trip down stream where the water was very deep, just below some rapids. We cast our flies out into the rapids and then drew them over to the eddy below. We had caught several nice trout when the Professor called out that he had a monster; his rod was bent up like a hair pin and the line was cutting the water like a miniature steamboat. Suddenly the fish stopped, something was wrong; undoubtedly one of the other flies had caught on a root or stone at the bottom. What was to be done? We were standing on a rock that tapered to a point extending under the water; somewhere near the end of this point the fish was fastened. We pulled, we tugged, we went from one side of the rock to the other, but we could not budge the fish. All of a sudden the fish came near the surface. We caught a glimpse of a broad tail, and our excitement increased to fever heat. "I'm going in after him," said the Professor, and proceeded at once to disrobe. With the aid of a landing net the Professor slowly made his way down the rock. The net was too short, so a long stick was obtained, and again the Professor walked in. By dint of long and careful manipulation we succeeded in partly loosing the fastened fly-hook, and then by united effort we succeeded in drawing the fastened fish toward the surface. Suddenly the hook was freed and with a rush the monster came to the top. "Shoot me if it isn't a miserable plebeian chub!" howled the Professor, and then realizing the ridiculous side of the situation, we laughed and we roared. It was too funny; the joke on the Professor was too good; it must be told.

I shall never cease to regret that I did not have a camera to take a series of pictures of him standing up to his waist in the water. The first his happy expression of intense excitement, then his momentary look of rage and disgust, and finally his hearty laugh over the joke that will stand against him for many a day.

SILVER DOCTOR.

FISHING AT SANTA CATALENA ISLAND.

SANTA CATALENA ISLAND, Southern California, July 14. —The fishing season of Santa Catalena Island began this year in April and has been remarkably fine. A number of New Yorkers are on the ground piling up big records and saying nothing. Santa Catalena is an island thirty miles off Los Angeles county, reached by a line of steamers, which start at San Pedro. The little town of Avalon on the south end of the island is the objective, and being but 3½ hours from Los Angeles, the Los Angeles business men who are patrons of the rod can reach it with ease and comfort. Some of the fishing I have described in former letters and herewith give some figures which I think will interest eastern anglers and sportsmen.

The best record so far has been made by Mr. Stuart M. Beard, of the Canandaigua (N. Y.) Fishing Club. He has been fishing since May 12, and has taken in all 2,656lbs. of fish, all on the rod, with a 15-strand cuttyhunk line and a large reel holding about 900ft. The catch is 41 yellow-tail (*Seriola dorsalis*), weighing 738lbs., averaging 18lbs.; 5 sea bass, 153½lbs.; 13 albicore, 211lbs.; 2 black sea bass, 98 and 200lbs. The largest yellow-tail taken weighed 43lbs., and many rock bass, etc., etc. The 98lbs. bass Mr. Beard caught in front of the Metropole Hotel, several hundred guests watching the catch from the piazza and the beach, and it was finally landed by the aid of some friends on the yacht Linda. The 200-pounder was taken twenty miles from here on the shores of San Clemente Island. The fish was hooked late in the afternoon and towed the boat, which contained Mr. Beard and Mr. Rodgers and oarsman Harry Elms, for three miles, making a sturdy fight all the time. Two hours slipped away, and night came on and the sea rose, making an ugly swell; but they kept at it, Mr. Rodgers succeeding in lighting a lantern, which he held while Mr. Beard manipulated the rod; another hour went by before the wet and utterly exhausted men brought the fish to the gaff, cut its throat and towed it to their yacht, anchored in the harbor. The fish was hoisted aboard and carried to Avalon, where it was found to weigh 200lbs. a day after it was caught. This gives Mr. Beard the record for the largest fish on a rod on the Pacific coast; and as we have no records of tarpon, we should be glad to hear from some of the tarpon men who have taken larger fish on such tackle. The line was 15-strand, as above described.

The record was held by Major Chas. Veile, of the cavalry, last year, who took a 138-pounder on a rod.

Mr. J. Neale Plumb, of New York, one of the finest fishermen in the country, is now trying to break Mr. Beard's record, and as the black sea bass are biting well, there is every reason to believe he will do it.

The following are some of the season's catches so far:

J. Neale Plumb, about 600lbs. of yellow-tail, sea bass and barracuda. Mr. Plumb has been fishing but a few days.

C. F. Holder, 10 yellow-tails averaging 15lbs.; 20 barracuda averaging 10lbs. The latter or part taken on an 8oz. split-bamboo, and the yellow-tails taken on a light rod, the tip being a trout split-bamboo tip, 15-strand line; 1 black sea bass, 247lbs., taken on a hand line; 2 sea bass, 20 and 12lbs., on rod.

June 17.—W. A. Carnes, San Francisco, 3 yellow-tail, 16, 18, 28lbs.; 39lb. halibut (rod).

June 19.—Messrs. Curtis and Lindley, San Francisco, 17lb. yellow tail (rod).

June 21.—W. A. Carnes, San Francisco, 124lbs. of yellow-tail; barracuda and rock bass. Mrs. C. H. Lindley, San Francisco, 16lb. yellow-tail. Mr. Keyser, Pasadena, and John Vandevoort (partner of Andrew Carnegie, Pittsburg), 60 rock bass averaging 4lbs.; 29 sheepshead averaging 8lbs., all on rod.

June 24.—Dr. Johnson, Alhambra, Cal., 165lbs. of yellow-tail averaging 15lbs. Dr. H. H. Frothingham, Chicago, 142lbs. yellow-tail, barracuda and rock bass, all on rod.

June 25.—F. W. Reid, 190 lbs. of yellow-tail. C. F. Bissell, Norwich, N. Y., 11 yellow-tail, weighing 178½lbs.

June 27.—Col. W. L. Washington, N. Y., a 42½lb. yellow-tail, on rod. A. C. Roscoe, 39lb. yellow-tail; 45lb. sea bass.

June 28.—Alexander Badlum, the San Francisco historian, 4 yellow-tail, 100lbs. J. C. Cline, black sea bass (hand line, 265lbs.).

June 29.—Dr. Johnson, 1,080lbs. fish on rod; largest yellow-tail, 35lbs.

June 30.—W. A. Carnes, San Francisco, 315lbs. black sea bass (hand line). Miss McMillan, 2 yellow-tail, 40lbs. S. N. Fowler, 6 albicore, average 40lbs.

July 5.—Dr. Kirkpatrick, 75lbs. of yellow-tail. Mr. Callum, 30lb. yellow-tail.

July 6.—C. H. Moll, Hollywood, 36 albicore. Miss Alice Hall, 1 32lb. yellow-tail.

July 7.—H. O'Fallon, of New York, 3 yellow-tail, 43lbs.

These are a small percentage of the catches taken by gentlemen staying at the two hotels—Metropole and Island Villa. The little town has about 2,000 summer visitors, most of whom go fishing, which is suggestive of the sport. Nearly all the above fish were taken on rod and reel, ranging from a tarpon rod to light split-bamboo.

PISCATOR.

BOSTON AND MAINE.

AUG. 9.—More pleasing reports from the salmon fishermen are at hand. The season has been a good one, with an increase of salmon generally reported in most of the Provincial rivers. Mr. Edward Brooks, a member of the Tobique Club, with Mr. R. H. Sims, has fished the Tobique River, in New Brunswick, with a result of thirty-five salmon in three days. Such fishing is remarkable, and is doubtless the result of the care being bestowed upon the preserve.

Mr. C. H. Olmstead and Mr. George Talbott fished the Grand Cascapedia in July. Ten salmon at least are reported to their score. Both are Boston gentlemen, and both are much pleased with their trip. Mr. Olmstead's largest fish weighed 28lbs., and he is justly proud of such luck, if luck it may be termed.

Mr. Richard O. Harding, with Appleton & Bassett, brings back several trophies from his salmon trip that please him very much. He took a camera along, and has one or two pictures showing a fight with salmon. Mr. D. H. Blanchard is shown with a salmon hooked, and very intent upon conquering him. The buckling of the rod is well illustrated. A great many sportsmen have dropped into the store to see the pictures.

The latest fishing yarn in the newspapers is concerning a gull that was seen swimming on Moosehead Lake, and was caught by some men in a canoe. Hooked to a leg was found a leader, and attached to another fly on the leader was a trout weighing 3 or 4lbs. The hook was so thoroughly embedded in the gull's leg that it had to be cut out. Since, it comes out that B. F. Beal, of Boston, one report says, was fishing in Lily Bay with a leader to which several hooks were attached. He struck a trout which took away his leader, flies and all. At the Lily Bay House, when the gull and trout were brought in, the leader was pronounced the one that Mr. Beal had lost.

Rev. Julian K. Smythe is an ardent lover of the rod and line, as well as a good deal of a canoeist. He has been on his vacation trip, and has paddled from Saco, Me., up the Saco River, to Fryeburg. Mr. and Mrs. Smythe made the journey in four days. They took their two daughters aboard at Hiram. A store of provisions was laid in at the starting point, and with the exception of lodging at farmhouses on the way they lived in their canoe and tents. Mr. Smythe is one of the leading clergymen of Roxbury, Mass.

Recently Graves, who several years ago murdered the two Maine game wardens, has been granted an audience with the Governor and Council at the State prison in that State. He made a strong plea for extenuation of his life sentence. In touching language he related how the dog which the warden wanted to kill was one which his wife had harnessed into a cart with another dog, and the pair had hauled around their son, who was a cripple. Furthermore, it was a bird dog, and not a deer dog at all. Graves said that one of the wardens had his gun cocked, and the other had a pistol, when he shot them. But at last he admitted that, under the same circumstances, he should do the same thing again. The pardon has not been granted. In the recent warden shooting case in that State the guide who did the shooting has not yet been apprehended.

Shore bird shooting along the Massachusetts coast does not seem to have taken much of a start yet, though the open season is already several weeks old. A few bags of summer yellow-legs are mentioned from along the north shore. Claude H. Tarbox, with the Baileys, has been out along the Byfield shore, with a result of seven birds last week. They will try again in a day or two. Mr. M. Parker has just returned from a look for birds at Scituate, and reports only a very few summer yellow-legs. A couple of gunners went down to Marshfield the other day, but came back without any birds.

Aug. 11.—Flights of summer yellow-legs are reported off Hampton and down as far as Salem and Beverly. A gentleman came up from Old Orchard on Saturday and he reports flights of summer yellow-legs off Saco Beach and in the vicinity of Biddeford Pool. He says that he saw no gunners nor did he hear of any, but heard numerous reports of a plenty of birds. He suggests that the weather is so hot that no one desires to go a-gunning. But doubtless it will not take long to draw the gunners out if the birds are plenty. SPECIAL.

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

THE WEIGHTS OF STRIPED BASS.

NEW YORK, Aug. 12.—*Editor Forest and Stream:* The enclosed clipping was taken from the Newport *Journal* of Aug. 3. I know Mr. LeRoy as a gentleman and a thorough fisherman, and that he is incapable of having any misstatement made with his knowledge: "Monday, at the Beavertail fishing club, Mr. Stuyvesant LeRoy broke the bass record of the season and of the club, by landing a handsome fellow that tipped the scales at 68lbs. It was seen to-day at Ash's fish market, where it was found to measure 4ft. 4in. from tail to nose, and 1ft. 9in. in girth. The Beavertail fishers lost several large bass Monday, but none were probably so large as this. A number of big bass have been caught this season at the various fishing piers, the fish appearing to run larger than usual."

My object, however, in sending you the clipping is to assert that my experience has proved that no striped bass measuring 4ft. 4in. from tail to nose ever weighed 68lbs. I have measured carefully eight or ten bass running from 40 to 51lbs. in weight at the time they were killed and before they had an opportunity to bleed much, and I have found it to be an invariable rule that they would weigh exactly 1lb. to the inch. An allowance of one or two pounds might be made for an extra girth, but no more. The fish I speak of were weighed and measured at the Squibnocket Club in days gone by. Other fish that I have heard of, taken at Narragansett Pier, have weighed in exactly the same ratio.

I would be glad if some of your numerous subscribers who are fishermen would take up this question and experiment, if they are fortunate enough to kill a large fish.

S. M. B.

NOTES FROM FISHING WATERS.

Correspondents are invited to send us notes of fish, fishermen, fishing conditions and fishing facts, so that they may reach this office on a Monday.

LAKOTA, Conover P. O., Vilas County, Wis., Aug. 9.—The fishing at these celebrated fishing grounds, while not quite as good as last season, is good, and some wonderful catches are on record, especially of muskalonge. Perry Hull, of Chicago, landed a fine 30-pounder, and the undersigned had the satisfactory experience of landing a splendid 33-pounder upon July 25. Black bass and pike are caught in abundance; in fact, the fishing up here is all one could desire. H. A. W.

EAGLE RIVER, Wis.—The following catches were made in this vicinity by Mr. Walter Stager, of Sterling, Ill.: July 20, in Loon Lake, 69 black bass; July 22, in Franklin Lake, 50 black bass; July 23, in Franklin Lake, 50 black bass; July 24, in Loon Lake, 132 black bass.

Down the Jordan in a Canvas Boat.

MANCELONA, Mich., July 13.—For the benefit of any readers of FOREST AND STREAM who are foregoing, as I did for years, the exquisite pleasure to be found in a canvas boat, for fear of its liability to snag, I presume to write you my experience with such a boat on the 5th inst. The boat used was a 15ft. Osgood. My companion, Dr. Burnett, of this place, and myself started at the highest so called "open waters" of the Jordan River, some seven miles north from Mancelona. We knew the stream to be very rapid and full of trout, but there our acquaintance with the purling waters ended. My experience during the three weeks' ownership of the boat had assured me that it was absolutely safe so far as tipping or ordinary accidents were concerned, and my conceit was sufficient as to my ability to handle a boat or construct and conduct a camp, so that a guide was not considered desirable; and we "inland noodles" started out, going down alone.

With our boat loaded with tent, blankets and camp equipage to the amount of several hundred pounds we floated down. The morning was perfect and the trout hungry. Our creels lay open before us and were fast filling with the speckled beauties, when we realized that we were shooting down a stretch of rapids that was of the nature of a toboggan slide. Keeping well in the center of the stream we had no thought of danger until, rounding a sharp bend, we were confronted by a dead cedar tree, which had fallen completely across the stream and was not four rods ahead of us. In our attempt to check our speed we were successful in throwing the boat squarely across the stream and so struck the obstruction broadside. There was a crash, a splintering of wood and our load was in the water; but our boat had gone through under the log, breaking through the dead limbs, some of them being as large as one's arm. We succeeded in capturing the runaway boat, and emptying out the water found it intact, except that the rock elm gunwales had been stripped off and torn into flinders.

Reloading, with I judge at least a ton of water-soaked "plunder," we started on, only to prove the truth of the old adage that "Troubles never come singly;" another turn, another crash, and our unfortunate experience had been repeated. Again we loaded and started on; we were in the midst of a great cedar swamp and there was nothing to do but to keep to the stream and boat; and keep to them we did until we reached a main traveled road where we could get a team to convey us below the rapids. With gunwales stripped off, bottom boards wrenched and split, the metal on the bow and stern torn off, yet the canvas showed not a scratch, and after going through two such shocks, either of which would have rendered a wooden boat useless, the portable canvas, with her double load of camp equipage and water, was still staunch and steady.

My skepticism as to canvas boats has entirely disappeared! For rough, hard usage, I can from cold experience and in warmest terms say, always take a canvas boat.

C. L. BAILEY.

Thinks that a Bass Thinks.

SAGINAW, Mich.—*Editor Forest and Stream:* In regard to leaping bass. I fish once a week from early morn till dark, mostly for small-mouth bass, aud I catch a good many during each year. They most always leap after a short fight, and usually make two and sometimes three leaps. They reason thus: "I have fought on a stiff line and there is no show; I will leap out of the water, gain slack line, open my mouth and shake my head and free myself;" which is just what they do in a great many cases. I have often seen them throw hook and bait 6 or 8ft. in the opposite direction. I don't see how any one can fail to note every move of the fish in the air. I plainly see that in the air they always have open mouth with gills extended, and shake the head vigorously. Every act goes to show that the bass figures on freeing himself. Mr. Simpson says, if the bass has such an amount of intelligence as "Old Sam" credits him with, why does he not go to the bottom, take a turn of the line around a stone or snag and free himself at his leisure? Now I have seen them do that very thing. Last week I lost five nice fellows in just that way. After a hard fight with two leaps they saw that there was no possible chance that way; made a dive directly on some snag; wound up and tore loose. I have seen them give up all hope of freeing themselves by fair means and then turn their attention to some old stump or root several feet away, and try all manner of strategy to get to the snag for no other purpose but to wind up. There is no question in my mind that a bass leaps to free himself and figures on gaining slack line. When that fails he resorts to other and more desperate means, such as snagging. I never saw one leap over 2ft. DENTIST.

SOMERVILLE, Mass.—In regard to black bass and the matter of their jumping and shaking the hook out, from a boy I have been taught that such was their habit, and that under no circumstances must I allow them to break water if I could help myself. Certainly nine out of every ten bass that I have ever lost have rid themselves of the hook while in the air, and as nearly as I could make out they did it by a process of shaking. I have seen them go all of 3ft. out of water, and that close to the boat, so that I had ample opportunity for observation.

What mine eyes have seen that must I believe, notwithstanding Dr. Ellzey to the contrary. WALDO.

Fifty-two Years a Fly-fisherman.

L'ANSE, Mich., July 27.—*Editor Forest and Stream:* Mr. A. F. Young, the oldest fisherman on Lake Superior, if not the oldest in America, is again with us, having arrived on Tuesday of this week. For many years Mr. Young, who is a resident of Escanaba, makes an annual trip to the shores of Keewenaw Bay in pursuit of speckled trout. His first fishing dates back to 1831, at Fall Creek, in the town of Grotten, N. Y. Coming West in the year 1850 he penetrated the forests of Wisconsin, Minnesota and Michigan, surveying the numerous streams, few of them escaping his notice that abounded in trout. He has familiarized himself with all the streams entering the Chippewa in Wisconsin, several entering White River and several more that flow into Root River, also a number flowing into the Mississippi. In Michigan he has fished all the prominent streams, including Rapid, Day, Escanaba, Bark, Huron, and the headwaters of Iron River. From the year 1868 he has confined his fishing from Chocolate in Marquette county to L'Anse at the head of Keewenaw Bay. He claims that for comfort the latter place excels any point he has visited during his experience.

The fishing here is from a boat in a bayou at the head of the bay; and by the way Mr. Young hints to his brother fishermen if they wish to avoid the effects of the sun's rays the inside of the boat should be painted green. Here he has captured in a couple of hours as many as twenty-two trout weighing not less than 40lbs. He has caught them weighing as much as 5¼lbs., while 3 and 4-pounders are common. He has constantly fished with a fly for the past fifty-two years, and now at the age of seventy-two with little effort casts a distance of 75ft. Mr. Young is an encyclopedia on fishing, and the writer will endeavor to land some of his experiences in a later issue. B.

Mussels Taken with Hook.

SOMERVILLE, Mass.—In a recent issue I noticed an article as to whether mussels voluntarily or involuntarily attach themselves to a baited hook. My experience was with the fresh-water mussel and occurred while I was trout fishing in a lake. I was fishing in about 20ft. of water, using worms for bait, and having grown somewhat weary had allowed the hook to sink to the bottom and to remain a few moments. Upon drawing it to the surface I found a mussel firmly attached. During the afternoon this was repeated perhaps half a dozen times and caused considerable joking and laughter among those with me.

My own solution was that the mussels were lying with shells wide open, as is their habit in deep water, and the baited hook chancing to fall against the soft fleshy portion of the bivalve irritated it, whereupon it promptly closed its shell, holding the hook fast. The possibility of the bait having any attraction for it never occurred to me.

WALDO.

They Eat Baby Trout in the White Mountains.

BOSTON, Mass., July 29.—*Editor Forest and Stream:* I inclose a clipping from the Boston *Herald* of Saturday morning and wish you to notice the catch of 22lbs. of trout in one day at Fabyans, N. H., therein noted. If the Fish Commissioners respect the laws and enforce them as they should, there is a case which deserves investigation.

I am very much interested in trouting in the White Mountains, and I have never been in a place which affords more work for the Commissioners than there. In almost every hotel and on almost every day there are trout brought in which are under the legal size.

It seems to me to be against the interest of the State to stock these waters, only to have the baby trout fished out the following summer. MONTINUS.

Death of Ellis W. Brown.

THE current issue of the Elizabethtown, N. Y., *Post* brings news of the sudden death of Ellis W. Brown, of Keene Valley. To one who has known him as a friend and companion in the chase the sad news comes with added shock. It is only a few days since he wrote of the approaching hunting season, and chronicled his catch of a 3lbs. trout in the Au Sable. Rarely was there a more generous companion, or a man in whom was born a greater love of forest and stream. He was a member of the Keene Valley Guides' Association and of the Adirondack Guides' Association. He was an enthusiastic hunter and fisherman, being well known to the sporting fraternity throughout the Adirondacks.

Kingfishers in Camp.

THE Kingfishers will leave next Thursday on the "Mackinaw Flyer," over the C. H. & D. and Michigan Central Railroads, for their annual camp-out in Northern Michigan. At St. Ignace they take the D., S. S. & A. road for the Manistique Lakes, where the cook has been sent ahead with the camp outfit to pick out a soft spot on which to light. The club is well known through "Kingfisher's" camp yarns in FOREST AND STREAM, and wherever they pitch their tents they find friends among the brotherhood of anglers and sportsmen. With the party will be Col. H. C. Culbertson, President of the Cuvier Club of this city; G. J. Murray, Assistant Postmaster Muller and his brother "Jim;" J. M. Hickman and L. C. Cordes, of the post office; "Old Sam" Smith, C. C. Furr, Dick Morris, G. L. Payne, of Frankfort, Ky., and T. W. Cochran, of Louisville. At Deshler they will be joined by an old friend of the club, Dr. A. E. Elliott, of Lodi, O., who will make his initial "cast" as a "Kingfisher." Mr. D. G. Edwards, of the C., H. & D., has made things pleasant for the party, and his office and the *Commercial Gazette* staff will be looking for a bar'l o' fish—more or less—soon after they get the good fishing places located in the Manistique Lakes.—*Cincinnati Commercial of late date.*

Game and Fish Protection.

Maine Protection.

Editor Forest and Stream:

In your paper June 8 I see Manley Hardy, of Brewer, has taken exceptions to my criticisms made to you on his article entitled "Ninety Deer," and on the face makes out a very good case against the Maine Commissioners, in support of that dilemma he manufactured in his former article, with two horns, which he dubbed dishonesty and stupidity. The way he has told the story and the way he has got his certificates is a surprise to me, leaving out that part which is a key to the whole, which if added would change the meaning. He seems to be very cute in this, but leaves his tracks uncovered and easy to trace. I am not going to accuse him of dishonesty and stupidity as he has us, but I think after reading his own certificates, with the addition of some I shall add from the same parties, if he is honest, "which I am disposed to say he is not," he will conclude to withdraw the horns and store them away among his curiosities, as an invention that didn't invent.

When he mixed up the pudding he omitted the flavoring, and only half baked. As the proof of the pudding is in the eating, and as I have tried it his way and found it as above stated, I now ask him to try it mine. I shall try and have it well done and flavored with full certificates.

Mr. Hardy says: "In regard to my statement that a prominent Bangor merchant offered to testify that he paid money to a warden not to see a deer he was shipping to a friend, and that he gave the name of the warden to whom he paid it, Mr. Stanley says: 'All I can say is that I think he is making an assertion that he cannot back up and I believe is untrue. * * * Can you believe a merchant can be found who is fool enough, even if he had done what Mr. Hardy says, to testify to anything of the kind? I challenge Mr. Hardy to produce the proof.' Well, I accept the challenge, and if it is damaging to the Commissioners or any warden, it is the fault of Mr. Stanley, as I give it at his request. Here are his certificates:"

BANGOR, Me., May 14, 1895.—This certifies that the undersigned, C M. Conant, of Bangor, Me., and A. C. Tyler, of Boston, Mass., with Jefferson Neally, of Munroe, Me., killed several deer in the fall of 1891 and wished to send one to Boston for Mr. Tyler. We went to the office of Geo. W. Harriman, of Bangor, and asked if he could arrange it so that the deer could be shipped. He replied that he could. One of the party paid him $2 and he agreed to meet us at the depot when the noon train left. Mr Harriman came according to agreement and the deer, which was marked for Mr. A. C. Tyler, of Boston, was shipped and was duly received in Boston.

Commonwealth of Massachusetts, } ss. C. M. CONANT,
Suffolk, Boston, May 16, 1895. } ALFRED C. TYLER.

These certificates are all right as far as they go, but in the mixing he omitted the following, probably by mistake, which ruins their flavor. The additions I herewith add to Mr. Hardy's affidavits, which I think Mr. Hardy will admit that the deer were legally shipped and that his pudding is ruined.

BANGOR, June 28, 1895.—*To Whom It May Concern:* This is to certify that our affidavit of May 14, 1895, published in the FOREST AND STREAM, in Vol. 44, No. 23, of the date of June 8, 1895, was procured from us through the personal solicitation of Manley Hardy, of Brewer, Me.; that it was given by us under a wrong impression and misunderstanding of the fish and game laws relating to transportation of game; that the deer referred to in the affidavit of May 14, above written, was lawfully shipped and was accompanied by the owner, Mr. Tyler, as the law required; that the $2 paid Mr. George W. Harriman, of Bangor, the game warden, also named in said affidavit, was for services performed by him in assisting us to ship said deer upon the express train, upon which it was not usual for the express company to transport such articles; that in so doing, as we now understand the whole matter, he did nothing that was improper or unlawful, or in any way compromised him as an officer of the law, but simply to accommodate us. CHAS M. CONANT,
A. C. TYLER.

BANGOR, July 20, 1895.—I, as the attorney of Tyler and Conant, of Bangor, Me., having been consulted in regard to the above affidavit and explanation attached, investigated the law thereto, find that said deer was killed in fall of 1890 instead of 1891, and that said deer could be legally shipped to Boston as Mr. Tyler desired, and that any pay that said Geo. W. Harriman received was for his service in aiding them in having it transported, as it all depended whether the express train would take them or not. I find that said Geo. W. Harriman done nothing that was illegal as a game warden in the above transaction. A. H. HARDING.

If you will refer back to FOREST AND STREAM of April 30, 1891, which contains the series of articles written by Miss Fanny Hardy and her father, entitled "Six Years under Maine Game Laws," Chap. 5, you will find these words, of which I have no comment to make, except that I heartily endorse them:

In speaking of sportsmen and wardens, she says: "If it should be asked after this part, Where is the good sportsman? it will certainly be asked after the second, Where is the good warden? He is not very abundant here, but in this immediate vicinity we have one man who deserves special mention. Mr. Eben G. Morse, of Eddington, is a warden whose justice, faithfulness and honesty are believed in by the people here. I have never but once heard him accused of anything which was not honorable, and that he did not do, although there was reason for the suspicion."

I refer you to this, as I wish to use his evidence, and the endorsement of Mr. Hardy and his daughter ought to have some weight in what Mr. Morse may say.

Here it is:

EDDINGTON, June 28.—*H. O. Stanley, Esq.* Dear Sir: In regard to the statement of Manley Hardy, as recently published in FOREST AND STREAM, that he offered to go with me to Tyler and Conant and get proof of the illegal shipping of game is not correct. I did meet Mr. Hardy on the street, and he commenced his prattle about violations and non enforcement of the game laws, as he always does when I meet him, and he used Mr. Harriman's name in connection with Tyler and Conant's and stated that Harriman assisted them to unlawfully ship deer, and that they paid him for so doing; but I had too much confidence in Harriman, and too little faith in Hardy or what he said, to take any notice of it. Mr. Hardy did not offer to go to Tyler and Conant with me as stated, nor did he ever offer to go anywhere with

me to get proof or in any way to help or assist in getting any proof of any violation, or give to me the least help in any way to enforce the laws or to protect the fish and game of the State; but I have good reasons to believe that he has rather been working against us.

A few years since Mr. Stilwell (as commissioner) sent me upon a trip into the northerly part of Penobscot and easterly part of Hancock counties. This was in the winter. The next summer I met a well-known hunter, trapper and guide (whose name I will give if wanted), who told me that he knew that I was about there at the time, as Manley Hardy wrote him that I was in that vicinity and to be on his guard. He also stated that if I had caught him, he would only had to call on Hardy to get money to help him out!

At the time of Hardy's daughter's writing the series of "Six Years under the Game Laws" (which I believe to have been dictated by him) she made many statements that were, to say the least, misleading. I corrected her, and gave her the proof that they were so; but no corrections were made in FOREST AND STREAM that I could detect.

As to the prosecution (or, as he would have it, persecution) of the man for selling salted trout, he was and had been for some time before selling them on the market square in Bangor. He might have been a peddler, but I have seen him for days at a time at his stand, both before and after his arrest, but never saw him elsewhere to my knowledge. The trout might have been, as he claimed, imported, but they were exactly in appearance like trout taken in the lakes of Maine, and he had no barrel or anything to show that they were not such.

What I wanted to have decided was if salted trout could be sold in close time, whether native, legally caught, or imported, and so told the man and he so understood it; and I requested Mr. Wentworth, if the man had to pay a fine, that so much of the fine as was coming to me (one-half) be remitted; but the man has paid no fine or costs.

You are at liberty to make such use of this as you deem proper.

Yours truly,
E. G. MORSE, Fish and Game Warden.

PENOBSCOT, *ss.*—June 29, 1895.—Personally appeared the above-named E. G. Morse and made oath that the statements by him herein made are correct. Before me,

CHARLES E. DREW, Justice of the Peace.

To support his assertions that trout, or "togue," as he calls them, were sold in close time in Augusta, he has brought forward the following letter from Mr. R. G. Leonard, written from memory and of which I need make no comments, and an affidavit from his daughter, Mrs. Fanny Hardy Eckstorm;

PASSADUMKEAG, Me., May 16, 1895.—*Mr Manley Hardy.* Dear Sir: In reply to your letter of the 15th inst., will say that I did write Mr. Stanley about the togue on sale in Augusta that winter. He wrote me that he knew of no arrests being made there for the illegal sale of fish, and said that they were not caught in this State, but came from Lake Ontario. Yours Truly, R. G. LEONARD.

To this may be added the following affidavit: This certifies that I, the undersigned, saw Commissioner Stanley's official reply to Mr. Leonard's complaint above mentioned, and the same was seen and examined by others interested in game matters, also that the commissioner's letter admitted the justice of the complaint, stating that lake trout had been sold in Augusta in close time as affirmed, but examination showed that the fish were taken in Lake Ontario; therefore the matter had been dropped.

This further certifies that at date the law absolutely forbade the sale of lake trout in close time; that Mr. Stanley's colleague had prosecuted the proprietors of the Bangor House, in Bangor, for serving on his table trout taken in a pond exempted by special law from the usual close time, and that the supreme bench, to whom the case was carried, decided that the law forbade selling in close time fish taken legally—as may be seen by reference to the Maine law court decisions, case of the State *vs.* Flarius O. Beal—Maine Reports, Vol. 75, page 289. FANCY HARDY ECKSTORM.

The fish mentioned above in State *vs.* F. O. Beal were togue, taken from Tunk Pond, in which there was no close time, and of another kind of fish from those mentioned by Mrs. Eckstorm.

Mr. Hardy further says: "These statements prove that Mr. Stanley either was ignorant of the laws relating to the sale of togue (the italics are mine) at that season, or that he knowingly allowed them to be violated with impunity. Let us see if this is so."

Mrs. Fanny Hardy Eckstorm says in her certificate: "This further certifies that at that date the law absolutely forbade the sale of *lake trout* in close time."

The only thing necessary for me to say is, that neither at that time, nor at any other, has there ever been any close time on lake trout in Maine.

I presume Mrs. Eckstorm not being familiar with the fish and game laws of Maine caused her to make the mistake in certifying to the close time on lake trout, for which I cheerfully excuse her. It can do me no harm, and I hope none was intended.

Notwithstanding Mr. Hardy's assertion to the contrary, I here state the fish I saw were not togue, and were unlike anything we have in Maine. I went with Mr. Thayer, of the Augusta House, "who had had these fish on his table," to the market where he bought them. The dealer took us to his refrigerator and showed them to us, and said they came from Lake Ontario, and were lake trout, which I have no doubt they were, for which there is no close time in Maine, or need of any.

Mr. Hardy further says: "I do not deny that for years trout have been in close time on the bill of fare at the Augusta House, and that I, a commissioner, appointed and sworn to see the game laws were not violated, had allowed this to pass unrebuked." This sounds cranky; yet I cannot believe he is tinctured with any blood of that kind. Neither do I wish to be understood as insinuating such. But can he point out any law making it my duty to interfere with Mr. Thayer by saying what he shall and what he shall not have on his bill of fare? There are no close times on bills of fare or on lake trout in Maine. But I have said enough about these Augusta trout. It is of no great importance what they were. They came from out the State. The case recently decided by the full bench in the case of the poor peddler, whom Mr. Hardy says we abused, decides they were not contraband, even if they are what Mr. Hardy says they are.

Now as to the last question, "Mr. Stanley says, 'If Mr. Hardy knows so much about the illegal shipping of deer from Bangor why don't he inform the Commissioners, which he has not done?' My answer to this is: that after trying in vain to call the attention of wardens to it, finally at the meeting of the Fish and Game Association in Bangor a year ago last winter, when both Commissioners and many wardens were present, I not only made the statements of which he here speaks, but stated on the authority of a member of the Association that at least 200 deer had been sold to marketmen that season, and I gave proof that only about twenty were skinned here, showing that only these were cut up to sell in Bangor."

My answer to this is: that he did make the assertion he states, but that he did not offer to produce one iota of proof of illegal shipment, and never did to the Commissioners of Fish and Game to my knowledge, nor ever gave them any help to enforce the laws. Mr. Hardy further says: "I also stated how the wardens pocketed fines belonging to the State, and gave an instance of one who sold me over $100 worth of seized hides and who, Mr. Stilwell said, kept the whole part of the proceeds belonging to the State; and I said that the warden I referred to was then sitting in front of me and I called on him to rise and deny it if he could. I ask Mr. Stanley if that is not being interested in game protection and informing the Commissioners?"

I will say in reply: Mr. Hardy did tell the truth. The man he speaks of did sit before him, but he was not a warden and had not been for some time, and for the very reason Mr. Hardy speaks of we had refused to recommend his reappointment or to employ him. I have no doubt the man had pocketed fines, but Mr. Hardy produced no proof, or offered to, that the man had done so, although I presume he may have thought so by the telling of the seized hides, which the man had a perfect right to if they were legally seized. They were his.

If Mr. Hardy knew they were illegally gained, it is an open question whether he was not liable himself for buying them. Mr. Hardy further says: "Or has he forgotten stating in the store of S. L. Crosby before he left Bangor that nine-tenths of what I said was true?" No, I don't recollect anything of the kind, but will say that as far as the charge against the warden (who was not a warden at the time) was true, and for that very reason was struck from the list and had not been employed for some time.

As for his assertions about deer being shipped from Bangor, I believe in part to be true, but not to the extent he asserts. Assertions are no proofs.

I still say that Mr. Hardy has never produced a single case or offered to—to my knowledge. If he has done so, he can easily cite the case, and I will cheerfully retract my words and ask Mr. Hardy's pardon. Assertions through the newspapers should never be made unless you can back them up with the evidence.

There are several other assertions in his article of the same ilk, but of little importance, which I shall not notice, as I have not the time or inclination.

In closing I will say I don't intend to have any more controversy with Mr. Hardy through the newspapers, and will say the worst I will accuse him of is his apparent ignorance of the real interests of fish and game matters in Maine, and some points in the fish and game laws with which he don't appear to be familiar. HENRY O. STANLEY.

DIXFIELD, July 15.

Circular to Maine Wardens.

Item 1. Wardens will serve under orders from or by virtue of contract for service with the commissioner, and in either case will be allowed $2 per day, including expenses, unless different rates are agreed upon. Provided, however, that when ordered long distances from their usual field of labor, extra allowance will be made for necessary transportation.

Item 2. Wardens, while on duty, will make weekly reports in writing to the commissioners, stating location and nature of work for each day covered by report, and also how to communicate with them if desired. If not on postal route, report must be sent as soon as such route is reached, giving reason for delay.

Item 3. All claims of wardens or others against inland fisheries and game department must be in duplicate and rendered to commissioners at end of each month. Blanks for same will be furnished by commissioners upon application.

Item 4. Wardens will not employ aid, except in arrests and service of criminal processes, without authority from the commissioners, and when so employed must file voucher with charge for same.

Item 5. Wardens will make themselves familiar with their duties as fire wardens; ascertain the names and addresses of owners and agents of wild lands, and promptly notify them of any forest fire, beyond their control, on land of such owners and agents; and for that purpose may use telegraph and telephone at expense of the State.

They will also ascertain origin of fire, and names of persons and parties kindling the same.

Item 6. Wardens will make no settlement, nor receive any money in settlement for the violation of any fish and game law, or any offense against the same. Offenders must settle at court. Offenses are punished by fine, of greater or less sum, or by imprisonment, or both, as court may determine. All fines for violation of fish and game laws, except in local or special cases where the law otherwise provides, belong to the county and not to the State as formerly.

Item 7. In the services of all processes, civil or criminal, wardens are entitled to regular officer's fees, to be paid by the county or court to whom fines are paid, such as arrest, travel, conveying and keeping prisoner, summoning witnesses and travel for same, attending court, amount paid for necessary aid in arresting, keeping and conveying prisoner. Fees for service of mittimus should be taxed thereon.

Item 8. The law prohibits taking trout less than 5in. in length, and sea salmon and landlocked salmon less than 9in. in length. This law has been commonly violated. It is important that it should be understood and enforced. We cannot have large fish if we destroy the small ones. Wardens will give due attention to the enforcemant of this law.

The Kennel.

FIXTURES.

BENCH SHOWS.

Sept. 9 to 13.—Industrial Exhibition Association's annual bench show, Toronto, Ont. C. A. Stone, Sec'y and Sup't.

Sept. 17 to 20.—Rhode Island State Fair Association's third annual bench show, Narragansett Park, Providence, R. I.

Sept. 17 to 20.—Orange county Fair Bench Show, Newburgh, N. Y. Robert Johnson, Sec'y.

Sept. 17 to 20.—Montreal Kennel Association's show, Montreal, Can. Geo. K. Lanigan, Hon Sec'y-Treas.

Sept. 24 to 27.—New England Kennel Club's second annual terrier show, Boston, Mass. D. E. Loveland, Sec'y.

Oct. 8 to 11.—Danbury, Conn.—Danbury Agricultural Society. G. L. Rundle, Sec'y.

1896.

Feb. 19 to 22.—Westminster Kennel Club's twentieth annual dog show, Madison Square Garden, New York. James Mortimer, Supt.

FIELD TRIALS.

Sept. 2.—Continental Field Trials Club's chicken trials at Morris Man. P. T. Madison, Sec'y, Indianapolis, Ind.

Sept. 10.—Morris, Man.—Manitoba F. T. C. John Wootton, Sec'y, Manitou.

Oct. 29.—Assonet Neck, Mass.—New England Field Trial Club's fourth annual trials. Arthur R. Sharp, Sec'y, Taunton, Mass.

—, Morris, Man.—Northwestern Field Trials Club's Champion Stake. Thos. Johnson, Sec'y, Winnipeg.

Nov. 5.—Chatham, Ont.—International F. T. Club. W. B. Wells, Sec'y.

Nov. 7.—Newton, N. C.—U. S. Field Trial Club's Trials A. W. B. Stafford, Sec'y, Trenton, Tenn.

Nov. 11.—Hempstead, L. I.—National Beagle Club of America, fifth annual trials. Geo. W. Rogers, Sec'y, 250 West Twenty-second street, New York.

Nov. 18.—Eastern F. T. Club, at Newton, N. C. W. A. Coster, Sec'y, Saratoga Springs, N. Y.

Nov. 25.—Continental Field Trials Club's quail trials at Newton. P. T. Madison, Sec'y, Indianapolis, Ind.

Dec. 2 to 4.—High Point, N. C.—Irish Setter Club's trials. Geo. H. Thompson, Sec'y.

Toronto Show.

TORONTO.—Owing to a mistake on the entry forms of the Industrial Exhibition Dog Show, Sept. 9 to 13, it appears that the fee for registration or listing is 50 cents each, when it should read that the registration fee is $1, while that of listing is only 25 cents. I would call attention to Canadian exhibitors that the Canadian classes are for dogs owned in Canada, and who have never won a money prize in Canada, United States or Europe at any recognized show. These classes are made for the purpose of allowing a large number of those who are desirous of exhibiting, but know that they have no show against the crack dogs of America. Classes for dogs and bitches will be divided if there be five or more of either sex entered. A puppy class for St. Bernards; rough or smooth coated, will be added to the prize list of the Toronto Dog Show Class 16½ for dogs and bitches, first prize, $10; second prize, $5; third, diploma. C. A. STONE, Sec'y of Dog Show.

English Setter Type.

NEW YORK.—*Editor Forest and Stream:* The remarks of "Albert" in FOREST AND STREAM of Aug. 10 contain much that is wise and true. His reference to the sortiness of cocker spaniels well illustrates how type can be established by breeding to a standard which all agree to and which all understand.

The spaniel club judges, I think, are unanimous on the matter of type, and there is a consistency in their judging which engenders confidence on the part of the public, besides furnishing fixed lines for the guidance of breeders. There are not the bewildering upheavals of all the records which occur alternately when English setters are judged at succeeding shows. To be of any value, there must be an approach to consistency in the records. If Towser gets first to-day and Rival gets vhc., the public infers that Towser is a good deal better dog than Rival; but if to-morrow Rival gets first and Towser vhc., the public does not know anything worth knowing about Towser and Rival. Judgments which are directly opposed to each other are worth nothing. If one is right, the other must be wrong. Which one is wrong the public cannot determine, but the public can get tired and disgusted and can turn its back on the whole matter. This constant reversal of decisions, one judge against another, may be very good for a few breeders who have breeds corresponding to the types of the two opposing camps; for, knowing the type preferred by the judge, they know when to show and when not to, and of course throw their influence in favor of their favorite. This serves more and more to make the opposing types distinct. The result is not, as one might suppose, two permanently distinct types, but a loss of all type. Breeders get careless and trust more and more to luck. If they breed carelessly, they may consider that if they miss one type they may strike the other. There is nothing fixed definitely as a standard. Guesswork or carelessness supersedes intelligence, enthusiasm and industrious effort. Men who have a just pride in breeds which are true to a recognized standard lose interest in those which are bred carelessly and loosely to a shifting or double standard.

As "Albert" says, English setters can be bred to a type as cockers are. The same care and unanimity of action applied to the setter would have results of the same successful and pleasing nature as those applied to the cocker. There must be but one standard, and the judges must judge by it. As long as there are two opposing camps, even though they profess to use the same standard, the English setter will lose type. Making standards to fit dogs, instead of breeding dogs to fit standards, may be remunerative to a few for a short time, but in time it is certain to end injuriously to the breed of setters and its interests.

I regret that I misunderstood "Albert's" remarks as to judging at New York. He claims that the first four dogs showed English setter type, and that leaves the inference that the rest of the class did not. Surely a setter class at New York should be of such high quality that all the dogs in it would be of the same type. There would of course be the little individual differences, perhaps so minute that careful inspection would be necessary to detect them, even if the type was uniform; but there is a possibility of breeding to type so closely that all the individuals of a breed may appear alike to the eye at first, and only by the more careful comparison of details can the differences be noted. The general effect is the impression of likeness. The unlikeness must be searched for. When there is a uniformity of type, there is that quality so pleasing to the eye and so gratifying to the breeder, that is, sortiness. Such results can never come from haphazard breeding and mixed or many standards.

The matter is worthy of the serious consideration and action of the setter breeders of America, if that beautiful dog is to be kept up in the future to the high place he held in the past.

The differences are not confined to type entirely. The sizes vary greatly, from the slender, weakly dog, of feeble constitution and weak mind, and the little, runty, toy setter, up to large, coarse dogs, or tall, thin, flat, lank dogs, whose ancestry might be accredited to a dozen foreign sources were there not written evidence that the dog is well bred, and in the face of such written evidence good breeding must be conceded whether the dog is a freak or a fine one. BREEDER.

Gordon Setters.

NEW YORK.—*Editor Forest and Stream:* Please state that exactly the same prizes will be paid at the Rhode Island dog show, next month, in the Gordon setter classes as to English and Irish setters.

Last September the entries at the Providence show were 48 English, 28 Irish and 38 Gordon setters, and immediately upon reading their premium list, a few weeks ago, in your paper, I wrote the secretary protesting against any distinction in prizes against Gordons, and stating that I would not exhibit myself, and hoped other Gordon setter owners would refuse to exhibit, where our dogs were not put upon an exact par with all other setters.

This remonstrance caused the increase noted above. If dog shows are really held for the improvement of all dogs and profit is only incidental, I see no consistency in inviting and entering a poorer exhibit by offering poorer premiums, and as a Gordon man I resent any action that places our setters below other kinds. I object to Gordon setters (the handsomest of all dogs, bar none) being put upon the same grade in the premium list with pugs, terriers and bulldogs. And I own as many Irish setters, winners in field trials and bench shows, as Gordons.

JAMES B. BLOSSOM,
President Gordon Setter Club of America.

Cocker Spaniels.

OMAHA, Neb.—*Editor Forest and Stream:* Through the columns of the FOREST AND STREAM I would be pleased to hear if there ever has been bred a pure white cocker spaniel. My solid black cocker bitch Reham Raven Beauty (37,347, King Raven by Lady Fulton), whelped seven puppies to King Raven (Champ. Black Duke by Topsy S.), one red, five black and one pure white. I have bred quite a number of thoroughbred cockers, and I wish to say this white puppy has all the appearance of the right sort, except the color. R. F. MAHER.

POINTS AND FLUSHES.

In our business columns, J. Wrinkle, Lee, Mass., offers English setter. Rockland Beagle Kennels, Nanuet, N. Y., offer beagles. H. Hayes, Dexter, Me., offers foxhounds. W. A. Rice, Springfield, O., offers pointers. Sunflower State Kennels, Woodston, Kan., offer St. Bernard puppies. A. L. Bailey, Plymouth, Mass., offers pointers. F. Sandys, Eau Claire, Wis., will train dogs. H. Smith, N. C., gives particulars of training.

Prince, a St. Bernard dog owned by Mr. Franz Mayer, of this city, died of poison on Aug. 12. He had won some prizes and was a popular pet in the neighborhood of his home. Of him the *Sun* says:

"According to Mr. Mayer the dog knew as much as a human being. Whenever anything was needed from the baker, butcher or grocer, Mrs. Mayer would hang a basket containing the written order in Prince's mouth, and he would go straight to the store she sent him to, never confusing the orders. He would wait at the dealer's for the order and always bring the goods back safely. Another of Prince's accomplishments was known to every member of the East Side Bowling Club, which has met for several seasons at Prince's, at Eighty-fourth street and Avenue A. Mr. Mayer is a member, and on bowling nights he used to send Prince on ahead carrying a bag containing his favorite ball, which weighed 18lbs. Prince guarded the bag until Mr. Mayer arrived, and was then sent home with orders to return at 10 o'clock. The bowling sessions always ended at that hour, and prompt to the minute Prince would come barking into the place. Prince had records as a life-saver, having on several occasions jumped to the rescue of children who had fallen into the East River at the foot of East Eighty-ninth street —a favorite playground. The last occasion was on April 22, when he saved a little girl named Elizabeth Katter. Mr. and Mrs. Mayer feel Prince's death as though they had lost a child, and the children as though they had lost a brother."

The grouse trials, run near Bala, beginning July 30, had 10 pointer puppies, 6 setter puppies, and 19 in the All-Age Stakes, and there were 5 braces. In Pointer Puppy Stakes (puppies of 1894, £5 5s. each; first, 30 guineas; second, 20 guineas; third, 10 guineas), Mr. P. D. Williams's Lanarth Bolton (Beacon—Bess) won first; Mr. J. Earle Lloyd Lloyd's Totnes Rattler (Totnes Vril—Totnes Zoe) won second, and third was won by Sir W. Wynn's Dawn of Gymru (Woolton Druid—Bertha of Drayton). In the Setter Puppy Stakes (puppies of 1894; first, 20 guineas; second, 12 guineas; third, 7 guineas), Col. H. Platt's Madryn Earl (Aldon Tam—Madryn Fan) won first; Col. H. Platt's Madryn Flash (Spot—May of Arvon) won second; J. F. H. Owen's Luna (Arvon—Deutzia) won third. A champion prize of £10 went to the best of the two puppy winners. The Brace Stakes resulted as follows:

First, Sir W. W. Wynn's w. b. pointers Rob o' Gymru (Banjo—Duchess) and Bess o' Gymru (Banjo—Juno), 20 guineas. Second, Col. C. H. Legh's liv. w. pointers Druid II. (Howdah—Duchess) and Hector III. (Herald—Lache), 10 guineas. Third, Sir W. W. Wynn's liv. w. pointers Poll o' Gymru (Plum—Sybyl) and Plum o' Gymru (Ightfield Dick—Doxey). The All-Age winners (60, 30, 20, 10 guineas, first, second, third and fourth) were F. C. Lowe's Ben of Kippen (Robket R.—Laura of Kippen), first; second, B. J. Warwick's Dolly of Budhill (Meirelbeke—Devon); third, W. Arkwright's pointer Tap (Rapp VI.—Sella Price); equal fourth, Sir Watkin Wynn's Poll o' Gymru (Plum—Sybyl) and E. Bishop's Polly Pedro (Senor Don Pedro—Jeanette).

If you have tears, prepare to shed them now. Gentle reader, brace up your nerves for the perusal of the most affecting meeting in the whole of kennel history. The battle of Yorktown is forgotten; George Washington, Charlie Mason and Jim Watson are forgiven. International caresses have been exchanged by Mr. Webb, of America, and Mr. Jackson, of England. The *American Field* records the touching incident of Mr. Webb's visit to Bath in these sympathetic lines. We cannot provide slow music for all our readers, but let them send their kennel lad out to whip the puppies the while they peruse the following:

At Bath he was met by Mr. Cyrill W. Jackson, who escorted him to his beautiful home, the trip leading him along the River Avon, Mr. Jackson thoughtfully planning this to give Mr. Webb an opportunity to enjoy a bit of English scenery; but this was not all, for a most graceful and the greatest compliment which could be given an American awaited him. As the two emerged from the dense foliage and turned towards the house there, flying freely from a staff on the lawn, was the American flag, and as the stars and stripes fluttered in the breeze Mr. Webb's eyes moistened from patriotic emotion, and as soon as he recovered from his surprise at this unlooked-for consideration he thanked his host heartily, assuring him the joy of that moment would be a joy forever.

Readers, let us slobber!

In the next column of the *American Field* we lighted upon a notelet, a long way off the above, not near it, no connection with it, but nevertheless "the long arm of coincidence" seems to cuddle together paragraph and advertisement. This is the notelet:

Mr. Cyrill W. Jackson, of Bath, England, intends visiting America in August or September.

When you have done smiling, and can take your finger from the side of your nose, please note that Cyril is spelled the same odd way in both paragraphs.—*Stock-Keeper (England).*

It is gratifying to learn that the fatalities from rabies are not near so numerous or serious as one might be led to suppose from the alarmist nature of many of the newspaper reports. From the Registrar-General's returns we find the death rate in the United Kingdom to have been as follows:—1890, 8; 1891, 7; 1892, 6; 1893, 4; 1894 return does not transpire, but is, we believe, still less, which means one death to about 7,000,000 of population.—*Our Dogs.*

Those who intend visiting the trials to be held at Morris, Man., would act wisely in engaging accommodations beforehand. From reports which come in, the trials will be well attended. It is almost certain that the accommodations of the Commercial Hotel will be strained to the utmost. It would be advisable for the proprietors to engage more accommodations in adjacent houses, which would serve as an annex to to the hotel, to meet the overflow of guests which are sure to be there.

The whippet racing, to be held as an adjunct of the New England Kennel Club's annual terrier show, promises to be a complete success, judging from the interest in it and preparation for it. We hear that Mr. Loveland's trip to New York and vicinity, to promote the whippet interests, was quite successful.

The cherished beliefs of boyhood are knocked over one by one by the vandal hand of Time. George Washington's hatchet has been shelved with the bow and arrow of cock robin. In the daily press is a story which relates that Billy Tell did not shoot the apple off his son's head; in short, it states that it is an old Norse tale, many centuries older than Tell's time, the only change being in the names of the chief actors and localities. In an unfeeling-like manner the story proceeds as follows:

"Another equally well-known story is that of the slaughtering of the dog Gellert by Llewellen. This has been so far localized that even the grave of the dog is shown at a place to which it has given name, in England. Yet in the old collection of stories called 'The Seven Wise Masters,' which was translated into English from the Latin, and into the Latin from the Hebrew, and into the Hebrew from the Sanskrit, relation is made of a lord who has an only son, an infant, and a hound which he loves greatly. The nurse goes into the room in which is the child's cradle, and seeing it overturned and the dog covered with blood, rushes out to tell her master that the dog has killed and devoured his son. The father draws his sword and stabs the hound; but when the cradle is removed the child is found to be beneath it, safe and sound, and near to it a dead serpent is discovered which the dog had killed in defense of the child. This, with the substitution of the wolf for the serpent, is precisely the story of Gellert, and we may see from it that the circumstances, if they ever happened at all, must have happened not in Wales five or six centuries ago, but in India at least a thousand years earlier."

Alas! that so noble a hound should be a myth.

"In sooth he was a peerless hound,
The gift of roal John,
But now no Gellert could be found,
And all the chase rode on."

"'Hell hound! by thee my child's devoured!'
The frantic father cried;
And to the hilt his vengeful sword
He plunged in Gellert's side."

"Looking over the club's standard of the corded poodle," says the *Stock-Keeper*, "we see that they require the head to be *long, straight*, and *fine*, and the skull not broad. This might describe a borzoi's head. If by 'straight' no stop is intended, we do not agree, and we protest against poodles being required to have fine and narrow skulls. We give another description and at present without the author's name: 'Head, wedge-shaped, showing stop and cheek very broad, almost flat, giving the dog great brain capacity; occiput strongly developed.'"

Collie Scotforth, by Metchley Wonder out of White Heather, in our English exchanges is mentioned as having been sold to Capt. R. Woodget, and will be sent to Australia. He is the sire of nearly fifty winners and is credited with about two hundred prizes.

The wire-haired fox terrier Roper's Nutcrack, which sold at Manchester recently for 121 guineas, is reported as having been sold to Mr. R. Phillips, South Shields, Eng., for £210.

Bob Armstrong informs us that while fishing at Highland Lake recently with a party he had a narrow escape from death. A lightning bolt struck a tree close by him, while five or six other bolts killed cows and split trees in rapid succession.

Care of Dogs on the Chicken Grounds.

THE matter of feeding is important for the consideration of the shooter, when some miles away from town in the chicken country, or when in small country towns which have no meat market. It is particularly important if the shooter has neglected the wise precaution of taking a supply of dog biscuits for food for his dogs. But there is an easy way to keep his dog's needs supplied if he only keeps them in mind while shooting chickens. The old birds, whose years and struggles have toughened them to a degree which places them beyond a dish for the table, make excellent dog food. Their preparation for dog food is simple. The skin, with its coat of feathers, is stripped off, the dead birds are thrown into a pot and boiled without further preparation. The chickens are thrown to the dogs, about two to each dog. On such food the dogs will keep in excellent condition and do their work satisfactorily.

A good bed at night is quite necessary for the working dog. On the prairie, when chicken shooting, this matter is too often neglected by the hunter. He is tired himself, and after giving the dog his supper he too frequently leaves him to shift for himself. There is always an abundance of coarse hay in a prairie country. It is so cheap and abundant that there is no excuse whatever for neglecting to provide the dogs with bed and shelter. A few sticks set up beside a stack, so arranged as to form the necessary frame work, covered up with hay 3 or 4ft. deep, make a most comfortable kennel. Put in plenty of hay for the dog to sleep on. This kind of temporary kennel can be easily built by itself, independently of any stack or building. All that is required is plenty of hay and a few sticks.

Manitoba Field Trial Entries.

CHATHAM, Ont.—*Editor Forest and Stream:* Kindly say for me in your next issue that my Derby entries to the Manitoba field trials—Selkirk Dan, Selkirk White and Selkirk Belinda—were sent to Manitoba on July 6, for the purpose of being trained for the Derby of that club, and are now at Dominion City, Manitoba, in charge of J. J. Spracklin. They will be on hand at Morris on Sept. 10, if alive. W. B. WELLS.

Game Laws in Brief.

THE *Game Laws in Brief*, new edition, now ready, August 27, has new game and fish laws for more than thirty of the States. It covers the entire country, is carefully prepared, and gives all that shooters and anglers require. See advertisement.

Yachting.

OUR first views of the Vigilant-Defender protest of July 22 were so very different from those expressed by yachtsmen and in print that we have hesitated to present them; but a careful consideration of the whole matter of the meetings of these two yachts at the starting line on each occasion when a dispute has arisen, on July 22 and Aug. 6, leads us to the conclusion that the former, if not the latter as well, is covered by a section of the rule not yet referred to by anyone who has discussed the question.

If we are not greatly in error the alleged fouling in the first case, if not the second, comes under Section 14 of the New York Y. C. rules, being but the old story of the "Tuxedo foul" in 1890 and the Volunteer-Gracie foul of 1891. In the race of July 22 the two yachts were approaching a mark to pass it on the required side without tacking. The facts are that both elected to start on the west end of the line, close under the Scotland Lightship, Vigilant standing along right above the line, close hauled on starboard tack, with Defender on a parallel course on Vigilant's weather bow, and always nearer the lightship. Both intended to pass the mark as soon as the gun fired in a very few moments, and, when it did fire, Defender, now very near the lightship, bore away and crossed the line, first crossing Vigilant's bows at a distance which is claimed by Vigilant to have been very dangerously small, and by Defender to have been too great to have involved risk of fouling.

Throughout the whole maneuver, as we saw it, Defender was so far ahead that no question of overlap can be raised, and the nearer to the mark, thus being the inside boat. Under such conditions, the provisions governing port and starboard tacks, and the right of way of a yacht close hauled over one going free, become inoperative, and under the imperative language of Sec. 14, "The outside yacht must give the inside yacht room to pass clear of the mark."

At best the risk of the position devolved on Vigilant; though close hauled on starboard tack, she, running just aweather of the starting line, was in a position which might at any moment bring her within the operation of Sec. 14, compelling her to give way to a yacht nearer the mark and inside of her. The claim made in the protest, that she being closehauled and Defender free, she could hold the line until ready to cross, and force Defender on the far side of the mark, is not warranted by the rules of any club.

In the second case, the general conditions were similar, with the exception that instead of being right on the line, the two were just north of the Brenton's Reef Lightship, the course being S. W. ½ W. and the starting line between the Lightship and the Sylvia, almost at right angles with the course. The maneuvering was thus done just above the line and a little outside of one of the marks, both boats working to pass this mark on the required side without tacking at gun-fire. When the alleged bearing away occurred, both, shortly after tacking, were heading for the lightship on starboard tack, Vigilant, the leeward boat, proposing to force Defender outside of the mark while crossing herself. Both boats were pointing at, if not above, the markboat, finally bearing away hard to round under its stern, and there may be a question whether their positions placed them outside the provisions of Section 14; but to us it seems otherwise. Both were about to pass a mark on the required side without tacking, the inside boat having an overlap, and it would seem that she was entitled to room at the mark.

Had the Volunteer-Gracie affair been made, as it should have been, the basis for a plain and forcible statement from the regatta committee of the year as to the rights of an inside yacht which can pass a mark without going on the other tack, such occurrences as these would be less frequent; but there is still a wide difference of opinion among practical yachtsmen as to the right of way at a mark.

To us it seems that in each of the present cases Vigilant was in the poorer position, being the outside boat, and liable at any moment to be placed at a serious disadvantage.

THE most interesting news of the week, and we hope that it may prove true, is that two new boats will be built next fall to beat Queen Mab; one to be designed by Mr. A. Cary Smith for Mr. J. B. King, owner of the schooner El Semarie, and the other to be designed and built by the Herreshoffs for Rear Com. J. C. Bergen, yacht Hildegarde, New York Y. C.

The task of beating Queen Mab, designed in 1891, with boats designed in 1895, should be such an easy one that we sincerely hope that the designers will not stop there, but will at the same time attempt to produce something that is not only faster, but as wholesome and handsome as the famous Watson cutter. Queen Mab was designed solely for British racing in the 40-rating class of 1892, with no thought of crossing the Atlantic. She is now, with an enlarged sail plan, but 63.28ft. racing length by the Seawanhaka rule, or nearly 2ft. under the limit of the class, 65ft.

A cutter of 58 to 59ft. l.w.l., about a foot shorter than Queen Mab would be allowed 5,000sq. ft. of sail to bring her within the limit of the class; and on such dimensions it should be possible to build a boat that would be faster, her added power suiting her better to American conditions; and that at the same time need not be a useless machine. The construction of Queen Mab should keep her afloat for nearly a generation, and long after her life as a racer is over she will have a value as a serviceable and shapely cruising craft. The best thing that could happen in yachting to-day is the building up of a few strong classes with good serviceable boats of this general type, on which an owner can live and race without a steam tender to feed his big crew and to carry the "cruising trim."

Now that Defender has sailed ten races, meeting Vigilant in nine, to say nothing of Volunteer and Jubilee, the experts are at work on elaborate computations intended to forestall the uncertain result of the coming meeting with Valkyrie III. It would take a wise man, however, to reconcile the inconsistencies in the performance of the new boat, and, after duly comparing the long run to New London, the run to the Vineyard and back, the windward work and the leeward or reaching work off Newport, to say the Defender was five, ten or twenty minutes faster over a 30-mile course than Vigilant in her '93 or '95 form; or that the latter is faster by a definite amount this year than last. The races of Vigilant with Valkyrie II., Jubilee, Defender and Britannia, and the races between Valkyrie III. and Britannia have furnished a mass of figures from which a man may prove conclusively, according to his individual prejudices and sympathies, that any one boat is faster by a certain exact number of minutes than some other particular boat; thus demonstrating the inevitable success of Defender or Valkyrie III. as he may desire.

Rejecting as useless and misleading the times taken over different courses, some in different years, and under varying conditions, and drawing but a general conclusion from the races without resort to actual seconds in the timing, we believe that Vigilant is decidedly faster than in 1893-4, possibly 5m. over a 30-mile course; while Defender, though showing unevenly beside Vigilant in a close reach and giving some evidence of hard steering and loss of speed in a strong quartering wind, like the second Valkyrie, is at least 10m. faster than Vigilant to-day over the same length of course. That Defender is decidedly an all-around better boat than Vigilant seems proved beyond question, whatever the gain may be in minutes and seconds;

she goes through the water much more easily, especially in a sea, she carried a larger sail plan in a very satisfactory manner, and she has proved that from a bad berth under the other's lee she can walk out clear across her bows.

Thus far the new boat must be set down as a success; she is evidently a fast and able vessel, with no very bad faults and some remarkably strong points, notably with sheets hard in, and she is capable of further improvement. We were by no means the only ones who were deceived by her light bilge and have been surprised at her stability; but it is evident, now that she has been seen under her largest sail plan and with her keel exposed in dry dock, that her draft, sail area and displacement were all understated in the figures published prior to the launching. That advance of sail plan which has been visible on every new defender from Mayflower to Vigilant is not seen this year; in fact, we doubt whether she has 500sq. ft. in excess of Vigilant.

How much faster or slower she may be than Valkyrie III. we have no means of knowing; in which case we are no worse off than many who have already settled the whole matter. Never was less known about a Cup challenger by her own people than in the case of Valkyrie III., and, little as is known by those who watched her races with Britannia and Ailsa, yachtsmen on this side know still less. There is every reason to doubt the stories of excessive beam; the true figures are probably about 25ft. 6in., or 3½ beams to length as compared with Vigilant's 3⅓; this extreme beam being in Valkyrie, as the photos show, considerably diminished at the waterline amidships and rapidly disappearing forward and aft, and not, as in Vigilant, the indication of an abnormally full and round side. What stops Vigilant in a sea is not a few inches too much of extreme beam, but a full bow from the waterline upward, such as has seldom been seen on a fast yacht.

The stories about Valkyrie's lack of stability and bad performance may be quite true, though even this is not certain; and yet there is every reason to believe that these defects have already been partly remedied and will still further disappear, especially if the new steel spars prove lighter than wood; while it must be remembered that this display was made in such weather as has troubled few of the Cup races.

In praising Defender and condemning Valkyrie one very important fact has been overlooked. If any American yachtsman familiar with the Cup races of the last decade were asked off-hand which of the two yachts would be most likely to win over the Cup courses in September, both having the same length, about the same draft, displacement and ballast, and one having 26ft. beam to the other's 23, and 12,000sq. ft. of sail to the other's 11,500, he would give a prompt reply in favor of the wider and more heavily rigged boat.

We can fully indorse the newly made discovery that too much beam is a bad thing, that form counts for something, and that over-canvasing does not always pay. We knew all this long ago if it is against the laws of nature; but at the same time we submit that, on a waterline of 90ft., a beam of even 26ft. is by no means excessive, if skillfully handled, and is far more appropriate for the special work in hand than 28ft. The fact is that while much is known about Defender that must be highly gratifying to her owners and designer, the third Valkyrie is an unknown quantity, in a measure to her designer and owners, to a greater degree to British yachtsmen and entirely so to those on this side. Not until the pumps suck in the east dock of the Erie Basin some time about the end of the month will anything definite be known about her.

In lamenting the passing away of the June regattas, it has been the custom of New York yachtsmen for some years to point to the growing importance of the August cruise and the Newport races as more than offsetting what is generally recognized as a loss. After the very mild and uneventful "Jubilee" cruise of 1894, and the expedition of this year, we are forced unwillingly to the conclusion that the owners of all save the smaller yachts, these being outside the requirements for representation in the New York Y. C., do not want to race in any way, either in June or August. The cruise of this year has been well planned and well managed; business is better than in the last two years, and yet the past two weeks have been sufficiently quiet in the great business centers to allow yachtsmen to absent themselves; there are very many yachts in commission this year; the racing of Defender and Vigilant has awakened a keen interest among yachtsmen; the generous and spirited efforts of the club's officers and some individual members have provided many prizes in addition to the very liberal offerings of the club. Apart from the Vigilant-Defender controversy, which is entirely an outside matter, the annual cruise of 1895 is justly entitled to be set down as a success. The fleet has been large, the weather perfect, free from storm and rain and with at least a working breeze on every race day, with special good luck on the hard run of the cruise to New London; with abundant sociability and good fellowship and no delays or mishaps; but looked at, as it really is, as the major port of a whole racing season, what does it amount to?

The cruise lasted just nine days, going to pieces most suddenly and unexpectedly on the evening of the ninth. It included four squadron runs with races for all who chose to enter; three special races, one practically limited to the largest yachts and two open to all classes; and two lay days, one a Sunday. The four days of special races off Newport for all classes, which were actually a part of the cruise and intended to increase the importance of this annual yachting carnival, were scorned by the yacht owners in a way that must be intensely disappointing to those who have given time and money in the interest of yacht racing. The largest number of starters in any race of the cruise was twenty-six, while thirty-two yachts in all took part in the racing.

The schooners were stronger than usual this year, with the new Amorita, with Lasca returned from abroad, and with Loyal and Neaera racing all the time. The single-stickers were notably weak outside the largest class, which at best only numbered four and oftener two boats; but with such famous craft as Vigilant, Defender, Jubilee and Volunteer one does not look for a very large fleet to make keen racing. The smaller classes, which should be well filled, included a handful of boats covering a wide range of sizes, so that there was hardly any class racing. It is a sorry consolation to think that yacht racing is but little more active abroad than here, and that even Cowes week has failed to galvanize it into more than an appearance of vitality.

One contributary cause of this state of stagnation on both sides is the building of the great syndicate racing craft and the consequent discouragement given to the individual ownership of usable and raceable yachts; such a craft as at least, if in no sense cruisers, may be raced without an attendant steam freighter. The whole question of extreme size, cost and draft, racing construction, big crews and finkeels, presents many and serious difficulties; but it is at least safe to say that one of the most effectual steps toward a healthier condition in yacht racing would be the removal of the America's Cup competition to a class of single-stickers of not over 70ft. l.w.l., with crews berthed and fed aboard, and under certain wholesome restrictions as to construction, cruising trim in ordinary races, etc. The steam freighter and boarding house, the fish hook anchor and string cable on the bows, the flimsy racing hatches, and the absence of staunch ground tackle and fittings in an emergency such as that in which Vigilant was nearly lost in 1893, have come naturally enough and there is no use now in mourning over them; but it can hardly be denied that the progress from Genesta in 1885, with owner, captain and entire racing crew living comfortably aboard day after day through the whole series of postponed races, down to Vigilant, Defender and Valkyrie III., empty shells like an old-time sandbagger and utterly dependent each on her steam tender, denotes that the *fin de siecle* decadence is not confined exclusively to music, art and the drama.

Whatever the destiny of America's Cup next month, we should like to see a new challenge tendered and accepted not later than the last of October, and an order placed with every prominent designer, American and British, for a possible challenger or defender as the case may be of not over 60 to 70ft. waterline; the national representatives to be selected by trial races next season off Sandy Hook and about the Isle of Wight. Such a condition of affairs might confidently be counted on to produce a fleet of half a dozen boats on each side, leaving a strong fleet to continue the home racing after the challenger was withdrawn for the ocean voyage. All this may be visionary in the extreme, and may even shock some who believe in the special consecration of the syndicate 90-footer as the only thing good enough for international racing, but we have no fear that it will fail to commend itself to the majority of earnest yachtsmen as something too good to be true.

Removal of Markboats.

Editor Forest and Stream:

In the recent regatta of the Indian Harbor Y. C., sailed on July 27 last, quite an interesting point was raised, a question that I do not recollect ever having come before a committee.

The course sailed over by some of the classes was from the starting line almost southeast to a buoy placed by the committee near Center Island, turning the same and returning to final line, then over other portions of the course. Shortly after starting the wind, which had come in from southwest, had increased until something like a gale was blowing. When the yachts that had to turn the mark in question reached the place where it should be, they discovered that it had been carried away. The regatta committee, however, anchored the tug used as a committee boat, and raised the signals on her, denoting her to be a mark to turn.

Several of the boats turned the tug, among them the cabin cat Mary, belonging to Mr. W. E. Elsworth. Mr. Elsworth, with much pluck, sailed the entire course, finishing in good shape. A protest was lodged against Mary on the ground that she did not turn the mark as laid down in the sailing instructions.

Rule 15 of the Indian Harbor Y. C. reads as follows: "Instructions.—Each yacht entered for a race shall, at the time of entry or as soon after as possible, be supplied with written instructions as to the conditions of the race, the course to be sailed, marks, etc. Nothing shall be considered as a mark in the course unless specially named in such instructions. * * * The regatta committee shall have power to change the course or amend the instructions on or before the day of the race; provided notice of such change is given to each yacht before the preparatory signal is given."

Rule 20 reads as follows: "Removal of stake boat.—Should any stake boat, buoy or other mark be absent or missed from its proper position during the race, the question of the necessity of resailing the race shall be decided by the regatta committee."

In this case, however, the regatta committee made a mark of the committee boat, and several of the contesting yachts, including Mary and the one that lodged the protest, rounded in good faith.

The question remains, was the committee justified in doing as they did and should the protest be sustained or disallowed?

I have examined most of the club books and gone over their racing rules, and all of them from the New York Y. C. down are similar to those of the Indian Harbor Y. C. A short preamble heads the New York Y. C. rules, however, as to the decision of the committee being based on the rules so far as they will apply, and as no rules can be framed capable of meeting every incident and accident of sailing, that all attempts to win races by other means than fair sailing shall be discouraged. I do not find such a preamble in any of the books I consulted, save the racing rules of the New York Yacht Racing Association, which has a long article concerning the "management of races" at the head of their rules.

It strikes me that, in view of the coming races for the Cup, this is rather an important question. In such races it is usual for the committee to give the course to a tug that logs it off, anchors a mark, and then hoists club signal and anchors near the mark. In the event of the mark carrying away before a new one could be placed, and of both Cup contestants, or one of them, rounding the tug, if a protest were lodged against the winner because of the removal of the mark, as in the case referred to, has the regatta committee of the New York Y. C. power to declare the tug a mark?

NEW YORK, Aug. 7.

[The question raised by our correspondent is an important one, and so far as we know there is no record of a decision covering it. We should say, in the case of the Indian Harbor race, that the regatta committee acted within its powers in making a mark of the committee boat; and that if, as stated by our correspondent, the protesting yacht suffered no material loss from the change, there could be no ground for protest. Had it appeared that the chances of any yacht were injured by the change of marks, however unavoidable and necessary such change might have been, there might be a ground on the part of such a yacht for a protest. As we understand the case, the regatta committee acted in good faith in availing itself of the only possible remedy for an accident that could not have been foreseen; this action of the committee being understood by the contesting yachts which rounded the mark. Under the circumstances as stated, it would be unreasonable and unfair to decide the race off on a purely technical objection. It is quite possible for a case to arise in which one boat may be placed at material advantage or disadvantage by such a change of mark; but it is obviously impossible to guard against all contingencies, and such a provision as that quoted above from the Indian Harbor Y. C. rules seems a wise one, the regatta committee being presumbly qualified to decide as to the best course. No such provision exists in the New York Y. C. rules.]

The Definite Article.

THE propriety of using the name of a yacht without the definite article prefixed has frequently been questioned in this country, there being no recognized standard of authority. The use of the name alone, without the article, was severely ridiculed here only a few years ago as an English affectation; but, so far from this being the case, the usage of British yachting writers differs, many using the article invariably and others not at all. Only a short time since we read a report of a race by a regular yachting writer in which the article was used in one sentence and omitted in the next, at random.

Under the heading "The Defender' is Correct," the New York *Herald* attempts to settle the matter forever in a rather dogmatic manner of its own, as follows:

"A plea for the definite article is in order. This little word is one of the most potent and significant in the English language, and should be used and honored accordingly. Common sense, euphony and the laws of grammar demand this.

"It is incorrect to speak of the Cup defender as Defender. She is the Defender. There is more in this small monosyllable than appears on the surface. William the Conqueror, William the Silent, Richard the Lion-Hearted—all such names gain in dignity by this apparently trifling prefix. In like manner, though there are many O'Donoghues, there is only one man who has the right to style himself The O'Donoghue.

"For valid reasons, then, it is desirable that this forcible little word be used with the names of all vessels and with all other names except such as are distinctly outside its domain. While there may or may not be hidden virtue in words, it is certain that our admirable mother tongue is too often rendered cacophonous by an incorrect use of the definite article."

So far as the strict laws of grammar are concerned, the *Herald* is correct, but as to both common sense and euphony we must differ from it. To the landsman who looks upon a yacht as a mere inanimate assemblage of wood, metal, canvas and "ropes," it may seem but right and proper that the strict rules of grammar should be observed, as much in this case as in speaking of a trolley car or a typewriter. To the yachtsman, however, a yacht is a thing of life—swift, sensitive, lovable and almost possessed of intelligence. Such craft as Volunteer, Vigilant or Britannia have an individuality of their own which the true sailorman has quietly and unostentatiously recognized by the long established custom of naming them without the prefix. No one would question the propriety of this nomenclature as applied to a horse or a dog; we claim that it is quite as appropriate and euphonious in the case of a sailing yacht. In speaking of merchant ships and steam vessels the custom of the sea and the rules of grammar are as one; the exception in the case of sailing yachts may certainly be excused as a tribute to their special characteristics.

So far as the *Herald* has made any argument in order to apply it to yachts it would be necessary to speak of "Puritan the Defender," "America the Winner," "Genesta the Challenger," etc. With such a construction as this no one would dispute the introduction of the article, but it would lead to an absurdity this year.

To us a yacht possesses a vitality and individuality that is most fittingly recognized by giving her a distinctive name of her own; and we have no sympathy with those who would destroy or deny this individuality by coupling it to the definite article by using "it" in place of "she" in speaking of her, or by making it necessary to affix a long string of Roman numerals to distinguish her from others of the same name.

American Y. C.

MILTON POINT—LONG ISLAND SOUND.

Saturday, Aug. 10.

THE American Y. C. sailed a special regatta on Aug. 10, the weather being hot and sultry, with barely enough wind to carry the yachts once over the following course:

From off Milton Point around white spar buoy off Parsonage Point, 1⅝ miles, leaving same on starboard hand; thence around white spar buoy off Red Springs Point, Hempstead Harbor, 3⅞ miles, leaving same on starboard hand; thence around southwesterly stakeboat off Larchmont flying American Y. C. flag, 3⅞ miles, leaving same on starboard hand; thence across finish line off Milton Point, 1⅜ miles; total distance, 10¾ nautical miles.

The start was made at 12:10, Minerva being handicapped 4m. and Gossoon 1m. The 15ft. classes included two new boats—Trilby, built for Com. Tyson by Wood & Son, from a design by Chas. Olmstead, a fin-keel boat of wide beam and Ethelwynn, built by the St. Lawrence River S., C. & S. L. Co., for Mr. C. J. Field from a design by W. P. Stephens. The latter boat was under sail for the second time. She is 23ft. over all, 15ft. l.w.l., 6ft. beam and 7in. draft, with a manganese bronze centerboard of 55lbs. The rig is the same as Scarecrow, a leg o' mutton mainsail and one jib. The times were:

Great South Bay Y. C.

PATCHOGUE—GREAT SOUTH BAY.

Saturday, Aug. 10.

THE seventh annual regatta of the South Bay Y. C. was sailed on Aug. 10, resulting in a very good race. The most interesting of the entries was a new boat very similar to the noted English 1-rater Sorceress, built for Mr. John L. Suydam by the St. Lawrence River S., C. & S. L. Co., at Clayton, N. Y., from the designs of Mr. Linton Hope. She is about 20ft. l.w.l., 8ft. beam and 1ft. draft, cat-rigged, with a battened leg o' mutton sail. She has a centerboard trunk in which either of two boards may be used at will, one of ¼in. steel weighing about 125lbs., and one of a similar steel plate with lead plates bolted to the sides to make a weight of 800lbs. In this race she carried a cruising mainsail. The times were:

West Hampton Country Club.

WEST HAMPTON, L. I.

Saturday, Aug. 10.

THE annual regatta of the West Hampton Country Club was sailed on Aug. 10 in a fresh S.W. breeze, the times being:

	Start.	Finish.	Elapsed.	Corrected.
FIRST CLASS.				
Madcap	3 05 00	5 42 04	2 23 04	2 37 04
Sybil	3 05 00	5 40 31	2 35 31	2 35 31
Blue Wing	3 05 00	5 37 00	2 32 00	2 31 38
Girl	3 08 00	. . . .	. . . .	. . . .
Thetis	3 08 00	5 07 40	1 59 40	1 59 40
SECOND CLASS				
Jessie	3 08 00	5 07 40	1 59 40	1 59 40
Surprise	3 08 00	5 02 41	1 54 41	1 59 21
Meg	3 08 00	5 07 50	1 59 50	1 59 17
Julia	3 08 00	. . . .	. . . .	. . . .
THIRD CLASS.				
Hironda	3 11 00	. . . .	. . . .	. . . .
Olive	3 11 00	5 14 59	2 03 59	2 03 38
Enigma	3 11 00	5 04 52	1 53 52	1 53 17
Sunbeam	3 11 00	5 08 56	1 57 46	1 57 46
Flint	3 11 00	5 35 07	2 24 07	2 19 09
Gem	3 11 00	5 37 35	2 26 35	2 21 37

Julia broke her mast at the start and Hironda lost her mast. At the finish of the race the dock, which was crowded with spectators, gave way and threw a number of people into the shallow water, all being rescued with but trifling injuries.

The American Model Y. C. Trophy.

OWING to the non-compliance of the Marine Park M. Y. C. to forward a proper voucher, as required by the challenged club, and a reasonable time having been allowed for the receipt of the same, the race has been declared off. Great regret is felt by local model yachtsmen at this state of things, but they hope for better results next season.

NEW YORK Y. C. CRUISE, 1895.

Fourth Squadron Run.

VINEYARD HAVEN TO NEWPORT.

Monday, Aug. 5.

THE first break in the continued spell of good weather which had favored the New York Y. C. fleet was on Monday morning, and even then it was nothing more serious than fog, which delayed the start for the fourth and last squadron run, from Vineyard Haven to Newport. The racing division has been of but moderate size this year, and by Monday morning it was still smaller; Lasca, Iroquois, Mayflower, Alcaa and others having sailed to the eastward, while more had gone to New Bedford or Newport. The non-racers, encouraged by a bright sun and a moderate S.W. breeze, made an early start for Newport, and it was proposed to start the racing boats at 8 A.M., but before that hour the fog which had been over the Sound during the night shut in thick, and the signals for a postponement were on the Sylvia.

About 10:30, however, the sun shone again and the fog gradually rolled back from over Vineyard Sound before a 10-knot breeze from S.W. The preparatory signal was given at 11:35, the flagship being anchored off West Chop Light. Volunteer had left the fleet, but the other three were ready with clubtopsails aloft, but Jubilee lowered hers and set a jibheader, her topmast having proved very weak in the doublings before the Goelet cup race, and having been stiffened by battens. With a prospect of a freshening breeze and a beat to windward she did not care to press the spar too hard.

For once Queen Mab was late at the line, Wasp, Katrina, Uvira, Norota, Hildegarde, Gossoon and Queen Mab being the order; the first just 3s. after the gun. The schooners started at 11:50 in this order: Ariel, Marguerite, Constellation, Loyal, Merlin, Ramona, Emerald, Neaera, Elsemarie and Amorita; a good start and none handicapped.

The three big cutters were started at 11:55, going over quickly; the lack of deep water at the buoy leaving Vigilant the weather berth, Defender having to start in deeper water to leeward of her and Jubilee All were on the port tack, and trimmed hard down for a beat to the Vineyard Sound Lightship.

Defender was soon clear of Jubilee, and then began a sharp skirmish for first place with Vigilant. The two made a number of short tacks, Vigilant still weather bowing the other, but finally they, after working the Vineyard side of the Sound, stood out for the north side on port tack, heading for Naushon. Defender settled down to reach through Vigilant's lee. The sight was a fine one as the keel boat steadily footed ahead of the centerboard craft until well clear, and then luffed out and crossed her bow. Such a sight is no rarity in the smaller classes, but it is a refreshing novelty in the largest class; something that, so far as we can recollect, has never before been seen.

While Defender was thus beating Vigilant, the latter was serving Jubilee after the same fashion, the three being now well strung out in line.

The smaller yachts, led by Wasp, held the south side of the Sound, Queen Mab taking the lead before Quick's Hole was reached. Emerald easily led the schooners, sailing well all day. Defender and Vigilant kept it up, tack for tack, the former drawing steadily away; she cleared the Vineyard Sound Lightship by a few yards and then stood to fetch Brenton's Reef Lightship, 17 miles away, on the same leg. There was a steady breeze of about 10 knots and now a long roll to the sea, the sky being clear and the day perfect, even for midsummer. With each mile she increased her lead until she had made up a full 9m. at the end of the 37 miles; the full times being:

	Start.	Finish.	Elapsed.	Corrected.
SCHOONERS—FIRST CLASS.				
Constellation	11 51 25	4 54 50	5 03 25	5 03 25
Ramona	11 52 14	5 25 05	5 32 51	5 32 09

Elsemarie	11 54 09	5 21 05	5 26 56	5 26 56
65FT. CLASS.				
Loyal	11 51 50	5 53 11	5 46 21	5 46 21
Neaera	11 53 19	5 51 54	5 58 36	5 52 40
CUTTERS—FIRST CLASS.				
Defender	11 55 40	4 04 40	4 09 00	. . ..
Vigilant	11 55 34	4 13 43	4 18 09	. . ..
Jubilee	11 55 32	4 24 30	4 28 58	. . ..
70FT. CLASS				
Queen Mab	11 48 56	4 55 07	5 06 11	5 03 56
Hildegarde	11 46 57	5 32 23	5 45 26	5 45 26
50FT. CLASS SLOOPS.				
Uvira	11 49 26	5 35 21	5 43 55	5 47 44
Norota	11 46 56	5 53 10	6 06 14	5 54 42
Gossoon	11 47 38	5 54 14	6 06 36	6 06 36
MIXED CLASS.				
Wasp	11 45 34	5 09 38	5 24 04	5 01 38
Katrina	11 45 45	5 04 15	5 18 30	5 18 30

On arriving at Newport Mr. H. F. Lippitt, one of the owners of Wasp, learned of the death of his youngest child, so the yacht was at once withdrawn from the other races.

Drexel Cup Races.

NEWPORT.

Tuesday, Aug. 6.

THE regular cruise races were this year materially supplemented by the prizes generously given by Mr. J. R. Drexel, of Philadelphia, owner of the steam yacht Sultana, under the following conditions:

Prizes: $200 cup for Class 1 schooners, $200 cup for Class 2 schooners, $400 cup for Classes 3 and 4 schooners, $400 cup for Class 5 schooners, $200 cup for Class 1 of single-masted vessels and yawls, $200 cup for Class 2 of single-masted vessels and yawls, $200 cup for Classes 3, 4 and 5 of single-masted vessels and yawls, $200 cup for Class 6 of single-masted vessels and yawls.

The race is open to yachts belonging to the club in cruising trim, and which have not been hauled out to clean since the commencement of the cruise.

The start will be off Brenton's Reef Lightship. Preparatory signal at 10:50 A. M.

The course will be twice around a triangle, 7 miles to a leg, formed by Brenton's Reef Lightship, Point Judith whistling buoy and an offshore mark.

Sailing Directions.—In cruising trim, with the exception of first class sloops, which will be in racing trim.

The start will be off Brenton's Reef Lightship. Preparatory signal, 10:59 A. M.

Written entries will be received on board the Sylvia up to 8 o'clock on the morning of the race.

Starting signals will be:

No. 1.—Preparatory.—A gun will be fired and the blue peter hoisted.

No. 2.—Start for single-masted vessels and yawls.—Ten minutes later a second gun will be fired, the blue peter lowered and a red ball hoisted.

No. 3.—Start for schooners (handicap time for single-masted vessels, etc.)—Five minutes later a third gun will be fired and a second red ball hoisted.

No. 4.—Handicap time for schooners.—Five minutes later a fourth gun will be fired and both balls dropped.

No. 5.—Start for first class sloops.—Five minutes later a fifth gun will be fired and a red ball hoisted.

No. 6.—Handicap time for first class sloops.—Two minutes later a sixth gun will be fired and the ball dropped.

COURSES.

No. 1, letter C.—Start over a line between the Sylvia and Brenton's Reef L. S., 7 miles S. W., ½ W. around whistling buoy off Point Judith (leaving it to port); 7 miles E. by S., ¾ S., around a white spar, with red stripe (leaving it to port); 7 miles N., ¾ W., to Brenton's Reef L. S. (leaving it to port), and sail over the same course a second time, finishing over a line between the Sylvia and Brenton's Reef L. S., at right angles to the home course; 42 miles.

No. 2, Letter D.—Same course as No. 1, but sailed in the opposite direction, all turning points to be left to starboard; 42 miles.

Schooners.—Classes I. to IV., inclusive, twice around; Class V., once around.

Cutters.—Class I. and II., twice around; all other classes, once around.

Stopping signals.—Should the committee decide to stop a race on the first round, the signal will be as follows:

For schooners.—One red ball will be displayed.

For first class cutters.—One red ball will be displayed.

For the other classes of cutters.—Two red balls will be displayed.

The course and prizes merited a far larger list of starters than appeared at the line—six schooners and seven cutters. The morning was clear, with a light haze that disappeared about 8 o'clock, the sun shining brightly, while a light S.W. wind ruffled the smooth waters off the mouth of Narragansett Bay. The wind blew almost from the Point Judith Buoy to the Brenton's Reef Lightship, and the letter C signaled the first course, the triangle to be sailed against the sun. The fleet, such as it was, came out about 10:30, the smaller yachts showing jibheaders. Baby jibtopsails were aloft in stops, and the racing craft threaded their ways through a large fleet of attendant vessels, from catboats to the big steam yachts, which crowded about the line between the Sylvia, anchored to the southeast, and the Lightship. The preparatory gun was fired at 11 o'clock, the wind blowing about 10 knots, and the starting gun for the smaller single-stickers 10m. later, Queen Mab not starting until 11:11:57, when she led the procession—Gossoon, Hildegarde, Uvira and Norota, all in Indian file on port tack by the flagship.

The schooners got the gun at 11:15, Amorita, crossing on starboard tack, being but 47s. after it; then came Marguerite, Elsemarie and Emerald, the first two following Amorita, while the third went over by the flagship in the wake of the cutters, the fleet being thus mixed at the very start. Loyal and Neaera were handicapped.

The two big boats began their work some time before the start, and when the handicap gun for the schooners was fired at 11:20 they were together, just N.W. of the lightship, on port tack, and thus heading to the westward. Defender swung about rather slowly to starboard tack when there were still three minutes to go, Vigilant at once tacking also, thus putting her to leeward, but ahead of Defender as they came for the line. There were a number of small craft in the way, notably the small steam yacht Columbia, with a crowd of excursionists aboard, and the Canadian steam yacht Gladys. Vigilant held her luff as she headed for the line, and was pointing very high as Defender ran along to windward of her. Each was eager for the coveted weather berth, and on Vigilant at least the occurrence in their first meeting at the line on July 22 was still remembered. Just what followed in the second minute before gun-fire is now a matter of keen controversy, and will probably remain so. Vigilant held her course until near the lightship, with Defender close on her weather, and then bore away, Defender running ahead and cutting the line at 11:25:55 with a lead of 5¼s The sequel to this incident is given in the letters of Mr. Willard and the regatta committee elsewhere, but the claims of both parties should be stated here. Vigilant claims that she had the right of way, Defender being an overtaking yacht, and that the latter bore away, compelling her to do the same in order to avoid a collision. Defender admits Vigilant's position and the bearing away on her, but claims that Vigilant was the first to alter her wheel and give way, and that in doing so she forfeited all her right of position and was compelled to give way to Defender. Those on the latter boat stoutly assert that the course was not altered until after Vigilant had altered hers. In endeavoring to get out of Defender's course the small steam yacht Gladys collided with the lightship, losing her mainmast and sustaining other damages.

The result was that Vigilant lost the first place and some time as well, going over the line to leeward and nearly a minute astern of Defender. As they crossed Vigilant took a luff out and both stood along on starboard tack, Vigilant carrying a baby jibtopsail, but pointing well, while Defender's stay was bare of canvas for the first ten minutes when the baby was broken out. Both went on port tack at 11:29 and stood along, the newer boat steadily gaining. Defender tacked inshore at 11:51, Vigilant following 2m. 30s. later.

The smaller boats were already in the Narragansett shore and Emerald was headed in, the leader of the schooners. As Vigilant came up with Loyal to windward she steamed by at a great speed, but it must have seemed a week to the smaller vessel while she was blanketed by the big single-sticker.

At noon, Queen Mab was leading the fleet a third of the way down the Point Judith shore, having worked short tacks well in under the land. Defender, after having also made several short tacks, was approaching Queen Mab, Emerald was third boat, to leeward of Defender. Uvira was close inshore, in fourth place, Gossoon being astern of her, Marguerite to leeward of Gossoon, and Norota just astern. Hildegarde and Amorita were a little offshore, under the lee quarter of Defender, and while the latter had passed all but Queen Mab, Vigilant was just to leeward of the pack, from two to three minutes astern of Defender.

A few minutes after noon Defender crossed Queen Mab's bows and took the first place, the whole fleet making many short tacks under the shore. Point Judith was passed at about 12:25 and ten minutes later the last tack was made, the mark being under the port bow. Defender stood by the buoy, if anything throwing away a little to windward, but coming down fast and breaking out her balloon jibtopsail very smartly as she passed. With the wind still light S. W. and a smooth sea, she headed for the second mark. The times at the first mark were:

Defender	12 27 11	Amorita	1 04 58
Vigilant	12 43 20	Norota	1 05 15
Queen Mab	12 52 00	Gossoon	1 06 03
Emerald	12 57 45	Elsemarie	Not timed.
Uvira	12 59 26	Loyal	Not timed.
Marguerite	1 04 00	Neaera	Not timed.
Hildegarde	1 04 40		

Vigilant set her No. 1 jibtopsail and lowered staysail, the others setting the same jibtopsail.

On the beat of full seven miles Defender had gained 5m. 44s. on Vigilant, the elapsed times being 1h. 17m. and 1h. 11m. 16s. The conditions were very even and neither boat suffered from the other racers or from the attendant fleet. The wind was nearly abeam on the second leg, and after trying her largest jibtopsail for some dozen minutes Defender changed it for a No. 2; Vigilant, however, carried her No. 1 to the turn. The only times taken at the second mark were:

	Elapsed.	Gain.
Defender	1 16 14	0 39 03
Vigilant	1 23 45	0 40 29

The seven miles, with a 10 knot breeze abeam and the sea smooth, were covered at a speed of about 10 knots. Emerald still led the schooners, and Neaera and Gossoon gave up, the latter being disabled. The third leg brought the wind well aft, but Defender set her smaller balloon jibtopsail when 6m. clear of the mark. Vigilant set balloon jibtopsail and at 1:46 broke out her spinaker to port, carrying it all the way in. While the leaders were on the last leg, though the sky was clear and the sun shining a dense fog approached from the sea, coming in so swiftly that everything was soon hidden at a short distance from the Lightship. Defender jibed over and started on the second round, but within 3m. the recall signal summoned her in and the race was finished with the first round, the times being:

	Start.	Finish.	Elapsed.	Corrected.
SCHOONERS—95FT. CLASS.				
Emerald	11 17 56	2 38 39	3 20 43	3 20 43

Uvira	11 13 27	3 03 21	3 49 54	3 49 11
Norota	11 13 46	3 17 54	4 04 08	3 57 35

Defender beats Vigilant 6m. 01s., the latter having held her off the wind. The fleet scurried into the harbor, and barely in time, as the fog shut in thick and fast. After sunset, however, the sky cleared and left a fine night for the illumination. The formal disbanding of the squadron took place at a meeting on the flagship at 6:30, resolutions of thanks to Com. Brown and the regatta committee being passed. The record for Fleet Captain Robinson's prize for the schooner winning the most runs stands: Constellation, four firsts; Amorita, four firsts; Emerald, two firsts and two seconds; Ariel, three firsts; Loyal, three firsts; Iroquois, two firsts, one second; Mayflower, Lasca and Neaera, one first each.

Sec'y Oddie's prize for the single-stickers resulted: Queen Mab, four; Wasp, three; Uvira, two; Gossoon and Katrina, one each.

The misbaps of the cruise were very few. Clara lost her topmast and bowsprit on the first run and did not rejoin the fleet; Gossoon was run into while at anchor in Newport Harbor on the day of the Goelet cup race by a Government tug, the latter's stem striking the yacht squarely abeam of the starboard runner-plate and badly damaging the side and deck. Repairs were made the next day, and the yacht continued to race Norota had her topmast pulled out by the fin-keel Palmyra on Wednesday while she was at anchor. Bentley Barber, one of Defender's quartermasters, was taken ashore at Newport suffering from appendicitis and was operated on at the hospital, the operation being successful.

Tuesday evening was devoted to the illumination and water parade, the first of the kind since 1886, and by far the most elaborate affair ever attempted, the general use of electric lights making it easily possible to outdo similar attempts in previous years. Not only were the yachts of the big fleet completely illuminated, but the whole town was decorated with flags, streamers and electric lights, long lines of particolored lights being strung along the water front, while the buildings, steeples and the cottages on the hills about Brenton's Cove were brilliantly lighted. The water parade was composed of gaily decorated boats and launches, the more notable being a navy cutter covered with painted leaves hung far astern, the whole making a sea serpent similar to the one lately sighted by the schooner-yacht Agnes in Long Island Sound, Father Neptune with his trident straddling the back of the monster. Another navy cutter, both being rigged up by the Newport Naval Reserves, carried two legs of mutton sails and a jib made of a wire framework over the spars, on which many small lights were hung, making a very striking sight. The gig of the steam-yacht Forget Me Not was also very beautifully decorated with fairy lamps of different colors. A band afloat, and others at Fort Adams and the torpedo station, played all the evening, while fireworks and numerous searchlights added to the general enjoyment. One of the most beautiful sights of the evening was the American flag on Goat Island, floating in a wreath of low lying fog and brought into view by the concentration of several searchlights on it.

The Newport Cups.

Through the public spirit of several leading yachtsmen, citizens of Newport and members of the New York Y. C., the leaders being Messrs. Goelet and Sands, arrangements were made last spring for a series of four days' racing immediately after the New York Y. C. cruise, the club regatta committee consenting to assume the immediate charge of the racing. The following programme was prepared by Messrs. Sands, Kortright and others of the citizens' committee. The yachts will be divided as follows:

First class, schooners in cruising trim; second class, sloops, cutters and yawls in racing trim; third class, schooners in racing trim; fourth class, sloops, cutters and yawls in racing trim.

Any class may sail in cruising trim by unanimous consent.

The classification and prizes will be as follows:

First class, over 80ft. racing length, first prize $300, second $125; second class, over 70 and under 80ft., first prize $250, second $100; third class, over 60 and under 70ft., first prize $200, second $80.

Sloops, etc.—First class, over 80ft. racing length, first prize $400, second $160; second class, over 60 and under 80ft., first prize $200, second $80; third class, over 50 and under 60ft., first prize $150, second $60; fourth class, over 43 and under 50ft., first prize $100, second $40; fifth class, under 43ft., first prize $50, second $20.

No second prize will be given in any class unless four or more start. Sloops, etc., in class 5 must be up to the requirements for representation in the New York Y. C.

The course will be an equilateral triangle by Brenton's Reef Lightship, Point Judith whistling buoy and an offshore mark. All classes of schooners and classes 1 and 2 of sloops, cutters and yawls sail twice over the course, except by order of the committee; classes 3, 4 and 5 of sloops, etc., once over.

The same course will be used for each day's racing, except that the committee will start yachts so as to make one leg as much as possible to windward. The start will be from Brenton's Reef Lightship. The races are open to yachts of any regularly organized club.

The first day, Wednesday, Aug. 7, was set for the schooners, while the single-sticklers were to race on Thursday and again on Saturday. Wednesday morning, however, brought a double wet blanket to the festivities. The day broke clear and bright with the sun shining at 6 o'clock, the wind being east; soon, however, a dense fog came driving in over the harbor, blighting all hopes of a race as the wind then was. Shortly after colors there came a violent thunderstorm and a hard blow, lasting until 11 o'clock, by which time the sun came out, the wind shifting to S.W.

The morning papers carried through the fleet the letter of Mr. Willard to the regatta committee withdrawing Vigilant from the remaining races, throwing a general damper over the whole affair, and as it proved that very few schooners were entered for the first day no attempt was made to start after the weather improved. The Vigilant protest and letter kept yachtsmen busy all day, the whole fleet being divided into two parties, each with the most positive opinions, *pro* or *con*. Vigilant was surrounded by a fleet of catboats and launches, the regatta and Cup committees endeavoring to adjust the disagreement so that the racing might be continued. The result, however, was that late in the afternoon Vigilant set her mainsail with the racing numbers cut off, hoisted the ensign at her peak and broke out her headsails, starting for Mr. Willard's summer home at Bristol.

Queen Mab started out about 5 o'clock with topmast housed and a single reef in, but came back after an hour, the wind now blowing strong and the sea being bad outside. The new Herreshoff fin-keel 15-footer Osprey, owned by W. K. Vanderbilt, was out under a reefed mainsail and small jib with a crew of three, sailing beautifully, while the new Sibbick one-rater May, owned by Ogden Goelet, was also under way. Among the boats in the harbor were the fin-keel Mercury, the Dyer boat Salmon, a queer flat craft with a most unusual rig, the Chapoquoit and the new Hanan 34-footer Acushla, with her owners and her builder, Hanley, on board, bound from Buzzard's Bay to Larchmont.

During the evening the yachtsmen were on the *qui vive*, as it was known that the regatta committee was busy considering the letter and protest from Vigilant, and at a late hour the decision was announced in two letters which are given elsewhere.

Newport Cups.

Thursday, Aug. 8.

Good weather came again on Thursday, a bright sun and a moderate S.W. wind, though there was still a heavy roll to the sea outside; it was too late, however, to save the projected sailing week. A muster of the rapidly diminishing fleet showed only Jubilee, Defender, Emerald, Marguerite, Norota and Acushla as possible starters. The race was called and the regatta committee went out on the tug Winslow to Brenton's Reef. The start was given at 11:30, Emerald going over within 30s., while Marguerite followed at her leisure. The two single-stickers were started at 11:40, Jubilee leading over the line at 11:40:31, with Defender 18s. astern. The course was the same 21-mile triangle as on Tuesday, and sailed in the same direction, the first leg to windward with a light S.W. wind and rolling sea. Acushla had started alone, but soon gave up. The four stood out as in Tuesday's race, Emerald in the lead for the first half hour, when Defender, having passed Jubilee very early in the race, passed Emerald and took first place. The times at the first mark were:

	Elapsed.	Gain.
Defender	12 39 40	0 08 51
Jubilee	12 47 16	1 06 45
Emerald	12 51 47	1 21 17
Marguerite	12 57 49	1 25 27

0 04 10

Starting off with the wind on the starboard beam Defender ran for a time with baby jibtopsail set, and then shifted to a No. 2. The second mark as timed:

	Elapsed.	Gain.
Defender	1 17 30	0 37 50
Jubilee	1 26 30	0 39 14
Emerald	1 31 25	0 39 38
Marguerite	1 39 00	0 41 20

0 01 24

0 01 42

After a jibe the last leg was quickly run, the times being:

	Finish.	Elapsed.	Gain.
Defender	1 57 04	0 39 24	0 00 11
Jubilee	2 06 05	0 39 35	
Emerald	2 13 11	0 41 46	0 04 59
Marguerite	2 25 45	0 46 45	

The official times for the whole race are:

	Start.	Finish.	Elapsed.	Corrected.
SCHOONERS.				
Emerald	11 30 30	2 13 11	2 42 41	2 42 41
Marguerite	11 32 13	2 25 45	2 53 32	2 51 11
CUTTERS				
Defender	11 40 49	1 57 04	2 16 15	. . ..
Jubilee	11 40 31	2 06 05	2 25 34	. . ..

Emerald wins the schooner prize of $300 by 8m. 30s., and Defender the cutter prize of $400 by 9m. 19s.

An effort was made to arrange a match on Saturday between Defender and Jubilee, but in entering Newport Harbor on Friday Defender struck bottom off the Goat Island buoy, and hung until high water, when she came off uninjured, but the race was given up. Both Defender and Vigilant returned to New York on Aug. 12, and will dock this week.

Valkyrie III.

HAVING sailed from Glasgow on July 27, Valkyrie III. may be expected at any time now, though the incoming steamers report strong westerly winds Her racing spars and sails arrived on the Furnesia on Aug. 11. Lord Dunraven sails on the Teutonic on Aug. 21, and Messrs. Watson and Ratsey will shortly sail for New York.

YACHTING NEWS NOTES.

Zeruah, cutter, whose lines recently appeared in the FOREST AND STREAM, sailed a special match off Boothbay on Aug. 6 with Swirl, a local boat, winning the race.

Yampa, schooner, Mr. R. S. Palmer, has been repaired and fitted out and sailed on Aug. 7 in the Royal Yacht Squadron regatta at Cowes, coming in 14m. ahead of Amphitrite and 22m. ahead of Cetonia; she was, however, disqualified for carrying extra hands in a race for yachts in cruising trim as prescribed in Rule 33.

On Aug. 17 the Huguenot Y. C. will hold its first annual regatta. The feature of the race will be a contest for mosquito craft, and the committee would like to hear from the owners of the half-raters, St. Lawrence skiffs, ducking boats and sailing dinghies. The larger classes will also be provided for. A special class will be formed for he 31s and 21s cabin cats and sloops, and open cats. Schooners in cruising trim which do not measure over 50ft. in the water line will form an odd, but none the less interesting class. The race starts at 11 A. M., and will be over a four-sided course, with a one-gun start. The Huguenots have solved the one-gun start problem by dividing the fleet at 25ft. r. l. All over 25ft. r. l. go over on the first gun, and all under that measurement on the second gun. There will also be a race for the Douglaston dinghy class. Each group of starters covers a separate course, so there is no confusion whatever. Entries may be sent to Mr. A. Embury, Pelham Road, New Rochelle, N. Y.

Vigilant—Defender.

THE preliminary contests of the international races of 1895 have resulted in a most unforeseen and unfortunate occurrence, one that is likely not only to be long remembered by yachtsmen, but to lead to bitter feeling and possibly further trouble between men of national prominence in yachting. It is safe to say that, with the single exception of the illegal and arbitrary tampering with the terms of the deed of gift of the America's Cup in 1887, the present dispute is the most deplorable and serious occurrence in the history of American yachting. The domestic side of it is serious enough; but added to this is the effect on foreign yachtsmen at a time when all eyes are centered on the great American yachts. All through the last season while Vigilant was abroad the American press devoted itself to attacks upon the methods of yacht racing in vogue in Great Britain; charges of foul sailing on the part of Britannia and other yachts, of treachery on the part of Vigilant's pilot, and of unsportsmanlike conduct by the Prince of Wales and other yachtsmen were generally made, being supplemented by pointed comparisons with the methods and usages of American yachtsmen. Right in the face of this there comes the point blank accusation, from one of the leading American yachtsmen against another of even greater prominence, of deliberate foul sailing. Whether the charge be true or false, a great harm has been done—a harm that cannot soon be repaired.

The incident of the first race between Vigilant and Defender, on July 20, is still fresh in mind; how the two yachts met at the line, Vigilant standing along the line on the starboard tack and ready to start while Defender came down free across Vigilant's bows. The result was a red flag and a subsequent protest in writing to the regatta committee on the part of Mr. E. A Willard, who has entire charge of Vigilant during the absence of Com. Gould in Europe; the ground of the protest being that Defender violated Rule 16, Sec. 2, "A yacht free shall keep clear of one close hauled."

In all such cases it is most important that a hearing shall take place at once and a speedy decision be made, but in this case, as is usual, there was a delay in getting at both sides and it was postponed until the cruise began. On one occasion, the first day at Newport, Mr. Willard was unavoidably absent, and the proposed hearing was deferred until the fleet reached the Vineyard, and there Mr. Willard requested that the matter be left until the return to Newport. Meanwhile the race for the Drexel cups came off on Aug. 6, and the two yachts came together at the western end of the starting line, this time both on the wind, but under generally similar conditions. Again Vigilant claimed that she was unjustly compelled to give way; but this time she set no protest flag, continuing the race as though nothing had happened. The same evening, after returning to harbor, the following letter was written and sent by Mr. Willard:

"YACHT VIGILANT, Newport Harbor, Aug. 6.—*Messrs. S Nicholson Kane, Chester Griswold, Irving Grinnell, Regatta Committee New York Y. C.*: Dear Sirs—I hereby withdraw Vigilant's entries for the races on Thursday and Saturday. In doing so I desire to add a few words of explanation. As you are aware, Mr. Gould, and I as his representative, fitted out and prepared Vigilant for racing for no purpose in the world except to assist in developing the fastest American yacht, and thus aiding in the defense of the America's Cup. To this end Mr Gould has cheerfully gone to great expense and I have taken much pains and spent much time.

"I cannot, however, consent to continue racing Vigilant unless the contests are to be conducted according to the rules of yachting. I have now twice given way to Defender at the start of the race, when Vigilant clearly had the right of way, because I was unwilling to risk a collision which might leave America without a Cup defender. However willing I may have been to waive my rights in the past, I am not willing to go on waiving them indefinitely, and, even if I were, it is quite possible that a situation might be created in which a collision would be inevitable.

"Mr Gould's sole desire, as well as mine, is that the Cup may be defended by the fastest American sloop, which might not be the case if Vigilant and Defender collided. As you know, I have already protested Defender's action at the start on July 22. In to-day's race Defender again violated the rules and froze Vigilant out of a position to which she was entitled. In both cases there would have been a collision if Vigilant had not given way.

"In each the responsibility of avoiding an accident was cast upon me. It would not be fair either to the yacht or her owner to continue racing under those conditions. Very respectfully yours,

"E. A. WILLARD."

After Mr. Willard had been seen on the following day, a lengthy meeting of the regatta committee was held in the evening, the result being the following letters:

FLAGSHIP SYLVIA, Newport Harbor, Aug. 7.—*E. A. Willard, Esq.*: Dear Sir—Referring to your protest of July 22, asking that Defender be disqualified for alleged violation of Section 2, Rule 16, of the racing rules, and referring to your subsequent request at the Vineyard for a postponement of a decision until the squadron returned to Newport, we beg to say that, after mature consideration, the committee has reached the conclusion that they cannot sustain the protest. Yours respectfully,

S. NICHOLSON KANE,
CHESTER GRISWOLD,
IRVING GRINNELL.

FLAGSHIP SYLVIA, Newport Harbor, Aug. 7.—*E. A. Willard, Esq.*: Dear Sir—We beg to acknowledge the receipt of your letter of yesterday, wherein you notify us of Vigilant's withdrawal from Thursday and Saturday races of this week and that you cannot continue racing unless the contests are to be conducted according to the rules of yachting. Our committee regrets your decision to retire from the racing. We also regret your published statement that racing rules are not being properly enforced. For this statement we consider there is no warrant. Yours respectfully,

S. NICHOLSON KANE,
CHESTER GRISWOLD,
IRVING GRINNELL.

As we are ignorant of the evidence offered by Mr. Willard in support of his protest and that of the other side in opposition, the committee giving no reasons for its decision, it is impossible to discuss the merits of the first letter.

In our opinion Mr. Willard's letter is in no way intended as a reflection upon the regatta committee, but at the same time it is capable of the interpretation that the violations of the rules of yachting which he complains of were so flagrant that the committee must have noticed them, and should have taken action under Rule 17, Section 3. Without discussing this point, we may say in passing that the committee was in a poor position to see either alleged foul, being on the flagship at the other end of the line (the yachts in each case being close to the lightship), and not in a position to judge of the exact distance. It is plain from the second letter of the committee that it has interpreted Mr. Willard's letter in this way, and promptly resented what it considers an implication of unfairness on its part.

On Wednesday afternoon Mr. Willard made a public statement of his side of the case to the representatives of the New York and Boston papers as follows:

"Mr. Willard was asked why he had not protested against Defender yesterday. In reply, Mr. Willard turned to Rule 19 of the New York Y. C., which reads as follows: A yacht which shall be disqualified twice in one season shall be debarred from sailing in club races for the remainder of the season. Mr. Willard explained that he felt confident that if he had protested, his protest must be allowed, and that he felt equally confident as to the result of the protest of July 22. He said: 'If Defender should be disqualified in both these races, the owner of Valkyrie might claim that the Cup races were club events, being sailed for a trophy held by the club under the direction of the New York Y C. officers, and subject to its rules, and hence that Defender, even if selected to defend the Cup, was disqualified.

"'I wrote to the regatta committee on July 28, calling attention to Rule 19, and expressing willingness that if the regatta committee deemed best the decision in the protest of July 22 should be postponed until the end of the yachting season. Vigilant has been put in commission and raced solely to harp Defender. We want to make Defender as fast as possible, so that she may successfully defend the America's Cup. If the protest was allowed then, the question of eligibility to sail against Valkyrie might be raised. Mind you, I don't say that rule applies for the America's Cup races. The Cup committee might select one of those fishing sloops to sail against Valkyrie if it thought fit, but it would give an opportunity for the point to be raised, and we are not trying to put any obstacles in the way of Defender.

"'We want to make Defender go as fast as possible. If, when we have attained a good position at the starting line, we are compelled to give it up or damage the new boat, then we can't help her much. Take yesterday's start, for instance. Vigilant was going fast, but we were compelled to bear away, then luff under Defender's stern and lose all headway. It meant two or three minutes before we were sailing properly again, and it would have made some minutes difference in the time if we had crossed the line first and had the weather position, to which we were entitled. If we are to just sail behind Defender over the course we cannot give her a fair trial, and it is impossible to get a line on her capabilities.

"'I am tired of having the responsibility of avoiding a collision put on my shoulders. I am willing to look after Vigilant, but they must look after Defender. There might come a time when I could not give way, and then Defender might be sunk. I have seen the America's Cup committee and have promised to have Vigilant on hand for the trial races on Aug. 20 and 22, and if a third race is necessary on Aug. 24. Vigilant will be thoroughly overhauled, her sails retrimmed and she will be faster than she is now.'"

From the circumstances of the case Mr. Iselin is in a position where he can afford to say nothing, and he has thus far wisely availed himself of this advantage, though both Capt. Haff and Capt. Barr have been interviewed.

The parties in the dispute are all well known. Mr. Willard owned and raced the sloop Eclipse years ago, before sloops had gone out of use, and of late years has been noted as one of the most skillful Corinthians about New York. He sailed with Gen. Paine in 1886-7 in Mayflower and Volunteer, in 1888-9 he steered the 40-footer Nymph and won many prizes in her, and in 1893 he was intimately associated with Mr. Iselin in the management of Vigilant. Mr. C. Oliver Iselin was winning races twenty years ago in the open boats Mary Emma and Dare Devil, when sandbag sailing was in its most prosperous era; later he gave up racing, but reappeared in 1887 with the steel centerboard cutter Titania, which headed the 70ft. class in 1888-9. In 1893 he was the head of the second syndicate which built and raced Vigilant against the second Valkyrie; last year he was in British waters in a chartered steam yacht, sailing on Vigilant in some of her most important races. This year he is one of the three owners of Defender and the master of the yacht.

Capt. Haff is one of the oldest of American skippers, sharing with Capt. Terry the honor of being the best. He long ago sailed the then sloop Fanny and made a reputation for her. In 1887 he sailed Volunteer in the Cup races for Gen. Paine; in 1888-9, while still in Gen. Paine's employ, he sailed Titania for Mr. Iselin, making a success of a boat that had promised to be a failure, and in 1893 he sailed Colonia for Mr. Rogers and the first syndicate.

Capt. Charles Barr, the younger brother of Capt. John Barr, skipper of Clara, Thistle and Jubilee, is one of the youngest, but at the same time ranks among the first of American skippers. Both the Barrs are Scotch by birth, but are now naturalized Americans, residents of Marblehead. Capt Charles Barr came to this country as one of the crew of Clara in 1885, making the ocean passage in her. For the next two years he commanded the little cutter Shona for Mr. C. H. Tweed, going abroad in 1888 to watch the building of Minerva at Fife's yard, and sailing that yacht, of 40ft. l.w.l., across to Marblehead, acting as captain and navigator. In the two following years he raced Minerva with extraordinary success, no small part of her fame being due to his skillful handling. Since then he has commanded Oweene, Wasp, Gloriana and Navahoe. This spring he was released by Com. Gillig, owner of Gloriana, and took command of Vigilant, fitting her out and navigating her on the Atlantic voyage, and sailing her ever since.

How quickly and fully this incident has been appreciated by British yachtsmen is shown by the comments of the *Pall Mall Gazette* on Aug. 7, in which Mr. Willard's charges of foul sailing are contrasted with Lord Dunraven's action in a recent race in waiting at the line to start her with Ailsa and Britannia. The *Field*, of Aug. 10, also comments in the same strain, as follows: "When the owner of Vigilant complains of foul sailing and failure to observe racing rules, we rub our eyes and think that things must be very bad indeed on the other side."

Beverly Y. C. 224th Regatta.

MARBLEHEAD, Aug. 3.—This race was in all but fourth class a resail of the race of July 20, which was not made in time and was only open to entries of that date.

Race was started in a light S E. air, but about three-quarters of an hour after start it came in strong S.W., giving all but first and second classes a free wind all round, the little fellows having all they wanted.

As in all resailed races half the entries were unable to be present.

First and second classes sailed a triangle of 10½ miles with a good beat on second leg. Other classes sailed 6½ miles, and owing to change of wind had no beat.

With a breeze the Minnetoka boats did well.

	Length.	Elapsed.	Corrected.

Goat, R. M. Horton	18.00	1 34 04	1 20 09
Pointer, C. P Curtis	16.10	Withdrew.	

Winners of prizes—First class, Ida J.; second class, Susie; third class sloops, Evadne; third class cats, Koorali; fourth class, Evadne first; Bonita second.

Judge: F. Elliot Cabot.

The 225th regatta, 2d Buzzard's Bay Championship, was sailed off the club house Aug. 3, in a good southerly breeze, most of the boats starting with single reefs and putting in another during the race. The number of starters was comparatively small, as it always is at this time, owing to the N. Y. Y. C. cruise.

There were no starters in special class and only one each in first and second class sloops, which consequently sailed together.

In second class cats the old Surprise appeared after an absence from the races of three years. She did well, though handicapped by a cracked tiller.

The fourth class race was the most interesting. Sylph, though not in the club, sailed course and was timed by request. She carried whole sail easily. Grilse started with single reef and ordinary jib as did Ghuzz. The first leg to Abiel's was made without a tack, the wind being well to the south. Ghuzz fell behind, Sylph rounded a trifle ahead of Grilse and set her spinaker, the first time one has been seen in this class in a race. Grilse, however, passed her, and at leeward mark, buoy 5, put in a second reef and shifted to storm jib, and on beat back to starting line held her own and rounded 9s. ahead of Sylph and 1m 54s. ahead of Ghuzz, who had broken spinaker pole before the race.

After running some minutes Grilse set a very large spinaker and for the rest of the run to buoy 5 ran away from Sylph; at the buoy the latter got her spinaker in the water and Ghuzz caught her. Grilse gained on both in the beat home. Howard won easily in cat class.

In fifth class cats Imp won easily, Vif having too light a crew, while Hilda and Laurel sailed a very pretty race, former winning by two seconds.

Courses: first and second classes, triangle 11¼ miles; third and fourth classes, triangle and extra windward leg, 8½ miles; fifth class, to windward and back, 5½ miles.

An error was made on July 4 race: the time given to Weona belongs to Tern; Weona withdrew owing to the blinding rain, the judges mistook the boats.

Winners of prizes: Classes 1 and 2, sloops, Little Peter first; Class 2, cats, Anonyma first, Surprise second; Class 3, Meiro first, Doris second; Class 4, sloops, Grilse first; Class 4, cats, Howard first; Class 5, sloops, Hilda first; Class 5, cats, Imp first.

Anonyma, Grilse and Imp win and hold pennants; Meiro and Howard win legs for pennants, tieing Doris and Dawdle. Hilda wins a leg.

Judges: W. Lloyd Jeffries, A. H. Hardy.

The Accident to Yampa.

From The Yachtsman.

A SHOCKING accident, which, unhappily, was attended with immediate fatal results to one poor man and serious injuries to three others, occurred at the well-known yacht yard of Messrs. Fay & Co., Southampton, about noon on Friday, the 12th inst. It seems that preparations were being made for the launch of the large American schooner-yacht Yampa, belonging to Mr. Palmer, which arrived there about two months ago from the Mediterranean, and has since been hauled up at Fay's for repairs and refit. High water was timed at 2 o'clock, and all through the morning the ways and cradle were being fixed. Unfortunately, however, one of the chains which held the yacht on an even keel carried away, and the vessel traveled down the uncompleted ways for 2 or 3ft., and then fell over on her port side, her mast falling foul of the schooner-yacht Ursula—hauled up by her side—one of the masts of the latter being carried away. When the vessel moved thus unexpectedly the alarm was given, and most of the men were able to get away from beneath her, but one, a shipwright, named Alfred Tilling, living in York street, Northam, was caught by the falling hull, and knocked down and crushed beneath her, being, without doubt, immediately killed. Two American sailors, named Augusta Caston and William Shurbert, who were working aloft, were thrown from the rigging and badly hurt. So, too, was another man who was on board at the time, named Bootyman. The injured men were removed to the Royal South Hants Infirmary as speedily as possible, and happily the report, widely circulated in the town, that two of them died soon after admission proved to be untrue, and at the time of writing all are progressing favorably. Bootyman has returned to his home. In the first excitement attending the disaster, Tilling was not missed, but a cap which was found floating in the Itchen close by was identified as his, and the inquiries made proved, beyond doubt, that he was buried under the Yampa. Very little could be done before low water except to take precautions to prevent further damage to the vessel, but when the tide fell the search for Tilling began, and before nightfall the operations disclosed his head and hand. Digging was continued without cessation, the efforts to recover the body being assisted by the rising of the stern of the yacht on the next tide, and late in the night the body was got out. The right leg was smashed to pulp, the left arm was clenched over the chest, and the right arm was bent forward, showing that the poor man was knocked down and buried in trying to escape from beneath the vessel.

He leaves a young widow and two little children, the youngest of which is only twelve weeks old. The inquest on the remains was opened on Saturday, when evidence of identification was given by Alfred James Whettingtall, brother-in-law of deceased. Mr. Randall, solicitor, expressed, on behalf of Messrs. Fay & Co., their utmost sorrow at the occurrence, and their sympathy with the bereaved family, adding that the firm at once undertook to bear the expenses of the funeral. The inquiry was then adjourned till Wednesday (yesterday). On Saturday the Isle of Wight Company's powerful tug Ajax made an ineffectual attempt to tow off the vessel, which, of course, will have to be hauled up again. The owner of the Yampa was in the South of France at the time, but one of his friends boarded the yacht on Saturday evening, and in creeping along the almost perpendicular deck slipped and cut his leg, and he was treated for the injury at the Royal South Hants Infirmary. The vessel was got upright on Sunday evening. Poor Tilling was buried quietly on Monday. Mr. Palmer, owner of the yacht, generously contributed £200 to the fund being raised for the widow; Fay & Co. gave another £100, and lists have been opened at the local banks.

[As noted elsewhere, the yacht has since been hauled off and repaired.]

Canoeing.

FIXTURES.

AUGUST.

9-23. A. C. A., 16th annual meeting, Bluff Point, Lake Champlain.

SEPTEMBER.

Red Dragon fall regatta, Delaware River.

Mr. Howard and the R. C. C. Cup.

WE have already mentioned that Mr. William Willard Howard, of New York, did not start in the race of the Royal C. C. on July 13 for the reason that his canoe Yankee, shipped last winter from England to Clayton, N. Y., for alterations, had not been returned to England. This fact evoked the following comment from the *Field:*

'Up to Wednesday it is evident that the international race will not take place; no doubt the absence of the American canoe may be plausibly explained away, but we fear we are again about to have to face a dry fact—that an international challenge is made a considerable time before the date of the challenge cup race; that members of the Royal C. C. patriotically thereupon come forward, at considerable expense and inconvenience, to defend the cup; that members of other clubs also come up from various parts of the country to assist in such defense, and then, at the last moment, no 'Stars and Stripes' appear upon the course. This state of things the club experienced last year at Bourne End on the upper Thames, and the same state of things appears highly probable now on the lower Thames.

"To be careless of or unprepared for defense would be clearly wrong in the senior club, and yet, after two years' fiasco as to international competition, is it reasonable to expect the best men to come forward and build and race canoes, up to date in all points, with the high probability that the international element will be wanting in the race, though possible up to the last moment? Experience will now perhaps dictate to the club that an individual is not a nation, and that it would be well in future to accept no foreign challenge, unless it be that of a duly recognized club, where the competitor will be representative of his club, and not of his own personal fame, and a competitor representative of his club and flag will certainly appear at the starting line."

These comments have brought out from Mr. Howard a reply, published at his request in the *Field*, the *Yachtsman* and the *Yachting World*. We reprint the *Field* letters with comments in full:

"We publish the following correspondence merely because Mr. Howard is an American, who had challenged for the Royal Canoe Club Sailing Cup. We regret the uncalled-for language contained in the letters of Mr. Howard and his agents, and we reprint the 'Note' of last week which is supposed to hold the 'scandalous imputation:'

"MESSRS. CHARLES ATKINS AND NISBET, 1 Water-lane, Great Tower street, London, E. C.—Dear Sirs—My attention has been called to an article in last Saturday's *Field*, containing an insinuation that my canoe Yankee was purposely kept in America in order that I might not sail in the Royal Canoe Club's Challenge Cup race.

"As this canoe has been in your hands since last February, I should be glad if you would make public the facts in the case; not that I care what the canoeing editor of the *Field* may take it upon himself to say, but that the sport of canoe sailing may not rest under such a scandalous imputation. Yours truly, WM. WILLARD HOWARD."

"LONDON, July 15."

"W. WILLARD HOWARD, ESQ., 9 Weymouth street, Portland place.—Dear Sir—We are in receipt of your favor of even date, and regret to hear that any such insinuation as you mention should have appeared in the *Field*. The facts of the case as regards your canoe Yankee are as follows: We received your written instructions, dated Tiflis, Jan. 15, to ship this canoe to Mr. Fry, of Clayton, New York, for certain alterations to be carried out, and we forwarded her by first available steamer, and, in accordance with your desire, we requested Mr. Fry to return the canoe no later than the end of May. We did not hear from Mr. Fry in return to our letter advising dispatch of canoe, but concluded he would return her in good time.

"On June 21 we received a telegram from you dated Erivan, June 18: 'If Yankee not returned, telegraph Fry send instantly; telegraph me Batum.' To which we replied: 'Yankee not arrived; have cabled Fry to send immediately,' and we cabled Mr. Fry the following: 'Ship immediately canoe Yankee,' which cablegram we duly confirmed, and stated that it was most important the canoe should arrive in time to enable you to compete in her for the Royal Canoe Club Challenge Cup race on July 12. Had Mr. Fry even shipped her on receipt of our wire she could have arrived in time for the race in question; therefore, the only person who is responsible for the delay is Mr. Fry. It is, therefore, in our opinion, as untrue as it is absurd for anyone to insinuate that you arranged for the canoe to be kept back in order not to race her.

"As you request us to make these facts public, we send copies of your letter and this reply to the *Field*, *Yachtsman* and *Yachting World*. We are, dear sir, yours faithfully,

"CHARLES ATKINS AND NISBET."

"JULY 15."

"[The above letters (dated July 15) show that the builder in America was communicated with twenty-one days before the race day to send the canoe to England. We are not concerned as to whose fault it may be, but the fact remains that, after a duly lodged challenge of over two months' standing, no appearance was made of the challenger at

the starting line on the day of the race. The following is a *verbatim* copy of the remarks we published last week: * * *

"We leave it to the dispassionate reader to discover where is the insinuation that the canoe was purposely kept in America, in order that it might not sail for the challenge cup, and who is responsible for the 'scandalous imputation' except the writers of the above letters. —ED.]"

We fail to see in the *Field*'s original criticism the alleged insinuation, or anything more than is justified by Mr. Howard's peculiar conduct in refusing at the last moment to start in the challenge cup race of 1894. So far as the Royal C. C. is concerned, the trouble is that the so-called "challenge cup" is neither a challenge cup nor an international cup, in that it is raced for by all comers, without challenge, as would appear from the published conditions, and it may be raced for by British canoeists alone, in the absence of foreign competition. It is precisely the same as the A. C. A. sailing and paddling trophies, raced for once a year by all comers, without regard to nationality and without formal challenge. There can be little satisfaction either to the club or to an American in competing in this loose way; if there is to be any international competition worthy of the name, it should be for a new cup under certain definite conditions, such as those governing the New York C. C. international challenge cup, the contest being limited to a properly accredited representative of a foreign club and one representative selected by the defending club.

Apropos of the delay with Yankee, we learn that the ½-rater built by Fry for Mr. Howard, in which Mrs. Howard was to sail against Spruce IV. in England, is still at Clayton.

Miss Johnson's Poems.

Editor Forest and Stream:

A. C. A. men who attended the '93 meet on the St. Lawrence must remember Miss E. Pauline Johnson's recitals from some of her poems What canoeist could forget "The Song My Paddle Sings" and "In the Shadows," so delightfully rendered by their author? "In the Shadows," they will remember, was set to music by Dr. Gage and sung at the camp-fire one evening. The music is in perfect sympathy with the poem, and I shall always remember it as one of the finest camp songs ever brought to a meet.

Canoeists who enjoyed the stirring recitals as I did will be interested to learn that a volume of poems—"The White Wampum," by Miss Johnson—has just appeared. It is published in London by Mr. John Lane, of "Bodley Head" fame; in Boston by Messrs. Lamson, Wolffe & Co., and in Toronto by the Copp Clark Co. It is a beautifully printed little volume, and has an appropriate special title-page and cover design.

When I received the volume I opened it at raudom and read "Erie Waters," the first stanza of which I give below, and the book has gone at once on to the little shelf of my choicest favorites. The two poems mentioned above are included in the book, and with "Erie Waters" constitute three poems which no canoeist and no lover of poems of nature can fail to appreciate and enjoy. No "decadence" here:

"A dash of yellow sand,
Wind-scattered and sun-tanned;
Some waves that curl and cream along the margin of the strand;
And, creeping close to these
Long shores that lounge at ease,
Old Erie rocks and ripples to a fresh sou'western breeze."

Among a number which particularly impressed me I remember "The Camper," "The Flight of the Crows" and "Penseroso," all of quite a different trend than the ones mentioned before. "Penseroso" is a fierce, passionate cry to nature, and is grand. I should like to quote it here entire, but must remember that this is not a book review and will desist.

By the way, "In the Shadows," mentioned above, was published with music in the FOREST AND STREAM of Dec. 30, 1893. I do not remember hearing it at Croton Point last summer, but hope some one will bring it to camp this year. OCEAN.

GOUVERNEUR, N. Y.

The A. C. A. Meet.

FROM all reports, the A. C. A. meet, which began on Aug. 9, promises to be very successful; there are already many canoeists in camp, and the arrangements are very satisfactory. The races begin next Monday. The post office address is "A. C. A. Camp, Hotel Champlain, Clinton county, N. Y."

A. C. A. Membership.

ATLANTIC DIVISION: David Losee, James A. Smith, Francis Way. Northern Division: R. O. King, Toronto. Eastern Division: R. M. Molineux, Boston; William W. Beal, Boston, Mass. Central Division: Joseph P. Coughlin, Troy.

Rifle Range and Gallery.

Presque Island Rifle Club.

ERIE, Pa., Aug. 3.—The following scores were made to-day by members of the Presque Island Rifle Club:

Germann	5	8	4	10	6	7	6	9	9	7—71
	5	5	9	4	6	8	9	4	9	10—69

	0	6	4	4	6	3	5	3	7	2—40

At the regular meeting held on Thursday evening, Aug. 1, the following officers were elected for the ensuing six months: President J. W. Paul; Vice-President, W. F. Trieber; Secretary, W. J. Leyer; Treasurer, Wm. Patton; Captain, J. Bacon; Lieutenant, Geo. Shaffer;

Sing Sing Sharpshooters.

MR. G. W. VAN BUREN, Secretary of the Sing Sing, N. Y., Rifle Club, writes us under date of Aug 2 as follows: "The amateur riflemen of this place will hold a tournament on Labor Day, Sept. 2. Mr. Wm. Lyman, of Middlefield, Conn., has sent us 100 copies of his little book to be given away as souvenirs to our shooters." Further particulars in regard to this event can doubtless be obtained by writing to Mr. Van Buren.

JEFFERSON CITY, Mo., July 31.—All to-day there was a procession of dead fish floating past this city in the Missouri River. They are carp, buffalo and drum. The largest observed will weigh probably 4lbs., and they have apparently been dead from thirty-six to forty-eight hours. Various theories are advanced, but the most plausible of them is that the fish were washed out of the numerous small streams above here by the late freshets, and were unable to live in the muddy water of the Missouri River. It is estimated that fifty miles of dead fish have floated by the city to-day, and at 7 o'clock this evening the river was still full of them.—*St. Louis Globe-Democrat.*

Trap-Shooting.

All ties divided unless otherwise reported.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Aug. 19.—PADUCAH, Ky.—First annual tournament of the Paducah Gun Club. T. J. Moore, Sec'y.

Aug. 19-20.—MONROE, La.—First annual tournament of the Monroe Gun Club; live birds and targets. H. W. Stevenson, Sec'y.

Aug. 20.—WEST END, N. J.—Hollywood championship, 100 live birds, $100 entrance, 30yds. rise. Entries close Aug. 13, to J. S. Hoey, manager.

Aug. 20-23.—HOLMESBURG, Pa.—Pennsylvania State Sportsmen's fifth annual tournament, under the auspices of the Keystone Shooting League of Philadelphia. John C. Shallcross, Sec'y, Frankford, Pa.

Aug 21.—BALTIMORE, Md.—Tournament of the Maryland and District of Columbia Trap-Shooters' League, on the grounds of the Baltimore Shooting Association. the tournament being held under the auspices of the Green Spring Valley Gun Club.

Aug. 27.—SPRINGFIELD, O.—Second monthly tournament of the Home City Gun Club; targets; professionals barred.

Aug. 27-29.—CHARLOTTE, N. C.—Tournament of the Interstate Association, under the auspices of the Charlotte Gun Club.

Aug. 28-29.—FREDERICK, Md.—Two days' tournament of the Frederick Gun Club, at targets.

Aug. 28-29.—IONIA, Ill.—State Meeting of the Michigan Trap-Shooters' League, under the auspices of the Ionia Gun Club.

Aug. 29-30.—SHERBURNE, N. Y.—Tournament of the Sherburne Gun Club.

Aug. 29-31.—HOT SPRINGS, S. D.—Hot Springs Gun Club's second annual tournament.

Aug. 30-31.—CHICAGO, Ill.—First monthly shoot of the Cook county Trap-Shooters' League. Chas. Grubbs, manager.

Aug. 31.—SPRINGFIELD, N. J.—Team shoot between the Union Gun Club, of Springfield, and the Endeavor Gun Club, of Jersey City.

Sept. 2.—MARION, N. J.—Annual tournament of the Endeavor Gun Club; targets.

Sept. 2-3.—NEWARK, N. J.—Tournament of he South Side Gun Club; targets. New Jersey Trap Shooters' League contest at 2 P. M. on the second day. W. R. Hobart, Sec'y.

Sept. 4-5.—UTICA, N. Y.—Two days tournament; live birds and targets.

Sept. 4-5.—SHEPHERDSTOWN, W. Va.—Morgan's Grove Fair Association's tournament, under the management of the Interstate Association

Sept. 5.—MICHIGAN CITY, Miss.—First semi-annual tournament of the Michigan City Gun Club.

Sept. 6-7.—WARREN, O.—Tournament of the Warren Gun Club. H. B. Perkins, Jr., Sec'y.

Sept 10-12.—INDIANAPOLIS, Ind.—First annual tournament of the Limited Gun Club. Royal Robinson, Sec'y.

Sept. 10-13.—DETROIT, Mich.—The Des-Chree-Shos-Ka annual tournament, under the management of Jack Parker.

Sept. 10-13.—ST. PAUL, Minn.—Annual tournament of the St. Paul Gun Club; John P. Burkhard, Manager.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed.

Mr. W. F. DeWolf, secretary of the newly organized Cook County, Ill., Trap-Shooters' League, and also secretary of the Eureka Gun Club, of Chicago, writes as follows: "Mr. Wm. Mussey, of Chicago, a well-known shot and billiardist, wishes, I understand, to furnish the first trophy for the teams. With team races already shot between the Cicero Club vs. the Garden City Club, the great 18-man team race between Eureka vs. Garfield Club, the League contests, the proposed two days' tournament given by Mr. Charles Grubbs at time of holding first contest (his dates are Aug. 30 and 31), and the shoot of 5-men teams for the trophy emblematic of the championship of the State of Illinois, now held by Eureka Gun Club (which race will be shot on Aug. 14 on Eureka's grounds, the Garfields being the challengers), trap-shooting bids fair to be lively in Chicago for the next month or two. What do you think of Eureka Club's 18-man team shooting between 82 and 83 per cent., using mostly Class B men, and being at that without the assistance of such men as Bingham, Heikes and others of its members, who were unable to be present? These members were all old ones, all *bona fide*, no taking them in just for that shoot. The Garfields shot over 80 per cent., and had nothing to be ashamed of; 'hot stuff,' wasn't it? Have we many clubs who can make such a showing? The Garfield boys felt sure of beating us, one of them having said publicly in a certain place where shooters congregate, only the evening before, that 'Garfield was a sure winner,' and it was only a question of how many;' and so 'the best laid plans of men' often 'gang a-gley.'"

The Schmelzer Arms Company, of Kansas City, Mo., have written us that the conditions under which the trophy won by Mr. Sexton at its recent tournament have been changed. Briefly the conditions are as follows: Contest will be at targets thrown from traps pulled in reverse order; the winner to give a bond in $250 for the safe-keeping of the trophy; the trophy to be contested for annually at an open shoot; entrance fee for this contest $10; price of targets to come out of the entrance moneys, the balance going to the holder at the time of the shoot; first open shoot to take place at Detroit, Mich., Sept. 11 next; anybody can challenge on depositing $50 with C. J. Schmelzer, the $50 going to winner of contest; if won twice in succession in open contests the trophy to become the property of such winner. Other conditions, such as relate to challenges, deal with time limit, etc., and are of the usual nature. The date of the first open contest, Sept. 11, is worthy of special note.

The recent tournament of the New York State Association for the Protection of Fish and Game, and the near approach of the annual gathering of Pennsylvania sportsmen in Philadelphia, makes us naturally solicitous for the health of the kindred organization in New Jersey. What has happened to that Association? It is the possessor of two handsome trophies, one we believe now held by W. Fred Quimby. Why doesn't New Jersey have her annual meetings? She has as many expert trap-shooters as any State in the Union, and such annual gatherings would be successful. The organization need not conflict in any way with the New Jersey Trap Shooters' League, and would not do so. Wake up, somebody.

Western trap-shooters will have a chance of showing what they can do on Sept. 10-13. Mr. John P. Burkhard, 57-59 East Seventh street, St. Paul, Minn., writes that the St. Paul Gun Club will hold its annual tournament on the above dates at the Minnesota State Fair Grounds, the shoot being under his management. An attractive programme, liberal purses, reduced railroad rates, and the fact that the State fair will be in progress should draw a good crowd of shooters. A programme can be obtained by writing to Mr. Burkhard.

Harry Thurman, Secretary of the Pennsylvania State Sportsmen's Association, was in New York a few days ago. While speaking of the prospects of the State shoot at Holmesburg Junction, Aug. 20-23, he said: "Quimby thinks we'll have sixty shooters at our tournament. If we have three dozen I shall be satisfied, considering the way tournaments are going." Yet we believe that Quimby's estimate is more nearly correct there that of "Father Time." The programme for that tournament is an attractive one.

The score made by the Baltimore Shooting Association's team in the Maryland and District of Columbia Trap-Shooters' League on Aug. 7 is pretty nearly, if not quite, a record: Six-men teams, 25 targets per man, known angles—result, four 24s and two 23s, a total of 142 out of 150—a team average of 94.6. On the same day "Uncle Billy" Wagner broke 88 out of 90 at unknown angles and 24 out of 25 at known angles.

The Michigan Trap-Shooters' League will hold its "State meeting" on Wednesday and Thursday, Aug. 28, 29, at Ionia, Mich. The tournament will be under the auspices of the Ionia Game and Fish Protective Association. Programmes can be obtained by writing to George J. Cutler, secretary of the latter organization. The three-men team race on the first day and the State championship contest on the second are special features of merit.

H. S. Welles, of A. G. Spalding & Bros., has devised a ball cartridge for shotguns that is giving great satisfaction. As loaded, the charge consists of 3 or 3¼ drams of smokeless powder, and a ball weighing one ounce that is seated in a combination of wads original with Mr. Welles. The ball may be shot accurately from any 12-gauge gun without danger to the choke, and is a deadly charge for large game at short range.

Leander Campbell, of Little Silver, N. J., and Phil. Daly, Jr., of Long Branch, N. J., shot a match at 50 live birds, $100 a side, on Friday, Aug. 9, Campbell outshooting his opponent by a good majority. The match was brought to a close at the end of the 47th round. Owing to Campbell's dilatory movements at the score, the match was a very tedious and long drawn out affair.

The Monroe (La.) Gun Club has issued a programme for an open-to-all tournament on Monday and Tuesday next, Aug. 19 and 20. The first day is given up to the smashing of bluerocks; there are nine 15-target events, $2 entrance, $5 added, and one 20-target event, $3 entrance, $7 50 added, on the programme for that day. The second day is appropriated for live-bird shooting, no programme being arranged.

Rolla O. Heikes was East for a few days last week, and put in an appearance at the New Jersey Trap-Shooters' League shoot on the Climax Gun Club's grounds on Aug. 7, receiving a warm welcome from everybody—he always gets that. The reason of his trip to New York is probably accounted for by the announcement that Rolla will in future use E. C. powder.

The second match between Eddie Hill, of Trenton, N. J., and Leander Campbell resulted in a victory for Hill by the score of 44-41. Each man has now won a heat and considerable interest is evinced in the outcome of the third race.

The first annual tournament of the San Antonio, Tex., Gun Club will be held Oct. 27-30. Mr. Willard L. Simpson, secretary of the club, P. O. Box 765, will answer all inquiries in regard to this shoot.

Carl Von Lengerke is tarred with the same stick as his brother Justus. His 25 straight at unknown angles in the league team race on the Climax Club's ground on Aug. 7 was a capital piece of work.

The Endeavor Gun Club, of Jersey City, N. J., will pay a visit to the Union Gun Club, of Springfield, N. J., on Aug. 31, for the purpose of shooting the first of a series of team races with that club.

The Warren (O.) Gun Club claims dates for a two days' tournament at targets. The days chosen are Sept. 6-7. All necessary information may be obtained of H. B. Perkins, Jr., secretary of the club.

The chances for a big shoot at Charlotte, N. C., Aug. 27-29, are booming. From present appearances there will be at least sixty adherents of Colonel Anthony on deck the first day.

Are you going to Des-Chree-Shos-Ka?
If not, why not?

EDWARD BANKS.

Trap-Shooting around Cincinnati.

CINCINNATI, Aug. 10 —Southern Ohio has not been satisfied with the great DuPont tournament at Cincinnati in May, but is making the gun club's grounds lively with less pretentious affairs, though none the less enjoyable.

The Lockland Gun Club, of Lockland, a suburb of Cincinnati, gave an all-day tournament in July at which the entries averaged 23; in several events over 30 sportsmen participated.

The Home City Gun Club, of Springfield, O., with a membership of 60 enthusiastic young sportsmen, gave a tournament on July 30, a full report of which appeared in your issue of to-day.

The Pickaway Rod and Gun Club, of Circleville, O., also gave a good tournament on July 30, which was well attended by the gun talent of that great shooting center and by several visitors from Chillicothe, Ironton, and nearby points. Ralph Trimble, of Cincinnati, represented Messrs. DuPont at the tournament and made many warm friends by his courtesy and clever work.

Professor Goodman, of the Bandle Arms Co., keeps the enthusiasm of the Cincinnati sportsmen from flagging by giving his regular "rain or shine" shoot at Mackie's. These grounds are regarded as a very difficult place to make high scores on, but Trimble, Waddell, Richard, Condell, Goodman and occasionally a visitor, manage to locate the bluerocks at the place where they will connect with the shot to the best advantage of the shooter. At this week's meeting the scores in sweepstake shooting were:

Targets	10	15	15	15	15	15	15	Per cent.
Goodman	9	..	12	14	14	14	13	.. 89
Richard	9	13	14	13	14	11	13	13 87
R Trimble	10	15	15	15	15	13	15	15 98.2
Waddell	9	14	13	15	15	13	15	14 94
Pedro	9	13	13	12	..	..	..	.. 85
Hosea	..	10	12	9	13	11	10	7 68
Stone	..	12	13	12	10	11	12	.. 78
Robinson	..	11	11	11	..	..	..	.. 73

The East End Gun Club, of this city, announces an amateur tournament chiefly for merchandise prizes, to be given at its grounds on Aug.15. Several novel features have been introduced in the programme issued by the club. This will be a local affair that will afford sportsmen within a radius of twenty-five miles considerable enjoyment. It is surprising how carefully a sportsman will shoot for a pair of beaded-covered slippers or a plug hat of the style 1890.

Hon. Thos. A. Logan, R. S. Waddell, agent of DuPont and Hazard powder companies; Lieut. DuBray, the Parker Gun Co.'s representative, and a score of other prominent sportsmen of Cincinnati and vicinity, contemplate the organization of a large and strong gun club, which will be incorporated and include in its membership all lovers of live-bird and inanimate target shooting in the Queen City who care for club affiliation. There is great need of an organization of this kind with sufficient capital to afford our sportsmen facilities for the enjoyment of a few hours before the traps each week. When the plan is fully matured we will let FOREST AND STREAM know all about it.

BUCKEYE.

Taggart Scored 88.

NEWBURGH, N. Y., Aug. 8.—Ex-Captain George H. Taggart, of the West Newburgh Gun and Rifle Association, shot a match to-day against the birds, matching himself to kill 80 out of 100 for $100. Shooting in good form he won easily, scoring 88, with three dead out of bounds; 59 of his birds were scored with the first barrel. H. C. Higginson was referee; David Brown, trap-puller, and W. J. Sutton, scorer. Taggart's 88 were scored as follows:

Trap score type—Copyright 1895, by Forest and Stream Publishing Co.

G H Taggart...
↩↗↩↩↗↩↙↩↗↑↩↖↖↖↗↓↩↘↩↗↩↗↖

Other scores during the day were: H. C. Higginson 24 out of 26 Taylor 7 out of 8, Mitchell 5 out of 7, Barday 4 out of 8 and Kerr 3 out of 7.

DAVID BROWN.

The Hollanders are Plucky.

HOLLAND, Mich., Aug. 1.—Interest in trap-shooting is increasing here. The Resort Steamboat Company offered a solid silver medal to be contested for by teams of six men from the Holland and Zeeland gun clubs, the match to be held at Macatawa Park. Although we had not had sufficient practice to become good shots, yet we concluded to try for it and the contest was held this morning. The shooting was at 25 bluerocks per man, known traps, unknown angles, entrance $2 per team, to pay for targets. Score:

Zeeland.

ARTHUR G. BAUMGARTEL, Sec'y.

New Jersey Trap-Shooters' League.

WEDNESDAY, Aug. 7, was the date set for the seventh tournament of the New Jersey Trap-Shooters' League. The shoot took place on the grounds of the Climax Gun Club, of Plainfield, N. J. The weather, after the heavy thunderstorms of the morning, was perfect when one could sit in the shade and enjoy the cool breeze that blew from the southwest. The heat, however, was very trying to the shooters at the score, as the club house shut off every atom of breeze from them, while the rays of the sun beat down with tropical force. The arrangements made by the home club for the comfort of its guests were capital in every respect, while Tom Keller and Charlie Smith kept things moving in a manner that gave everybody lots of shooting. Altogether just about 3,000 empires were thrown during the day, empire traps and targets being used in all the events.

The guest of honor was Rolla O. Heikes, who had come East on a business trip. Rolla was looking well and shot well, perhaps not quite up to his usual standard, but still well enough to be there or thereabouts all the time. The targets were thrown far and fast, which, added to a background that is about as poor as it can be, kept scores down. The team total of the Maplewood Club is especially worthy of notice, and only goes to show what a really strong team that club can get together. It was a great disappointment to the Riverside Club, of Red Bank, that its team showed up a man short. An optional sweep having been gotten up in connection with the team race, the four men of that team, with Heikes as its fifth man, shot along with the rest, scoring 101, Heikes and Ballard making 24 each, while Ivins was answerable for 22. Carl Von Lengerke, a brother of Justus, the senior member of the firm of Von Lengerke & Detmold, was the only shooter to make a straight score, his 25 landing the Endeavors in fourth place. Van Dyke's 24 and A. Sickley's and Geoffroy's 23 were the other high scores. McAlpin, one of the leaders in the race for individual honors, was unfortunate enough to have to shoot a strange gun, his own having missed connections at the Liberty street ferry. He knocked out 22 for Boiling Springs, however, and is fourth on the list with a percentage of 91 made in four contests. Drake had a bad spell in the middle of his string, missing his 14th, 15th, 17th and 18th targets; this prevented him from improving his average of 92, at which figure he is tied with A. Sickley, three members of the Maplewood team leading the league. Van Dyke's average of 96 is referred to elsewhere.

During the day eight events, all at unknown angles, with an average entrance fee of 10 cents per target, were decided. The scores in those events were as follows:

Events:	1	2	3	4	5	6	7	Events:	1	2	3	4	5	6	7
Targets:	*10*	*10*	*15*	*15*	*20*	*10*	*10*	Targets:	*10*	*10*	*15*	*15*	*20*	*10*	*10*

Al Heritage.....1011000111111111000110001—15— 90

The Riverside Club side referred to above was as follows: Heikes 24, Ballard 24, Ivins 22, J. Bergen 16, J Cooper 15—101.

The scores made by each club in the contests already decided run as follows:

	Feb.	March.	April.	May.	June.	July.	Aug.
Maplewood	106	103	114	104	98	99	112
South Side	100	106	101	109	103	87	90
Boiling Springs	106	..	98	96	95	115	90
Climax	..	86	95	104	98	106	100	99
Union	101	105	102	100	..	96	98
Elizabeth	89	90	109	103	74	109	91
Endeavor	71	96	88	100	94	94	94
Riverside	..	101	85	68	..	..	..
Union Hill	43	67	72	..	86	72	..

As the final results of these team contests are calculated on the basis of "the five best scores to count," we have the standing of the clubs to date as follows:

	Shot at.	Broke.	Per cent.		Shot at.	Broke.	Per cent.
Maplewood	625	539	86.2	Elizabeth	625	502	80.3
South Side	625	519	83	Endeavor	625	478	76.4
Boiling Springs	625	510	81.6	Riverside	375	254	67.7
Climax	625	507	81.1	Union Hill	625	340	54.4
Union	625	506	80.9				

All the clubs that shot on this occasion improved their percentages with the exception of the South Side. The gains made were: Maplewood 2.1, Endeavor .9, Climax .7, Elizabeth and Union .3, Boiling Springs .2. The Maplewoods' gain places them securely in the lead, unless something unforeseen should occur.

The records for the individual prizes show Ferd Van Dyke far ahead of his competitors, his five best scores are hard to beat: 25, 24, 24, 24 and 23, a total of 120 out of 125. Twenty-six shooters have averages better than 80 per cent. for three or more shoots. In order of merit they stand as follows, the number in parentheses after a shooter's name giving the number of times he has competed:

	Shot at.	Broke.	Per cent.		Shot at.	Broke.	Per cent.
Van Dyke (5)	125	120	96	Whitehead (5)	125	107	85.6
Drake	125	115	92	Breintnall	125	106	84.8
A Sickley	125	115	92	Hebbard	125	106	84.8
McAlpin (4)	100	91	91	Greiff (4)	100	84	84
Ivins (3)	75	67	89.3	Parker	125	105	84
Apgar	125	111	88.8	Geoffroy	125	103	82.4
Collins	125	110	88	Huck	125	103	82.4
Miller	125	110	88	C Smith	125	103	82.4
Sigler	125	109	87.2	W Smith	125	103	82.4
Hoffman	125	108	86.4	E Sickley (4)	100	82	82
"Williams"	125	106	86.4	Thomas	125	102	81.6
Yeomans (4)	100	86	86	Woodruff	125	101	80.8
Money	125	107	85.6	Woodruff	125	101	80.8

The above figures show that the race is a pretty one, with two more shoots to be decided. Although first place, both for club and individual championship, is practically decided the fight for the positions is very close and interesting. No less than 87 shooters have taken part in the seven shoots held to date.

Baltimore Shooting Association.

BALTIMORE, Md., Aug. 3.—The Baltimore Shooting Association held it regular weekly club shoot this afternoon. The events of most interest were: The regular weekly club shoot for averages, which runs through the season; the Carlin and Fulton handicap, and an improvised team race, embracing all the members on the grounds who cared to participate. Messrs. Carlin and Fulton of this city have very kindly donated three prizes to be shot for as follows: 100 targets per man, to be shot on five successive club days, 20 targets per man per day. Last Saturday being very stormy the handicap was postponed and two scores were shot up this afternoon. This is the fourth score in the race and on next Thursday will be shot the final. The team race proved quite interesting, as the score was pretty close in the first event. Feeling that they had not done themselves justice, and with the throb of anticipated victory pulsating through their veins, the defeated team challenged for a second race. The result proved that they had misjudged the throb. Their humiliation was but the deeper, as the scores will show:

No. 1, 25 targets, known angles: Brown 18, White 21, Claridge 20, Stanley 20.

No. 2, 15 targets, unknown angles: Brown 10, White 12, Claridge 15, Chairs 11, Stanley 9, Antique 12.

No. 3, 10 targets, unknown angles: White 7, Brown 10, Claridge 5, Stanley 5, Coe 7, Chairs 6.

No. 4, same: Penrose 8, Brown 8, Antique 5, Malone 7, White 8, Stanley 5.

No. 5, club shoot, handicap, 25 targets, known angles:

STANLEY.

Paducah Gun Club.

PADUCAH, Ky., Aug. 5.—The trophy handicap shoot was held to-day, fifteen members taking part in the contest. The handicap is based on an allowance of extra targets to shoot at, Class A men being scratch with 25 targets. Class B shot at 26, Class C at 27, and Class D at 28. Capt. Thompson, Erhardt, Rawleigh and Fowler tied for the trophy with 22 each. On the shoot-off at 5 targets, Rawleigh won by breaking straight; Thompson and Erhardt broke 4, Fowler 3. Capt. Thompson was additionally handicapped by a slight accident to his gun. Score:

Trophy handicap:

Class A.

C L Robertson	1011101111111111011011101—20

T. J. MOORE, Sec'y.

Meadville Gun Club.

MEADVILLE, Pa., Aug. 7.—The Meadville Gun Club held its regular shoot to-day, the scores below being made by the members present during the afternoon. Although these same scores are some that the club is ashamed of, it takes courage from the fact that even the cracks have their off days. This afternoon in event No. 2, Krider, who last week ran 25 straight, scored only 8 targets. No. 1 was the club shoot, 15 known angles and 10 unknown; No. 2 was at unknown angles. Scores:

No 1:	No. 2:

CHOKE-BORE.

Maryland and Washington Trap-Shooters.

BALTIMORE, Md., Aug. 7.—It is said by the knowing ones that if a fellow follows the races long enough he is sure to go "broke." The targets thrown on the grounds of the Standard Gun Club to-day must have been following the races pretty closely of late, as the majority of them went "broke."

This was on the occasion of the third tournament of the Maryland and District of Columbia Trap Shooters' League, held under the auspices and on the grounds of the Standard Gun Club of Baltimore City. These grounds are sometimes referred to as the Standard grounds. This is slightly misleading. The grounds are not standard by any means. Unfortunately for the shooter the proper preparation had not been made; platform facilities were very poor; clerical force inadequate; trapping unsatisfactory; shooting slow and of necessity kicking very much in evidence. It is a very huge mistake for one man to attempt to run a tournament of this kind by himself, no matter how large his proportions or how great his qualifications. No one person can take entries, keep score, divide moneys, and perform various other offices and at the same time keep a tournament of this kind going, and do it satisfactorily.

It is also an axiom that the pacemaker is not of necessity first under the wire at the finish. The event of absorbing interest was the team race, between teams composed of six men each, representing respectively the Capital City Gun Club, of Washington, D. C; Baltimore Shooting Association, Green Spring Valley Gun Club and the Standard Gun Club, of Baltimore City. Three races have now been shot off. The Capital City team took the lead in the first race, held it well in the second and looked sure winners with the Standard team second. But how have the mighty fallen? The Baltimore Shooting Association team went to the grounds to-day arrayed in their most vivid war paint, clad in their fastest shooting toggery and primed for victory.

The Capital City team shot first and made a score of 134 broken. The Standard team then took their places at the score and went them one better, stepping down with a score of 135 broken to their credit. With a look of grim determination the Baltimore Shooting Association team stepped slowly and majestically to their places. Ready! Pull! and they were off. Pencils were out to note down the goose eggs, but they were few and far between. Realizing that they were turning the last quarter and about rounding into the stretch, the boys steadied themselves for a supreme effort, and with a grand sprint ran out a score of 142 broken out of a possible 150. This score places them in the lead with two points to spare. After this event the interest in the shoot lagged, and but two more of the programme events were shot off.

The next and final tournament of the League will be held on the grounds of the Baltimore Shooting Association, on Wednesday, Aug. 21, under the management of Green Spring Valley Gun Club, Mr. Horace W. White, Pres. Every facility will be at hand to make this tournament a pronounced success and to administer to the comfort and convenience of the shooters. In addition to the regular events and team race, there will be a special prize event, 50 targets per man, entrance $5. Three prizes: First, bicycle; second, case Mt. Vernon Whiskey; third, not yet selected, value $15. All shooters are cordially invited to attend this tournament and participate in the various events.

Below will be found summary of the scores; all the programme events being at unknown angles, with a uniform entrance fee of 10 cents per target:

F. M. D.

Pier Defeats Smith.

PATERSON, N. J., Aug. 7.—James Pier, of Boston, N. J., and H. Smith, of this place, shot a match to-day at live birds on Rogers' grounds. The conditions were: 15 live birds, $25 a side, old Long Island rules to govern. About 75 spectators from Paterson, Singac and Boston were on hand to witness what was expected to be a close race. Pier, however, won easily, shooting in his best form and killing his birds in good shape. Smith was unable to stop Rogers's birds, being beaten by 4 birds with only 14 shot at. A return match was at once arranged, the conditions being the same with the exception of the rise, which will be 25yds. instead of 21yds. Mr. Van Houten acted as referee. Scores:

J Pier	↙↖↖↖↖↗↗↖↗↖↗→↗	1 1 1 • 1 1 1 1 1 1 1 1—13
H Smith	↗↙→↑↖↖↗↑↑↗↑↗↑	1 1 • 1 • 1 • 1 0 1 1 1 0—9

DUTCHER.

WESTERN TRAPS.

HAVE YOU GOT A BOY?

CHICAGO, Ill., Aug. 9.—All shooters of this vicinity should bear in mind the dates of Aug. 30 and 31, and be ready to turn out then for a two days' shoot on the pleasant grounds of the Cicero Gun Club, a nice quarter of an hour's ride on the fast electric road which connects with the Madison street cable. By making a good turnout at this shoot, they will be doing a good thing for themselves and incidentally doing good to others. The occasion is the first meeting of the Cook County Trap-Shooters' League, that is to say, the second day of the shoot will represent that meeting, but the tournament for both days, under the auspices of the League, is a benefit shoot for Mr. Chas. Grubbs, who will manage the affair in its entirety on both days and take all receipts. Shooters will heartily patronize this event when they learn that Mr. Grubbs takes this means of getting at a little ready money for the purpose of sending his son to New Mexico for his health. The boy is suffering from a lung trouble and needs to get into a better climate. He is the son of a big-hearted shooter, who has many big-hearted friends among our shooters. This I am sure is enough to say, except to repeat that the dates are Aug. 30 and 31. Come to Charlie Grubbs's shoot. Montgomery Ward & Co. furnish traps and targets. Don't forget Charlie Grubbs.

THE NEW LEAGUE.

As announced briefly by telegraph on the evening of organization, the new Cook County League is now ready for business. At the meeting of organization there were only about a dozen men present and only three clubs were represented, but this is by no means any criterion, and for the League there is nothing to predict but a pleasant success. It is to be hoped that this may prove true in some measure of the target shooting question in Chicago. This is a great big city, but when it comes to a target tournament it is about the poorest city on earth. Perhaps after a time this organization will better knit together the split-up members of the shooting body of Chicago, and make it possible to give a modern target tournament here which will bring out the proper number of shooters, and oversee the strangely conservative methods of this city in such matters.

The plan of the League is to hold monthly shoots. The first one will be held at Cicero Gun Club grounds, Aug. 31; the second at Eureka Gun Club grounds, Sept. 21; the third at Garfield grounds, Oct. 19. There will be suitable season prizes, also a League team trophy, the latter to go to the highest club per cent Mr. W. P. Mussey, of the well-known Chicago shooters' rendezvous at 106 Madison street, generously offers to furnish the trophy for 1895, and this guarantees something handsome. There is a $5 initiation fee and the yearly dues are $5. The competition is at 25 targets per man, targets at 2 cents. Live-bird shoots may be arranged by the committee, but targets will be the chief concern Stress will be placed on the wind-up of the season, the Thanksgiving Day shoot, which we may hope to see develop into an interesting Chicago fixture. As was stated earlier, there are 25 gun clubs in Chicago, with at least 600 shooters on their rosters If half of these can be galvanized into suitable energy, we should see some shooting here in the future.

FRANKLIN—GORTSCH.

A match between Geo. Franklin, President of Evanston Gun Club, and C. Gortsch, of South Chicago, was shot at Roby, suburb, on Aug. 4. The race was close, as both men killed straight to the eleventh bird, when Gortsch allowed a slow right quarterer to get away, only to fall dead out of bounds. The birds were "soft" shooting and from three traps, 50yds. boundary, 25 birds, for $25 a side, Illinois rules. Score:

Trap score type—Copyright, 1895, by Forest and Stream Publishing Co.

Franklin.....1 2 1 2 2 1 1 2 2 1 1 1 2 2 2 1 2 2 2 2 2 2 2 2 2—25

Gortsch.....1 2 1 1 1 1 1 1 1 0 1 1 1 1 1 2 2 • 1 2 2 1 1—23

Franklin used a Scott 10-ga., 3¾dr. Schultze, 1¼oz. No. 8 chilled in first, No. 7s in second. Gortsch shot a 12-ga. Parker hammerless, 3dr. E. C., 1⅛oz. No. 7c both barrels.

KANKAKEE SHOOT.

The three days' shoot at Kankakee, Aug. 7-9, was a nice little affair, entries 15 or 20 pretty regularly. Tom Marshall allowed Keithburg to go without a mayor while he attended the shoot. Abe Kleinman, Eddie Bingham, W. H. Skinner, Oswald von Lengerke and others from this neck of woods were on hand. R. L. Trimble, the Kentucky champion, came up from Covington and added a few more lines of laurel to his collection, taking high average each day and breaking 146 out of 160 targets shot at. Following are winners for each day.

First Day.

No. 1, 10 targets: Grube 10, Magruder 9, Trimble 9, Hill 8.

No. 2, 15 targets: Partington 13, Skinner 13, Carrow 13, Trimble 13, Magruder 12, Hill 12, Chester 12, Tate 11. Livinguth 11, King 11.

No. 3, 25 targets: Von Lengerke 25, Bingham 25, Trimble 24, Grube 22, Ruble 22, Partington 21, King 21, Marshall 21.

No. 4, 10 targets: Livinguth 10, Trimble 10, Thomas 9, Ruble 9, McColly 9, Magruder 8, Kleinman 8.

No. 5, 15 targets: Grube 14, Bingham 14, Thomas 13, Marshall 13, Von Lengerke 13, Partington 12, Hill 12, King 12, Trimble 12, Ruble 12, Kleinman 12. McColly 12.

No. 6, 25 targets: Kleinman 25, Trimble 24, Marshall 24, Partington 23, Ruble 23.

No. 7, 10 targets: Grube 10, Ruble 10, Bingham 10, Erhardt 10, Heiss 10, Partington 9, Hill 9, Tate 9, Livinguth 9, King 9, Von Lengerke 9, Chester 8, Trimble 8, Marshall 8.

No. 8, 5 pairs and 5 singles: Tate 14, Skinner 13, Trimble 13, Marshall 13, Ruble 12, Von Lengerke 12.

No. 9, 25 targets: Grube 24, Livinguth 24, Ruble 24, Magruder 23, Marshall 23, Kleiman 23, Trimble 22, Von Leugerke 22, Bingham 22, Heiss 22.

No. 10, 10 targets: Skinner 10, King 10, Trimble 10, Kleinman 10, Barto 10, McColly 10, Partington 9, Hill 9, Grube 9, Carrow 9, Magruder 8, Tate 8, Thomas 8, Marshall 8. Ruble 8, Bingham 8.

Second Day.

No. 1, 10 targets: Thomas 10, Ruble 10, Trimble 10. A. Kleinman 10, Marshall 9, Hill 9, Magruder 9, Barto 9, Skinner 9, Partington 8, Bingham 8, King 8.

No. 2, 15 targets: Hill 15, Partington 14, Chester 14, Grube 13, King 13, Schumacher 13.

No. 3, 25 targets: King 25, Bingham 24, Park 24, Ruble 23, Partington 23, Marshall 23, Trimble 23, Grube 23.

No. 4, 10 targets: Ruble 10, Armstrong 10, Thomas 9, Bingham 9, Hill 9, A. Kleiman 9, King 9, Tate 9, Schumacher 9, Partington 8, Marshall 8, Trimble 8. McCally 8, Barto 8, Park 8, Chester 8.

No. 5, 15 targets: Bingham 14, King 14, Chester 14, Thomas 13, Partington 13, Marshall 13, Trimble 13, McCally 13, Hill 13, Barto 13, Magruder 12, A. Kleinman 12, Schumacher 12, Armstrong 12, Tate 12.

No. 6, 25 targets: Park 25, Ruble 24, Trimble 24, Hill 24, Grube 24, Magruder 23, A. Kleinman 23.

No. 7, 5 pairs and 5 singles: McCally 14, A. Kleinman 14, Bingham 13, Marshall 13, Ruble 12, Trimble 12, Hill 12, King 12, Chester 12.

No. 8, 10 targets: Trimble 10, Hill 10, Kleinman 9, King 9, Chester 9, Thomas 8, Ruble 8, Marshall 8.

No. 9, 25 targets: Trimble 25, Tate 25, Kleinman 24, Thomas 23, McCally 23.

No. 10, 10 targets: Livinguth 10. Ruble 9, Partington 9, Trimble 9, Park 9, Chester 9, Kleinman 8, King 8, Herman 8, Tate 8.

Third Day.

The third and last day of the Gun Club tournament here was fully as successful as either of the other two, and the visitors were well pleased with the meeting. The events of to-day were as follows:

No. 1, 10 targets: Marshall 10, Trimble 10, Fortier 10, King 10, Bingham 9, Hill 9, Thomas 9, Magruder 8, Grube 8, Ruble 8, Sleezer 8, Park 8.

No. 2, 15 targets: Ruble 15, Bingham 14, Grube 14, Hill 14, Park 14, Livinguth 13, Tate 13, Thomas 13.

No. 3, 10 doubles, 5 singles, $10 added money: Hill 21, Marshall 19, Bingham 17, Trimble 17.

No. 4, 10 targets: Marshall 10, Bingham 10, Hill 10, Thomas 10, Trimble 9, Grube 9, Livinguth 9, King 9, Tate 9.

No. 5, 15 targets, $10 added money: Ruble 15, King 14, Fortier 13, Grube 13, Park 13.

No. 6, 25 targets, $25 added money: Hill 23, Trimble 23, King 22, Park 22, Bingham 21, Magruder 21, Grube 21, McColly 21.

No. 7, 10 targets: Trimble 10, Marshall 9, King 9, Sleezer 9, Hill 8, Park 8, Glass 8.

No. 8, 15 targets: Trimble 13, Bingham 12, Hill 12, Magruder 11.

No. 9, 25 targets, $30 added money: Livinguth 24, King 24, Ruble 24, Park 24, McColly 23, Grube 23, Tate 25, Hill 22, Marshall 22.

B. L. Hill, of Cincinnati, won the day's average.

SHEBOYGAN SHOOT.

At Sheboygan, Wis., Aug. 4 and 5, a pleasant two days' shoot was held, with attendance from Milwaukee, Chicago, Oconomowoc Menominee, Two Rivers, etc., etc. Honors on the first day were about even. The second day's shoot brought out a large attendance, and the honors of the day went to the South Side Gun Club, of Milwaukee. Manitowoc, Two Rivers, Hingham, Racine and Oshkosh were represented.

The winners of the first day were as follows:

Event No. 1, 10 birds: Schiffeneder and Baudman, of Sheboygan; Henry, of Two Rivers; Rastad, of Milwaukee, and Kauffman, of Oconomowoc, all went straight.

Event No. 2, unknown angles and known traps, 10 birds: Schiffeneder, of Sheboygan, and Rye went straight.

Event No. 3, 20 birds, "Jack-Rabbit" system: "W. M. M.," of Chicago, went straight. Julius Kroos, of Sheboygan, broke 19.

No. 4, 10 targets: "W. M. M." 10, Bondmann 10, Kaufmann 10, Rock 10.

No. 5, 15 targets: "W. M. M." 15, Rout 14, Staley 14, Bondmann 14.

No. 6, 10 targets: Kaufmann 10, Kroos 10, Gillman 10, Stable 9.

No. 7, 20 targets: Sonshagen 20, Kaufmann 20, Bondmann 19, Schiffeneder 19.

No. 8, 15 targets: Kavel 15, Kaufmann 14, Sonshagen 14, Gillman 14.

No. 9, 10 targets: "W. M. M." 10, Bock 10. Brcught 10, Sonshagen 10.

No. 10, 15 targets: "W. M. M." 15, Kroos 14, Kaufmann 14, Sonshagen 14.

RACINE SHOOT.

The daily press dispatches from the Racine shoot read as below: Many sportsmen are here, among them J. L. Johnson, of the Milwaukee Gun Club; Eugene Cahoon, of Freeport; Thos. Parker, of Oconomowoc; Charles Antoine and W. H. Skinner, of Chicago, and James E. Bush and J. L. Case, of this city. Fifteen matches were shot to-day at artificial bluerocks. Johnson, of Milwaukee, was the winner in most of the contests. Thomas Parker killed 20 straight birds in one match, which was the record of the day. The Chicago marksmen are doing well. The summaries:

No. 1, 10 targets: Johnson won, Shoop and Case second, Bush third, Antoine fourth.

No. 2, 10 targets: Shoop and Johnson tied for first place, Case second, Antoine third, Skinner, Parker, Meley and Wiley tied for fourth place.

No. 3, 20 targets: Parker won; Bush, Skinner and Johnson second, Shoop and Case third, Lewis fourth.

No. 4, 5 pairs: Johnson won; Case second, Parker and Shoop third, Skinner fourth.

No. 5, 15 targets: Johnson won; Case second, Parker and Shoop third, Skinner fourth.

No. 6, 10 targets: Cahoon won; Wiley, Johnson and Antoine second, Blake third, Meile and Skinner fourth.

No. 7, 20 targets: Johnson won; Shoop second, Case, Antoine and Bush third, Allis, Lewis, Skinner and Wiley fourth

No. 8, 15 targets: Johnson and Allis first, Case, Lewis, Pugh, Blake and Bull second, Shoop third.

No. 9, 10 targets: Skinner won; Bull and Bush second, Case, Allis, Pugh and Johnson third, Shoop and Evans fourth.

No. 10, 15 targets: Johnson and Bush first, Pugh second, Shoop and Case third, Bull, Lewis, Skinner and Allis fourth.

No. 11, 10 targets:—Allis and Skinner first, Antoine and Johnson second, Abe Pugh, Art. Pugh, Bush, and Case third, and Evans fourth.

No. 12, Same:—Johnson won, Skinner, Blake, and Antoine second, Case and Art. Pugh third, and Abe Pugh fourth.

No. 13, Same:—Case and Johnson first, Allis, Antoine, Art. Pugh and Sharp second, Parker third, Skinner and Blake fourth.

No. 14, Same:—Parker won, Case, Pugh, Shoop and Smiding second, Evans third, and Allis fourth.

No. 15, 5 pairs:—Johnson won, Case second, Antoine third.

No. 16, 10 targets:—Case won, Johnson second, Art. Pugh third.

No. 17.—Same:—Art. Pugh won, Case second.

ELSEWHERE.

The Lake Geneva shoot of last week is reported very successful. There are numbers of small tournaments going on all around in the country. These small shoots are worth far more to the sport of trap-shooting than the great tournaments.

DECATUR SHOOT.

Chan. Powers, of Decatur, Ill., writes in regard to the coming tournament of the Independent Gun Club, of that city, Aug. 21 and 22, that inquiries for programmes are coming in so fast that the shoot seems to be sure of success. The programme is unique and snappy. It says that targets will be shot at 1⅛ cents, that balloons are going to be scarce. No black powder loads will be allowed; nobody will lose a shot; nobody will be barred or handicapped. The events are varied, but practical. E. HOUGH.

909 SECURITY BUILDING, Chicago.

Trap in Iowa.

DES MOINES, Ia., Aug. 9.—Inclosed please find scores of two matches shot to-day on Des Moines Gun Club grounds of this city.

The first match was between Mr. Christianson, of Randall, and Mr. Peterson, of Coon Rapids, Ia., 50 live birds each, for $50 a side. The first 15 birds were wet and did not fly well, but the rest were a fair lot, and but few had to be flushed. There was quite a strong wind to help the birds along, and some fine shooting was done by both contestants. Mr. Christianson used an L. C. Smith and Mr. Peterson a Parker gun. Mr. Christianson scored 45 to Mr. Peterson's 42, and won. Score:

Trap score type—Copyright 1895, by Forest and Stream Publishing Co.

Christianson....2 2 2 2 1 2 2 1 1 2 1 2 0 2 2 2 2 0 0 2 1 2 1 2 2—22

Peterson.....2 2 1 1 1 1 1 2 1 2 1 2 1 1 2 2 0 0 0 1 2 1 0 1—21

The second match was at 50 birds each between Christianson, of Randall; Miller, of Oskaloosa, and Crissman, of Ottumwa. The birds were a good lot and the match was close and exciting. The purse was $50 a corner, the winner to take the pot of $150. Christianson won by the narrow margin of one bird over Miller. This was the first match Crissman had ever shot on the grounds, and he was somewhat handicapped on this account. There is some talk of another match of the same kind between the same gentlemen. All three contestants used Smith guns:

Christianson...1 1 0 2 1 2 1 2 2 1 1 2 2 0 2 1 1 0 2 2 2 1 0 1 1—21

Miller.....2 1 1 1 0 0 1 0 2 1 2 1 0 1 1 2 1 1 0 2 1 1 2 1 0—19

Crissman.....2 1 2 2 1 0 2 2 1 2 0 0 2 0 2 2 2 2 2 2 2 2 0 1 1—20

C. W. BUDD.

Union and Endeavor.

JERSEY CITY, N. J., Aug. 12.—*Editor Forest and Stream:* Following the suggestion in FOREST AND STREAM of Aug. 10, the Union G. C., of Springfield, and the Endeavor G. C., of Jersey City, have arranged to shoot a series of team races. The first to be decided on Union's grounds Aug. 31. Conditions: Seven to ten man teams, 25 targets per man, entrance price of targets at 2 cents each.

At the regular meeting of Endeavor G. C. on Aug. 9, in view of the dissatisfaction expressed as to the way targets were thrown at the N. J. T. S. League contest on June 29, it was decided to have a new set of traps in position for our fifth annual Labor Day tournament, Sept. 2, and to have the targets thrown to comply with American Association rules. Everything possible will be done to give entire satisfaction to visiting sportsmen, and no unfair dealing will be practiced or tolerated. J. A. CREVELING, Sec'y Endeavor G. C.

Sheridan Rod and Gun Club.

SHERIDAN, Wyo.—We have just organized a rod and gun club here. It will be known as the Sheridan Rod and Gun Club. Officers as follows: President, Mr. Newell; Vice-President, Geo. Estelle; Secretary and Treasurer, Mark R. Perkins. MARK R. PERKINS.

The Binghamton Tournament.

BINGHAMTON, N. Y., Aug. 8.—The two-days' tournament, which was brought to a close this evening, was a very pleasant affair, all those who took part in it being pleased with the sport afforded for their amusement by the management. The weather on the first day was threatening in the morning, but cleared up later, and a brisk wind kept the atmosphere cool. To-day it was clear and pleasant, with quite a high wind blowing.

Among those present, outside the members of the home club, were: Neaf Apgar, of Evona, N. J.; Gus E. Greiff, of New York, representing Von Lengerke & Detmold and Schultze Powder; P. Adams, New York; A. G. Courtney, D. Lefever and George Mann, of Syracuse, N. Y., the two former, of course, looking after the interests of the Lefever Arms Co.; Sim Glover, Rochester, N. Y.; E. D. Fulford and his brother John, from Utica; A. W. Adams, Chicago, Ills.; Knight, Cortland, N. Y., and Paddleford and Brainard, Sherburne, N. Y.

The scores show that Neaf Apgar had his shooting clothes on and was pointing his gun about right. During the two days of the shoot he fired at 405 targets, known traps, unknown angles, and broke 383, scoring a percentage of 94.3. In the programme events on the first day he broke 95.6 per cent.; in all the events on that day he scored 95 per cent., breaking 228 out of 240—a gait rapid enough for anybody. It may be of interest to note that on that day he went straight 9 times in 18 events, and missed but one target in six other events. Glover and Kendall were second in the averages on the first day in the programme events, each breaking 93.7 per cent. That Glover was in hard luck is evidenced by the fact that in eight of the twelve programme events he missed going straight by a single target. On that day he shot a Winchester repeating shotgun, shooting his old gun on the second day. Mr. Kendall's average is one that any expert might be proud of. E. D. Fulford was close up with 93.1 per cent., breaking 79 out of his last 80 in the programme events on the first day. His two days' total of 342 out of 380 gives him just a 90 per cent. average, beating Glover by 1.3 per cent. for second average. H. W. Brown, a Binghamton man, had fourth best general average, 87.3, shooting consistently well all through the tournament. Greiff also shot a good race, breaking in all 269 out of 310, a percentage of 86.7.

The tables given below will tell the story of the shoot, all the events being at known traps, unknown angles:

First Day.

Events:	1	2	3	4	5	6	7	8	9	10	11	12			Per

Wheeler	..	..	6	11	8	8	7	..	7	9	3	..	..	95	59	62.1

The following are the ten best averages made by shooters who took part in both days' programme events, and also in the extras on the first days, the scores as given in the tables being all that reached us:

	Shot at.	Broke.	Per cent.		Shot at.	Broke.	Per cent.
Apgar	405	383	94.3	Kendall	405	347	85.6
E D Fulford	380	342	90	A W Adams	390	327	83.8
Glover	390	346	88.7	Courtney	280	232	82.8
Brown	380	332	87.3	Hobbie	405	329	80.1
Greiff	310	269	86.7	Lefever	255	209	80.1

PUBLISHERS' DEPARTMENT.

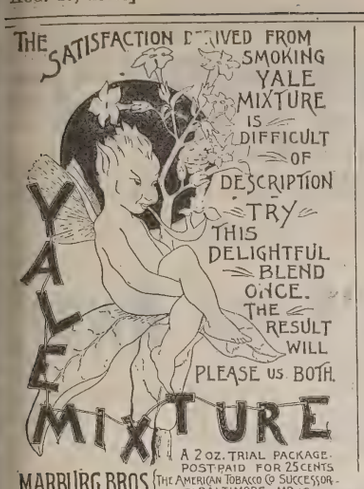
Hunting Moccasins.

PHILADELPHIA, July 25.—*Mr. M. A. Smith:* Dear Sir—I have received the New Ideal Hunting Shoe ordered of you last week, and to say that I am more than pleased with them is expressing it mildly. *They are simply perfect.* You will remember that these are the second pair I have had. The first pair I subjected to the hardest kind of tests, and must say that I derived more comfort and wear from them than any shoes I ever had. They never tired or hurt the feet in any way, but felt like an old slipper, so comfortable were they. I am confident the new ones will prove even more serviceable than the first pair. The sportsmen throughout the country should be very grateful to you indeed, as I am sure they are who are lucky enough to have had a pair. I found them not only easy, as I have stated, but—*absolutely waterproof,* and I have given them severe tests. Very truly yours,

J. R. PAINTER.

"Our Native Birds of Song and Beauty."

WE have received from the publisher, Geo. Brumder, of Milwaukee, Wis., Part XII. of "Our Native Birds of Song and Beauty." We have already expressed our appreciation of the high character of Mr. Nehrling's work as a popular account of North American birds; and this number, devoted to the sparrows, amply sustains the promise of those which have preceded it.



"Hunting and Fishing along the Northwestern Line"

is the title of a booklet recently issued by the Chicago & Northwestern Railway. It is profusely illustrated, and gives information in detail concerning the best hunting and fishing grounds in the West and Northwest. Copies will be mailed free to any address upon application to W. B. Kniskern, General Passenger and Ticket Agent, Chicago & Northwestern Railway, Chicago, Ill.—*Adv.*

A Boston Estimate.

BOSTON, July 22.—*Editor Forest and Stream:* Through my loaning several copies of FOREST AND STREAM to my friends they became so interested in its contents that now they are regular readers of your valuable paper, and when out fishing we generally discuss the different subjects contained in its columns.

I can see a whole "stack" of FOREST AND STREAMS before me which I would not part with for treble their cost, and I look forward to each succeeding issue. I consider it the most interesting and instructive paper published of its kind. BOSTONIAN.

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where we get back a good deal more than cost of catalogue and postage.

ABBEY & IMBRIE,

18 Vesey Street, New York City

MARSTERS HAS WORMS.

Sand Worms, 12c. per dozen. White or Blood Worms, 25c. per dozen.

I am with you again with lower prices for Fishing Tackle. I find by experience that putting down the prices and increasing the quality, increases my business every year.

One lot of Split Bamboo Fly and Bass Rods will be sold at 98c. until all are sold. These Rods are all nickel mounted, solid reel seats, beaded butts, silk wound. Extra tip. Complete in wood form and cloth bag, and will give satisfaction. Lengths and weights of Fly Rods are: 9ft., 6oz.; 9½ft., 6½oz.; 10ft., 7oz.; 10½ft., 7½oz.; 11ft., 8oz. **Reel seats below hand.** Lengths and weights of Bass Rods are: 8½ft., 9oz.; 9ft., 10oz.; 9½ft., 11oz.; 10ft., 12oz.; 10½ft., 14oz.; **reel seats above hand.** Any of the above rods sent by mail on receipt of price and 30c. extra for postage.

No. H.—A special lot of hard rubber and nickel, raised pillar, multiplying reel, with balance handle and side spring click, 40yds., 68c.; 60yds., 78c; 80yds., 88c.; 100yds., 98c. Any of the above reels sent by mail on receipt of price and 10c. extra for postage.

No. E—Special lot of hard rubber and nickel, raised pillar, click reels, 40yds., 48c.; 60yds., 58c. Sent by mail on receipt of price and 5c. extra for postage.

No. C—Special lot of extra fine nickel plated, raised pillar, multiplying reels with click and drag, and screw off oil cup, 40yds., 58c.; 60yds., 68c; 80yds., 78c; 100yds., 88c.; 150yds., 98c.

Single gut leaders, mist color, 1yd., 20c. per doz.; 2yds., 40c. per doz.; 3yds, 60c. per doz. Double gut leaders, mist color, 2yds., 75c. per doz. Hand twisted treble gut leaders, 3ft. long, 10c. each, 90c. per doz.

A special lot of Trout Flies at 16c. per doz. Sent by mail, 1c. per doz. extra for postage.

A special lot of Bass and Pickerel Spoons at 5c. each. Sent by mail, 1c. extra for postage.

All kinds of **Hollow Point best quality hooks**, snelled to single gut, 10c per doz.; double gut, 15c per doz.; treble gut, 20c. per doz; four-ply, 25c. per doz. Sent by mail, 1c. per doz. extra for postage.

300ft braided linen reel lines on blocks, 40c.; 300ft. hand made linen reel lines on blocks, 9 thread, 38c. Sent by mail, 3c. extra for postage.

Brass box swivels, all sizes, Nos. 1 to 12, 15c. per doz. Sent by mail, 1c. per doz. extra for postage

SEND 2-CENT STAMP FOR 74 PAGE ILLUSTRATED CATALOGUE AND SPECIAL LIST NO. 4.

(Open evenings until 8 o'clock. (Saturday evenings until 11 o'clock.) J. F. MARSTERS, 51, 53 & 55 Court St., Brooklyn, N. Y.

"THREE IN ONE" COMPOUND.

3 REGISTERED. TRADE MARK.

An Oil for Guns and Bicycles.

It Cleans Thoroughly,
It Positively Prevents Rust,

THE ONLY PERFECT FISHING LINE IS THE

Natchaug Braided Silk Line.

Made from the choicest stock braided 16-strand three-cord silk. They will outwear three ordinary lines. Spool perfectly when in use.
Never flatten or become water soaked.

NATCHAUG WATERPROOF BAIT & FLY LINES

will float on the water. The finish cannot be broken. Those who have used them will have no others. Send four cents for samples and prices and pamphlet containing our awards of prices for last season and cash prizes for 1895. For sale by all dealers.

$225 in Gold Given Away!

WE offer the following Prizes for the Season of 1895, $225 in Gold for the largest fish caught on the

NATCHAUG SILK LINES

From April 1st to November 1st, 1895.

First Prize—$25 in Gold for the heaviest Muskallonge.
Second Prize—$25 in Gold for the heaviest small-mouthed Bass.
Third Prize—$25 in Gold for the heaviest large-mouthed Bass.
Fourth Prize—$25 in Gold for the heaviest Lake Trout.
Fifth Prize—$25 in Gold for the heaviest Mountain Trout caught west of the Mississippi River.
Sixth Prize.—$25 in Gold for the heaviest Brook Trout caught in Maine or Canada.
Seventh Prize—$25 in Gold for the heaviest Brook Trout caught in the United States, east of the Mississippi River, outside of Maine and Canada.
Eighth Prize—$25 in Gold for the heaviest Pickerel, Pike or Salmon.
Ninth Prize—$25 in Gold for the heaviest fish of any kind caught with the Natchaug Silk Line in fresh or salt water.

CONDITIONS:

All of these fish must be caught with the Natchaug Silk Fishing Line, and by fair angling.
Competitors must forward to us their full name, P. O. address, together with description and weight of fish caught, and name of dealer from whom line was purchased, within thirty days after such catch is made, together with the name of one reputable witness affixed. On November 7, 1895, the award will be made and the list of successful competitors announced in the FOREST AND STREAM and the *American Field*.
All successful competitors before receiving their prizes will be required to send an affidavit as to their statement of fish caught.
If your dealer does not keep the Natchaug Silk Fishing Lines, order direct from

THE NATCHAUG SILK CO., Willimantic, Conn.
Or, 213-215 Fifth Avenue, Chicago.

"Outside the Danger Line."

Mr. Wilmot Townsend's new drawing, "Outside the Danger Line," depicts a flock of broadbills alighting; and the study of action will readily be recognized by observing gunners as true to the life. The scene is on a calm day, when, with nothing to alarm them, the ducks have concluded to rest a while far from shore. Reproduced by the artotype process, the plate being 16×21in. Edition limited to 100. Price is $3.

FOREST AND STREAM'S OUTDOOR SCENES.

FROM ORIGINALS IN WATER COLORS AND OIL, PAINTED EXPRESSLY FOR THE FOREST AND STREAM.

AS PREMIUMS.

We have prepared as premiums a set of four beautiful and artistic reproductions of original paintings of realistic outdoor scenes. The art work is the best obtainable in New York; the pictures are rich in effect and are intended for framing. They are done in 12 colors. The yacht race is from an oil painting; the others from water colors. The scenes are shown in the small cuts herewith. The plates are 14¾ x 19in. The pictures are sent both to **new** subscribers and to **old** subscribers upon renewal, on the following terms:

Forest and Stream *one year and the four pictures*, $5.
Forest and Stream *6 months and any two pictures*, $3.

If subscribing for 6 mos. designate by title the two pictures desired. Single pictures will be sold separately, price $1.50 each, or the set, $5. Remit by express or postal money order, payable to Forest and Stream Publishing Co., 318 Broadway, New York.

The pictures are sent by mail, postpaid, wrapped in tube.

Copies of them may be seen at this office, and inspection is invited.

HE'S GOT THEM.

BASS FISHING AT BLOCK ISLAND.

JACKSNIPE COMING IN.

VIGILANT AND VALKYRIE.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2. | NEW YORK, SATURDAY, AUGUST 24, 1895. | VOL. XLV.—No. 8. No. 318 BROADWAY NEW YORK.

For Prospectus and Advertising Rates see Page vii.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, $5.
Forest and Stream *6 months and any two of the pictures*, $3.
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

SNAP SHOTS.

IN a recent issue we exploded the story that millions of wild duck eggs are collected by Indians in Alaska and other northern regions for importation into this country for the manufacture of albumen. The Seattle *Argus*, commenting on our exposure of the canard (which is French for "duck" and English for "duck-egg fake") remarks that it is very much to the discredit of the FOREST AND STREAM that "it should take this action without proper investigation." The fact is quite the opposite. We were the first and up to date the only ones to investigate the truth of the story, and we found out and declared that there was nothing in it.

The *Argus*, whose remarks we give elsewhere, says that it "can produce affidavits to the effect that this traffic does exist to an enormous extent." We have written to the *Argus* to send us the affidavits and we too will print them. We will print any and every stitch of evidence that anybody at any time anywhere may have to offer to controvert our statement that the duck-egg story is an empty and silly yarn.

We may add that it appears to us to be incumbent upon the officials of the National Association for the Protection of Game, Birds and Fish, who have made a calamity cry of the Alaska duck-egg destruction, to explain their part in the view-with-alarm outcry. If they fool the people once, how shall the people know that they are not fooling them when they start another game protection "issue"? The youth who cried "wolf" when there was no wolf, was not believed when there actually was one. There is so much to be done for the cause of game and fish preservation in America that it is a tremendous pity to waste breath and fool the public on imaginary issues. As for the *Argus*, it perhaps is promoting a $5,000 good thing for some patriot who wants a trip to Alaska at Uncle Sam's expense.

The report on "Birds as Protectors of Orchards," contributed by Mr. E. H. Forbush to the Bulletin of the Massachusetts Board of Agriculture, is of so great importance that we direct special attention to it. The value of the services insectivorous birds render to agriculture is generally accepted as an abstract principle; here are concrete facts, which present and illustrate and emphasize the principle in an extraordinarily convincing manner. This report of ornithologist Forbush ought to be circulated by the million copies all over this blessed land. It would go far toward correcting the ignorance, stupidity, stubbornness and heathenism that now wage war on the birds.

The angle-worm has prompted a vast amount of writing, chiefly of the things that happened before and after the bait was put on the hook. Weightier, if less important, contributions to literature have been devoted to this humble creature. Darwin devoted years to the study of earth-worms as soil makers; and now comes a monograph by a British naturalist on the Oligochæta, the order of worms to which the common angle-worm belongs. There are in the order fourteen families, more than 100 genera and over 600 species, so that the earth-worm tribe may well furnish material for scientific research and for bulky volumes. The more than 650 titles quoted in this new work hint of the attention given to earth-worms by students; and if the author had only consulted angling literature he might have quoted as many more not so scientific.

Speaking of angle-worms, the occasion is timely for passing along the suggestion which Mr. George T. Angell, president of the American Humane Education Association, sends out this month "to the editors of about twenty thousand newspapers and magazines," to this effect: He says that "humane persons may kill fish worms instantly by plunging them in a dish of boiling water, and so giving the fish cooked worms instead of raw." That strikes us as a happy thought and a helpful hint for the twenty thousand editors if they are all worm-fishermen. If the trout positively won't take the worm raw, give it to him cooked—anything to get fish when the camp is hungry.

A writer in a humane journal carps at "a good Philadelphia mother," who had sent her son into the Adirondacks with one of the best guides of the woods "that he might shoot a deer, because she trusted 'that Divine Providence would protect him.'" The humane writer is horrified at the thought that a mother should trust in Providence for the care of a deer-hunting son; he manifestly does not recognize as belonging to the scheme of creation the adaptability of the young man to hunt deer and of the deer to be hunted by the young man; he does not consider that deer hunting can have Divine approval, nor that a mother may rightly invoke the care of Providence in behalf of a hunter. Our own notion is that the young man was blessed in having such a mother, and the mother in having such a son. Deer hunting is a perfectly legitimate pursuit for young men whose loving mothers are wont to commit them to the care of Providence. If the exercise of maternal solicitude and faith were never required in behalf of sons engaged in less innocent employments than hunting deer, the world would be nearer the millenium than it is to-day or will be for ages to come. All this is said of course without authority, and subject to correction by any one who knows all about Providence and is cock-sure that despite a mother's trust Divine Providence will let a young deer hunter go to smash because he is engaged in something awfully wicked.

Majestic Liberty held aloft her torch in the harbor of New York last Sunday night to light to snug anchorage within its rays Valkyrie III., come across the seas to try conclusions with her cousin of American birth. The voyage was uneventful, and the boat reached port in good condition. No one can foretell the result of the races to be sailed next month; but one thing is certain, the winner, whichever one it shall be, will have defeated a good boat.

Just as we go to press comes a dispatch from our Chicago staff correspondent announcing that the Kewanee cold storage game case has been ended with a conviction of H. Clay Merritt, who was fined $805. This is not a large sum when compared with the rumored fines running from $23,000 to $630,000, but it really is a good round figure to pay for having frozen game stored away, and a penalty amply sufficient to vindicate the law and to teach a lesson.

The most suggestive feature of this Kewanee cold storage case is the amount of frozen game shown to be in stock. The birds piled in the vaults were the over-supply from the last open season. A cold storage establishment full of game means that more game was slaughtered in the season for killing than could be used in that time for food. In other words, the market-shooters are not restricted to supplying the demands of the hour; they kill multitudes of birds in excess. What is true of this one storage establishment is true of scores of others. There are to-day tons and tons of dead game packed away awaiting consumption. This is where our game is going to; and such facts as these furnish the abundant occasion for the FOREST AND STREAM'S Platform Plank—the sale of game should be forbidden at all seasons.

The summer meeting of the American Forestry Association will convene Sept. 3, at Springfield, Mass., at the time of the forty-fourth meeting of the American Association for the Advancement of Science. Recent forestry legislation, water supply, protection of road-side trees, co-operative forestry, sea-coast and river-bank planting, municipal parks, etc., will probably form the chief topics, as well as the national forestry interests. The Association has now over 700 members, distributed through the United States and Canada.

It has been pointed out by us more than once that whatever of game protective provisions and agencies we have in this country, all are due to the activity of sportsmen. They are the prompters and promoters of the laws; they originate and put into operation systems of executing and enforcing the statutes; they provide the ways and the means. For a new instance illustrating these facts note the action of the St. Louis Kennel Club, reported in our game columns, which has come forward to the financial support of the State game warden. The last Legislature having neglected to make an appropriation for the purpose, these St. Louis citizens stand ready to supply the sinews of war. They do this not for their own particular, personal, selfish benefit, but to promote a cause which is of direct and immediate advantage to the commonwealth. That in brief is the story of game and fish protection during one stage of its development in every State in the Union.

If a genuine bull-fight, Spanish, Portuguese or Mexican, were to be given within convenient reach of any of our large cities, the only problem the promoters would find a perplexing one would be to provide standing room for the 10,000 spectators who would rush to see it, and who would pay such prices for the privilege as to insure the fortunes of everybody connected with the enterprise. There is not a shadow of question that bull-fighting would be a popular "sport" with large classes of the community, and there is not a whit more doubt that public sentiment would never tolerate it. We note that the Colorado Humane Society, through Secretary Thomson, has appealed to Gov. McIntyre to issue a proclamation forbidding the proposed Mexican bull-fight at Gillet, in the Cripple Creek district, on Saturday, Sept. 24.

If bull-fighting cannot go on unmolested in the wilds of Colorado, it certainly cannot be promoted in the East. The announcement of the managers of the Atlanta Exposition that they proposed to have among their attractions an outfit of bulls and bull-fighters from Mexico and genuine combats, has provoked such a storm of protest and opposition, that now the Exposition authorities have given out that their show will be only a sham. Whether the people who would pay to see a real fight will pay to see a sham remains to be determined. The interesting fact is that public sentiment on bull fights is to-day where it was fifteen years ago when it squelched a similar project in this city. The opposition was then led by Henry Bergh; to-day no Bergh is needed to lead it.

It would take a Philadelphia lawyer to tell what a legislature is driving at sometimes when it sets about revising the game laws. In this State, for example, the law now protects meadow hens on Long Island between Aug. 16 and Jan. 1; and permits them to be killed from Jan. 1 to Aug. 16. Most people who know anything about meadow hens assume that the intent of the law-makers was to provide seasons just the opposite of those named. That perhaps is a charitable view to take of it.

There is another muddle in Minnesota, where, by an error of designating the sections of the game law, it appears that the hunting of birds with dogs is forbidden. The Attorney-General has just given an opinion that the prohibition of using dogs must be deemed to apply to deer. As given in the *Game Laws in Brief*, the enumeration of the sections is such that the provision as to dogs does apply to big game. We assume that if taken into court the Attorney-General's view would be sustained, and that the perspicacity of the *Brief's* revisory methods would be vindicated.

In Wisconsin too the Attorney General has been called on to give his opinion on a mooted point. The law forbids killing mallard, teal or wood-duck between Dec. 1 and Aug. 20 following; but in another section forbids killing "any wild duck of any variety" between May 1 and Sept. 1. The Attorney General and the State Game Warden have united in interpreting the conflicting provisions as opening the season for mallard, wood-duck and teal on Aug. 20.

The Sportsman Tourist.

MY FRIEND, THE DOCTOR.

I THINK that my dear old friend Dr. K. was one of the most thoroughly companionable men I ever met, but paradoxical as it may seem, he possessed a very irritable disposition, and at times was given to fierce outbursts of anger. There was nothing, however, in the slightest degree malicious about them, for they were merely fiery offshoots of an impetuous and as I knew keenly sympathetic and very kind heart. Indeed, there was something quite engaging to me in these temperamental squalls, and I confess to having frequently slyly plotted to lure the Doctor to a rise.

On the other hand, even under conditions calculated to try men's dispositions to the utmost, he was one of the most patient men I ever saw, meeting irritating disappointments and annoyances with a placid, unruffled good nature that was at times my astonishment and admiration. These occasions were for the greater part incidental to days afield with dog and gun or rod, for the Doctor was quite as ardent an angler as hunter. Indeed, I think that he was quite the most enthusiastic sportsman that I ever saw, but, strange as it may seem at first thought, the size of his bag seemed to have but little weight in determining the amount of pleasure he extracted from those "days of living," as he called them, as distinguished from those other days in the town, when people merely "existed," he said.

I do not mean, however, to have it understood that he was indifferent in any way to the element of sport on these occasions, for I have many times seen his eye kindle and face flush as he described some particularly difficult kill or some unusually fine fish brought to creel after a long and stubborn fight; but he was a great lover of nature, and the enjoyment he derived at times from the pictures she spread before him transcended any of the other pleasures of the day.

Thus, I have seen him on many occasions, when fishing a stream whose every pool and riffle held prizes that would tempt most anglers to ceaseless efforts, drop down and in the enjoyment of some most inviting prospect forget all about the idle rod lying by his side.

Again, too, in those rare autumn days whose hazy, golden hours seem to the eager sportsman, alas, so very, very short, I have known him to sit for hours, seemingly, on some old log or grassy bank, gazing with deep, placid joy on some particularly striking bit of scenery, utterly unmindful of the cheery piping of Bob White and a numerous family near by, and the eager whines and pleading actions of his restive dog.

I have often reproached him at these times, asking why he would thus sit idly by and throw away precious time, but he would reply with a deep-seated smile of contentment upon his face, that he thanked heaven he was not such an utterly unappreciative dullard as I, that I should have remained in the hum-drum town and not desecrated with my presence surroundings the rare beauties of which I utterly failed to understand; that hunting was a mere incident of such a day, a pleasing way to beguile the intervals between such golden moments as he had been enjoying.

He was, too, continually doing and saying the most whimsical and amusing things when actively engaged in sport. Thus, one day when snipe-shooting together, we became slightly separated, I following up a boggy bit of ground leading slightly to the right of the main marsh we were on. I failed to start a bird, but as I heard the Doctor's gun at regular intervals I concluded that he was having very fair sport. In a short time I swung back on to the main marsh, and after proceeding some little distance jumped a snipe, which I killed. The Doctor was approaching me at the time, and when he came up to me he said in a very lugubrious and somewhat injured tone of voice: "Well, I hope you feel better now; you've gone and spoiled my day's sport for me."

"What do you mean?" I asked, naturally somewhat surprised at his words.

"Simply that I had a day's sport marked out with that snipe," he replied, "and you come up with your brutal, murderous gun and ruin all my plans."

"Have you been shooting at the same bird all the time?" I asked, a glimmer of the Doctor's meaning beginning to come to my mind.

"Certainly," he replied, with a rather resentful and injured air, "and I should probably have been pleasantly engaged in the same occupation four hours hence if it had not been for your murderous stupidity. Indeed, I may say that the snipe and I had arrived at a perfect understanding regarding the matter. Naturally the bird seemed a little nervous at first, doubtless mistrusting my intentions, but he soon came to understand that he had practically nothing to fear, and thereafter conducted himself in a manner which seemed clearly to indicate that he really enjoyed the situation. As for me, I had all the excitement of a good shot at easy range, with the pleasant assurance that the event would be repeated indefinitely at frequent intervals."

It was all said in the most sober manner possible, and with a certain injured air, as though he really felt that he had a grievance against me.

How well, too, do I remember another occasion in northern Michigan when, resting a moment alongside a trout stream, I was the witness to a very amusing incident which befell the Doctor, and which drew from him a monologue which tested my powers of self-control to the utmost, for I was fearful that a betrayal of my presence would check the flow of words, which, under the circumstances, seemed more exquisitely funny than anything I ever listened to.

He had reached a particularly inviting pool, whose dark, shady depths instantly suggested the abiding place of royalty. Owing to trees and bushes, however, it was only possible to reach it from one place, and that was on the steep, sloping sides of a large rock just on the edge of the stream. Its surface was so smooth, however, that it offered very little foothold, and to slip meant a certain plunge into the cold pool just below it. The Doctor evidently appreciated this, for he surveyed the situation for some little time, evidently loath to trust himself where disaster seemed so imminent. The pool, however, looked so tempting—doubly so because it was so difficult to get at—that the Doctor at last cast aside his fears and slowly clambered on to the rock for a cast.

Scarcely had his lure touched the water before there was a sudden flash of colors from the dark depths and then a beautiful trout cleaved the waters in his fierce upward rush. The Doctor fastened him, but in the excitement of the moment forgot all about his precarious footing, and just as he struck the trout his feet shot out from under him and he plunged into the pool underneath. As he shot down he involuntarily threw up his hands, with the result that his line was fastened in a tree above, while from its branches there dangled and flopped about a trout which I should think would weigh nearly, if not quite, a pound. The water did not reach much above the Doctor's waist, and I shall never forget the look of mingled surprise, anxiety and disgust upon his face as he contemplated his own position and that of the trout. The fish, however, didn't propose to be hung up in any such style as that, and after a moment's fierce struggle dropped back into the stream.

Then it was that the Doctor's disgust became uncontrollable, and after a moment's contemplation of his snarled line and the treacherous stone which had so cruelly undone him, he broke forth as follows: "Doc K., you're an old ass. You never did know much, but you're getting so that you don't know anything at all. Didn't I tell you not to go out on that stone? that you'd surely fall in? and yet, like an old mutton-head, you went right out there and promptly fell in, of course. But that wasn't enough for you, you old idiot, you must go and lose the biggest trout you ever hooked, and that, too, when you had him so well fastened that he could never have got away if you had only kept him in the water. What in the devil did you want to try to throw him over the tree for? What could you ever have been thinking of? O, well, there's no use talking to you. You don't know enough to go ashore. You're just simply hopeless."

The tone of his voice, the expression of his face, his position there in the water—all lent an effect to this speech such as no words of mine can give adequate conception of. I had been choking with suppressed merriment, and as he concluded I burst forth into roars of laughter.

"O, you're there, are you?" said the Doctor, with a fine scorn in his voice. "I was just thinking that the picture wasn't quite complete without your presence. You sort of round it out and fill out the gaps, which I, with all my ability in this direction, never could hope to. O, laugh, you big calf," he continued, thoroughly exasperated at my continued laughter. "You can't help it, I know; but I thank God that, as much of a fool as I am, I haven't yet arrived at the idiotic laughing stage." Then he made his way to the shore, and proceeded to disentangle his line from the limb upon which it had caught. It was but a minute or so, however, before he had regained his usual good nature, and was laughing and joking over his discomfort in the jolliest manner possible.

How well, too, do I remember an incident which befell us while on a hunting trip in Kansas, wherein a thoroughly characteristic fit of rage on the Doctor's part—justifiable, he always asserted—broke up a day's hunt, and placed me in an exceedingly uncomfortable situation. If there was any one object in creation toward which the Doctor entertained a violent, unconquerable loathing, it was a pot-hunter. Indeed, it was very amusing to hear him fume and inveigh against this individual, who, he hotly declared, was deserving of a long term in the penitentiary. On several occasions he has had violent quarrels with them, denouncing them in very unparliamentary language, and once the dispute waxed so fierce that it looked as though it would end in a shooting affray, the p. h. threatening to fill the Doctor with lead if he made any demonstration against him. In fact, it was only with the greatest difficulty that I succeeded in dragging the Doctor away and, I really believe, in preventing an outbreak of hostilities. I make these observations for the purpose of showing the Doctor's violent prejudice in this matter, inasmuch as it is intimately connected with the incident which I am about to relate.

He had met me in Kansas City in the latter part of November, and we had gone out to a small town on the McPherson branch of the Santa Fé where quail were said to be very plentiful. This we found to be the case, and we had delightful sport, our bag running from thirty to fifty birds to the gun a day. One day we were accompanied by a resident of the place named Benson, whom I had known for two or three years. He claimed to be something of a sportsman and was very anxious, he said, to see our dogs work, concerning which he had heard some great stories from our driver.

We had gone a mile or more from the town, I should think, when suddenly we noticed a fine large covey of birds sitting in the grass by the side of the road. We stopped and were proceeding to put our guns together, when suddenly, to our great surprise, Benson, without saying a word, fired deliberately at the birds as they were huddled together upon the ground.

The Doctor's face was a study. For a moment a look of complete, overwhelming surprise was reflected upon it, and then, as he saw some of the wounded birds flopping about on the ground, and realized what Benson had really done, an exceedingly dark and ominous storm gathered upon his face, and the lightning of fierce indignation flashed from his eyes.

"Did you shoot at those birds on the ground?" he asked, his voice fairly quivering with suppressed rage.

"Yes," replied Benson, but the grin upon his face had faded very perceptibly, for he had begun to realize that his act was very distasteful to us both, and especially to the Doctor.

What a withering look my companion did bend upon him, and then turning to me he said, in a voice almost choking with anger: "You and this man can hunt together, if you want to, but I'm through so long as he is in the party. You can go on and I will go back to town."

"What's the matter?" asked Benson, as though ignorant of what had so aroused the Doctor's anger.

"Matter?" roared the Doctor, Benson's manner and question seeming to sweep away every particle of the restraint which he had evidently tried to place upon himself. "Why, the matter is that I don't consider myself safe with a man who would pot a covey of quail out in the open ground, without any cover within a mile of them. I think a man who would do that would shoot a man in the back for fifteen cents, if he got the chance. I will bid you, gentlemen, good day." And with that he turned about and marched back toward town.

"Come, Doc," I said, making an effort to mollify him, "don't let this spoil our day's sport. I don't think Benson realized what he was doing, and I am sure the thing will not happen again. Come back here and let's go on."

Turning about rather slowly as if to emphasize his words he replied: "You can go on, but I shall never disgrace myself hunting with a man who would deliberately pot a covey of quail in the open." And with that he resumed his way and nothing I could say had the slightest effect upon him.

As I said in the beginning the day's sport was spoiled, and I was placed in a very uncomfortable position with reference to Benson. The latter hardly seemed to know what to make of the Doctor's angry outburst and departure, but consoled himself after a little with the observation that my friend was apparently rather excitable at times, as well as somewhat cranky.

I could continue almost indefinitely relating these anecdotes of the Doctor, but the ones I have told will serve to illustrate the odd characteristics of my friend. As may be readily imagined, he had a number of enemies; for, as is already apparent to the reader, he was at times inclined to speak his mind very freely, but to his friends he was ever the most loyal, loving and ingenuous being that ever lived. God rest his noble soul. SANCHO.

MY FIRST CARIBOU.

IT was the last week of September in the fall of '93 when all arrangements had been completed for our annual hunting trip to Maine woods.

My friends Mel and Somes, with whom I was an invited guest, had decided to try the east branch waters of the Penobscot this year, having hunted on the west branch waters for the past twelve years.

We left Gloucester, Mass., on the 5 P. M. train for Salem, thence to Newburyport, where we made connections with Pullman for Bangor, arriving there at 5 A. M. After a hearty breakfast we took an accommodation train for Mattawamkeag. Arriving there we found Royal Reed waiting for us with one of those famous Bar Harbor buckboards and span. We first went down to the hotel, where we changed our city togs for knockabouts, and if you'll believe it the transformation was so complete that Reed, after looking around, failed to recognize me and asked Somes where the Doctor was, my appearance being not unlike one of the goodly number of loafers who stood near, eager to see any fresh arrivals, or hear any bit of news that might be going on.

It wasn't long before we were well under way on the old stage road between Mattawamkeag and Patten and a jolly crowd we were. It was a delightful day and there was much to delight the eyes of the lover of natural beauty. It was near sundown when we arrived at Patten and put up at the hotel; although somewhat tired and feeling the cravings of the inner man we had enjoyed our twenty-six mile ride immensely.

At 6:30 the next morning our team was at the door and we took the Shin Pond road. The first ten miles the road was in very good condition, but it grew worse and worse. We passed Shin Pond at 10 o'clock, and as the board was not a very strong one and the road was so rough, Mel and I thought we would try walking, and found it so much more comfortable that we didn't get into the vehicle again, but walked the rest of the way, eleven miles, to Sebois Lake farm. We enjoyed it, being constantly on the alert for partridges, and had the extreme good luck of bagging thirteen plump ones without getting out of sight of the road. It being a nice warm day they had come out into the road to wallow and pick up oats that had dropped from the toters' teams. The birds were very tame, and I didn't have much trouble in cutting their heads off with my .38-40 rifle, Mel having the only shotgun in the party. Once we were called back to help get the team out of a difficulty, the brake under the wagon had refused to pass over a high boulder that was in the middle of the road. It took our united efforts to free the vehicle.

At Sebois farm we had a late dinner, and after a consultation decided to put on to First Grand Lake that night. We secured a fresh spirited span and a heavier buckboard, with Joe, a half-breed, as driver. It was a wood wagon. Securely packing everything away in the box under the seat, we held on for dear life, and what jouncing and bumping. In one instance there were two logs missing in one bridge; when the horses came to these holes they would sort of balance a second, then give a leap and clear them, when the forward wheel would drop into the space with the horses on the jump you can well imagine what a bounce we would get. Not stretching it one bit we would clear the seat 6in. and come down, oh, so hard. What's everbody's business is no one's, and if a teamster could possibly get along he would never stop to make repairs. In many instances trees had blown across the road, and rather than cut out the obstruction they would bush out a new path around the blow-down, making a new road for themselves and any that might come after. Thus it was a very tortuous course through the woods.

At this stage of the journey it was so late that the darkness had become intense, and some of the party had grave fears as to our reaching Harvey's camp in safety; but Joe was very reassuring, and succeeded in calming our fears. You can well imagine how welcome was the light from that cabin window when we finally came out into the clearing. We all joined in a rousing war-whoop which brought out the whole family to see who were the disturbers of their universal quiet.

Our guides, Fred. Fowler, Elmer and Dan Hale from Medway, had started four days in advance of the party to pole the canoes forty miles up the river. The water was low and rapids many, necessitating three carries, one a distance of three-fourths of a mile. On reaching the lake they had selected a charming little cove in back on Louse Island, and set about at once to fix up camp. The tents, provisions, etc., had been taken in over the road by a toter from Mattawamkeag. By prearrangement upon reaching Harvey's three shots were fired to inform our guides, who were three miles away across the lake, that we had arrived. Supper was hardly over when they put in an appearance to carry us across. At camp we found everything in apple-pie order. There were two tents for sleeping and one large fly tent in which we dined. The table was made of spruce splits and the seats were very unique in the same rustic style. The beds were of spruce boughs with a canvas covering, and plenty of blankets.

The first day in camp it rained, so Somes and I tried fishing, but our efforts were not crowned with very much success. However, we caught enough for supper. During

the day I sighted a deer and two fawns, but they were too far away for a shot.

Mel and guide started out to learn the location of Fowler's Ponds, of which we had heard glowing accounts. They failed to secure any fish, but did not come home empty-handed, having the honor of being the first ones of the party to bring in a deer. Next morning Mel left in his canoe and went up the Thoroughfare and Hay Brook.

On reaching the first marsh he sighted a caribou. Landing, they crept through the tall grass until they were near enough to get a shot. It proved to be a two-year-old barren cow, and made great eating. That night when the game was brought into camp I began to think that I wasn't in it. I made up my mind to give the fish a rest and try my luck at hunting for a change, and to my great surprise and satisfaction before night I had the extreme pleasure of killing one of the nicest specimens of bull caribou that was ever taken out of the State. As you will see by the accompanying photograph, the antlers were very large and symmetrical. We estimated his age at eleven years, and his weight about 750lbs.

We left camp early that morning for Hay Brook, prepared to stay all day. Fred stowed a bucket of grub, teapot and skillet up in the bow; I had him put in the jack lantern, thinking that if we didn't get any game during the day we would do some jacking at night coming home through the Thoroughfare. We found this an excellent place for such sport. Ducks were very plentiful, and during the day I made a number of fine shots; also noticed lots of deer tracks, some caribou, and three moose tracks, appearing to have been made quite recently. One of the freshest moose tracks measured 7in. from the toe to the dew claw. We hunted all over first and second caribou bogs, and finally came to the first carry, which was about five miles from the mouth of the Thoroughfare. I finally came across fresh signs of a big caribou and immediately started out on his trail. After following it about two hours through swamps and over ridges I sighted the monster perhaps an eighth of a mile distant on the opposite side of an open marsh. He appeared to be making down the stream in the direction we had come; there was a stiff breeze from the northwest, and as we were to the windward of him we thought best to separate and try to head him off, knowing full well that if he once got scent of us it would be useless for us to pursue him further. Now you may not think this was exciting, but those who have been in a similar position with such game in full view will understand my anxiety just at this time. Unfortunately I started in the direction of the river, never once thinking how I was going to get across until I reached it. I gave one hurried glance up and down the stream in hopes to see a log or something on which I could cross; seeing nothing of the kind I waded right in, holding my rifle above my head. It is a wonder I ever got out of that mud alive. If I had not been of more than average height I would have been obliged to swim, as the water in some places was quite up to my neck. I finally reached hard ground and set out on a run, keeping some distance from the river for about a quarter of a mile, then bore in again until I came to the first bog expecting to see him, but he was not there. After waiting a minute I made up my mind that he was ahead of me. Glancing up the river there I saw him. Being of a very accommodating turn of mind he had crossed and was coming down on the same side at a good fast walk, stopping now and then to sniff the air and listen. I crouched down behind some bushes and waited for him; being to leeward of him I really think he would have walked by me within two rods had I not stopped his progress.

Fred, coming up at sound of my shots, started to skin him, while I went back to get the canoe. It began to get quite dark before Fred got him dressed, and had the head, skin and one saddle put in the canoe. Meanwhile, finding some dry driftwood, I built a fire on a little knoll, and made preparations for supper, not having had anything warm to eat since morning. Hanging the teakettle on a crotched stick and warming up some partridge stew and venison in the skillet, we were soon eating a supper that we enjoyed probably as much as any we ever had.

Once more in the canoe, with the moon and stars shining brightly, we glided silently down the stream, and hadn't gone far when rounding a bend I sighted a doe and two large fawns playing on a little sandbar, that made out into the stream. Fred steadied the canoe with his paddle, while I reached for my rifle, but they were having such a playful time that all desire to kill them had left me. They soon spied us and skipped off in the bushes. We then rigged up and lighted the jack, and before reaching the lake again I shot a nice four-year-old buck with good antlers; fired at two more deer, and probably heard twenty or thirty whistling and stamping the ground. Sometimes there would be three or four making noises at the same time, and ofttimes we could see their eyes shining through the bushes.

It was nearly 10 o'clock when we passed Louse Island, and as we were nearing camp I fired three shots to let the cook know we were coming, so he could make some hot tea, as we were quite stiff and chilly from sitting in the canoe so long. When our bow slid on to the gravelly shore Elmer and Dan stood there to greet us, and we were received with a warm welcome, as they had begun to worry a little about our welfare. Somes and Mel having had a hard day's tramp had retired early in the evening and were now sound asleep. The skin was still attached to the head, and Fred, taking hold of one horn and I the other, we carried the whole thing up to the tent; unfastening the flap, we walked right up to the foot of the sleepers; holding a lantern in one hand, so it would shine on to the head, I yelled "caribou!" at the top of my voice, and if you could have seen the wild and surprised look on those fellows as they awoke from their peaceful slumbers to gaze on such a sight. Being too much excited to go to sleep again, they soon dressed and came out to the camp-fire to talk it over. It was near midnight before we had ceased telling about this and previous big hunts. Mel also had a prize to show us in the shape of a 10lb. lake trout which he had caught that morning while trolling. While sitting around the camp-fire we heard the *too hoo* of a big owl far away. Dan immediately demonstrated his ability to draw him nearer by imitating his vocal renderings. Knowing the owl's fondness for the odor of burnt leather, Elmer cut a large piece from the top of his boot and put it into the fire. In about ten minutes the owl was in a tree directly over our heads.

MT. KATAHDIN.

WHAT I BROUGHT HOME.

The next morning I borrowed Mel's shotgun and taking a can started out through the woods to Trout Brook Farm to get some milk, and on the way shot a large porcupine and several partridges. I found a bear's skull in good condition which I prize very highly. On reaching the farm I succeeded in getting some good milk, paying the exorbitant price of twenty-five cents a quart. I had a very interesting conversation with the proprietor concerning game in that region. He told me that in the early summer he had seen (and he pointed out the locality) where a large cow moose and two calves had crossed his hayfield within twenty-five rods of the cabin, and numerous other incidents where large game had been seen quite near.

That night Fred and I had an early supper and started out to call a moose, and naturally selected a spot on Hay Brook near where we had seen the big tracks, realizing at the same time that the chap that made those tracks might be twenty miles away. Upon hearing those distressing sounds from my guide's birchbark horn, it struck me comical and I had a great desire to laugh, but immediately received a sharp criticism. Fred called at regular intervals and after waiting one long hour we received a rousing answer, and cold shivers ran up and down my spinal column. Fred gave me some more instruction, and said he didn't believe we would ever get him, as we were to the windward of him and the stream was so narrow. However, he worked hard and succeeded in bringing him within twenty rods of us. He came up very cautiously, hardly making any noise, but when he smelt us he made as much noise as a span of horses, and how the sticks snapped and cracked as he rushed out of that swamp full of windfalls. He must have been a monster. Knowing it was all up with us for that night we set out for camp.

The other days were without special interest, although we enjoyed every hour and lived on the fat of the land and water.

On the sixth day we broke camp and Mel and Somes started out on their trip down the Allegash waters. My guide and I escorted them to the head of Second Grand Lake to assist in carrying the dunnage; there it was transferred to a jumper or wood-shod sled and hauled in over the tote road to Indian carry, while the two canoes were poled up Webster Brook to the dam. In going through the Thoroughfare that morning Mel's canoe was leading, Somes about ten or fifteen rods behind, while I brought up the rear about fifteen rods astern, having been quite a distance behind. I had been helping paddle, and had just come around a bend in sight of the other canoes, when I sighted a fine doe standing in plain view at the water's edge directly opposite Somes and not 10yds. distant. She appeared to be greatly interested. When I fired you can imagine how surprised those fellows were to look around and see that deer go bounding into the brush, and as she did so I fired again. Somes said he knew by the way she jumped that I didn't hit her and Fred said he didn't think I did and thought it wasn't worth while to land and see, but I was quite confident, although having shot under difficulties, being in rapid water at the time. On putting ashore I jumped out and ran to where the deer had stood and found lots of blood; following the trail through the bushes up over the embankment I found her stretched out with two bullet holes just back of the fore shoulder and not 3in. apart, either one of which would have caused death. While dressing her we found that one bullet had pierced the right ventricle of the heart. I felt highly elated and received many compliments.

The only sorrowful part of the whole outing came when I bade my friends good-by at the head of the lake; but as my time was limited I had to return, putting back to Harvey's camp that night. Fortunately I met some men from Patten that had been exploring for an operation up in that locality, and made a deal with them to take me out. So bright and early next morning we started. Having a good, frisky span and strong running gear, we made Patten before dark, and shot six partridges on the way. I never shall forget that ride over those corduroy roads, rocks and log bridges. Next morning I took the four-horse stage and put up at Sherman for dinner. With fresh spans we put on to Mattawamkeag, arriving there in time to catch the through express for Boston. It was an outing long to be remembered, and best of all, I secured what I had long been wishing for—a fine head to adorn my office.

IRVING H. POMEROY.
GLOUCESTER, Mass.

CAMP FOREST AND STREAM.

Fifth Annual.

CHICAGO, Ill., July 23.—The other day I was in a hurry when I reached home, and threw myself upon a stool in an attitude of careless grace. In my home I have revolving stools instead of chairs, and these stools are arranged in a long row, each swinging easily upon a pivot, for the convenience of a guest who wishes to turn about and throw anything away. This is a great deal better than chairs, which are awkward. Also, an oak counter, bare, is far better than a table covered with a tablecloth. You never can tell what there is under a tablecloth, but if there is anything wrong about the oak board you can see it, and kick. Well, I was in a hurry, and wasn't very hungry, so I told the cook, who was leaning on the oak counter, to cook me some ham and eggs, and be quick about it, and not make the ham too light. "That's about the quickest thing you can cook, I suppose?" said I.

"Yes," said the cook. "Have it ready in two minutes."

"I don't think," said I, in the cook's English.

The cook was a large man with a gray eye, and he looked at me calmly for a moment, without taking his elbows off the counter, or I should say table.

"I'll bet you the price of your supper I can build the fire and cook ham and eggs and have 'em here on the table before you in two minutes," said he.

Of course, I know that it isn't usual for a gentleman to argue or speculate that way with his cook, but there was something irritating in the cook's tone of superiority, and besides I thought I had a moral cinch on some free ham and eggs. So I said, "I'll have to go you. Turn her loose."

So the cook turned her loose then. And he won his bet with plenty of time to spare. "You seem to forget, young man," said he, "that this here is Chicago."

Well, I wouldn't have believed that if I hadn't seen it done, and done fair and square. We cooked ham and eggs, or rather bacon and eggs, pretty fast up in camp, but at best I should think it took J. B. H., who is an expert, at least ten minutes, perhaps twelve minutes, or fifteen minutes. We never timed it, the other fellow being usually busy getting water, or setting out the plates and cups, or measuring coffee, or doing something of the kind. Therefore, so far as I know, the relative superiority in speed at cooking ham, or bacon, and eggs must be said to remain with Chicago as against Camp FOREST AND STREAM, much as I dislike to admit the latter beaten in any way. Indeed, I do not admit it beaten. For do not the bacon and eggs of Camp FOREST AND STREAM in excellence and sweetness surpass all comparison with similar product of other spots, even the pleasant village of Chicago? Speed is well, my brethren, and gasoline is well, but never shall man expect of speed and gasoline alone such results as come from a skillet whose handle you have to wrap in a bit of bacon sacking, to prevent burning at the crackling wood fire on the ground. There lies Araby. There is Cyprian luxury. Epicurus sits in shadow by yon tree and rubs his hands while cookery such as this progresses.

But the skillet must be of aluminum. Hitherto, and for the four years preceding, Camp FOREST AND STREAM had been furnished only with sheet iron skillets—two of them, one nesting in the other. This year, when I took in the new aluminum frying pan, the conservatism of three-quarters of a century looked down upon it from J. B. H.'s mild blue eye. It might do, but it was new, and we had tried the iron ones. (We have two sets of granite-ware plates, one blue and the other gray, and J. B. H. won't eat off the gray ones, because we got the blue ones first.) But I begged him to let me try this thing, until with much demur he consented. So upon its shiny, silvery interior I placed some thin slices of the best bacon to be bought, and the bacon slid and skated all around, but kept on sizzling and getting brown. And then, when I cracked the eggs one by one on the edge of the frying pan, and dropped them hissing into the red hot *extraite de bacon*, and when the eggs—but, dear me! how I am running ahead of this story.

To begin with, J. B. H. and I went again to Mukwonago. It was five years ago that we first went there and discovered Phantom Lake. After that came cottagers, hotels and all that sort of thing. This year, fearing that our late camping spot on Phantom might be a trifle sheenesque, owing to aforesaid prevalence of summer facilities, we decided upon a change. Early in the spring I made a voyage of exploration in Wisconsin along the Wisconsin Central Railroad, over Waukesha and Walworth counties, and concluded that there was no country lying out of doors better for a camping trip, and that it would not do to change and leave that region. Moreover, I discovered a new lake, about six miles or so from Phantom, and though I am willing to admit the lake was there before this year, I protest that a better lake could not have been made to special order. Deep, blue, clear, surrounded by high oak-covered hills, and not a soul nor a sign of a cottage on it—except one little house where once some campers used to stay. No more beautiful lake ever lay out of doors. It was as pretty as Phantom and indeed strikingly like it in configuration, but it had this advantage, that it was absolutely quiet and untroubled. Lastly, was there not a grand spring of pure water, running from under the foot of the very bluff where I knew we would want to camp? And did ever there lie out of doors a more seemly spot than this tiny ridge at the top of the bluff, under the big oaks, where there was just room enough on the level for a tent or two? I was sure that J. B. H. would mark that very spot for the building of the city. So I wrote and told him what I had found—a whole lake all for ourselves, a lake front without a sod broken on it, enough bulrushes for a few bass at least, I was sure, and plenty of wood and water such as one might dream about, but rarely see. I told J. B. H. that I had traveled the whole North country over, and had found nothing like this region of the spring lakes. And would he please change from Phantom, it being understood that if we didn't like our newly discovered lake we should at once change to our old grounds. To this J. B. H. gave hesitating consent, loath to leave the scene of our former camps, but still willing to find privacy and bass in combination. Therefore, in fear and trembling for the result, I this year led the way to a new site for our camp. Not being able to leave Mukwonago for a better place, because there isn't any better, we once more went to Mukwonago, and thence drove eight miles through paradise, J. B. H., uncertain as to the wisdom of our departure, and at that time skeptical as to the merits of an aluminum frying-pan, maintaining a discreet silence on certain topics, but hoping it would all come out well.

At Mukwonago we got a team from neighbor Dillenbeck, and said good evening to neighbor Andrews, and got a jug of kerosene and a basket of eggs—I hope now some folk who have been critical will begin to see the connection between this story and its beginning—and set out across the countryside, taking that road which runs straight to the great fashionable place, Beulah Lake, which latter we, being much disposed to be unfashionable, sought to avoid. So we crossed the foot of Beulah, where the pretty old waterwheel is that somebody ought to sketch and nobody ever does, and made on out toward the wild and unknown region lying around the town of Troy Center. So far into *terra incognita* we had never gone along this route. Neither of us, nor our driver, knew where neighbor Schwartz—the owner of most of our lake front, to which he had kindly given us access—resided. Our driver had never heard of this new lake, it being so far away in the heart of a strange and wild country. But we fared on, though now the shades of evening were approaching, hoping ever to learn of the farm of neighbor Schwartz. We passed the farm of neighbor Simons, and neighbor Simons was out mending his hay rick. He was doing this when I last saw him last year, so that one is left of the impression that neighbor Simons mended his hay rick all winter and spring. But of him we queried not, going yet several miles, at last asking a stranger where was the farm and the lake of neighbor Schwartz, said lake to be distinguished as Schwartz's Lake, Lulu Lake, Deep Lake, Round Lake, or by several other names bestowed in the generous albeit slightly confusing manner of that land. Then the stranger pointed out the land to which we should further journey; so at length we came to our new neighbor, Mr. J. A. Schwartz, who owned part of this paradise, and he kindly acted as our guide over three-quarters of a mile of rough hills and forest land; so at length we came out upon a glorious high hill, above the lake, and in full view of a sunset prepared for us alone, and one such as one would order if particular in his sunsets. Then the driver went away, and we were alone by our new lake, in the depths of our new woods.

J. B. H. looked long and silently out over the lovely view which lay spread below and before us, and he drew a long calm breath of content which I was glad to hear. "It's prettier than Phantom," said he slowly. Being thus far along, I thought we might pitch camp. And to my pleasure, as receiving the confirmation of an expert, J. B. H. proceeded to mark out with his heel the diagram of our tenting place upon the exact spot I had mentally selected when I was there discovering the lake. Right on the crown of a little open spot beneath the big trees, where we would have shade and shelter and good drainage in case of rain, he established the lines of our habitation. Be sure, this was not by the lake side, but far above it, for we were wise and knew the habits of mosquitoes. We were nearly at the top of the great bluff and 200yds. from our spring by the lake level. The hill was long and steep, but that was no objection and much a benefit, as both he and I had reasoned, each by himself. So there went up the two Protean tents side by side, and so we began the framing of the prettiest of the five FOREST AND STREAM camps, and indeed the prettiest camp I ever saw in the woods.

Time was when we took small luggage on our trip. The first year one small canoe would carry it. Then we became more luxurious. To-night we had two tents—though neither was more than 7ft. square—and several canvas bags, and two stout boxes from a grocer's house. Our tents we put up side by side, one for a home and one for a storehouse. The artful fly of each tent we spread out high in front in the way of a bat-shaped awning. Thus we had many square feet of living and roaming ground beneath canvas after all. From the peak of our house tent we floated a brave flag of silk, the prettiest on earth. And between the two tents, connecting them, we stretched tight and trig a long stream of canvas bearing in *facsimile*, though much enlarged, the moose head and the rest of the sign manual which you see every week at the top of the paper. "FOREST AND STREAM," said the banner; and all I wish is that the parents and all the rest of the FOREST AND STREAM family could have seen how seemly the head of the paper looked, stretched there in full across the space between two oaks. I think the trees winked at it.

But, be it remembered, J. B. H. had as yet given only a partial and imperfect indorsement to this moving of Camp FOREST AND STREAM—the first move it ever had. He had admitted the natural beauty of the spot, but as to the quality of the spring water or excellence of the bass for eating purposes, he was of course still silent. Moreover, he was still unpersuaded as to the merit of an aluminum frying-pan in actual camp life. It was therefore with some misgivings that I proceeded to unpack the boxes from the grocer's house, while J. B. H. put other articles in order in the tents, and then mapped out the exact place where our little hearth was to be raised for a few pleasant days.

In Camp FOREST AND STREAM things are done decently and in order. There is no slovenliness and all things go by system. This system prevails in the packing of our luggage, it being easy to reason that things put in the bags last will come out first, and if properly arranged, in the exact chronological order of their usefulness in getting the camp in order. Thus our tarpaulin, which goes at the bottom of our tent and is the first thing spread upon the ground, is the last thing put into the great carry bag which never really gets full—a non-human characteristic of great excellence. After this comes the floor cover that goes over the hay and makes the smooth, clean carpet. Then come the tents, and last of all the blankets. I regret to say, however, that the grocer man has never learned our system. When I came to open our boxes I found a can-opener first, then some impracticable coach candles the man thought I ought to have, then sardines, which being a makeshift should have small tolerance in any camp; then tinned goods of all sorts, and everything else but what we wanted. Of course what we wanted and what the system should have assured us of finding was, first, matches; second, lantern; third, lantern wicks; fourth, corkscrew to pull the cork out of the kerosene jug (because it always gets stuck); fifth, bacon; sixth, eggs; seventh, butcher knife; eighth, coffee; ninth, sugar. And so on. Because now the sun had sunk behind a long streamer of glory, and the fresh wind of evening had sprung up, and night was coming on—the first night in camp, when one has to finish cooking the first supper after dark, and eat it by lantern, and go to bed with still some things to be fixed up around the home. Such should have been the system pursued by the grocer man, but I am prone to believe he was not a man of good habits, such was the confusion I found in the supply box. The shadows were heavy by the time I had arranged all the proper articles in order by the side of the fire. For by that time J. B. H. had found a little log that suited him, and some flat stones which just fitted under the legs of the little grate we call our stove, and a dry stick of just the proper sort to whittle into kindling shavings. Then there was a hurried trip to the spring with the canvas pail, a rare thing, but a great blessing in camp, and in a moment more there was a ray, a flicker, a tiny blaze, a merry fire. Not till the fire is lighted can camp be called begun. This fire now brought out very beautifully the outlines of our tents, our spreading wings of canvas, our fluttering flag and the sign of the FOREST AND STREAM. It was a cheerful, comfortable sight. I felt very happy, except when I thought of the new frying-pan of untried utility.

J. B. H. drew a very long breath of happiness, and sat him down by the fire to cook the first meal in camp. With unhesitating hand he chose the well-proved iron frying-pans which heretofore had done service in our trips to the woods. "Your new pan may do to fry eggs in," said he, obligingly, "but I would not risk it if we had fish or anything serious." Thus encouraged, I made bold to beg a bit of bacon juice from his pan, augmenting this by some thin slices of bacon in my own new silver-looking utensil. And then the bacon began to skate and slide around in there, as I said, and to grow brown, yet not to stick fast to the pan. And when I cracked the eggs on the side of the silver skillet, as I stated, and dropped them lightly into the red-hot bath awaiting them therein, the eggs never adhered to anything, not even the thin edges of them, near the side of the pan, where eggs in camp so often yearn to linger. These eggs slipped and slid into the aluminum pan, and finding there nothing tangible upon which they could lay a hand, began so swift a race about the interior of the pan that in a few moments they were cooked of their own friction. Then we just divided them into egg-sized sections, flipped each one over to warm it on the other side and then at once took them out—the very nicest fried eggs we ever saw in camp, which is saying a great deal. J. B. H. looked at the interior of the pan. Not a spot marred it. Nothing had stuck to it. It was not blackened in the least. It was still shiny and silvery as at first.

J. B. H. took the handle of the new frying-pan from me. I had no individual option on it from that forth. The iron pans were discarded, and the new one did all the work, even to the frying of the fish. When we broke camp we left the iron frying-pans behind us. Next year we shall have three frying-pans, nesting one within the other, and they will all be new and silvery.

Such bacon and eggs! It was, I doubt not, more than two minutes before we had them done, but we were not in Chicago, and besides, no place in Chicago, let me once more aver, not even my home where the row of stools is, can produce such bacon and eggs as ours in Camp FOREST AND STREAM. Can one wonder that, having proved the beauty of our new lake and the virtue of our new frying-pan, and the excellence of our new spring of water, we should lie down that night under the rustle of the leaves and the soft flutterings of the little silken flag with the conviction that all was to be well; that the promise of the banks of bulrushes which we saw before sunset from our hill was to be fulfilled in bass—in short, that the fifth annual of Camp FOREST AND STREAM was to be none the worse for the change of location, and not below the excellence of former years.

E. HOUGH.

MORE ABOUT CRACKERS.

ST. FRANCIS, Lake County, Fla., Aug. 10.—*Editor Forest and Stream:* I am not like "A Georgia Cracker," or Mr. Avis. I have only taken your paper eight days, but got the back numbers to June 22, 1895. I became interested in Mr. Avis's article in the "sample copy" sent me. I have been a reader more or less for a year of your paper. Now, why is it every writer about Florida hits or tries to hit the "Cracker?" They think it funny like their snake stories, which I see you touch up in a recent issue. Go for them. They are both threadbare, worn out subjects. How many snakes did Mr. Avis see? One, and that a blacksnake, and his is about the usual experience; there, however, were more around, especially on the floating islands he mentions.

"What is a 'Cracker?'" "Why called 'Crackers?'" was asked by one of our prominent Florida dailies a few years ago. I will give you a synopsis of the five replies. Three say it was a term applied to stock raisers and cattle herders, who reigned supreme, and the "crack" of their long whips could be heard nearly all the time. These applied to Georgia and Florida. Another applies to Georgia, when at the battle of Savannah during the Revolutionary War Gen. Lincoln was heard to remark, "Listen to the 'crackers.' Whenever you hear that 'crack' a British soldier falls." Another, who says he learned it in the original home of the "Cracker," the Georgia side of the valley of the Savannah River, between Augusta and Savannah, reports: "At the time of the Revolutionary War this region was sparsely settled; the people had few conveniences; their corn was pounded in wooden mortars into meal. The British soldiers when they invaded this section in 1777–8 called them corn-crackers, and the name extended to all native born white men." I doubt if Mr. Avis saw a "Cracker." He likely saw so-called ones imported from the North, too lazy to enjoy good health. They are the larger class of so-called "Crackers," and are a disgrace to humanity.

Now, sportsmen, when you return home from our fair State and write your experiences, let up on the "Cracker" and snakes. Tell all the yarns you want about fish. You cannot exaggerate on that subject when referring to Florida.

I am not a "Cracker," but am told I will be in about fifteen months. They say it takes seven years' residence. I have lived on the St. John's River since in Florida, and have met a good many tourists out like Mr. Avis and party, and numbers of them who claimed they were regular newspaper correspondents. They all go provided with a railroad and U. S. Government chart issued in about the year one. They know it all, distances, etc.; go back North

and write up the State. They don't know a good time when they see it. Their outfit is new. They think because fish bite in such a place North they will bite in the same kind of a place here; ducks and quail in same looking places, and so on. Then we have the sportsman who takes advice and has a good time, and comes down next season he is so well pleased. But such is life. It takes all to make a world, and we could not get along without Mr. Avis, "A Georgia Cracker," "The Florida Cracker" or "the snakes." JOHN E. HARRIS.

THIS IS "SINGGAMBLE."

Editor Forest and Stream:

I notice in "In Shintangle Camp, by "Kelpie," a reference to the "Singgamble fire" mentioned in some of my Puget Sound articles, and he wants information as to "what constitutes a singgamble fire."

For his benefit I will tell about the singgamble as I saw it on the Skokomish River in all its primitive simplicity, with the dense forest of cedar and fir for light. It happened in this wise:

I was sent out by a Seattle newspaper, in company with one of the staff, with orders to write up and illustrate all the Indian legends, customs and folklore stories we could pump from them. On this trip I made all the illustrations for the articles and translated enough Chinook to fill a big book, for I could talk this jargon and my partner said it was too dense for him to even to attempt to learn.

We had tramped and camped a good many miles with the stoical Siawash, who, by the way, is as good as the average Injun; and at last found ourselves pretty well up the Skokomish River, and on this particular night had camped beside the trail, intending to move down the river in the morning.

Darkness, thick enough to whittle, had settled down over the densest forest in the world, and, tired out with our tramp, we were sleeping as only outdoor folks can sleep, rolled in our blankets on top of a thick bed of "mountain feathers," when a guttural voice woke me. I lay still and listened. All the conversation was carried on in a mixture of Chinook and genuine Siawash "wawa," and half a dozen voices seemed to be all mixed up over something which I soon made out was a proposed game of chance; in short, the "gamble of the song," or "singgamble," as it is called.

This was an interesting subject, a custom which we might travel many miles before finding again. I woke my partner and bade him listen, then as fast as the Indians talked I translated the conversation and my partner jotted it down in his notebook by guesswork in the darkness.

The Indians decided on a spot on the opposite side of the big log we lay alongside of as a proper place to do their gambling, not knowing we were anywhere in the country. A fire was built of dry wood, and enough more piled near to last through the performance, then the bets were arranged, consisting of two canoes, a watch, two ponies, some articles of clothing, and a couple of dollars in cash. About half of this booty was wagered on either side, and then the game began.

The implements for playing it were two sticks about an inch in diameter and three inches long, cut from a vine maple growing near. One of these sticks was peeled of the bark entirely, the other had only a ring of bark left around the center, and this one was the "lucky number."

One of these sticks is concealed in each hand and then the hands are swung back and forth in front of the body, keeping time to the gambling song, which is chanted by all the players and which gives the game its name of singgamble.

When they had the bets arranged, all the Indians, eight in number, sat or kneeled in two rows, facing together, one took the sticks and the song began. Each man had a short club and pounded on a small log that lay in front of him, a kind of tom-tom accompaniment to the chant.

Beginning in a low tone not without melody, something like negro ditties, the chant developed by easy stages until it was a genuine Indian song, without harmony, time or other element of music, yet wildly weird and noisy as only an Indian chant can be. This was continued until one on the opposing side made a motion indicating the hand he thought held the bark-ringed stick; then the man who swung the sticks must show his hands palms up, with both sticks in view. If the guess was right the one guessing received a small cedar stick, which counted one point in the game. If he guessed wrong he forfeited a point. The game is thirty points, and whichever side gets this number first is winner and takes the whole stake, which they divide among them.

That is what singgamble means, and no one who has missed seeing one can appreciate the wild, weird scene as we saw it that night among the giant firs, lighted by an outdoor fire, which threw its red glare on the swarthy faces and reflected the emotions and excitement of the red men as the play waxed warm and one side or the other made several points in succession.

After the play had been going on for some time I got up and moved into the circle of the light and greeted them with the Chinook salutation, "Kla-how-ya Till-acums," which was returned by a few grunts and looks of mild curiosity. Knowing that "you can't hurry an Indian," I sat down, loaded my pipe, and smoking watched the play in silence for some time. Then I talked with the players, got the hang of the game and concluded the whole scene would make a good sketch for illustrating a future newspaper article. Accordingly I got my paper and pens, and at 2 A. M. I made six or eight sketches of the wild group and their wild surroundings in the heart of the deep fir woods.

Since then I have witnessed the same game several times, have seen an Indian stake all his possessions, his wife included, and—lose. Such is the passion for gambling in the savage breast.

In the gray dawn, when the river mist began to rise and the living things awoke, the savage actors of the gambling scene left their fire to burn out, divided the stakes, and saying "Klook-wah" to us stole away in silence.

We turned in again, and when we got up a couple of hours later the whole thing seemed more like a disordered dream than a weird reality. The sketches still form part of my collection, and a pair of singgamble sticks fill a niche in my cabinet of relics and curios.

You know their history. EL COMANCHO.

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

Natural History.

BIRDS AS PROTECTORS OF ORCHARDS.

From the Bulletin of Massachusetts Board of Agriculture. By E. H. Forbush, Ornithologist to the Board.

THE present paper is merely a partial record of the results of an attempt to foster and protect birds in an old and neglected orchard with a view to observing the effect of such a policy upon the trees. The orchard is so situated as to be a favorite haunt for birds. It forms part of an estate in Medford, Mass., lying near the southern border of the stretch of wooded rocky hills known as the "Middlesex Fells," a large part of which is now under the control of the Metropolitan Park Commission of Massachusetts, and is being administered as a forest reservation. The nearest estates on the east and west of the orchard are cultivated to some extent. There are other orchards in the immediate vicinity and many large and fine shade trees. There are also on the estate in question many varieties of trees and shrubs. There is a small piece of woodland, covering perhaps an acre and a half, in which yellow pine predominates, the other trees being principally ash, oak and maple, some hickory and a few white pines. A lane running along the southern border of the estate is bordered on both sides with elms and poplars. A line of mulberry trees along the lane south of the orchard affords tempting food for such birds as are fond of fruit in its season. There are also many wild cherries and berries of several varieties, together with half a dozen trees of cultivated cherries.

Among the trees, shrubs and vines found on the estate and which furnish food for birds in the shape of berries or seeds at certain seasons of the year are the common barberry, Northern fox grape, poison ivy, wild yellow plum, wild red cherry, choke cherry, English cherry, black raspberry, high blackberry, garden raspberry, wild rose, common apple, common red currant, white ash, red mulberry, white oak, scarlet oak, white pine, pitch pine, hemlock, red cedar.

The orchard itself is a typical old orchard, such as is often found on small farms. It has suffered greatly from neglect. Two-thirds of the original trees have died or are in the last stages of dissolution. This is largely the result of neglect and improper pruning. Dead limbs and hollows in the trees have offered nesting places for such birds as the wren, woodpecker and bluebird.

For three years, from 1891 to 1893, inclusive, the trees were trimmed and cared for. They were sprayed or banded to protect them from canker-worms, and the "nests" of the tent caterpillar were removed. The result was a scanty yield of apples from most of the trees. One or two bore quite plentifully.

In order to observe the effect of the feeding of birds in the orchard, no care was taken in 1894 to protect the trees. During that year the tent caterpillars were very numerous in the vicinity, and it became evident also that a great increase in the number of canker-worms was taking place in the neighborhood. Although these insects made considerable inroads upon the trees, they did not seriously injure the foliage anywhere except in one or two instances. No attempt had been made previous to 1895 to foster or encourage the birds in the neighborhood, except that a few nesting boxes were put up in 1894, which were occupied in one case by a family of wrens and in another by the English or house sparrow. We were careful, however, to destroy the nests of the house sparrow.

In the fall of 1894 it was noticed that immense numbers of the wingless females of the fall canker-worm were ascending nearly all the trees and depositing their eggs; also, that the wings of the tent caterpillar moths were numerous upon the twigs, promising a plentiful supply for 1895.

Having allowed the insects one year to increase unmolested by man, we began in the winter of 1894–95 to encourage the presence of birds in the orchard.

In 1894 a small tree in the center of the orchard had been inclosed by a high board fence. The tree thus inclosed was used as an outdoor experiment station for observation on the breeding and habits of the gypsy moth. During the winter of 1894–95 Mr. C. E. Bailey made frequent visits to this tree to ascertain whether or not the birds were destroying the eggs of the gypsy moth. Incidentally Mr. Bailey observed many interesting things in connection with the feeding of birds on the eggs, larvæ and pupæ of insects which winter on the trees, and I am greatly indebted to him for many interesting notes on the feeding of birds in this orchard. He is a careful, conscientious observer, and is intimately acquainted with most of our native land birds.

Hunters and trappers are aware that many species of winter birds, such as titmice, woodpeckers, crows, jays and nuthatches are attracted by a skinned carcass suspended from a limb, and will remain in the vicinity until all the bones are picked clean or until, with the approach of spring, insect food becomes more accessible. Believing from my own observations that the chickadees were feeding on the eggs of the fall canker-worm, I asked Mr. Bailey to attract the birds, if possible, to the orchard by suspending pieces of meat, bone, suet, etc., from the trees. These food materials are suitable for birds at times when the trees are covered with snow or ice and, when lacking such nourishment, they might starve. Although birds will frequently visit bait provided for them and in time will eat a considerable portion of the meat, they do not depend entirely on this aliment, but spend the greater portion of their time in searching for insects and eggs in the immediate vicinity.

Finding a plentiful supply of food, the chickadees remained about the orchard most of the winter, except for a week or two, when the meat gave out; but they were lured back again later by a fresh supply which was placed in the trees. Not only were the chickadees attracted to the orchard in numbers, but other birds came also. A pair of downy woodpeckers and two pairs of nuthatches were frequent visitors, and a few brown creepers came occasionally. All these paid frequent visits to the meat and suet, and also thoroughly inspected the trees in search of insect food. They made excursions also to the trees in the neighborhood, but the greater portion of their attention was confined to the orchard in which the bait was suspended. As they became more accustomed to Mr. Bailey's presence, they grew quite tame and could be viewed at a distance of a few feet. Indeed, chickadees frequently alighted on his person and occasionally took food from his hand. He was then enabled to determine accurately (without killing them) what they were feeding upon, and was soon convinced that they were destroying the eggs of the canker-worm moth in large numbers, as well as the hibernating larvæ and pupæ of other insects injurious to trees.

To determine how many eggs a single chickadee would eat, a few birds were killed and their stomach contents examined, with surprising results. There was no difficulty in identifying the eggs of the canker-worm moth which were found in the birds' stomachs, as a great portion of the shells remained intact. The other insect contents of the stomachs were identified for me through the kindness of Mr. A. H. Kirkland, B.Sc., assistant entomologist to the State Board of Agriculture, who made the examinations. Although it was impossible in all cases to learn with certainty the species to which certain insects belonged, it was evident that they belonged to genera known to be of injurious habits. In all 1,028 canker-worm eggs were found in the stomachs of four birds. Four birds killed later in the season had eaten the female imagos of 105 spring canker-worms.

The average number of eggs found in each moth of twenty examined is 185. Mr. Bailey is very positive, from his continuous field observations, that each chickadee will devour on the average 30 female canker-worm moths per day from March 20 until April 15, provided these insects are plentiful. If the average number of eggs laid by each female is 185, one chickadee would thus destroy in one day 5,550 eggs; and in the twenty-five days in which the canker-worm moths "run" or crawl up the trees, 138,750. It may be thought that this computation is excessive, and it is probable that some of the moths were not captured until they had laid some of their eggs, but the chickadees are also busy eating these eggs. When we consider further that 41 of these insects, distended as they were with eggs, were found at one time in the stomach of one chickadee, and that the digestion of the bird is so rapid that its stomach was probably filled several times daily, the estimate made by Mr. Bailey seems a very conservative one. He now regards the chickadee as the best friend the farmer has, for the reason that it is with him all the year, and there is no bird that can compare with it in destroying the female moths and their eggs. It was noticed that the birds made no attempt to catch the male moths. This, however, cannot be considered as a fault, for the birds accomplish far more by destroying the females than they would by killing males.

The case-bearers and the tineids or leaf miners are injurious to the foliage of the apple trees. It was noticed by Mr. Bailey, who watched the birds closely for several days, that they were eating quantities of both of these insects.

A great quantity of animal food is required to sustain life and provide animal heat sufficient to enable these little birds to resist the inclemency of our severe winters. In proof of this it may be stated that during favorable weather the birds visited the meat and ate largely of it three times each hour with fair regularity. During each interval they were occupied in destroying eggs and other hibernating insect forms which were always present and numerous in the stomachs examined. This feeding appeared to be almost continuous except in severe storms, when the birds sought shelter, or when they were laboring under excitement caused by fear, as in the case of a visit from a hawk, cat or shrike. Whenever a cat appeared they immediately hid behind the branches and remained quiet until the intruder had passed. The appearance of other enemies or the firing of a gun would produce much the same effect.

The woodpeckers and nuthatches which frequented the orchards were not seen to eat the eggs of the canker-worm moth. As they were not numerous, none were killed. Mr. Bailey observed, however, that the nuthaches were eating many scales which they found on the limbs of the apple trees in a neighboring orchard. In relation to these scales the following note from Mr. Kirkland is of interest:

"March 20, 1895. Mr. Bailey brought in specimens of apple twigs infested with the bark scale louse. He reported that the nuthatch was feeding on them. These twigs were infested in a worse manner than I have ever seen before. They were literally covered with the scales. On one small twig, one-half inch in diameter, I counted 367 scales on one inch of the twig. The eggs contained in a number of scales varied from 62 to 83, with an average of 70."

These scales, when numerous, are very injurious to the apple tree. Each scale covered a dead female of the preceding year and the hibernating eggs, many of which must have been disposed of by the nuthatches. It was shown, both by observation and dissection, that birds feeding in the same neighborhood and upon the same trees showed considerable variance in the character of their food. Kinglets taken had no canker-worm eggs, but had eaten largely of bark borers. Woodpeckers seemed to confine themselves to the larvæ of borers and to wood-ants and other insects which bore into the wood of the tree. Chickadees and nuthatches ate the pupæ and eggs of insects found upon the bark or in the crevices of the trunks. No birds were seen to eat the eggs of the tent caterpillar, nor were any found in the stomachs of any of the birds examined. It seems probable that these eggs are so protected by a hard covering that they are not eaten by most birds.

It is impossible in the limited space at our command to give results of all observations and dissections in detail. We can merely give the apparent results of the presence of the birds in the orchard.

It was found that these birds were not only destroying the eggs of the canker-worm in this orchard, but were feeding on the eggs of the same insect in the woods where bait had been suspended.

As the frost left the ground on the first warm days of spring the wingless females of the spring canker-worm moth appeared in the orchard and began ascending the trees in great numbers. The chickadees commenced catching and eating the females and their eggs. Mr. Bailey placed twenty-two of the females on one tree, and in a few minutes twenty of them were captured and eaten by chickadees.

It was noticed as spring approached and insects became more numerous that the chickadees came very seldom to the meat. They were not as assiduous in their attention to the orchard, and a small portion of their food con-

sisted of the early gnats which were flying on bright sunny days. In early April they had nearly deserted the meat, although they still frequented the orchard in search of the female canker-worm moths. They seemed to prefer animal food to all other, and even in cold weather would hardly notice grain or seeds of any kind, though one individual ate a few oat kernels which were placed near his accustomed feed of meat.

Toward the last of April the English or house sparrow began to make its appearance in the vicinity and apparently drove the chickadees to the woods, as they disappeared and did not nest in the orchard, but remained in the woods, where they paired and nested.

I believe that the English sparrow is largely responsible for the fact that chickadees are not now found nesting in our orchards. Though they still nest in the orchards on the remoter farms and in the villages where the English sparrow is not numerous, they seem to have disappeared in summer from orchards near cities. At the time of the advent of the sparrow in this locality, twenty-five years ago, chickadees were often found nesting in old apple trees in the orchards in this region where now scarcely any are to be seen in orchards during the summer.

In the latter part of April and in early May the tent caterpillars made their appearance on the apple and cherry trees in the neighborhood. Canker-worms were also numerous on the apples and elms and appeared in some of the other trees. It was noticed, however, that while trees in neighboring orchards were seriously infested with canker-worms and to a less degree with tent caterpillars, those in the orchard which had been frequented by the chickadees during the winter and spring were not seriously infested and that comparatively few of the worms and caterpillars were to be found there.

With the warm south winds of May many summer birds came and settled in the neighborhood, and prepared to build their nests, among which the following were seen: chickadee, tree sparrow, crow, purple grackle, flicker, red-winged blackbird, robin, chipping sparrow, ovenbird, wood thrush, catbird, brown thrasher, black-billed cuckoo, yellow-billed cuckoo, black and white warbler, yellow warbler, chestnut-sided warbler, black-throated green warbler, pine warbler, house wren, American redstart, Nashville warbler, golden-winged warbler, scarlet tanager, rose-breasted grossbeak, Baltimore oriole, bluejay, least fly-catcher, wood pewee, phœbe, kingbird and downy woodpecker.

It was noticeable that early in the season, when the webs of the tent caterpillar first appeared on the apple and cherry trees, the orioles attacked them and devoured a considerable number of the hairy young larvæ. A little later, when the canker-worms became more numerous, it seemed as if all the birds in the neighborhood were intent on eating canker-worms, neglecting to a certain extent the hairy caterpillars. The cuckoos, however, seemed to feed impartially on both the canker-worm and the tent caterpillar.

Birds from all quarters in the wood and swamp, orchard and field, flocked into the trees infested by canker-worms and there spent a considerable portion of their time. In a short time the few canker-worms remaining in the old orchard were apparently eaten by birds, and the birds then directed their attention to the neighboring orchards, which were swarming with the worms. It soon became evident that these orchards would be entirely stripped of their leaves, while the old orchard retained its full foliage. Thus it was seen that the trees to which the chickadees had been lured during the winter had been so well protected that the summer birds were able to destroy the few remaining larvæ, while the trees at a distance from these contained so many larvæ that the birds were not numerous enough to dispose of them or to make any effective reduction in their numbers. This apparently demonstrated the usefulness of the egg-destroying winter birds, and showed the wisdom of attracting them to the orchard during the winter months. Not only did nearly all species of birds in the neighborhood flock to the trees infested by the canker-worms, but the chickadees living in their retirement in the woods came out to the orchards, flying some distance to procure canker-worms with which to feed their young, and making regular trips to the infested trees day after day.

On May 18 Mr. Bailey saw a female chickadee carry twenty larvæ to its nest. They were apparently all canker-worms but two, which were tent caterpillars. Of this he is certain, for he was within 3yds. of the nest to which the larvæ were taken. Later, on May 31, he noticed the chickadees feeding their young. It was evident that a large portion of the food consisted of canker-worms. The birds each made a trip to the nest about once in twelve minutes. The male and female came at nearly the same time and went away together. They went in the direction of an orchard infested by canker-worms. A few of the larvæ were dropped on the ground at the nest and proved, on examination, to be canker-worms.

The crow was also observed feeding on the canker-worms.

On May 22 the birds had nearly all stopped feeding in the neighboring woods and were in the orchards feeding on canker-worms.

Early in June, when the remaining canker-worms had finished their transformations and retired to the ground, several species of birds were again noticed feeding their young on the tent and other hairy caterpillars. Of these, three species (both cuckoos and the Baltimore oriole) seemed to be the most useful. On May 17 a cuckoo was seen to take eleven caterpillars out of one nest. Mr. Bailey writes: "On May 10 a black-billed cuckoo came into a tree near me at 3 P. M. and sat there until 4:40 P. M., then he went straight to a tent caterpillars' nest. He looked it over for a short time and then commenced eating the caterpillars. He picked twenty-seven caterpillars out of the nest before he stopped. The bird ate them all and did not drop one. Then he went to the tree in which I believe he remained during the night, for on Saturday, the 11th, I found the bird in the same tree and in almost the same place at 5 A. M."

The orioles, chickadees and vireos often pecked the caterpillars to pieces and ate portions of them, seemingly feeding to a considerable extent on the internal organs. This being the case, it is quite evident that the stomach contents cannot be depended upon entirely to determine the character of the food of these birds, as no one is expert enough to identify the internal organs of caterpillars with such certainty as to determine the species to which they belong.

The following is a list of the birds seen feeding on the tent caterpillar: crow, chickadee, oriole, red-eyed vireo, yellow-billed cuckoo, black-billed cuckoo, chipping sparrow, yellow warbler.

During the month of May an attempt was made to render the place as attractive to birds as possible. The undergrowth, which previous to 1894 had been trimmed out, was afterward allowed to grow, and in 1895 several low thickets had been thus formed; the mulberrry trees were stimulated by judicious trimming, and bore a considerable crop of early fruit which ripened in advance of the cherries, thus drawing the attention of the fruit eating birds away fram the cherries, and serving to attract them to the vicinity of the orchard. Ten nesting boxes were put up for the wrens and bluebirds, but as the bluebirds were very rare this season, none came to the orchard. Two families of wrens, however, were reared in the boxes in place of one family last year. Nesting materials—strings, hair and straw—were hung in the trees and scattered about. Several marauding cats were killed, and an attempt was made to keep nest hunting boys away from the neighborhood as much as possible. Thirty-six nests of birds were discovered in the neighborhood, as follows: 3 red-eyed vireos, 10 robins, 4 Baltimore orioles, 3 cuckoos, 5 chipping sparrows, 3 least fly-catchers, 2 redstarts, 2 yellow warblers, 2 chickadees, 2 house wrens.

Of these all but three were destroyed, probably by boys, the nests being torn down and the eggs missing. The three which escaped destruction were wrens' nests which had been built in boxes upon buildings, and a robin's nest in a maple tree within 10ft. of a chamber window. This wholesale destruction of nests discouraged several pairs of birds, and they disappeared from the neighborhood. Those remaining built new nests, and after a second or third attempt a few succeeded in rearing young. One nest of orioles escaped the general destruction, and the birds were busy for a long time carrying canker-worms to their young. One of them was noticed to take eleven canker-worms in its beak at one time, and fly with them to the nest. The vireos, warblers, chickadees, cuckoos, orioles and chipping sparrows were particularly active in catching canker-worms, and the English sparrow killed them in considerable numbers.

If the thirty-six pairs of birds whose nests were found had succeeded in raising their young, it is probable that they would have disposed of most of the canker-worms in the neighborhood. Five thousand of these larvæ are sufficient to strip a large apple tree. One hundred and eight young would have been reared, had each pair of birds raised three. According to Professor Aughey's experience, sixty insects per day as food for each bird, both young and old, would be a very low estimate. Suppose each of these 108 birds had received its sixty insects per day, there would have been 6,480 caterpillars destroyed daily. The destruction of this number of caterpillars would be enough to save the foliage and fruitage of one apple tree. In thirty days the foliage of thirty apple trees could have been saved, or 194,400 canker-worms destroyed. This does not include what the old birds themselves would have eaten.

In these observations the influence of insect parasites and predaceous insects has not been entirely ignored. Hymenopterous parasites were not seen to be numerous, and as it was a year when canker-worms were on the increase, it is not probable that these parasites would have been a prime force in reducing the number of the canker-worms had the birds not been present. Even had they been numerous they would have had little effect in checking the ravages of the canker-worm during the present year, as their interest is identical with that of the canker-worm, and they remain in its body until it has finished feeding, allowing it to defoliate the trees before completing their deadly work upon it.

We do not know to what extent such parasites are devoured by birds. This we could not ascertain without shooting the birds, which would have defeated our main object. No parasites of the tent caterpillar or canker-worm were found in the stomachs of the few birds which were examined. It is hardly safe to draw conclusions from observations so limited in their scope, but we may infer from what was observed that the egg-eating birds are of the greatest value to the farmer, as they feed almost entirely on injurious insects and their eggs, and are present all winter when other birds are absent. The summer birds which attack the larvæ are valuable also if they can be so protected and fostered as to become sufficiently numerous to do the work required. It is evident also that a diversity of plants which encourages diversified insect life, and assures an abundance of fruits and seeds as an attraction to birds, will insure their presence. In this connection I wish particularly to note the fact that the mulberry trees, which ripen their berries in June, proved to be a protection to the cultivated cherries, as the fruit-eating birds seemed to prefer them to the cherries, perhaps because they ripen somewhat earlier.

I believe it would be wise for the farmer to plant rows of these trees near his orchard, and it is possible that the early June berry or shad berry (*Amelanchier canadensis*) might also be useful in this respect. It is a handsome shrub or tree, flowering early in the season, and would be attractive at a time when other trees and shrubs are not in bloom.

At the present time, July 23, 1895, the trees in the orchard appear to be in good condition. They have not suffered from the slight pruning of their foliage which was effected by the few caterpillars and canker-worms which survived. The fruit is well set, and it now remains to be seen whether the birds will have any considerable effect in preventing the ravages of the codling moth. No other orchard in the neighborhood will produce any fruit this season, with one exception. The nearest orchard, situated directly opposite on the estate across the way, has not been ravaged by the canker-worms. This exemption is due principally to the efforts of the owner, who has banded his trees with tarred paper and has used tree ink faithfully and well upon the paper. He has also taken pains to clear the nests of the tent caterpillar from the trees. The orchard, being nearest to the one visited by the chickadees, was also an object of their attention, and this may account somewhat for the reduction of the pests in this place.

The record of these observations, incomplete as it is, is given for what it is worth as a contribution to the literature on this most interesting and important subject.

ABOUT DEER.

Mr. Hough's very interesting article concerning the search for the fantail deer prompts me to contribute my mite—a very small one—to the consideration of this fascinating subject, for I give the gifted special correspondent of Forest and Stream credit for an earnest desire for the truth, regardless of the destruction of all pet theories. I have no fantail deer to offer in evidence, and am very much inclined to skepticism concerning the little sulker, yet I have a few things to offer to the sportsmen of America which may possibly throw a small ray of side-light upon the subject of the wonderful variation of the different specimens of the whitetail deer.

Hanging on the wall of the room where I write is the dried skin of a deer's tail (whitetail), which has hung there some five years or thereabouts; and although dried up now until it measures only 17in. in length, was, when carefully measured before removal from the dead buck, a little over half a yard long. Who has found a bigger one, fantail, mule deer or whitetail?

Next: as I reported in Forest and Stream some years since, there was found in our county of Stevens, State of Washington, by Messrs. R. B. Lane and Robt. Legerwood, on Nov. 10, a freshly killed doe which was carrying when killed as large and perfectly developed a doe fawn as I ever saw. I examined it two days later. And this, too, in a locality further north than Quebec.

Again: about two years since I found an antler of a whitetail buck some twenty miles east of the town of Colville, Stevens county, Wash., which, I fancy, is quite as small as the one shown in the illustration given by Mr. Hough. It was an entirely new horn, unbroken at any of the points and unmarred by tooth of rodent, and altogether as pretty a specimen as I ever saw.

I intended when first I brought it home to mount it for the head of a fine rosewood cane given to my father in Nicaragua nearly forty years since, but upon the first sight of it my little daughter Echo clamored for it to mount a pin-cushion on (and of course she got it); and now when turned with the points downward like a small three-legged stool, and with the curve of the horn raising the center some 2in. above the table, and with a neat little cushion resting upon its tiny arch, we think it quite pretty.

Extreme length around the outside of the curve, 10¼in.; straight across from butt to tip, 6in. scant; diameter at butt, ⅞in.; number of spurs, 2, showing the animal to have been 3½ years old when it was dropped; short spur next the head, 1⅛in. long; long spur, 2½in. long. These of course do not include the tip.

Although slightly longer than the one shown by Mr. Hough, it is, as I remarked, absolutely unbroken. How long the one shown in the illustration was before the tips were broken is of course impossible to determine. By the way, it is to be regretted that a quartering view was not given of the head shown in the illustration, for it seems difficult to determine from the representation given whether the point on the left antler next the tip is really a genuine prong denoting a year's growth, or a mere bunch-like projection not uncommonly found on the antlers of the whitetail deer. No signs of any widening or palmation of this antler appear, the beam, spurs and tip being round, smooth and neat. This horn was found on a hillside in the midst of forest-covered mountains which stretch for many leagues in each direction from the point named, and the forest entirely unbroken, save by the narrow open valleys of the mountain streams.

Again: some years since I killed a fine whitetail buck, the tail of which for half its length was white as a ball of cotton.

This, now, is all I have to offer. Not much, to be sure, and it is not offered with the wish to discourage any one in the laudable search for the elusive fantail—only with the desire to call attention to the question of the wonderful possibilities of variation of type.

How far some little creature, "born out of due time," —possibly the offspring of a wounded mother—and confronted with unusually hard conditions of summer drought and excessive snow of winter, and possibly having been raced to the point of exhaustion by relentless wolves, it has taken a last refuge in the icy water of a mountain lake, there to be chilled to the marrow of its every little bone—how far the development of such a little unfortunate could denote variation from the true type I have not yet learned.

However, bring on the fantail! If he is in existence, I hope that Forest and Stream will lose a hundred dollars on him before snow flies!

I don't think any man should be afraid or ashamed to express an honest conviction, whether he is in line with the scientists or not. And don't I too believe in Wm. Tell? Didn't he stalk forth, bow in hand, in the pages of the dear old McGuffey's Reader we were all brought up on, and deliver his wonderful oration, which brought tears to many a little pair of eyes:

> "Thou dost not know me, boy; and well for thee
> Thou dost not! I am the father of a son
> About thine age; thou, I see, wast born like him
> Upon the hills," etc., etc.

And I come pretty near believing in Pocahontas.

I saw her portrait years ago (when there was money in the country) on the back of a national bank note, and she was pretty enough to believe in any day in the week!

But I don't agree with Lew Wilmot in his theory of the buck deer shedding the velvet from his antlers without rubbing them on the bushes.

I hate to disagree with him too. For any correspondent of Forest and Stream showing up within 200 miles of my mountain home seems like a neighbor.

Although I am not able to give dates when first in the season I have found the bark of young bushes fresh stripped by the horns of deer, I am quite certain that I have so observed (within a very few days of the first shedding of velvet), together with the strings of bloody velvet scattered among the fresh tracks which so quickly catch the eye of the hunter.

Orin Belknap.

The Velvet of the Antler.

Berlin, Germany.—*Editor Forest and Stream:* Mr. Lew Wilmot has evidently not had the opportunity to study the life and habits of deer very deeply, or else he would not deny the well-known fact that deer get rid of their velvet on their horns by rubbing the latter against young trees. It can fairly be presumed that the velvet

creates a kind of itching sensation at a certain stage and when it is quite ripe. From this the animal seeks relief by rubbing the horns against young trees. I have frequently witnessed this spectacle, and many young trees are injured in this way in this country by stags and roebucks. The American deer, of course, make no exception to this rule; they are governed by the same law of nature or natural instinct.

It is wrong to suppose that nature disposes of the velvet the same as it does of the red hair in the fall, as Mr. Wilmot asserts in his communication in FOREST AND STREAM of July 27.

ARMIN TENNER.

Game Bag and Gun.

TWO TYROS AFTER DEER.

ONE afternoon in the early part of July found the writer and his old shooting crony and bosom friend, Jim M., holding a lengthy confab in the rear of the store of T. Arms Co., which has come to be regarded as the headquarters of all the local nimrods. The engrossing subject of our conversation was, as it usually is, guns and gunning in general, and a contemplated shooting trip in the near future in particular. Deer season was to open on the 15th, and Jim and I had decided that we would try our luck. Neither of us had ever killed a deer—nor have we yet for the matter of that—although we had often tramped the marshes and uplands together in quest of feathered game with good success, and together we had bagged our full quota of fat ducks each season on the lakes and sloughs.

But now our ambition impelled us to seek nobler game, and so our trip was planned. We were to pass the night of the 14th on my father's ranch, which lies at the head of the San Fernando Valley, surrounded on all sides by rugged, brush-clad mountains; on the north and east by the Sierra Madre, on the south and west by the Los Feliz and Santa Monica ranges.

It was reported that deer were plentiful in the range immediately north of the ranch, so we concluded that this would be the scene of action.

During the few days remaining before the opening we sought the advice of all the old deer hunters we knew, who gave it freely; but just as we thought that we knew all about it, we would meet some one who would knock all our newly acquired theories sky-high and give us his experience and ideas, until we finally concluded to follow the easiest advice given, which was to select a ridge and climb straight on to the summit, scanning every cañon and "draw" thoroughly, and stopping now and then to look carefully about.

Although devotees of the shotgun, neither of us possessed a rifle, but a loan from two of our friends was easily negotiated. Jim got a .38-40-200 Marlin and I a .44-40-200 Winchester, neither of them good deer guns, so far as the proportions of powder and lead are concerned.

I met Jim at the ranch station on the evening of the 14th with his rifle slung over his shoulder and a look of confidence in his face. He never doubted his ability to down the first buck that jumped, he said.

I expressed myself in less confident terms and suggested "buck ague," but he scoffed at the idea.

After dinner had been discussed, we went down to the men's bunk house to have a little talk with Joe, who had to our certain knowledge killed several deer in this very range, and whom we questioned closely as to the most likely places for jumping deer. This done, we went back to the house and turned in, with instructions to the cook to have breakfast for us at 3:30 A. M.

I was awakened next morning at 3:15 by the loud-voiced alarm clock, and, after calling Jim, hurried into my clothes. Breakfast over, Jim and I shouldered our rifles and started.

The fog was very dense on the level, but luckily for us it had drifted away from the mountains. A walk of a few minutes brought us to the mesa or table land at the head of which the ridge which we were to climb commenced.

Up to this point we had carried on an animated conversation, but now we proceeded in silence, Jim keeping a sharp lookout in the cañon on the right, while I did the same on the left.

When we reached the first peak in the ridge which we were on, the scene spread out before us was beautiful beyond description; the fog, up to a certain level, shut out everything from view, and only the peaks of the opposite mountains were visible as they rose from this misty, sea-like island. It was well worth the climb to see this, if nothing else, and Jim and I stopped often to drink in the beauty of it.

At the summit of every little peak on the ridge which we were following we would stop and search every likely spot for deer. It was while thus employed, and about midway to the summit, that I heard a low whistle from Jim, and turning I saw him beckoning frantically to me. I judged by his actions that he saw a deer, so I hurried over to him. His first words were, "See that deer?" delivered in a whisper which was hoarse from excitement.

I looked in the direction of his pointing finger, which was trembling visibly, but could not see it, and so I told him.

Then followed a whispered conversation, Jim endeavoring to show me the deer, and I striving just as hard to see it; but in vain. Finally I said, "Jim, I can't see it, so you shoot it alone, and then if you don't kill it with the first shot I will help you bring him down on the jump." Just at this critical point, however, I saw the deer. Yes, there he was (and a fine buck, too, I thought), lying just under a mesquite bush. His whole outline could be seen with remarkable clearness, with his side toward us, head elevated and to the left, thus offering the easiest kind of a shot.

We reckoned the distance at about 200yds., and set the sights accordingly.

Then for the first time I noticed that I was somewhat excited; my rifle was visibly agitated and I seemed to have lost partial control of my hands. We were both kneeling, and our rifles were at our shoulders. I said to Jim in a strained whisper: "Count three and at the third count we'll both fire." He answered with difficulty, it's true, for his cheek was tightly pressed against the stock of his rifle: "I c-c-c-can't c-c-c-count." "Then I will," and I muttered "one, two, three!" and both the rifles cracked.

At the same instant we each worked a new cartridge into the chamber. But there was no need to hurry, for our "buck" was still there in the same position, and was apparently the coolest of the three.

I looked at Jim, and he at me, with an expression of the utmost amazement written all over his countenance. "What's the matter?" said he. "Matter enough," said I, "that's no deer, and we have spoiled our chances for this morning by those two shots."

Of course we were much chagrined by our miserable blunder, but there was some comfort in the fact that we had both been deceived, and had both been equally foolish.

We walked on over to our supposed "buck" and saw that a chance combination of a rock, some dead bunch grass and the excited imagination of two thoroughly green hunters had caused the deception.

We continued our hunt up the mountain, although all our ardor was gone. We were joined at the summit by another deer hunter, who had two fox-hounds with him.

He cast the hounds loose, and we all sat down on the ledge of rock which forms the summit, to enjoy the view, which was truly magnificent, and to discuss the events of the morning.

Our newly found friend had seen a fine buck two hours before in another part of the range, but in moving down the mountain to secure a better shot at it he had dropped his rifle and broken the hammer, rendering it useless.

After a long rest on the summit, during which time the two hounds frequently gave tongue far below us, we started on the descent, which was accomplished without further mishap and without sighting another "buck."

CULPEPPER.

BAY BIRDS AT CURRITUCK.

IF you have noticed the late quiet feeling in both the tea and dry goods trade and have wondered at the why and wherefore, this short letter, telling you of our trip to Currituck, will explain the reason. We cannot shoot bay birds and sell teas and dry goods at the same time.

We left New York on the afternoon of July 31 and reached Currituck Friday evening. From the start F. R. and the writer were looking for "good things" and "soft." I believe F. R. discovered something like this, or at least he said it was, and I really did not know enough about the matter to contradict him. But they were really four nice young fellows from Washington returning from a vacation and we did have enough left to get us through our trip. It seems to me that if we could only load our shells on the same principle that the Washingtonians employed when they would draw "two and sometimes three" and come out with a "flush or straight" (I believe these are correct names F. R. gave to them. I could not see any difference between the two), we would never miss a bird.

Our friend Leon White met us at the landing with his sloop and took us across the sound to his cottage. This sloop of his by the way is quite a curiosity; it was built over 100 years ago at Roanoke Island. It is about 35ft. long, 8ft. beam, dug out from one solid log. Leon uses it to transport his calves to the steamer and brought it over to meet us because, according to his instructions, we had brought down from Norfolk a ton of ice to freeze our birds so that if we had a little luck we could bring a few back with us to the friends at home. Saturday A. M. we were all early on the ground each in a separate blind with decoys out and ready for the birds. We did not have to wait long, as they were very plenty. Our bag the first day was nearly all of grass plover with a few kreekers sprinkled in. We were a little to the westward of the flight line of the other birds and saw only a few go down.

Sunday we took Leon's sea skiff through the surf for a try at the bluefish, which are generally very numerous along this coast. We had a circus both coming and going. A sea coming aboard on the way out picked F. R. up and sat him down again in no gentle manner. I thought his spinal column was gone, but he "pulled" through. He is really too thin to sit in the bow and act as a breakwater, for the fellow who sits next gets wet. We only fished a few minutes, as it was getting very rough, and came in flying. On our way back to the house we saw immense flocks of yellow-legs coming down and dropping in to feed, so we felt highly elated over our prospects for the next day.

Monday we were out before daylight and located more to the westward, and before it was really light enough to see, the guns were speaking. I have seldom seen the birds so thick, not flock shooting, but constantly coming along in small bunches of two, three or four. It made the prettiest kind of shooting, as the birds flew well and strong. There was a good breeze and you had to hit hard to count. The birds were in splendid condition. I should really be ashamed to tell you how many F. R. ate or how many shells we used, but we came out better than 75 per cent. We shot Tuesday and Wednesday, and on each day there seemed to be more birds than the day before.

Leon was, as I have always found him, ready to do anything in his power to make our trip a pleasant one. He would drive us out in his wagon, send the boy out on horseback about 7 o'clock with a hot breakfast and some ice for our water pail, drive out about 1 or 2 with our dinner, and then again at 4 or 5 to take us home. There is only one fault with Leon; he and his good wife give one more to eat than four men should have. Shortly before we went down he had caught in his net a sawfish 10 or 11ft. long, including the saw, and had stuffed it and mounted it on the fence which incloses his barnyard. It was certainly an ugly-looking customer. Leon said it tore his net all to pieces and let loose a fine lot of bluefish. A tarpon was taken in a pound not far from us, and they were taking a fine lot of Spanish mackerel. Leon was training a live swan for decoy purposes, and tells me that he will have three or four more by fall, also a fine outfit of live geese and other decoys. I shall make up a party and go down for the ducks late in November or December. We shot willet, winter and summer yellow-leg, robin, snipe, black-breasted plover, turnstone grass plover and kreekers. We only saw two curlew and one golden plover.

IDAHO.

Game Laws in Brief.

THE *Game Laws in Brief*, current edition, sold everywhere, has new game and fish laws for more than thirty of the States. It covers the entire country, is carefully prepared, and gives all that shooters and anglers require. See advertisement.

CHICAGO AND THE WEST.

Wars of the Wardens.

The deputy fish wardens on Lake Winnebago, Wis., on Aug. 9 seized a lot of illegal nets, worth in all $400, and captured also a fishing boat. There was a severe fight with a dozen fishermen, one of the latter being roughly handled. The warden has destroyed $1,000 worth of nets. The fishermen retaliate by suing for damages, and on Aug. 12 Deputy Fish Wardens C. W. Johnson, Max Mucks and Max Johnson were arrested charged with assault and battery during the fight. The case was set ahead and both parties are getting ready to make it a test case. Illegal netting has long been open and shameless in Lake Winnebago.

On Aug. 15 the vigorous State warden for Ohio, L. K. Buntain, seized eighty illegal nets on Lake Erie, out of Cleveland. A fight followed, and the fishermen got back part of the nets, but Buntain put most of them where the woodbine will weave its tendrils through them. He arrested several fishermen, and a hot battle in the courts is on hand there now. The cause of reason in fish and game protection advances in prominence every year.

Ohio Pheasants.

Mr. E. H. Shorb, State Fish and Game Commissioner, of Van Wert, O., passed through Chicago this week on his way to Utah and Montana, where he will travel about for some weeks. Mr. Shorb says the experiment of raising the Mongolian pheasant is no longer an experiment but a certainty in Ohio, and the State feels that it has added a prolific and hardy bird to its fauna. The pheasants stand any sort of cold weather and seem perfectly adapted to all the conditions of these parallels of latitude. In the State pheasantry at Celina, O., there are now 500 young pheasants confined in a wired inclosure 100×160ft. in size. These are the product of forty-one hens. The young birds are in perfect health.

Merrit Game Cases.

I am indebted to a special dispatch to the Chicago *Tribune* for the following unique information in regard to the now famous Kewanee cold storage case. The *Tribune*, let us suggest, is quite misinformed in regard to the matter of fines. Merritt has never been fined at all, nor was any attempt made to fine him in the first suit brought by Warden Blow. Could it be possible that Col. Blow was the sender of the *Tribune* specials? If so, Gen. Blow was hardly candid. Why? At any rate, it seems that the State's attorney has now taken a hand—which at first he thought he would not do—and it may be that at length we shall see proper, legal, statutory action brought against Merritt, namely, a prosecution for an offense against the law, which offense is punishable by fine. The dispatch reads:

"KEWANEE, Ill., Aug. 16.—[Special.]—The H. Clay Merritt illegal game case was up before the County Court to-day. After Justice Pyle decided against the State, the defense took an appeal to the Circuit Court, which convenes in October. The prosecution then will be conducted by Game Warden Blow and President Bortree, of the State Game Protective Association, and the fines, which would amount in the minimum to $136,155 and in the maximum to $680,775, would have gone part to the Game Warden and part to the school fund of the county. If the case now brought before the County Court by State's Attorney Graves goes against Merritt, the fines will all go to the county. The defense is maintained by William Lawson, of Kewanee. The information filed by the State's Attorney is said to be one of the most peculiar documents ever filed in an American court. It consists of 3,026 pages, and is more bulky than a dictionary. It is bound at the top with iron clamps and rods, and its cubic bulk is 1,071 inches. It contains 2,133 words to the page, a total of 6,454,458 words. At a speed of 100 words a minute, it would require 107 days of ten hours each to read it. The case will probably be decided to-morrow by Judge Mock."

These be big figures, but out of Kewanee, whence come reports of fines of $23,600, of $135,155, and of $680,775 (when there had been no fines at all), what shall we expect if it be not large figures? It would seem that States Attorney Graves had gone after Merritt one bird at a time. Let it be so. After a time the actual enormity of Merritt's sin against the people of this country will be apparent. The time will come when the life of the game dealer will not be a happy one. Thinking sportsmen unite on the doctrine of "Stop the sale of game."

An International Affair.

This week two gentlemen came into the FOREST AND STREAM office in need of information. One was Capt. Brand, of the German Army (his card reads, "Brand, Rittmeister und Escadron-Chef im 1. Bad. Leib-Dragoner-Regiment No. 20, Karlsruhe"), and the other was Mr. Weber, of Leipzig, Germany, owner of the *Illustrirte Zeitung*, one of the best known of German newspapers. Capt. Brand was heralded by letter from Von Bayer, of the U. S. Fish Commission, as a gentleman in need of a guide for a big game hunt in the Rockies. Billy Hofer was to have taken him, but had another party out, so had arranged for another guide and outfit for him, which latter was to meet him at Cinnabar. What Capt. Brand and his friend wanted to know was where Cinnabar was, where Livingston was, what sort of stores there were at Cinnabar, how many horses would be needed, what sort of a man the guide would be, how far the party would have to travel, how much game they might expect, what sort of blankets should be taken, how much of a cooking outfit would be needed, and so forth and so forth. In English all this is easy, but Capt. Brand and his friend knew only about as much English as I did German, so we had plenty of fun together. They wanted to go right out and buy a lot of things, but I held them down to one sleeping bag, one sweater and one carryall bag, the latter new and delightful to them both. Herr Weber was not going on the hunt, contenting himself with the tour of the Park, and he referred with contempt to the sleeping bag, and said a bed was good enough for him; at which the lean, brown, handsomely set up cavalry officer smiled with amusement. Unless I err very much, Capt. Brand is a thoroughbred, and a sportsman of the sort that will do. The type of gentleman and of sportsman is much the same for any nationality, and the nationality makes no difference so long as you have the type. I have rarely seen a man so boyishly eager to get out on his hunt as Capt. Brand was. His eyes shone, and he could hardly wait till the train started. He told me that three months ago his colonel asked him if he did not

want three months' leave to go to America, and that he jumped at the opportunity. He at once set to work studying the English language, and had kept at it almost every night from then till now. Of course, he could not speak much English, but I think he has done remarkably well, and if his guide will be patient and courteous as Capt. Brand himself, they can trade a lot of language in the two months or more they will be alone in the mountains together.

Capt. Brand had along two rifles, one the sporting model of the German small-bore military arm. This was carbine pattern, short-barreled, handsomely made and sighted very well, with a set of sights I would not mind having on a rifle of my own. He says that the bullet from this rifle has a soft head and expands, making a terrible wound. On roebuck it tore the flesh of the animal, on the opposite side from the entry of the bullet, so that one could put his hand into the wound. Capt. Brand wanted to try his little gun on bear, and I hope he may have the chance. Billy Hofer's partner will at least surely take him up to elk and deer, and perhaps antelope. He was so eager in his anticipations that I want him to have a good time—the more so from one little remark he made: "A female animal I shall never shoot, and of males not many." This is good doctrine for American sportsmen. Capt. Brand leaves his companion at the Fountain Basin in the Park, and goes on through on his hunt. Herr Weber I hope also to see again, for he began the teaching to me of some fine rolling swear words, in which I have always been deficient, and which he says are in general use in the newspaper profession in Germany. He assures me that there can be no genuine satisfaction in swearing in English. We had a very pleasant international symposium together.

Protection in Missoula.

A letter just at hand from Missoula, Mont., shows how far and wide the idea of protecting game is going these days. The writer says:

"The sportsmen of Missoula County, Montana, have a game warden, Jas. Booth, who is 'just the man for the place.' Yesterday afternoon he stationed himself on a bridge south of this city to inspect the different teams as they returned from the day's outing. Knowing there had been illegal shooting going on, and not being able to locate it, he searched all the rigs containing either 'sportsmen' or 'would-be sportsmen.' He was successful in seizing a bag brought in by two of the latter class—'would-be sportsmen'—namely, Lau Lyons and a Mr. Williams. They were returning from the latter's ranch, about 14 miles up the Bitter Root Valley. They had four mallards, three of them young ones. A complaint will be lodged against them at once, as it should be—for what is the use of having a paid game warden at an annual salary of $1,200 if he does not protect the game of the country he has sworn to protect, and who draws a good salary for the same. These parties claimed they were tame ducks owned by this man Williams, and that they were shot on his ranch, but such gammon as that will not do.

"What encouragement have the sportsmen of this county if such work be allowed to go on? The man who keeps the game laws—who unpacks his gun, gets his dog and goes out shooting when the season opens, Aug. 15—finds all the coveys of birds scattered and most of the young ones killed off by those who have been breaking the game laws.

"The FOREST AND STREAM is the acknowledged sportsmen's paper around here, currying no favor, treating all alike and doing its best to uphold the game laws as they should be.

"One or two examples of this kind will put a quietus on such work, and by having it known through your paper will let others know a few things about the men who set the law at defiance."

A.

Furs in the Far North.

The Edmonton *Bulletin* has some news about furs in the far Northwest British Provinces. In a late number it says:

"Colin Fraser, trader, of Chipewyan, sold to R. Secord on Friday the largest lot of furs ever brought into Edmonton. The price paid was $20,000. The lot was not only large, the fur was of extra fine quality. It included 36 silver foxes, 78 cross foxes, 124 red foxes, 41 fisher, 72 otter, 813 beaver, 33 wolverine, 106 bear, 3,016 marten, 582 mink, 115 lynx, 7 wolf, 3,100 rat and 481bs. of castorum. The unusual abundance of marten this year, with the comparatively high price at which they sell, adds greatly to the figures of the fur trade this season. Of silver foxes, which are always a rarity, there seems to be more than usual. Mr. Fraser's lot includes two that were almost perfectly black, and of course would be particularly valuable on that account. The silver, frequently called the black, fox, is about the same size and build as a red fox. The general color is black, except a white tip on the end of the tail. But on the hind-quarters there is a greater or less proportion of white hairs scattered among the black, giving a silvery appearance to the fur there. The greater the number of these white hairs the less valuable the fur, and the less the number the more valuable. A pelt of perfectly black fur, if in good condition, is worth a fabulous sum in Russia, where the silver fox is the distinguishing fur worn by nobility and royalty."

E. HOUGH.

909 SECURITY BUILDING, Chicago.

Birds in the South.

TANGIPAHOA, La., Aug. 11.—There are a great many bevies of young partridges to be seen, so that I quite think there is a promise of the best season for dog and gun that has been here for a very long time. Many of them now are three parts grown and fly a long gun shot when they are flushed; and as there is little or no shooting until after Oct. 1 (this Parish Nov. 1), there will be plenty of full-grown birds; but there are numbers of old birds either hatching or with very young ones even now, as the merry "Bob White" is yet to be heard. This Parish is what it should be for all—no birds should be shot before Nov. 1. I do not approve shooting butterfly size of birds, as many men will when the birds rise before them.

R. S. NICHOLSON.

WAVERLY, Miss., Aug. 15.—Contrary to my expectations, I am seeing lots of young birds, and also evidence that many are sitting yet. I expect an abundant crop of birds throughout this section, and particularly on the field trial grounds and my own grounds were sufficiently well stocked if not a single young bird was raised this year.

W. W. TITUS.

MISSOURI FISH AND GAME INTERESTS.

ST. LOUIS, Mo., Aug. 13.—*Editor Forest and Stream:* The proper enforcement of good and effective game and fish laws is a question which interests every hunter and fisherman in the State, and it is much to be regretted that while Missouri has as simple and strong a law as could be desired, and which, if properly executed, would result in absolute protection to both game and fish, the last Legislature cut down all appropriation and made no provision for the funds necessary to carry out the work. The warden, Jesse W. Henry, of Jefferson City, is a painstaking and conscientious official, who can be relied upon to carry out the game and fish laws fearlessly and impartially; but the lack of funds to prosecute violators of the law and prevent unlawful acts seriously hampers him in his work, and if some provision to ameliorate their condition is not devised, the laws will be violated with impunity and incalculable harm result.

The following correspondence, which has just passed between the St. Louis Kennel Club and Game Warden Henry, will be found of great interest to all sportsmen in the State, and it is to be hoped that the efforts of the club will do much to assist Mr. Henry and to create a sentiment in favor of the work of his office which the next Legislature will recognize by a generous appropriation. The date for the mass meeting has not yet been set, but due notice will be given, and officers of hunting and fishing clubs and all sportsmen generally are requested to communicate with Secretary Hutchison, 1800 Hickory street, or Treasurer J. B. C. Lucas, of the Citizens Bank, so that the meeting when held will be largely attended and productive of good results. The amount which each sportsman will be asked to subscribe individually will be small and insignificant compared with the good it will accomplish, but in the aggregate it is hoped it will be sufficient to greatly assist the game warden and tide him over that period until the Legislature makes the proper appropriation for the continuance of the good work.

ST. LOUIS KENNEL CLUB, St. Louis, Mo., Aug. 7.—*Mr. Jesse W. Henry, Game Warden, Jefferson County, Mo.:* The St. Louis Kennel Club numbers among its members many of the prominent sportsmen of St. Louis and vicinity and is naturally interested both as a club and individually in the objects and work of the office to which you have recently been appointed.

We note with regret that you will be greatly hampered by the neglect of the proper authorities to provide the funds necessary to carry on the good work of your office, and the object of this letter is to place ourselves at your disposal to assist in every way we can to overcome this difficulty, to subscribe our mite toward the establishment of a fund to enable you to increase the scope and usefulness of your office, and to induce others to join with us in this very desirable object. With this end in view the St. Louis Kennel Club has decided to take the initiative in the matter and in the near future will call a mass meeting of hunters, fishermen and sportsmen generally to discuss the subject and arrange in some way for concentrated action on their part.

I need not assure you that it will be a great satisfaction to us if our efforts should meet with even a modicum of the success which they certainly deserve, and I beg that you will consider me at your disposal to carry out any suggestions you may favor me with. I shall be much pleased to hear from you on the subject, and with best wishes, I am yours very truly, WM. HUTCHISON, Sec'y.

JEFFERSON CITY, Mo., Aug. 8.—*Wm. Hutchison, Esq.:* Dear Sir—I was very glad indeed to receive your letter this A. M. I have been satisfied all along that St. Louis would take this matter in hand and place me in a position to accomplish some good.

I have intended calling on some of the leading gentlemen of your city and discuss matters with them, but have delayed until I thought they were ready and appreciated the situation. Have written several of the clubs and have been waiting to hear from them. I will certainly call on your treasurer, Mr. Lucas, when I go down, as well as yourself and others. I returned several days ago from Brunswick, Charlton county, where a deputy had arrested a party of fishermen for seining in Grand River. I went to see that no mistake was made and that this, the first case under the new law, was successful. We succeeded in having them fined and the result will put a stop to all seining in that locality. My deputy there has instructions to enforce the law and to permit no violation of any kind whatever, and I am assured by gentlemen there that he will do his duty.

As yet I have not received money enough to pay for office expenses, but am going ahead feeling satisfied that thousands of dollars will be raised to push the work just as soon as those interested see that I mean to enforce the law. I enclose you a circular letter, also laws.

If you will write me when in your opinion I had better come down I will try and make it convenient to be there. Very truly yours, JESSE W. HENRY.

New York Grouse.

ITHACA, N. Y., Aug. 16.—The vigilants of the shooting fraternity were early afield to-day in quest of the elusive woodcock and his shapely rival, the ruffed grouse. Some good bags of woodcock are reported on the streets to-night.

Grouse are reported as unusually plentiful in nearly every part of Tompkins Co., the northern part being the only exception worth noting. This is said to be due to the supervisors' law in force last year, by the operation of which the grouse season closed Dec. 1. This cut off the market shooter and set him to trapping skunks and minks, killing foxes and other carnivorous animals that prey upon our game birds. Dec. 1 ought to be the grouse closing season for this section if not the entire State.

M. CHILL.

Second Sportsmen's Exposition.

NEW YORK CITY, Aug. 16.—*Editor Forest and Stream:* There will be a general meeting of the Sportsmen's Association held on Tuesday, Aug. 27, at 312 Broadway, at 2:30 P. M. Arrangements for the Exposition of 1896 will be made and such other important business transacted as may be deemed necessary. FREDERIC S. WEBSTER, Sec'y.

THOSE ALASKA DUCK EGGS.

THE Seattle *Argus* of Aug. 3 prints this:

"On the third page of this paper will be found an article setting forth the danger that menaces our game birds by the wholesale destruction of eggs in Alaska. That such destruction exists there is no doubt. This paper has investigated this matter as thoroughly as it can be investigated without sending an agent to the hatcheries.

"There is but one way to get at the bottom of this matter, and that is by sending a special agent of the Government to Alaska to investigate and report in order that Congress at its next session should take intelligent action. The *Argus* believes that if the rod and gun clubs of the country generally pass resolutions to this effect, it will accomplish the desired result. It would therefore ask that the press of the country generally, and especially the sporting papers, take hold of this matter and urge upon the Secretary of the Treasury the importance of immediate action.

"The business of gathering eggs for their albumen, as described by Senator Mitchell, is controlled by powerful syndicates, who have spent much money, and stand ready to spend more, to prevent the investigation of this matter, by casting discredit on the story. But sportsmen should remember the fate of our buffalo, deer and seal, and remembering, should take immediate action to prevent the re-occurrence in the matter of game of the feathered tribes.

"Those papers commenting on the matter, and gun clubs passing resolutions in regard thereto, are requested to forward copies to this paper.

"FOREST AND STREAM of July 22 published a long and elaborate article designed to throw discredit on this story. It is very much to the discredit of that publication that it should take this action without proper investigation. The principal thing on which they base their article is the denial of the railroad companies, whose business in this line would be ruined by competition, and of the importers, whose business would be ruined by publicity. They also publish letters from custom officers saying that this traffic does not exist, to the best of their knowledge and belief.

"In refutation of this, the *Argus* can produce affidavits to the effect that this traffic does exist to an enormous extent, although to just what extent can only be ascertained by intelligent and honest investigation.

"The *Argus* will publish soon statements from ex-customs officials showing that this business does exist to an enormous extent."

The "article setting forth the danger," on the third page, runs as follows:

"On Jan. 28, 1895, Hon. John H. Mitchell, senator from Oregon, introduced in the United States Senate a bill for the protection of game wildfowl in Alaska, but by some misfortune it did not reach a vote. Herewith the *Argus* prints Senator Mitchell's statement upon introducing the bill, and, take it for granted that he has been misinformed as to the number of game eggs shipped out of the Territory of Alaska, there yet remains a useless destruction that is appalling.

"There is but little doubt that from twenty to twenty-five thousand dozen eggs are taken from nests in the Alaska hatcheries annually. In gathering these nearly as many more are thrown away, having been partly hatched. Thus it will be seen that the destruction of eggs is something enormous. With the sportsmen shooting the game in civilization and the robbing of the nests in Alaska, it will only be a short time before our ducks, geese and swan will be game of the past.

"The manufactors of firearms, as well as sportsmen, must see that this robbery will affect them, and it is to their interest that they do what they can to have this matter brought before the Secretary of the Treasury at once, so that steps may be immediately taken to send some one to these breeding grounds to make a thorough investigation, and stop this wanton destruction.

"It will doubtless be of interest to know something about these breeding grounds. Along the Yukon and the river emptying into Golivin Bay are large areas of low lands, where the duck, goose and swan do their nesting. In early spring hundreds of thousands of these birds may be seen coming from the south to this far-away land, where they think they are free to build their nests and hatch their young, only to meet their worst enemy, the nest robber.

"Some may wonder why they have never heard of this before, but how many are there who even know where these places are? If you will take a map of Alaska, you will find the Yukon River emptying into the Bering Sea, and north of the Yukon you will find Golivin Bay. South of the Yukon is another large river, called Kuskoquim, and still further south one equally as large called Nushegak. Along these rivers are large hatcheries where eggs are also gathered.

"These eggs are not gathered because they are necessary for food. Birds are abundant. But the eggs are more easily obtained. It costs nothing to gather them, while in killing the birds it would be necessary to use ammunition, and go to the trouble of salting them.

"These bird nests are so thick that on the breeding grounds it is almost impossible to step without crashing into a nest. But the grounds are not of so great an area as a few years ago.

"As an illustration of the enormous number of birds in this region, the manner in which the natives kill them might be cited. They have six sinew strings about three feet in length, fastened together at one end by a large quill, while at other end are ivory balls, pear shaped and about the size of a walnut. They approach a flock of ducks or geese at dusk, and commence swinging this sinew tongs until the six strings whirling above their heads resemble the spokes in a hub. When the birds rise to fly, the sinew tongs are thrown into the flock, the ivory balls causing the sinew to wind around the neck, leg, or wing of the bird, whichever it may strike first. Sometimes as many as a dozen are captured at one throw.

"It is to the interest of these nest robbers that no one should know these facts, and therefore the sportsmen are always confronted with the cry of 'nonsense,' started by these game destroyers.

"The sportsmen should take measures at once to have this investigated."

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

Sea and River Fishing.

ANGLING NOTES.

Caddis Flies.

Some time ago, so long ago in fact that I do not wish to be specific about the date, Mr. Edwin Hallam wrote me from Manitowoc, Wis., as follows: "Inclosed in another envelope are a few flies that came into the car window while I was at Appleton, Wis., which is on the Fox River. The conductor of the train called them 'Green Bay flies.' What are they?" I must apologize for the delay in replying to the query, but it has been impossible for me to write any "Angling Notes" for several weeks past.

The fly inclosed was one of the Caddis or Caddice flies, and I sent specimens to Prof. Lintner, New York State Entomologist, asking if there was a common name for this particular species, and he replied: "There is no common name for the particular species of insect which you send me. They are a 'Caddice fly,' of which there are numerous species. The 'Green Bay Caddice fly' might serve as a local name for it, but it is not a local species, for I have a specimen of it in my collection—unnamed scientifically—which I took years ago at Schoharie, in this State.

"The Caddice flies, and their larvæ, which live in the water within cases of bits of vegetable matter, small stones or coarse sand, etc., which they drag about with them, protruding their front portions when they feed, are very serviceable for food for fishes, as I have shown in my paper on the 'Insect and other Forms of Caledonia Creek, New York,' in the Tenth Report of the New York State Commission of Fisheries."

The Caddis fly has sometimes been confused with the May fly, particularly in its larval state, but the flies are easily distinguished one from the other. The Caddis fly has two pairs of wings nearly of the same size, each pair having a fuzzy edge. When at rest the wings are folded lengthwise of the body. This fly has no antennæ and the May fly has. The May fly has two pairs of wings, one pair very much smaller than the other, and when the fly is at rest the wings are upright.

The Tenth Annual Report mentioned by Prof. Lintner is a very rare one—so rare, indeed, that I have understood that the New York Fish Commission does not possess a copy; and it is to be hoped that the Commission as now constituted may reprint Prof. Lintner's paper, with the illustrations, in some future publication, as it will prove of great value to all who are interested in fish food. In this paper Prof. Lintner says: "Insects, in either their larval or perfect stages, form a portion of the food of nearly all our fresh-water fishes, and a very large proportion of the food of most of the species."

Scotch Trout Fishing.

Mr. Archibald Mitchell, the salmon fisherman, of Norwich, Conn., is now in Scotland, and writing me from Largo, in Fifeshire, he says: "An angling club held a competition on a small lake in this vicinity on Saturday, and I and my son were invited to fish with the members and we accepted the invitation. The conditions were not favorable and the trout were not on the feed and it required very fine fishing to take them. Here are the scores: Ashton 13 trout, 5½lbs.; Honeyman 9, 3¾lbs.; Duncan 8, 3½lbs.; Anderson 5, 2½lbs.; Raside 4, 2lbs.; Stewart 4, 2½lbs.; Young 4, 1¾lbs.; Hood 4, 1½lbs.; Edmonds 3, 1½lbs.; my son and I weighed together 12, 4¾lbs. The fishing commenced at 10:30 A. M. and finished at 8 P. M. This will give you an idea of how much angling it takes here to kill a few small trout. I inclose one of the casts of flies I used. The largest trout I killed weighed 9oz. and the largest taken during the day weighed 15oz. I intend to spend a few days on Loch Leven just as soon as I can spare the time. I spent an afternoon with Forrest, of Kelso, last week. He makes very fine salmon flies and has been in the business for many years. I consider the banks of the Tweed to be the home of fly-tying."

The cast sent by Mr. Mitchell consists of drawn gut leader and three flies, also on drawn gut, tied on No. 14 hooks. I find that I used still smaller flies than these on Caledonia Creek this season, but there are few waters in this country where such fine tackle is required.

Strike of the Rattlesnake.

In one of the late magazines I saw a reproduction of a photograph of a rattlesnake "coiled to strike," and it caused me to look over my notebook for an interview with a rattlesnake hunter. It may be urged that rattlesnakes do not properly come under the head of "Angling Notes," but every one who has fished a trout stream in a rattlesnake country will admit that it is an appropriate heading. Mr. Reuben Ripley, of East Lake George, has been a rattlesnake hunter for many years. If asked why he hunted rattlesnakes, I presume he would say for fun; but be that as it may, Mr. Ripley and a merchant retired from business have made it a point to go each spring where rattlesnakes abound and shoot them as they come out of their "dens" for a sunning on the rocks. He says that it is exciting work when the snakes are thick—and he has killed over seventy in one day; but now that he is getting rather clumsy with age he considers rattlesnake hunting too dangerous for him to pursue it. The point to which I wish to refer chiefly, however, is that Mr. Ripley declares that the rattlesnake does not coil to strike, and cannot strike, as we understand a strike, when it is coiled. When he said this, and said it so positively as to be convincing, I concluded that the coiling of the rattlesnake to strike, which I had been brought up to believe in implicitly, was simply another doll stuffed with sawdust. Mr. Ripley tells me that when coiled a snake, if teased, will strike only with that portion of the body that is above the ground, or as he described it the motion was somewhat after the manner of a mother hen pecking at something that annoyed her. He says that the real strike of the snake, when it reaches furtherest with its poisoned fangs, is when the snake draws its body back toward its tail in curves on the ground, "just as you frequently see garden hose on a lawn," and then shoots the head forward until the body is straight. Further, a free snake cannot strike above a man's knee if he stands erect, and a snake cannot strike beyond about one-third of its length. Mr. Ripley has learned this from repeated experiments to test just what a rattlesnake can do under varying circumstances. If a snake is fastened to the ground at its tail it can strike its entire length. This reminded me of an incident which occurred near Shelving Rock, Lake George, which confirms Mr. Ripley's observations in this particular. Bony McCabe was haying and saw a snake trying to escape from the shelter of a haycock, and he attempted to spear it with a hay fork; one of the tines of the fork went through the snake's tail close to the rattler, pinning it to the ground, and at once the snake struck and extended its entire length upward at an angle of about 45°. While on this subject I am reminded that old George Kenyon, a professional rattlesnake hunter, once told me that there was nothing to fear from rattlesnakes at night, for they always crawled under cover where there was no danger of stepping on them, and there they remained until morning. This was a hard and fast rule, that snakes do not travel at night, and yet within a week after old George had given me this information a rattlesnake was seen to crawl along a path in front of a summer cottage at 10 o'clock at night, and old George was summoned to kill it, which he did five minutes before I came strolling along the same path with a friend to whom I had confided the fact that it was perfectly safe for us to walk along that path in the dark because old George had said so. He may have been right in the main, but there are, it is said, exceptions to all rules.

Fluid Silkworm Gut.

It is rarely that I hear from an old correspondent of Forest and Stream who, when he does write for this journal, signs himself "Splasher," but I have just received a letter from him describing the fishing in the State of Washington and incidentally he refers to another matter as follows: "I have been thinking what a fine thing it would be if some chemist would solve the problem of dissolving silkworm gut, that is, reducing it to its original fluid form in considerable quantities so as to admit of drawing leaders of any desired length from it. If this could be done, what an immense amount of waste gut could be saved, to say nothing of the other advantages. I have spoken of this a number of times. I believe it possible, and I offer the suggestion hoping some one may yet accomplish it. Some time ago there was a notice in the *Scientific American* of an artificial process of making silk fabric. My recollection is that this material is first produced in fluid form. Perhaps there is a possibility in it."

It may be possible to reduce the dried gut to a fluid state by a chemical combination, but I imagine any such process would injure its strength, in which event the gut would be useless for leaders. On the other hand we do know that gut 9ft. long and of corresponding strength has been drawn from the American silk worms, and what has been done can be done again. The difficulty in the way at present is to find out how and upon what to feed the worms. Dr. Garlick, the father of fishculture in America, who drew the gut referred to, is dead. He wrote me that he fed the worms on the leaves of the apple and the plum, but when in the East the worms were fed on apple leaves the gut lacked strength. Whoever may discover the proper food for feeding *Attacus cicropia* and *A. prometheus* will not need to resort to chemicals to reduce the Chinese silkworm gut to a fluid state to produce the best salmon leaders, in one piece, that it is possible for one to have.

Growth of Angling Works.

The earliest printed list of angling books was compiled by Mr., after Sir, Henry Ellis in 1811, and appeared in Sir Edgerton Brydges's "Bibliographer." It consisted of eighty works. I am somewhat specific in this matter because I have just read a newspaper item giving credit to Brydges for compiling the list. This list was extended to 180 entries, and appended by Pickering to Boosey's "Piscatorial Reminiscences" in 1836. This was followed in 1847 by Dr. Bethune's Waltonian Library, consisting of about 300 titles. In 1856 the Bibliographical Catalogue of Mr. J. Russell Smith contained 264 titles. The New Bibliotheca Piscatoria (1861–9) contained 650 distinct works. Westwood and Satchell's Bibliotheca Piscatoria of 1883, really a second edition of the volume of 1861–9, contains the titles of 2,148 distinct works and 3,158 editions and reprints. Of this last-named work I possess what I believe to be a unique copy. The work as it came from the printer contained a number of errors, and these Mr. Satchell corrected with a pen in the copy which he presented to me, and on the fly leaf he wrote an account of how the errors came about in a book of this sort.

A. N. Cheney.

Troublesome Vegetation.

Texas, August.—I was appointed "a committee of one" by our boating and fishing club to request the Forest and Stream to suggest some means to get rid of a moss that is growing rapidly in our lake. It is a green stuff that grows up from the bottom and slightly resembles a miniature tree under the water. When it reaches the top it seems to decay on top and forms a slimy substance of a lighter green color. When caught on a hook or oar it becomes stringy and is very troublesome. It is very spongy and heavy when full of water.

Any information you might offer through the paper or otherwise would be thankfully received.

The club at Corsicana, Tex., are experiencing the same trouble. They employed a man with a boat and chain and span of mules to drag theirs out. He cleared a space, if I remember rightly, about 200yds. square in a week or such a matter and gave it up.

A liberal quantity of salt sprinkled over the moss might kill it out, as salt will kill all vegetation when used in a field to kill Johnson grass.

The Newsman.

Cayuga Lake Fishing.

Ithaca, N. Y., Aug. 16.—John H. Selkreg and Warren Lyons, local anglers, returned from Redwood on the 14th, having spent a week at that point trout fishing. "Splendid luck" is their verdict. They succeeded in doing what past masters in the art of angling rarely do—taking a 9lb. wall-eyed pike on a light fly-rod with a trout fly as lure.

Good bass fishing is now reported at all the favorite bass grounds on Cayuga Lake. Some big pickerel and mascallonge are being taken at Union Springs. Near the village of Cayuga the bass fishing has been exceptionally fine during the past ten days.

M. Chill.

BOSTON ANGLING NEWS.

Boston, Aug. 16.—Sport with rod and reel was never more popular than it is to-day. Every man, and especially every boy, wants a share in it on his summer vacation. Even the man or boy who is chained to business takes his rod and line along when he gets off for a day, and pickerel or bass are tried for in the fresh water; or mackerel, cod or bluefish in the salt water. The Boston man or boy who has a lucky "pull" can get an occasional permit to fish the Brookline Reservoir for bass, though I have heard of few catches there yet. Even the canoeist on the Charles River puts out a trolling spoon or bait, and sometimes a pickerel and sometimes a black bass comes out to grace his creel. Harry L. Chatman, the junior Chatman in the house of Chatman, Kendal & Daniel, was canoeing on the Charles the other day with a friend. He had a line out. All at once there was a mighty splash, and the reel began to hum. The paddle was dropped and the rod taken in hand. It was evident that "a big one" was hooked. He would take about all the line Harry dared to give, and then when the attempt was made to reel him in, the light canoe was actually towed about the way the fish desired to go. Twice he came out of the water in grand style, and the angler is sure that he heard the jaws snap as he tried to shake out the hook. But such fighting was of no use, and after a hard struggle against rod and reel for fifteen or twenty minutes a magnificent black bass weighing nearly 3lbs. came to the net.

Everybody who goes to the seashore takes a line along or hires a boatman who furnishes the rigging. Mr. William J. Leckie, than whom no man in the United States is better known in the hide and leather trades, is just back from a couple of weeks at Martha's Vineyard. Every day he was out fishing or sailing. Often Mrs. Leckie was with him, but the sea off Katama Rips was generally too much for her to enjoy bluefishing, and as for mackerel fishing that was about out of the question for any lady. Indeed, Mr. Leckie and one or two other landsmen were not exactly sick when the mackerel boat lay to, anchored so that she was broadside on the waves and part of the time in the trough of the sea. They were not exactly sick, but the smell of the bait—well, enough has been said. But Mr. Leckie actually took over 200 mackerel that were very fine. He is greatly pleased with the mackerel fishing, and says that there is lots of sport there yet. Bluefishing has been a good deal of a failure in the neighborhood of Martha's Vineyard thus far this season. Mr. Leckie's party tried them faithfully, with a result of only two bluefish. The same report of a scarcity comes from Buzzard's Bay.

Mr. D. H. Blanchard is home again from his salmon river, the Northeast Branch of the St. Marguerite. The record for his river this season, caught by himself and guests, is thirty-five salmon. Mr. Walter M. Brackett, the salmon artist, whose preserve is just below that of Mr. Blanchard, is still at his river. He has had good luck this season, and had taken some seventeen salmon up to last accounts.

Mr. E. H. Wakefield, of Boston, is an angler who takes great delight in fishing. One of the best features of his angling is that he takes his wife with him; she is also an expert, and they never fish for count. They make a great many trips to ponds not far distant in quest of pickerel and bass fishing. They are just back from Wallace Pond in New Hampshire, where they have had the good luck to take twenty bass. Mrs. Wakefield has carried off high line by securing a bass weighing 5lbs. The couple are now about starting for the Rangeleys, where they will make only a short stop, however, their objective point being Tim Pond and the trout fishing they are sure to find there. They have visited those waters before.

Aug. 17.—There is an exhibition in Appleton & Basset's window to-day that is exciting a good deal of attention. The exhibit is the skin and mounted head of a mountain lion. When alive the beast measured 8ft. in length and weighed 194lbs. His height at the shoulder was 24in., and the girth of his forearm was 15in. The lucky man to kill such a beast was Mr. C. A. Hardy, a senior at Harvard, and a son of Mr. Edward E. Hardy, who has done so much for the propagation and restocking of game birds in Massachusetts, in connection with the Massachusetts Fish and Game Protective Association. The animal was shot near White River, Col., early last winter. But the skin and head are not the principal source of attraction in the window. There is a series of three photographs, the work of Mr. A. G. Wallihan, of Lay, Col.

Mr. Hardy, who is greatly interested in pictures of live game, heard of Mr. Wallihan and his expedition, and obtained consent to join them. With his father he had some time ago obtained a picture of a flying grouse, from some birds they were liberating, a picture that caused a good deal of interest and comment at the time. On the trip Mr. Hardy had the satisfaction of seeing at least eight mountain lions or cougars, and some of them under peculiar circumstances. Each of the series of photographs mentioned Mr. Hardy saw taken, and can vouch for their validity. They are not fancy sketches, but were taken by Mr. Wallihan from the live game itself. The first one shows the mountain lion, the skin of which is mentioned above, treed by the dogs. The beast is looking out of the tree at the hunter and the dogs. The second picture, and the most wonderful of all, shows the lion in mid-air and in the act of springing at the photographer. The guides were trying to dislodge the lion from the tree by stoning it, and Mr. Wallihan was standing not far from the base of the tree, camera in hand, watching for the beast to make a move. As the mountain lion is apt to do, the guides expected him to leap down the hill and run away, and Mr. Wallihan was watching for this motion. But his surprise may be imagined when he saw the beast actually crouching and preparing to spring at himself. This was the moment of his life. He had the nerve to poise his camera and to press the bulb when the beast was actually in the air springing for his own head, and, like the lightning flash picture, catch him as he sprang. His next motion was to dodge, and the beast was soon surrounded by the dogs, where he was shot by Mr. Hardy. The third photograph shows him being harried by the dogs as Mr. Hardy shot him.

Both Mr. Edward E. Hardy and his son are greatly pleased with the pictures obtained. They have a number of others. One shows the skeleton of a deer as completely cleaned by the mountain lions as though boiled and stripped. Mr. Hardy says that he saw a good deal of mountain lions during the trip. His opinion is that they

follow the deer, and then destroy a great many of them, doubtless preying upon them at night by springing from the trees. They move with death-like stillness, even when jumping from tree to tree. Mr. Hardy found himself uncomfortably near one one day as he was crawling up under some underbrush toward the "rimrock," as the guides term the borders of the cañons. There was snow on the "rimrock," and the beast actually slid along it and jumped into the cañon without the slightest noise.

Mr. Edward E. Hardy put the skin and pictures on exhibition in order that the public might get a glance at what he is greatly delighted with himself. It is altogether probable that he would be willing that the photographs should be reproduced in FOREST AND STREAM.

SPECIAL.

FOUR-OUNCE ROD AND SALMON.

WE, Louis Durand and Louis Gravelle, the two canoemen, had fished all the morning for salmon, and not a rise, although we saw a great many fish.

Returning to the little house, the highest station on the river, I took a 4oz. rod and commenced to cast, or rather try to cast, from the shore for trout, while the men went to prepare luncheon.

The river here is some 6ft. or more deep at the foot of the bank, which goes straight down to the water without a slope.

After a time I saw a salmon, and, as my fly touched the water, in an instant he rose and took it.

The little patch of clear water where I was fishing was bordered on either side by a perfect maze of fallen trees and roots, and all about me was a dense thicket of bushes some feet higher than my head—about the very worst place to play a salmon as well could be imagined.

I had on a very small brown-hackle fly, tied with slender single gut, fine leader and only 50ft. of line, with the smallest of reels.

The rod at once bent double, with tip in the water, though the fish only swirled slowly around in a circle of a few feet.

There being so little resistance in the rod it seemed to me the fish did not realize the situation.

After a minute or two, however, he made a swift short run out into the stream, taking nearly all my line (carrying my rod well into the water, the tiny reel shrieking and sputtering as certainly it never had before), jumped high in air, and then gently came back to his first position, while I proceeded to get my line in on the tinkling little reel as best I could.

The fish rested a couple of minutes or so, and then made another short rush, jumped, and came back as before.

If it had gone either to the right or left even a few feet, the leader would have been instantly parted by the fallen trees.

All this time I was shouting to the men to come to my aid.

They heard at last and running to the canoe came swiftly down in it to me.

I got in somehow, and we succeeded in gently swaying the fish gradually out into the stream.

It is needless to say how often the entire rod was in the water, and in addition my arm up to the shoulder, and how many times, as the men were straining every nerve following the flying fish, I saw the line almost gone.

The rod being too short to swing around the ends of the canoe, when the fish would start to run under it for the other side the men often lifted the line quickly in their hands and passed it around, but several times this was impossible, and the rod went under the canoe.

After three-quarters of an hour Louis Durand, in a fortunate moment, as the fish was passing his end, dropped his paddle and drove the gaff in 2in. from the tail, and the salmon was in the canoe.

It weighed 11½lbs.

The head guide, who has been on the river after salmon for thirty years, said, had he not seen the fish killed, he would have thought it under the circumstances impossible.

There being no chance when the fish took the fly to follow or even move from where I stood, and the usual run being several times the length of my line, this, with the exceeding dainty rod and reel, made an experience rather remarkable for good luck, as the handling had to be done so delicately that the ordinary salmon rod seemed by comparison a perfect tower of strength. R. G. M.

Fishing is an Art.

ARKVILLE, Delaware county, N. Y., Aug. 16.—*Editor Forest and Stream:* Dry Brook is in better condition. This year the spring floods were so much more severe than formerly that whole sections of farms were wiped out, enormous trees dragged out by the roots, rushed down the torrent against bridges, taking them along, sweeping barns and outhouses from the banks and making landscape entirely new for the prowling painter and fisher.

A week or so later, when the water had subsided sufficiently, I went up for a day and came back at sunset convinced that the "keepable" trout had also been washed down, for although I caught fully thirty, all were under size and were thrown back. I believe the small ones escape the rush of water by swimming up the numerous binnacles that border the stream. But now I have a softer tale to unfold. The larger ones are working up again and two miles above this point I have taken half-pounders galore, rarely coming in with fewer than fifteen in about four hours' wading, astonishing the new tackle fishermen who had condemned Dry Brook with disgust. Naturally, when their eyes returned to their normal size and position they would appear in gorgeous outfit, disappear for a day and appear again, damp, tired and hungry, with few or no fish. They now accuse me of having a private preserve or of buying them from the Aborigines, and although none of them have seen me go out the lesson is lost on them. They fish in herds.

Yesterday, in a blazing sun, I landed seven in little over an hour, the aggregate weight being about 3lbs. They would not rise to the fly, so I tried the grasshopper. But I am not giving it away up here. Selfish? Perhaps. I distribute my catch at the table invariably, rarely eating more than one of the smaller ones myself. My enjoyment is in getting them and being alone in nature's original atmosphere. Hunger does not trouble me, and here is a good hint for those of your readers who get up too early for breakfast and cannot find anything cold. I always have a piece of chocolate with me. It is amazing what a small bit is required to deaden the sense of hunger. And a pipe tastes just as good after it as after a meal.

Not long ago I made rather a curious catch. I had come to a bend where, below some willows, I knew was a nice pool. I made two or three preliminary casts in the air to get the length of line, when, on the last one, I was surprised by a vigorous strike and tremendous squeaking. Drawing back, I saw I had caught by the wing a wagtail, who had darted for the tail fly or had been hooked in passing. I let him go, more frightened than hurt, but he spoiled the pool. I have had some very good night fishing with coachmen and gray drake. The white miller seems not to attract.

I have also had some magnificent bass fishing about eighteen miles from here. I fought one for twenty minutes that I will swear weighed 5lbs., but alas! I didn't get him to scales. The fool boy who rowed became excited and upset the boat in about 30ft. of water, and he couldn't swim. I had my hands full for a while, and I haven't done cussing him yet. Mr. J. Cheever Goodwin will be up to-morrow and we will try them again.

Should the results pan out interestingly, you shall hear of them. H. M. ROSENBERG.

Nepigon Trout.

PORT ARTHUR, Ont., Aug. 10.—Fishing on the Nepigon River has been very good since July 1. The first to go up the Nepigon were two gentlemen from eastern Ontario; they started fishing about June 15; after three days' fishing they returned; the water was too high in the river. They brought down some thirty speckled trout, the largest about 6lbs., the smallest about 1½lbs.; average 2½lbs. each.

July 14 another party, consisting of Mr. M. Clarke, of St. Paul, and Mr. J. R. Dougherty, of St. Louis, went up the Nepigon and returned July 31, after seventeen days' fine fishing. The largest fish was caught by Mr. M. Clarke, and weighed 6½lbs.; this fish was caught with a minnow. In two hours one evening these gentlemen caught with two rods fourteen fish that weighed 72lbs. The trout they did not require were returned to the water. They preserved the largest specimens to take home with them, and were delighted with their trip. Mr. M. Clarke bought three Esquimalt dogs from the Indians at Lake Nepigon, which he sent to his home in St. Paul.

About July 19 another party, consisting of John A. Lea and E. P. Gates, of Independence; Judge T. A. Gill and C. O. Teichner, of Kansas City, went up for twelve days' fishing. They returned on July 31. They had a fine time. Mr. C. O. Teichner caught the largest trout, 6½lbs., with fly. Mr. E. P. Gates caught a double, the leading fish weighed 2½lbs. and the trailer 5½lbs.; the two weighing 7¾lbs. His largest fish weighed 4, 4½, 4½, 4¾, 5, 5½, 5½, 5¾, 6 and 6½lbs. each. He only got two fish that weighed less than 4lbs. Mr. John A. Lea caught twenty-seven doubles, largest doubles were 4¾ and 5¾lbs. each. He caught several doubles of 5, 6 and 7lbs. Judge T. A. Gill caught about twenty doubles. He did not stay through the trip. These gentlemen used split bamboo rods of 6, 7 and 8oz. each.

On Aug. 5 a party consisting of Prof. Delas Fall and Prof. R. Clyde Ford, with ten students from Albion College, Albion, Mich., went up the Nepigon River fishing. They intend to go as far north as the Albany River on a scientific expedition. They will be gone about one month. They will furnish me with notes of interest on their return. J. E. N.

Those Leaping Bass Again.

BOSTON, Aug. 14.—*Editor Forest and Stream:* Having read with much interest the articles on "Leaping Bass" may I venture a word or two?

I have usually found in my own experience that lowering the tip, or giving slack line for a leaping bass, was to lose my fish.

Do they shake their heads? most certainly, and often with open mouth, if one may believe the evidence of his eyes. Also a bass lightly hooked, or if hooked in lips or mouth, leaps freely; while if the bait is gorged and hook bedded in the soft gullet the fish rarely does more than roll up to the surface, preferring to bore down into deep water. If a leaping fish is hooked my experience is that it is safest to give plenty of time and keep a taut line, with rod near the surface of the water and bearing well away from the fish when he comes up for a leap; while if it is a fish that heads for the bottom the best way is to force the fight and get him netted as quickly as possible before the hook stretches and tears out of the tough but yielding gullet. I have never seen a bass leap more than about 2ft. in height above the water. Also I only speak of the small-mouth bass, having never taken a "large-mouth." HENRY J. THAYER.

NEW YORK, Aug. 12.—*Editor Forest and Stream:* Sir:—I have been reading the dispute going on in your paper for some time on bass jumping and cannot resist making a few comments. I am not acquainted with the gentlemen who are disputing with one another, and, although they may be experts on the life and habits of the bass, I do not agree with them on some points.

Some say that the bass does not jump out of the water when hooked, others say that he only gets to the surface, and others that he jumps only about a foot.

Now, although I am not an expert, I have caught quite a number of bass and have never known one to fail to come entirely out of the water. I have caught them with a rod and drop line, and they always come out.

Let me tell you what I have seen a bass do. About two weeks ago I was fishing from the shore of a lake about thirty miles from New York City, and, as nothing was biting, I got out about 25ft. of line and laid my rod on the ground. I was walking around, when I noticed a bass jump fully 2½ft. out of the water, about 60ft. or so from shore. When I got hold of my rod I found he was fast. Now how do those gentlemen who claim a bass does not jump out of the water account for this? The bass had run out about 40ft. of line, and had hooked himself and had then taken his jump.

He was not helped by the spring of the rod, as it was a very light fly rod and was lying on the ground at the time; also the line was very light and No. 7 hooks, single gut. The bass weighed slightly over 3½lbs. W. H. D.

NOTES FROM FISHING WATERS.

Correspondents are invited to send us notes of fish, fishermen, fishing conditions and fishing facts, so that they may reach this office on a Monday.

MR. W. B. YOUNG, of this city, has shown us a photograph of a string of bass taken by him on Spirit Lake, Iowa, June 10 last. Mr. Young fished eight hours, and in that time took 33 black bass, weighing 75lbs., the largest two of 6lbs. each. He caught them with frogs, casting with a 7½oz. Kosmic rod, and landed them without a landing-net. The oarsman was Royal Weed.

Mr. Leonard Hulit, of Asbury Park, N. J., sends us a photograph of a morning catch of 62 handsome weakfish, at Barnegat, by A. J. Taylor, Dr. De Voursney and himself. These three men are of the get-up-at-3-o'clock-in-the-morning-to-go-fishing tribe of anglers.

Mr. G. C. Howe, of the Windsor Hotel, Rouse's Point, Lake Champlain, sends us a photograph of a string of black bass taken there recently, thirty-seven fish to three rods. Mr. Howe estimates that there are 37,000 more fish in the same spot waiting to be hooked.

CLAYTON, N. Y., Aug. 15.—Following up their great success angling, Mr. W. R. Farrington yesterday captured an 11lb. wall-eyed pike; and Mrs. W. R. Farrington a 12lb. pickerel. Most assuredly the name of Farrington here is getting to be synonymous with large fish. Every day sees this couple with a fine catch of finny beauties. J. G. F.

THREE LAKES, Wis., Aug. 16.—Mr. C. B. Slade and Miss F. Slade, of Chicago, caught 320 black bass at Butternut Lake last week, largest 5½lbs.; also lunge fishing is good. CHAS. FRENCH.

A Copper Eye for Gimp Snells.

COLD SPRING HARBOR, N. Y., Aug. 12.—*Editor Forest and Stream:* Walking down Broadway a few days ago and stopping at Benedict Bros.', keepers of the city time, to get the correct number of seconds from the window near Cortlandt street without stopping more than a minute, my old angling friend, Mr. F. P. Benedict, beckoned to come inside. When not designing new things in jewelry, collar buttons and kindred things, he amuses himself by devising bait kettles and angling appliances, so something new was expected. His latest was a copper eye for gimp snells, primarily designed for heavier work, such as dead-eyes on wire cables, but the application to gimp raised the question as to the strength of the eye, and to show this Mr. Benedict took a piece of gimp some 7in. long and slipped a tube of fine soft copper ¾in. long over one end. It was very loose, and bending it into an eye with a pair of small pliers asked me to pull on it, and a very hard pull broke the gimp, while the copper never stirred.

I thought this worth writing about and have advised Mr. Benedict to let some tackle dealer put it on the market. Inclosed you will find the broken gimp as described, and will note that the eye last put on was imperfectly closed. FRED. MATHER.

St. Lawrence River Fishing.

CLAYTON, Thousand Islands, N. Y., Aug. 14.—Mrs. W. R. Farrington, of Poughkeepsie, N. Y., now a guest at Hubbard House of Clayton, yesterday hooked and landed the largest fish brought into town this season, viz., a 37lb. muskallonge, measuring 4ft. 4in. from tip to tip. The fish was an extremely game one and gave Mrs. Farrington splendid sport and plenty to do for just one hour and five minutes from the time of hooking till landed into the skiff. A week ago, as reported in your columns, Mr. W. R. Farrington landed a 33½lb. muskallonge, and last September Mrs. W. R. F. took one which weighed 40lbs. (which was also recorded in FOREST AND STREAM), so that this lady's and gentleman's reputation as expert and fortunate anglers is most fully established. Since their arrival at the river two weeks ago, their daily average catches of black bass and pickerel have been excellent.

Another party quartered at the Hubbard House, consisting of five, yesterday brought in 210 black bass, taken in seven hours' fishing. J. G. F.

The Saginaw Crowd.

EAST SAGINAW, Mich.—The car W. B. Mershon left here July 1 with Mr. C. M. Crawford and family, of Hagerstown, Md., for a trip to Yellowstone Park and the Pacific Coast. They are expected to arrive in Chicago on the 10th. They report having had a delightful time, no accidents and everything moving along splendidly. The Saginaw crowd are now planning for another pilgrimage to somewhere in the far West early in October.

MERSHON.

Fishculture.

Mussels for Fish Ponds—as Scavengers.

Editor Forest and Stream:

In my letter published in your number of July 13 attention was invited to the fact that I had been a witness to the capture of a considerable number of fresh-water mussels on fish hooks. Late in the month named, the same trot line, supporting about 175 hooks, was placed on the bottom of the Potomac River. The line remained in 20ft. of water over night. When it was lifted I stood on shore watching, and counted until nearly forty mussels were boated. To some of the hooks again two specimens were firmly clasped, the usual catch being one. Additional specimens were taken into the boat after my attention was withdrawn.

From my letters you are to understand that the fresh-water mussel, unlike the oyster, does not bide his time with open mouth and "bated breath" for the chance harvest of food borne on the ebbing or flowing current, but is given to business-like locomotion. That this habit is marked and of practical utility to the mussel is suggested by the fact that there was scarcely a hook that was blank.

Almost everyone knows that mussels have power to move about, but it may not be generally realized that the travel is a veritable browsing expedition, aimed at the picking up of the day's ration. I confess that the habit was unsuspected by me, and its announcement to others has been in the nature of a novelty.

Since the observations were made it has occurred to me that the nomadic habit of the mussel may pertain to a number of species, and that it may be profitably taken advantage

of, perhaps, in pond culture. It has been long claimed for the mussel that its young, amounting to countless myriads, afford valuable nutrition to small, growing fishes. The young mussels have been regarded as being especially valuable as a nutrient article on account of supplying calcareous matter, required in considerable quantity, for building up the bone structure of fish fry. But now it seems that another equally or more important use can be made of the mussel, in this case the adult, in the rôle of a sanitary functionary, *i. e.*, as a scavenger. There is a conspicuous want in this direction, and practical pond culturists will appreciate the prospective bearing of the suggestion.

The mussels first known by me to have been dragged from their watery homes on the hook found the common angle worm the source of attraction; the next catch, about 200 on one line, were tempted by a cooked paste composed of stale cheese and wheat flour; the third catch, mentioned in the early part of this letter, were victims to bits of raw side bacon and slices of salted river herring. The varied menu suggests a wide range of diet, and may include plants. The fresh-water mussels have a wide distribution. Apparently mussels require running water, or, what is an equivalent, a considerable water area. S. G. WORTH.

Game and Fish Protection.

Maine Protection.

Editor Forest and Stream:

In the article in your issue of Aug. 17, entitled "Maine Protection," Mr. Stanley gives a second affidavit from Messrs. Conant and Tyler. The first was given and printed in good faith, as the date was believed to be 1891. Further investigation showed that it was in 1890, and that being the case, there was no law forbidding Mr. Harriman from taking money if offered. But this fact, while it relieves the warden, only shifts the responsibility to the Commissioner. Mr. Stanley well knows that prior to 1891 there were numerous cases where deer were seized and held for alleged illegal shipment, when, as I am to-day informed by as good counsel as there is in the State on such matters, there was no law which forbid any man from shipping deer; and it was not till the Commissioners were beaten in the Bennett and McPhetres cases that the law in 1891 was changed; such being the case, there was no need of services of a warden or any one else in shipping deer in 1890.

If Mr. Stanley wishes to know certainly about this thing and will notify me of any time he will be in Bangor I will show him that the money paid was paid on the belief that the deer could be seized as others had been and that the owners had good grounds for believing so. The fact is the Commissioners allowed deer to be taken under form of law when the test cases proved what they knew before that there was no law and this was the cause of money being paid.

In regard to the affidavit of E. L. Morse that I never offered to go to Mr. Conant's with him, I have simply to say that I did so offer, and he told me, "If you have any proof you had better have him indicted." My only object in speaking to him on the subject was to get him to investigate it, and when I offered to go and show proof he squarely refused.

In regard to the guide's telling him that I had written and warned him of Mr. Morse's coming, I cannot say that a guide may not have told him so, but I will say there was no truth in it, and if Mr. Morse has an average memory he will remember that he once told me this same story on the street, and I told him there was no truth in it. I only know of one reason for Mr. Morse's seeming hostility to me, and that is that once, when I had good reason for believing that he would be shot on account of the belief that he put poison in various places, I warned him of his danger. He believed my word then, and at his request I wrote letters to two parties giving them his version of the matters and whom he thought it was done by. If I did him any wrong in so doing and helping save his life I apologize and will not commit a similar error in future.

The principal point to which I wish to call Mr. Stanley's attention, and except for which I should have let his article pass without a reply, is regarding what he states about togue, or as he still persists in calling them lake trout. To quote him exactly, he says: "Notwithstanding Mr. Hardy's assertion to the contrary, I here state that the fish I saw were not togue, and were unlike anything we have in Maine. I went with Mr. Thayer, of the Augusta House, who had these fish on his table, to the market where he bought them. The dealer took us to his refrigerator and showed them to us, and said they came from Lake Ontario and were lake trout, which I have no doubt they were, for which there is no close time in Maine or need of any."

Does Mr. Stanley wish it to go on record that he, a Fish Commissioner and a life-long fisherman, does not know that a lake trout, a laker and a togue are one and the same fish? He says that there is no close time on lake trout in Maine. On page 27 of Revision of Fish and Game Laws for 1895 he will find: "There shall be an annual close time on land-locked salmon, commonly so called, trout and togue." Now the only question in dispute is, are togue and lake trout one and the same? In 1884 a book was written on the "Fishery Industries of the United States," by George Brown Goode, with (as the title tells us) the co-operation of Spencer F. Baird, Commissioner. On page 486, under the head of "Lake Trout," we are told: "Naturalists have been sadly misled by these protean modifications. The 'namaycush' of the north, the 'togue' or 'tuladi' of the Maine and New Brunswick Indians and lumbermen, the siscowit or siskawitz of Lake Superior, the trout of Winnipeseogee and that of the Adirondack lakes, have each been honored with a distinct binomial. * * * A careful study of the dead fish is sufficient, however, to convince a trained observer that there are no structural differences by which these different forms may be separated into species." Leaving out a great deal which space forbids quoting, it is said on page 487: "This fish," writes Lanman, "is found in all the great lakes of New Brunswick and in very many of those in Maine, but is believed not to exist in the lakes of Nova Scotia. It is called by the lumbermen 'togue.'"

From what has been quoted above from the most eminent authorities in the United States, it seems clear that lake trout and togue are one and the same fish, and that a close time on one is a close time on the other, and also on all the other twelve different names which in the article quoted from are applied to it. It also seems clear that, while there may be minor points of difference, the fish taken in Ontario and Maine are one and the same. If Mr. Stanley will carefully read the whole of the article from which I have only quoted detached portions, I think he will be fair-minded enough to admit that he is in error, and that there really is a close time in Maine on lake trout, and also that I was correct in claiming the Ontario fish, as he calls them, as being the same as our Maine fish.

To quote Mr. Stanley again and lastly: "I will say in reply Mr. Hardy did tell the truth. The man he speaks of did sit before him, but he was not a warden, and had not been for some time from the very reason Mr. Hardy speaks of, as we refused to recommend his reappointment or to employ him. I have no doubt the man had pocketed fines, but Mr. Hardy produced no proof, nor offered to, that the man had done so, although I presume he may have thought so by telling of the seized hides, which he had a perfect right to if they were legally seized. They were his."

I wish to thank Mr. Stanley for in this case quoting me so fairly with the evident intention of doing me justice in this case. Had he taken the pains when we met after the meeting closed to have asked me for proof in this or any of the cases I referred to, I would certainly have met him half way, and I believe he would not have written some of the things he has or inserted such a scurrilous affidavit as that of Mr. Morse. The facts in the above case are these: I paid the warden at one time $101 for hides legally seized, Mr. Stillwell himself sending over for me to come over and see the warden. The warden did not pretend that they were his, for when after I had paid for and taken a bill of them I asked him to pay something on a large debt he owed me, he said that half belonged to the State. I afterward sent him a check for $27 for another lot of three hides. Wishing to know whether the State ever received its share, I carried the receipt and the stub of the check to Mr. Stillwell, who told me that he had never paid in a cent of that or any other fines. I cannot see where I failed to do all I was called upon to do, or what more proof I could show. Mr. S. kept the papers and I have never seen them since. A long time after I asked Mr. S. if the warden was still in office, and he replied that he was, and on my expressing surprise he said: "I have one consolation, the poachers do not get off easily." Till I read Mr. Stanley's article I was not aware of his discharge.

I stand ready to second any effort the Commissioners will make to get rid of poor wardens, if it takes the last one, and am happy to give them full credit for all they have done or will do in this line. Whatever opinion the Commissioners may have, I believe I have done my full share to try and have the laws administered so that people will respect them and those appointed to enforce them. For years I have been calling attention to the fact that wardens should give bonds, as numerous letters to Representatives and Senators will testify, and also that Commissioners should give statements of all funds received, whether from fines or otherwise, and an itemized account of how all such funds were expended, the same to be audited as other accounts are. The first part has been accomplished, and wardens now give bonds, as they should have done years ago.

Should I ever meet the Commissioners or any of their wardens in the woods, and they are hungry, they shall have half the provisions I have. If I ever know of their doing an unfair thing I shall tell them of it when I meet them.

MANLY HARDY.

BREWER, Me., Aug. 17.

DIXFIELD, Me., Aug. 17.—*Editor Forest and Stream:* In my article in FOREST AND STREAM this week in answer to Manly Hardy, entitled "Maine Protection," an omission of the word "not" makes me accuse Mr. Hardy of dishonesty, which I did not, nor intend to do. It reads, "I am not going to accuse him of dishonesty and stupidity as he has us. * * * If he is honest, which I am disposed to say he is not." It should read, "which I am not disposed to say he is not," etc. HENRY O. STANLEY.

Camp-Fire Flickerings.

"That reminds me."

He has a Horn Snake.

CHICAGO, Ill., Aug. 16.—In an earlier issue of FOREST AND STREAM I have ventured the assertion that some day I should see a specimen of the horn snake sent in to the FOREST AND STREAM office. To-day I can announce that the horn snake has arrived. I have got him. He is in a bottle, and can be seen without any price of admission. The only regret I have about the matter is that, unfortunately, the snake being dead, I cannot try it on a wagon tongue or hoe handle. I also regret that the horn is not so long as it might be, the snake having been killed before the horn had a chance to show what it could do. Still, the horn is there, and I can say I have a horn snake. I suppose Science will say this snake could not split a wagon tongue, but how does Science know? In short, did Science or anybody else ever see a horn snake, or any other kind of a snake, trying its tail on a wagon tongue? What does Science know about it then?

The smallness of the horn in my specimen leaves something to be desired, but I know Dr. Taylor and Mr. Miles, of Brownsville, Tenn., have seen snakes with longer horns than this. Moreover, the color of this snake does not all tally with the description of the Florida and other horn snakes. Therefore I must say I am not yet satisfied. Will some gentleman please send me a snake with a bigger horn?

None the less I thank Mr. E. A. McIlhenny, of Avery's Island, New Iberia Parish, La., very much for this snake, and for the very interesting letter which he writes in regard to it. Mr. McIlhenny is the first to materialize a horn snake, and his words have weight. He writes me thus:

"I have followed with much interest, through the columns of FOREST AND STREAM, your search for information about the horn snake. Being fond of natural history, whenever a report of a horned snake has reached me I have followed it up, offered rewards and searched myself, and have always (if I met with any) met with the same snake. I sent you one of these snakes in alcohol by express yesterday.

"This snake is known throughout Louisiana as the 'bastard horn snake.' It is generally conceded that it has a horn at the end of its tail, and that the horn has a sting in it, and whatever it touches dies from the effect.

"It is obvious there is no horn, and by examination you will find there is no sting. You will notice, however, the peculiar formation of the last scale on the end of the tail and the abruptness with which the tail terminates, and in this scale formation is where the idea of the horn comes from.

"The snake I sent you is a small one (they often attain a length of 6½ to 7ft.), and the horn is not well developed. As the snake grows larger the terminating scale enlarges, so that on a 6ft. snake I have seen the last scale from ¼ to 1in. long. These snakes are found around damp places, among old logs and fallen timber, which they are supposed to have killed. Their principal food is insects of various sorts and their larvæ. In procuring their food the unusual formation of the tail comes into use. By working it point first under small objects on the ground which would shelter insects, they are enabled to turn them over and find the food more readily. They in this manner strip the bark from old logs in search of food. They may be handled with perfect impunity, for they never attempt to strike with head or tail.

"The colors of the specimen I sent are much faded by the alcohol. In life they are a shiny blue-black, with the belly markings a brilliant red.

"To be sure I was sending the right snake I showed it yesterday to several of the negroes about the place, asking them what it was; they all gave about the same answer: 'Bastard horned snake, sure destruction to everything it stings,' etc., etc.

"I trust these facts will be of interest to you."

The facts are of interest. I have never read of any snake using its tail as above described, nor do I believe such habit is generally known. A snake with a soft tail would be no good in that business. In time, nature would harden the tail with a scale-like, horny protection. That is evolution, and on that I ask Science to agree with me. If she does that, Science admits about all I claim—that there is a snake with a horn on its tail, and that the horn has some purpose, or it would not be there. Science has never established that the actual purpose of it was to split wagon tongues, so it may be called a success after all. And I've got the snake to prove it.

More Snake Legs.

Mr. Frank M. Buckland, of West Hartford, Conn., sends the following cutting from the Hartford *Times:*

"Snakes with rudimentary legs and feet have been told of, but few, we guess, ever saw one. Such a snake has been killed (as we understand it) in or near the southwest part of Hartford, and left, in alcohol, at the *Times* office by Mr. George V. Brickley, of 120 Wethersfield avenue. It seems to be an undoubted snake, though a queer one. The head has been cut off and left with the body in the bottle; a large part of the other end also has been cut off, for the purpose, as Mr. Brickley is reported to have said, of getting it all into the bottle—a 6oz. vial. The snake was said to be 2ft. long; it has a half fuzzy look, and is of a very dark, almost black hue, relieved by many encircling yellow ochre stripes or bands. It looks, head and all, much like a viper or an adder; but the queer thing is a pair of little feet, with toes and claws, growing out of the body near the vent. It is not easy to study the creature through the media of glass and alcohol, and we do not guarantee the genuineness of the apparent phenomenon, but it certainly does look to be a real snake, sure enough. The person who brought the creature in seems not to have indicated very clearly the locality where it was killed."

The *Times* is puzzling over snake "legs" just as a lot of us were until the arrival of Mr. Boardman's letter, published in last week's FOREST AND STREAM. These legs are not legs, as reference to that number will show.

The "Smoking Revolver."

My friend the daily reporter has a great fondness for the "smoking revolver." The murderer shoots his "victim" seven times mortally, and then flings away his smoking revolver, or rushes upstairs with his smoking revolver, or turns his smoking revolver on the pursuing crowd, or upon himself, or upon the policeman—anyhow, it smokes always. And if my friend the daily newspaper artist did not draw the picture with a chunk of smoke coming solidly out of the revolver he would lose his job. In the daily press the weapon is always a "smoking revolver," and will be, even after nitros alone are used. But really, did the gentlemen ever fire a revolver, or see one fired, which had contracted this pernicious habit.

Another bad habit (after the "crashing through his brain" item) is the extremely free use made of buckshot by the daily reporter. In the mining riots now before the public, as in all earlier riots, the leader of the riot falls because "forty buckshot pierced his heart." He ought to fall then, to be sure; but why always the mystic number of forty buckshot? At Spring Valley coal riots this week one gentleman was shot in the back with the same forty buckshot, and they "pierced his heart," or "lodged in his heart," though a subsequent statement shows that he was still alive two days later.

Frog Industry.

"Growers and dealers in live frogs for bait" is what the card of Messrs. Utter & Johnson reads. There is quite a call among the Chicago bait casters for the useful frog, and it seems another firm is in the industry. For years Grossman, out Seventy-first street way, was the acknowledged frog man of Chicago, and I believe still continues in the business. It is an odd calling, but it bought a house and lot and raised a big family of nice boys and girls. I hope the new firm will do as well. E. HOUGH.

PUBLISHERS' DEPARTMENT.

The Buzzacott Outfit.

BUFFALO, N. Y., Aug. 14.—That part of the sporting fraternity that finds its chief delight in camping out in the woods, on the banks of a trout stream or near the feeding ground of the deer, may be interested in the experience of the 65th Regiment, of this city, Col. Samuel L. Welch, commander, with the Buzzacott cooking outfit on its recent field tour. The regiment was gone a week, making marches through Erie county, it having been the only regiment of the State National Guard with pluck enough to undertake this field service this year.

FOREST AND STREAM not being a military paper, I will skip over the marching and get down to the part the Buzzacott ovens played in the tour. When the regiment was laying plans for the tour the old ovens, part of the equipment of the command, were looked over, and it was voted that they would not do, it being impossible to cook a meal upon them. The officers of the company and the privates then went in and contributed money to equip the regiment with the Buzzacott outfit. They bought the style made for military purposes. The regiment is the only one in the State that has these ovens. The ovens worked to perfection during the week that the regiment was out, and since his return Col. Welch and the other officers of the regiment have spoken of the Buzzacott outfit in the highest terms. This experiment of the regiment ought to interest hunters who have not yet formed the acquaintance of the Buzzacott cooking outfit.

JOHN NOLAN, Assistant City Editor, Buffalo *Express.*

The "Badminton Magazine."

THE first number of the new English *Badminton Magazine of Sports and Pastimes* makes an extremely favorable impression. It covers a wide field, ranging from Alpine climbing to tarpon fishing and golf; and is handsomely printed and illustrated. The American agents are Messrs. Longmans, Green & Co., New York. The subscription price is $3.50 a year.

THE Marlin Fire Arms Company announce that they are now prepared to furnish their .30cal. rifle in the model 1893. The cartridge is loaded with 30grs. of smokeless powder and a 160grs. full metal patched bullet. The velocity of this bullet is a little over 1,800ft. per second; the penetration is nearly four times as great as that of the ordinary lead bullets shot out of the regular hunting rifles. The steel used for barrel, as well as that used in the receiver and breech-bolt, is manufactured and guaranteed to the regulation specifications of the United States Government.

"Hunting and Fishing along the Northwestern Line" is the title of a booklet recently issued by the Chicago & Northwestern Railway. It is profusely illustrated, and gives information in detail concerning the best hunting and fishing grounds in the West and Northwest. Copies will be mailed free to any address upon application to W. B. Kniskern, General Passenger and Ticket Agent, Chicago & Northwestern Railway, Chicago, Ill.—*Adv.*

The Kennel.

FIXTURES.

BENCH SHOWS.

Sept. 9 to 13.—Industrial Exhibition Association's annual bench show, Toronto, Ont. C. A. Stone, Sec'y and Sup't.
Sept. 10 to 13.—Binghampton Industrial Exposition's fifth annual bench show, Binghampton, N. Y. A. P. Fish, Sec'y.
Sept. 17 to 20.—Rhode Island State Fair Association's third annual bench show, Narragansett Park, Providence, R. I.
Sept. 17 to 20.—Orange county Fair Bench Show, Newburgh, N. Y. Robert Johnson, Sec'y.
Sept. 17 to 20.—Montreal Kennel Association's show, Montreal, Can. Geo. K. Lanigan, Hon. Sec'y-Treas.
Sept. 17 to 20.—Milwaukee Kennel and Pet Stock Association's first annual bench show, Milwaukee, Wis. F. S. Morrison, Sec'y.
Sept. 18 to 20.—Omaha Kennel Club's second annual show, Omaha, Neb. E. L. Marston, Sec'y.
Sept. 24 to 27.—New England Kennel Club's second annual terrier show, Boston, Mass. D. E. Loveland, Sec'y.
Oct. 8 to 11.—Danbury, Conn.—Danbury Agricultural Society. G. L. Rundle, Sec'y.

1896.

Feb. 19 to 22.—Westminster Kennel Club's twentieth annual dog show, Madison Square Garden, New York. James Mortimer, Supt.

FIELD TRIALS.

Sept. 2.—Continental Field Trials Club's chicken trials at Morris, Man. P. T. Madison, Sec'y, Indianapolis, Ind.
Sept. 10.—Morris, Man.—Manitoba F. T. C. John Wootton, Sec'y, Manitou.
Oct. 22.—Columbus, Wis.—Northwestern Beagle Club's third annual trials. Louis Steffen, Sec'y, Milwaukee.
Oct. 29.—Assonet Neck, Mass.—New England Field Trial Club's fourth annual trials. Arthur R. Sharp, Sec'y, Taunton, Mass.
—. Morris, Man.—Northwestern Field Trials Club's Champion Stake. Thos. Johnson, Sec'y, Winnipeg.
Nov. 5.—Chatham, Ont.—International F. T. Club. W. B. Wells, Sec'y.
Nov. 5.—Oxford, Mass.—New England Beagle Club trials. W. S. Clark, Sec'y.
Nov. 7.—Newton, N. C.—U. S. Field Trial Club's Trials A. W. B. Stafford, Sec'y, Trenton, Tenn.
Nov. 11.—Hempstead, L. I.—National Beagle Club of America, fifth annual trials. Geo. W. Rogers, Sec'y, 250 West Twenty-second street, New York.
Nov. 18.—Eastern F. T. Club, at Newton, N. C. W. A. Coster, Sec'y, Saratoga Springs, N. Y.
Nov. 25.—Continental Field Trials Club's quail trials at Newton. P. T. Madison, Sec'y, Indianapolis, Ind.
Dec. 2 to 4.—High Point, N. C.—Irish Setter Club's trials. Geo. H. Thompson, Sec'y.

1896.

Jan. 20.—Bakersfield, Cal.—Pacific Coast Field Trial Club. J. M. Kilgarif, Sec'y.
Jan. 20.—West Point, Miss.—U. S. F. T. C. trials. W. B. Stafford, Sec'y.
Feb. 3.—West Point, Miss.—Southern F. T. C. seventh annual trials. T. M. Brumby, Sec'y.

COURSING.

Sept. 24.—Lisbon, N. D.—Cheyenne Valley Coursing Club's meeting. H. C. Waterhouse, Sec'y.
Oct. 1.—Aberdeen, S. D.—Aberdeen Coursing Club's meeting. J. H. Davis, Sec'y.
Oct. 8.—Huron, S. D.—American Waterloo Cup. F. B. Coyne, Sec'y.
Oct. 23.—Goodland, Kan.—Altcar Coursing Club's meeting. T. W. Bartels, Sec'y.
Oct. 28.—Goodland, Kan.—Kenmore Coursing Club's meeting. C. F. Weber, Sec'y.

A DOG'S LIFE.

"A DOG'S LIFE" has long been the synonym for all that is harsh, menial, vexing or uncertain in human existence. The term seems to us a misnomer. At least the majority of dogs do not now lead hard lives. Beppo there for instance. In his old age—he is eleven years old—reviewing his career from the day he came to us a puppy of six weeks, I can see only affection, devotion, animal comfort, the fullest measure of success in all that a dog may attempt—love, obedience, fidelity, the chase, war.

He sits on the broad ledge of my study window as I write. A Newfoundland, black with white under-body and a white tip to his tail, which he carries curled over his flanks with the grace of a Henry of Navarre. The window is his favorite seat; it looks out on broad meadows and pastures falling down to the opposite slope of the Taghkanic range—a wilderness of overgrown pasture, wood, crag and peak—the scene of his early training. When six months old he began to accompany me on my long rambles afield, and his education began. I shall never forget the look of amazement, distraction and disgust his face assumed when we put up his first covey of partridges, which rose in every direction, here, there and everywhere; nor his frantic efforts to put his paw on this strange species of game, which sprang into air and was wafted away so mysteriously before his eyes—but after one or two experiences of this sort he learned that birds could fly and failed to display any unusual excitement.

An experiment that I tried upon him about this time elicited another display of his reasoning powers. In this same hillside pasture were a number of colonies of the large red ant (*Formica rufa*), the fiercest and most pugnacious of their kind.

Thrusting my cane into one of their hills, I directed the dog to dig them out, and he at once fell to, his paws working like trip hammers, with the result that he soon had the hill half disembowled, at the same time covering himself with hundreds of the insects enraged by this invasion of their domicile. These soon made themselves felt and the poor fellow, though measurably protected by his shaggy coat, was glad to betake himself to a neighboring brook to rid himself of them.

The reproachful look he gave me when I next gazed into his eyes haunted me for many a day, but he never showed resentment, nor attempted revenge. But after that no persuasion nor command could induce him to put his paws into an ant hill.

I adopted another method for bringing out his sense of smell. In our walks abroad it was some time before he could accommodate himself to my gait, but would get several hundred yards in advance. When this occurred I would suddenly hide by the roadside; presently the dog, missing me, would come tearing back, rush past and not seeing me anywhere would fly back, look about, and then bethinking himself of his gift of scent would put his nose to the ground, catch my trail and come straight for me, receiving with infinite content my patting and praises.

After a few lessons of this kind, he made no attempt to find me by sight, but brought his other sense into requisition.

As Beppo grew into dogship he settled into a routine of duties and occupations; to drive the cows to and from pasture, to surprise the wary woodchuck at a distance from his burrow and throttle him despite his sturdy defense and formidable display of incisors, to guard the premises at night, and attend his master with the devotion of a bodyguard by day, were his principal occupations. I am sure he has led a happy as well as useful life. His only sorrows, so far as I know, have been the frequent absences of his master and the bicycle.

I have noticed several times evidences of an aristocratic, or rather knightly, element in his character. For instance, no provocation will induce him to attack small dogs, nor the helpless young of his natural prey. For instance, one day he uncovered in Sire Swamp a nest of young rabbits barely a day old. A sharp, quick bark brought us to the scene, where we found him standing over them and regarding them with a comical air of interest and perplexity. We reproved him, and replaced their covering over the shivering, helpless things; and although the dog had the run of the pasture, and must often have passed near their burrow, they were unmolested until able to leave the nest.

But I began to speak of his aversion to the bicycle. When he was seven years old his master bought a wheel for health and recreation, and thereafter his morning exercise was usually a spin of several miles upon that.

Beppo at first tried to follow the tireless steed, but it proved too much for him. He would be left far behind, and come in panting, with tongue out. After one or two trials he wholly refused to go out with it, and no coaxing could change his determination. But I could see that he felt keenly the loss of his morning constitutional and his deposition as his master's bodyguard.

One supreme example of obedience, and one of pity and benevolence the dog gave, so marked as to be worthy of narration. While he was still a puppy a cat was brought into the family. She was of imported stock and during her early years had lived in luxury. Her mistress moved away while she had a flock of kittens hidden under the garret floor in such a manner that they could not be reached, and the cat stayed behind, refusing to desert her babies.

Six months of semi-starvation and abuse, of being chased by dogs and stoned by village boys, followed. Then a friend of ours decoyed the poor waif into her house and sent her to us. Sardis caught a mouse before she had been with us five minutes, and from that moment adopted the house as her home. Her temper, however, had been irretrievably spoiled, as poor Beppo, on making friendly advances, found, for she clawed and cuffed him without mercy, and never failed thereafter to show her enmity by snarling and spitting whenever he came into her presence.

One would suppose that the natural result would have been to make the dog an enemy to all cats; not so, however.

In due time, when Beppo had become a full-grown dog, Sardis had kittens, and one of them—Joe—evinced from the first a singular fondness for the dog. His mother, after scolding and expostulating in vain, cast him off utterly, whereupon the dog became its foster father. Night after night the kitten lay cuddled up against Beppo's shaggy breast with his forepaws folded over it. It thrived, too, and soon grew into one of the largest and finest male cats I ever saw. Beppo and Joe have lived together now nearly nine years, and have shown the most perfect cat and dog friendship ever recorded, I think. They sleep together in the dog's kennel. They are always together on the back porch of a morning, waiting for their breakfast, the cat rubbing against the dog's paws and under him, purring with the greatest content, and the dog taking as great delight in him.

Sometimes, to try them, we feed Beppo first; Joe will then draw near the dish so that his nose is but an inch or two away and await developments.

If the dog is hungry he will give a short, sharp bark or warning growl, and Joe will retire. But if the cat does not hear this, he will draw nearer and nearer, and when the dog is busy with a bone will seize a morsel and swallow it. Sardis meantime will sit at a distance with ruffled fur, growling at the dog and gazing with horror and disgust upon her offspring.

As an instance of his obedience take the following: I was standing at sunset on the banks of a lovely mountain lake, the dog seated on his haunches at my side, when I espied a diver out on the lake which exhibited the greatest curiosity concerning us. It began swimming toward the spot where we stood, its head stretched forward, turning first one eye, then the other, and diving in sudden panic every other yard. I quieted the dog with a warning s-s-h-h and the bird came nearer and nearer, until within 2yds. of us, where it remained some time cocking its eye to left and right, and to appearance very curious about this strange combination. I could feel the dog tremble with suppressed excitement. His natural inclination of course was to leap into the water, his favorite element, and seize the quarry; but he never stirred so much as an eyelash, and after a few moments' scrutiny the bird dived suddenly, reappeared several yards from where it had descended and paddled away toward its young hidden in the alders.

At 11 years Beppo has reached old age. He lags behind in our walks. He refuses to take to the water. He has a higher appreciation of the warm chimney corner. His life is practically closed.

Looking at it from beginning to end, I can see nothing in it but faithful service, devoted affection and pure enjoyment.

CHARLES BURR TODD.

Omaha Kennel Club.

THE premium list of the Omaha Kennel Club can now be obtained of the Secretary, E. L. Marston, Omaha. The entry fee for mastiffs, great Danes and Newfoundlands is $3; for toy terriers under 7lbs., King Charles, Blenheim, other toy spaniels and Italian greyhounds, $2; all other breeds, $2.50. There is a special prize of $25 for the handler making the largest exhibit; $25 for the largest exhibit owned by one handler, and other valuable, general and particular specials. Mastiffs, St. Bernards and great Danes have $15 in challenge classes, $15 and $10 in open classes, and $5 and $3 in puppies. King Charles, toy terriers, Yorkshire terriers, skye terriers, Dandie Dinmonts, Bedlingtons, Blenheims and Italian greyhounds have $5 and $3 open classes. The prize in the challenge class of such of these breeds as have one is $5. Other classes have $10 in challenge, $10 and $5 in open, and $5 and $3 for the puppy classes. Entries close Sept. 4. All express companies in Omaha will return all dogs free to point of origin that will be sent to Omaha over their lines on which charges have been paid at time of shipment, providing ownership remains unchanged. Spratts Patent meat fibrine vegetable dog cakes (with beet-root) will be fed.

THE DOG'S IMMORTALITY.

RONDOUT-ON-HUDSON.—*Editor Forest and Stream:* I read with much interest in your issue of Aug. 10 a letter from "Ego," of Albany, N. Y. I am sorry that I did not see the remarks to which he refers, by a clergyman who does not agree with me. There are many clergymen who do not agree with me as to the immortality of the lower animals, as well as upon a variety of other subjects.

"Ego" wants to know how a layman is to know what the truth is when from clergymen there are emphatic yes and no in reply to the question of the immortality of the creatures below man in the scale of existence.

I would ask him upon what question outside the exact sciences—if there are exact sciences—there are not emphatic yes and no? I am not one of those clergymen who would do his thinking for anyone—especially for anyone who is evidently so capable of thinking for himself as is "Ego." There is only one way for anyone to arrive at the truth, and that is by thinking—by holding his mind steadily toward it till its light breaks upon him. For twenty years I did this in animal psychology—I presume that in such a letter as this I have the right to speak so personally—and the fact of the immortality of the sentient universe burst upon me finally as a great illumination. Through those years, as now, I considered no being too mean for my careful and patient study. My dog was, as my last dog would be to-day, if some miserable fellow, whom I would compliment by calling him a whelp, because he did not agree with me in animal psychology, had not poisoned the poor little beggar a few days ago—my dog was, I say, through those years, from my very early manhood, my constant companion, and I thought days not mis-spent in regarding the still humbler fellow beings, to fully see whom I had to supplement my poor dull sight with the microscope.

Maybe I have gone too far in saying that the fact of the immortality of the sentient universe burst upon me. At least, enough light came to give me a great hope for that immortality.

This I hold myself ready to prove—as I think that in what I have already published I have gone at the present a great way in the direction of proving—that man has no single element of nature, intellectual, moral or spiritual, that is not found in the showing in the lower animal.

"Ego" says that man has and the dog has not the power of speech. What does he mean by speech? Articulate speech? In Scotland a dog has been taught to say several words, among them "good morning" and "food." If "Ego" means by speech the power of the communication of ideas, dogs have that; ants have it; all animals that live in communities have it. Without it their communal life would be an impossibility. I might fill this whole issue of the FOREST AND STREAM in giving instances of how my dogs have communicated to me not only simple ideas, but thoughts.

As to imagination—which "Ego" thinks that the lower animals have not—they have it as certainly as man has. A horse scares at a shadow, thinking it a man. The dog gives forth the rich tone of the chase in his sleep. He has dreamed, and dreaming without an imagination is an impossibility.

Thanking the FOREST AND STREAM for its kindly review of my book and "Ego" for the delightfully courteous way in which he writes, and hoping that the day may come when every one shall have given more attention to those who cannot plead their own cause,

CHARLES JOSIAH ADAMS.

Canadian Kennel Club.

THE nomination meeting of the C. K. C. was held at the Queen's Hotel, Toronto, on Aug. 7. Mr. R. W. Boyle acted as chairman, other members present being Messrs. G. B. Sweetnam, C. A. Stone and H. B. Donovan, secretary-treasurer.

The following officers were nominated and elected by acclamation: President, Mr. H. Bedlington, Hamilton; First Vice-President, Mr. J. S. Williams, Toronto; Vice-Presidents, Mr. F. W. Green, Halifax, N. S.; Mr. G. B. Bruce, Calgary, N. W. T.; Mr. R. McEwan, Byron; Mr. P. G. Keyes, Ottawa; Secretary-Treasurer, Mr. H. B. Donovan, Toronto. For the executive committee the following gentlemen were nominated, twelve to be elected by a mail ballot vote of the members, ballots to be counted at the annual meeting: Dr. H. S. Griffin and Mr. W. P. Palmer, Hamilton; Mr. T. G. Davey and Dr. J. S. Niven, London; Dr. W. H. Drummond and Messrs. Jas. Lindsay, J. A. Pitt and Leslie H. Gault, Montreal; Messrs. G. B. Sweetnam, C. A. Stone, R. W. Boyle and A. A. Macdonald, Toronto; Messrs. T. McK. Robertson and C. H. Corbett, Kingston; Mr. Andrew Laidlaw, Galt; Mr. C. M. Nelles, Brantford; Mr. H. Gorman, Sarnia; Mr. L. A. Klein, Black Lake, Que.; Major J. C. Guillot, Windsor; F. S. Wetherall, Compton.

Field Trial Rules.—It was decided to adopt the rules of Continental Field Trial Club.

H. B. DONOVAN, Sec.-Treas.

Montreal Kennel Association.

THE premium list of the Montreal Kennel Association's bench show is now ready for distribution. Mastiffs, St. Bernards, great Danes, deerhounds, greyhounds, Russian wolfhounds, English foxhounds, pointers, English, Irish and Gordon setters and collies have the same classification, namely, best kennel of four, $10; challenge classes, $10 and diploma; open classes, $10, $5 and diploma, excepting that Irish setters, challenge class dogs, have $20. All other open classes have uniformily $7, $3 and diploma, and those breeds which have challenge classes have $7 and diploma. The judges will be instructed to strictly withhold prizes when not merited, and in no case shall a special be awarded to a dog that does not win a first prize. Entries close Sept. 9. The judges are: C. A. Stone, Toronto, pointers, English setters, Irish setters, Gordon setters; P. G. Keyes, Ottawa, Ont., Irish water spaniels, clumber spaniels, field spaniels, cocker spaniels, King Charles spaniels, Prince Charles spaniels, ruby spaniels, Blenheim spaniels, Japanese spaniels, fox-terriers (smooth and wire); L. A. Klein, Esq., Black Lake, Que., dachshunde; J. F. Kirk, Toronto, all other classes. For premium list, apply to Geo. K. Lanigan, Hon. Sec'y, Box 692, Montreal.

The premium list of the bench show of the Binghamton Industrial Exposition can be obtained of the secretary, A. P. Fish, 22 Ross Building, Binghamton, N. Y.

POINTS AND FLUSHES.

THE chicken season opens in the near future, and there will then be sportsmen from different points of the compass hurrying with their dogs toward the sections where the sport prevails. Many men take long journeys to enjoy the pleasure of the change of scene, climate and shooting. The success of the trip, so far as shooting is concerned, depends largely upon the capabilities of the dogs. Good health and condition are more essential than good training, since a dog, however well trained, is powerless if he is physically incompetent. A long journey by rail is very trying to the healthiest and strongest of dogs. At best they have a confined place to rest in, the ventilation is bad, and the temperature in a close baggage car is very high. It is specially uncomfortable to the dogs if they are surrounded by trunks. The sportsman who is humane to his dogs will see personally that they are placed in the best part of the baggage car, free from draughts and where a supply of fresh air is constant. A gratuity paid to the baggage man does much toward dissipating any objections he may have to the owner's wishes. The dogs should be fed very sparingly on the journey. A few mouthfuls of meat is sufficient for a day's food. Overfeeding en route will surely result in worse condition than all else combined if the journey is at all long. Water should be given the dog in abundance. Keep a dish full within his reach constantly. At the stations where stops of twenty minutes or more are made the hunter can utilize the time by giving his dogs a run, so that they can attend to the necessary calls of nature. Many dogs, if not given an opportunity of that kind, will suppress the excreta en route, with the result that their health and usefulness are impaired for many days. As the outing of each shooter is generally limited to a certain time, it is well to know how to bring the dogs to the scratch at their best, and for such this information is given. By taking care of his dogs, the sportsman has a return in better service, aside from the promptings from humane reasons.

Among the amusing discussions during the legislative session at Tallahassee was that on a bill of Sullivan's, of Escambia, providing for the prompt slaughter of rabid dogs. The reading clerk had just read the title when an old gentleman, a representative from one of the interior counties, arose and with great gravity and dignity said: "Mr. Speaker, I am opposed to that bill. I am opposed to it because I don't see why rabbit dogs should be killed any quicker than any other kind of dogs. I've got a rabbit dog. He ain't much on looks, but I tell you when that dog gets on a hot trail in the broom sedge, and a little later you hear his voice a-yelping in a high key and the yelps gettin' fainter and fainter, till by and by you can just hear 'em down in the holler, and you go there and you see a little bench-legged yeller rascal barkin', his eyes bright and his forehead wrinkled with excitement, under a sartin tree, jes' you get you a long pole and meat is your'n for dinner." There was breathless silence during this eloquent appeal on behalf of the rabbit dog. When it had been concluded others rose up and paid glowing tributes to the qualities of rabbit dogs they owned, until one would have believed that a thing necessary to a man's candidacy for the legislature in the State of Florida is a first-class rabbit dog. The bill, by the way, was killed by a large majority.—*Florida Times-Union.*

It is commonly accepted as being true that the eyesight of the dog is very imperfect—so much so that he cannot see distinctly beyond a few yards. Many writers have confirmed and given the mistake a wider and wider dissemination by constant repetition. It is strange how the opinions of a past age, careless and superficial in many matters relating to the dog, are accepted as fact beyond question; and the more simple and common is the matter and therefore the easier it is to obtain proof, the more readily and trustfully is the falsity accepted.

In using his eyes the dog, it may be explained at the outset, is at a disadvantage. When he stands erect his eyes are but a short distance above the plane of the earth's surface. Let a man get down on all fours, then try to look about, and he will find that both his horizon is greatly reduced and there is an infinity of obstructions to sight which he did not notice when standing erect, because he is tall enough to look over them. Even when standing erect tall men have a decided advantage over short ones in the matter of unobstructed vision. The shorter the man is the more obstructions there are to clear vision.

This but briefly describes the natural disadvantages which the dog has to overcome in the matter of vision. In pursuit of prey, or when he desires to get a better view, he will rise on his hindlegs or bound into the air. It is not an uncommon occurrence to see greyhounds rise on their hindlegs when going at full speed, to get a better sight of the swiftly fleeing jack rabbit ahead. As they pursue by sight mostly, this trait can be more commonly noticed with them than with dogs which pursue by the sense of smell.

But the radical error is in assuming that the eyesight of dogs is a fixed quantity; that the eyesight of dogs is all alike. Their powers of vision vary probably quite as much as do those of the human raee. The eye of the dog is subject to the same infirmities and diseases as the eye of man. Because one dog is near-sighted, it does not follow therefore that all are so; nor does it follow that all dogs can see well because one can do so. The senses of the dog are all analogous to those of man. Old age seems to affect them alike. The eye grows dimmer; the hearing is less acute; the functional powers of the nose lose their sharpness, and we can infer that the taste of the dog is blunted. From youth to old age he exhibits much the same process of development and change as does his nobler examplar.

Mr. A. P. Fish, Binghamton, N. Y., writes us that Mr. J. Otis Fellows will judge the Binghamton Industrial Exposition's fifth annual bench show, to be held at Binghamton Sept. 10 to 13.

To the inquiries which we have had concerning Rev. Chas. Josiah Adams's book, we are not able to give full particulars as to price, etc. It is entitled "Where Is My Dog? or, Is Man Alone Immortal?" A review of it appeared in FOREST AND STREAM of May 25.

The new champion stake, which is now under consideration in connection with the winter trials on quail, is being earnestly perfected, and the particulars will be published in due time. If sportsmen were to publish their ideas on the matter they might thereby render some material assistance. The suggestions might cover the manner of arranging for and conducting the competition, rules for it, etc. The idea is to arrange a good up-and-up competition, with as little parade as possible and no buncombe.

Mr. R. S. Nicholson, Tangipahoa, La., a favorite trainer in his section and a skillful one in any section, writes us that there are a great many bevies of quail about Tangipahoa, and that there is promise of the best season for dog and gun than has been for a very long time. Of the weather he remarks as follows: "The thermometer has been up to 90° only on one day; twelve days, 89°; five to 88°; ten to 87°, and on other days less, some not over 80°; but then during hot times it never goes lower at daylight than 72° or 74° and some mornings is as high as 77°."

The St. Bernard, Grand Master, was sold recently by the Alta Kennels to the Rice St. Bernard Kennels.

The American *Stock-Keeper* kindly calls our attention to an error we made in referring to the whippet racing in connection with the terrier show. The latter is in September, the former in October.

Messrs. Frank Richards and N. B. Nesbitt, the famous field trial handlers, are at Glenlea, Neb., fitting their dogs for the coming debate in Manitoba next month. We learn that they have some good ones, and expect to make it interesting for those who think the prizes hang within easy reach.

"Exhibitors at the coming dog show of the Toronto Industrial Exhibition Association, Sept. 9 to 13," writes Mr. C. A. Stone, "will be pleased to hear that a piece of land 20×200 ft. has been set apart as an exercising ground for the dogs. The secretary is to have a new office, and wash and feed rooms will be provided. The building is to be thoroughly cleaned and whitewashed and several other needed improvements made."

Mr. Henry Jarrett, of the Chestnut Hill Kennels, was thrown from his bicycle on Saturday (17th) morning. His right leg sustained a compound fracture below the knee. He was taken to the Germantown Hospital and is doing as well as can be expected under the circumstances.

The annual meeting of the Canadian Kennel Club will be held in Richmond Hall, Richmond street, West Toronto, at 3 P. M., Sept. 10, and a meeting of the executive committee will be held at 7 P. M., same day and place. The following is the business to come before the meeting: Reading of minutes, reports and communications, consideration of field trial regulations, revision of constitution, by-laws, etc., and printing same, incorporation, consideration of the cropping of dogs, consideration of case of Industrial Exhibition Association vs. Fred. Kirby, counting of ballots, other business.

Box 88, Mt. Morris, N. Y., offers broken pointer. N. P. Boyer & Co., Coatesville, Pa., offer sporting dogs. Box 36, Camp Denison, O., offers broken pointer. Kugler & Fox, Kensington, O., offer setters.

The letter of Rev. Chas. Josiah Adams, on the immortality of the dog, published in our columns this week, will be of much more than passing interest and value to our readers. The forceful facts so skillfully presented make one think seriously over a matter which, a few years ago, was treated by the public as being too absurd for serious consideration. The tone of the discussion on the dog's immortality is worthy of the emulation of those who consider that personality is argument. Contributions on this and related subjects are specially welcome to our columns when written so courteously.

Hydrophobia and Rabies.

BIRMINGHAM, Ala.—*Editor Forest and Stream:* I noticed in the Birmingham *Daily News* a mention of a horse with a fully developed case of rabies. The symptoms began on Aug. 10. On Monday the horse had paroxysms and Dr. French did not believe he would live forty-eight hours.

On Jan. 20 (the same night and at about the same hour that Kent Elgin passed away) a mule died at this hospital with a full developed case of furious rabies. Since then not less than ten dogs have been taken there sick, which proved in the end to be dumb or furious rabies. Last week a large Newfoundland dog, the property of Dr. French and a pet of the stable, died with the former. This dog was bitten two years ago by another dog supposed to be mad. For several years, and especially during the past ten months, this fatal and dreaded disease has played havoc with dogs, horses, hogs, cattle and men through this section. Hardly a week passes but we hear of several unmistakable cases, and the dogs killed, supposed to be mad, will pass the hundred mark each year. Of the many persons bitten several have died, among them a prominent physician, who, financially unable to go to the Pasteur Institute, and take with him two little children bitten at the same time, remained at home and took his chances with them. The children are yet safe. Two gentlemen and a lady bitten attended the Pasteur Institute and are thus far all right. T. T. ASHFORD.

Northwestern Beagle Club of America.

MILWAUKEE, Aug. 15.—A meeting of the executive committee of the Northwestern Beagle Club was held at Milwaukee, July 23, at 2 P. M. The members present: F. F. Merrill, Charles Niss, Jr., Edward Bender, Rudolf Engelmann, Louis Steffen. Mr. Joe Lewis, of Moodus, Conn., was chosen as judge. The meeting adjourned until Aug. 14, when the following members were present: G. A. Buckstaff, Jr., Charles Niss, Jr., Rudolf Engelmann and Louis Steffen. Mr. Chas. C. Sidler, of Milwaukee, was chosen as second judge. It was voted that the club give three special prizes, as follows: (1) Most musical voice; (2) Most accurate trailing; (3) Most effective ranging. The headquarters will be at the Tremont Hotel, Columbus, Wis. The rates for those that attend the trials will be $1 per day and 50 cents for transportation to and from grounds. Entry blanks and premium list will soon be ready for mailing. LOUIS STEFFEN, Sec'y.

C. F. T. C. All-Age Entries.

THE All-Age Stake entries for the chicken trials are as follows:

POINTERS.

SELAH—Charlottesville F. T. Kennels' liver and white bitch (Rip Rap—Dolly D.).

LADY RUSH—H. T. Schmidt's liver and white bitch (Rush of Lad—Pet S.).

JINGO—N. T. DePauw's liver and white dog (Mainspring—Queen II.).

DEWOLF HOPPER—Seabury & Helfenstein's liver and white dog (Rush of Lad—Vie).

KENT OF SIDNEY—Seabury & Helfenstein's liver and white dog (King of Kent—Gip Beaufort).

LADY PEG II.—Richard Merrill's liver and white bitch (Rip Rip—Lady Peg).

DAISY RIP RAP—Richard Merrill's black and white bitch (Rip Rap—Lady Peg).

STRIDEMORE—Richard Merrill's liver and white dog (Strideaway—Hops II.).

LITTLE NED—W. N. Kerr's liver and white dog (Ridgeview Dazzle—Kate Claxton).

DON UPTON—C. G. Stoddard's liver and white dog (Ightfield Upton—Ridgeview Dutchess).

BLITHE'S LAD—C. G. Stoddard's liver and white dog (Ightfield Upton—Ightfield Blithe).

WAMDUSKA—Jas. F. Crane's liver and white bitch (Shotmaster—Divernon).

RIDGEVIEW RATLER—Furlough Lodge Kennels' liver and white dog (Beppo III.—Milley).

RIDGEVIEW BRACKETTE—Furlough Lodge Kennels' liver and white bitch (Ridgeview Tenny—Milley).

JOUR—Furlough Lodge Kennels' liver and white dog (Lord Graphic—Devonshire Fan).

MARGUERITE KENT—Furlough Lodge Kennels' liver and white bitch (King of Kent—Marguerite II.).

FAUSTINA—T. G. Davey's liver and white bitch.

IGHTFIELD MUSA—A. P. Haywood-Lonsdale's liver and and white bitch (Ightfield Dick—Clio).

DEEMSTER—A. P. Haywood-Lonsdale's liver and white dog (Ightfield Dick—Perdita).

LONSDALE—J. C. Phillips's liver, white and ticked dog (Coton—Psyche).

TICK BOY—Stoddard & Kidwell's black and white dog (King of Kent—Bloom).

TAMARACK, JR.—H. K. Devereux's liver and white dog (Tamarack—Maud Graphic).

FRANK—D. E. Rose's (agent) liver and white dog (—— — ——).

TORY JOE—F. R. Hitchcock's dog (Kent Elgin—Fanny Heath).

PLAIN SAM—Dr. John Daniels's dog (Hal Pointer—Kent's Star).

ELGIN'S DASH—F. W. Dunham's lemon and white dog (Kent Elgin—Mack's Juno).

ENGLISH SETTERS.

AULD CLOOTIE—C. W. DePauw's black, white and tan dog (Dick Bondhue—Shena Van).

LANYBY LAVARACK—J. A. Helfenstein's black and white bitch (Spokane—Dott Gladstone).

ANNE OF ABBOTTSFORD—Edw. A. Burdett's black and white bitch (Gladstone's Boy—Bohemian Girl).

TONY'S BOY—Norvin T. Harris's black, white and tan dog (Antonio—Laundress).

CYNASURE—Norvin T. Harris's black, white and tan bitch (Roderigo—Norah II.).

DIXIE'S FLAG—Norvin T. Harris's black and white dog (Wun Lung— ——).

COUNT BONDHU—L. Rausch's black, white and tan dog (Gun Bondhu—Cad Noble).

TORY DOTLET—F. R. Hitchcock's black, white and tan bitch (Count Gladstone IV.—Tory Della).

DASH ANTONIO—Richard Baugham's black, white and tan dog (Antonio—Lady Lucifer).

GLEAM'S RUTH—Manchester Kennel Co.'s black, white and tan bitch (Count Gladstone—Gleam's Maid).

GLEAM'S DART—Manchester Kennel Co.'s black, white and tan bitch (Count Gladstone—Gleam's Maid).

GLADIATOR II.—C. W. Graham's black, white and tan dog (Gladstone's Boy—Queen Novice).

MINNIE T.—Frank Richards's (agent) black, white and tan bitch (—— — ——).

ORTOLAN—Chimo Kennels' black, white and tan bitch (Orlando—Atlanta).

ROMA—A. P. Haywood-Lonsdale's lemon and white bitch (Fred. W.—Ightfield Rosa).

TRILBY—Thomas Johnson's white bitch (Ranger—Canising).

PSYCHE—Thomas Johnson's black bitch (Manitoba Toss—Patti Sing).

PATTI—Thomas Johnson's blue belton bitch (Duke of Gloster—Flora).

LADY MILDRED—D. E. Rose's (agent) black, white and tan bitch (Antonio—Ruby's Girl).

PETREE—W. T. Hunter's black, white and tan bitch (Roderigo—Gladstone's Girl).

IRISH SETTERS.

CHIEF RED CLOUD—Claremont Kennels' red dog (Claremont Patsy—Sally Gold).

P. T. MADISON, Secretary.

Milwaukee Kennel and Pet Stock Association.

MILWAUKEE, Wis., Aug. 13.—*Editor Forest and Stream:* The Milwaukee Kennel and Pet Stock Association will hold its first annual bench show, in connection with the Wisconsin State Fair Association, Sept. 17 to 20, in this city. The lateness at which our Association is giving publicity to our intentions was caused by a severe accident happening to the secretary of the State Fair Association pending negotiations, and it was only recently that all arrangements were completed, including the premium list, which will include liberal cash prizes and many valuable specials. Inasmuch as the total cash premiums reach the limit required by the American Kennel Club, it was decided to hold the show under rules of this Association instead of a local show, as was first contemplated, which will undoubtedly give the show a better prestige among the fancy and insure a better class of entries. The veteran "Uncle" John Olcott will superintend the show, which is a guarantee that the dogs will be well taken care of. Mr. John Davidson, of Monroe, Mich., the well-known bench show judge, has been selected to judge the entire show. All communications should be directed to the secretary.

F. S. MORRISON, Sec'y.

National Beagle Club Meeting.

An adjourned quarterly meeting of the National Beagle Club of America was held Aug. 15 at the rooms of the A. K. C., 55 Liberty street, New York.

Meeting was called to order by President Kreuder at 4 P. M. The members present were H. F. Schellhass, George Laick, John Bateman, John B. Lozier, N. A. Baldwin, William Tallman and George W. Rogers. The minutes of the previous meeting were read and approved.

A number of communications were received from different shows to be held, and it was decided not to offer any specials as requested until after the field trials were over, as the club intends to devote its entire time to the coming trials.

The following is a copy of a communication received and accepted:

To the National Beagle Club of America:

Gentlemen—For the past four years I have endeavored to fill the position as President of your club, and for the high honor bestowed I beg of you to accept my hearty and sincere thanks herewith tendered. While my ambition and endeavors to elevate and place upon a sound dignified basis the name of the National Beagle Club of America have not been fully and entirely realized, yet such results as we have been able to obtain have been procured in the face of many adverse circumstances and peculiar complications, and due very substantially to the earnest support given by brother members. Having always the interest and welfare of the club before me, I deem it a duty to ask you to retire my name as President at the expiration of present term.

Trusting you may grant my request, I assure you that my interest and energies toward the advancement of the club will be honest and sincere. I remain respectfully yours, H. L. Kreuder, President.

The nomination of officers for the ensuing year was then made. Two tickets were placed in the field, headed respectively by J. W. Appleton for President; First Vice-President, H. L. Kreuder; Second Vice-President, H. F. Schellhass; Third Vice-President, John B. Lozier; Treasurer, George Laick; Secretary, George W. Rogers; Executive Committee: George B. Post, Jr., A. Wright Post and N. A. Baldwin. President, H. F. Schellhass; First Vice-President, J. W. Appleton; Second Vice-President, Geo. B. Post, Jr.; Third Vice-President, John B. Lozier; Treasurer, George Laick; Secretary, George W. Rogers; Executive Committee: H. L. Kreuder, N. A. Baldwin and John Bateman.

The following committees were appointed by the chair: On Classes, H. L. Kreuder, George W. Rogers; on Grounds, H. L. Kreuder, A. D. Lewis and H. F. Schellhass; on Judges, J. W. Appleton, H. F. Schellhass; Standing Field Trial Committee: H. F. Schellhass, chairman; W. S. Clark, Bradford S. Turpin, H. L. Kreuder, J. W. Appleton, N. A. Baldwin, George F. Reed, F. D. Lewis and George Laick.

The reports of committees will be received at the club's next meeting, to be held Sept. 3 at the rooms of the A. K. C., 55 Liberty street.

The meeting was then declared adjourned.

George W. Rogers, Secretary.

250 West Twenty-second Street.

Bloodhounds and Crime.

I have very little spare time now, and the older I get the more averse I am to taking part in a newspaper correspondence.

Some correspondents seem to have very positive (and I trust erroneous) opinions as to the ability of the bloodhound.

Mr. F. J. Hutton's letter only speaks of two hounds and one trainer. If this is the extent of his experience, I do not think that he is justified in generalizing on the capabilities of the breed. The hounds might have been good or otherwise for working purposes, but of course a very great deal would depend upon the trainer, and we have no means of estimating his ability other than where Mr. Hutton says that the tracking of the hounds was faulty and could not be relied upon when they had not been previously allowed to scent the clothing of the runner. This can only be the experience of a very inefficient trainer.

Any pure bred bloodhound can very soon be taught to hunt a man without having either seen him or scented his clothing. Mr. Hutton says that "atmospheric conditions also played a most prominent part." This, of course, is well known to any one who has hunted hounds, or has broken dogs to the gun, and the conditions generally supposed to be most favorable to scent do not always prove to be so. Mr. Hutton also says that "good results depended considerably upon the shortness of time which had elapsed since a trail was laid." I think he would be more correct if he said that the quality and extent of the training was chiefly proved by the coldness of the trail which could be hunted successfully. Any one can in a few lessons train bloodhounds to hunt a man's scent half an hour or so old.

No doubt it would have been better if the bloodhound had been continuously trained to hunt man, but fortunately the points chiefly denoting great scenting powers have been vastly accentuated of late years, and we have now an animal as much improved in these respects from the pictures of bloodhounds of the early part of this century as it is possible to conceive.

In the murder case which Mr. Hutton supposes, no doubt the chief difficulty would be in preventing the ground from being foiled, but this would become less as the police and the public got to understand the advantage of keeping the surrounding ground clear.

If, as Mr. Hutton supposes, the bloodhound "might nose around for miles without striking the actual trail," no doubt "a brace of well-trained sporting dogs, worked by an experienced man, would do just as well," but this is not saying much for the "sporting dog."

I don't think that anyone has a greater opinion of the importance of some intelligent, persevering men bringing the training of the bloodhound to a much higher pitch yet attained than I have, especially in the matter of hunting a much colder scent than any attempted of late years, but I doubt whether the kind of persons likely to achieve this end are people who would expect to do so by means of a club, and I don't understand what the club is to do. Are the members to meet together at certain times for training purposes? This would indeed be an edifying spectacle.

Mr. H. C. Walker says that in the case of the Whitechapel murders the attempt to trace "Jack the Ripper" was made absurdly futile by the mismanagement of the police in not getting the hounds quickly enough on to the trail, and the owner, fearing some harm might overtake his hounds, withdrew them.

Will you allow me to say that the police had no opportunity of getting the bloodhounds on the scent of "Jack the Ripper," as no murder of this class was attempted during the many weeks the hounds were in London. This is, I think, a fair instance of the probable deterrent influence of the bloodhound if he were brought into general use as a detective.

I may also say that the hounds were not withdrawn from London in consequence of fears for their safety.

There are many people who read fragments of a correspondence of this kind, and jump to the conclusion that the part they happen to see is the correct one.

To any one who reads this, and feels impelled to rush into print, I would say don't do so, unless you have something to say, and are quite sure of your facts—don't strike an average from one or two instances.

It seems such an easy matter not to write to the papers and yet it is evidently so difficult. I do not seem to have been very successful in that respect myself.—*Edwin Brough in Stock-Keeper.*

Irish Setter Trials.

Claremont, N. H.—*Editor Forest and Stream:* Now is the time for the Irish setter men of America to come forward and support with their entries the coming Irish setter trials.

There is many a good field dog of the Irish race hidden away in different parts of this broad land, and it is both fit and proper that the owners of such should let the public see them run. There is many a youngster of promise growing up that only awaits the opportunity to prove its field worth, and every owner of such an one should come forth and show the sporting public that their pups can work.

And the owners of the large and famous show kennels of America, Kildare, Oak Grove and Seminole, ought now, if ever, to prove to the unbelieving that their sleek-coated dogs can find and point birds with dash and style as well as sweep all before them on the show bench.

Many a good dog may run and not win. All cannot get the prizes, but next in honor to the victor is the vanquished.

Some people have gotten the idea into their heads that the red dog is only good in looks; that he is not of much use in the field on game. But the fact is such people are wrong.

Rawdon B. Lee in "Modern Dogs," 1893, says: "I should consistently say that from what I have observed of late years—and I have seen all the best dogs run—that the Irish setter is as dashing, as energetic, as stylish, as the best English dog I ever saw. When properly and perfectly trained the red setter has shown us that no other variety can beat him."

And further on, in naming some red dogs famous for their field work, says they "are quite as good dogs as any man might be proud of owning."

Why, even this very year, in an all-aged stake of sixteen entries of all breeds, the best England could produce, there was just one Irish setter, and he won the stake; as the London *Field* said, "showing all the old dash and style for which we had previously praised him. He perhaps made fewer errors than any other dog in the competition."

Now, if such a deed as that doesn't prove the red dog's worth as a field trial winner, then will some one who is moderately unprejudiced kindly tell me what does? I should think the winning of that stake by an Irish setter would make every owner of a red in America want to run his dog, at least in the Irish trials.

I presume each one thinks he owns the best field dog in America, and he ought to be generous enough to let the public see a dog that is a dog.

But there is the rule that should be changed, and that is the one that bars all previous first prize winners in America.

It is too early to shut out any Irish setter, and no doubt the owners of Sedan, Redford, Currer Belle and Finglas would like a chance to show that their dogs can win again, that it was not luck before. Let the all-aged stake be open to all Irish setters in America.

There are good Irish setters in this country, and I predict that the coming trials will show work of a far higher class than any seen in the former Irish trials.

Mont Clare.

American Spaniel Club.

New York, Aug. 16.—I have received several letters regarding the conditions of the Spaniel Club sweepstakes, to be judged at the New York show in February, 1896, which indicate that they are not clearly understood and an explanation is needful.

The entries for sweepstakes close on Sept. 1, at which time it is necessary to make payment of $2 for each entry, at the same time giving the date of birth and pedigree. On Jan. 1 an additional payment of $3 is due upon each entry, and if this is not paid the entry drops, and the original payment forfeited.

All entries, no matter of what breed of spaniels, are judged together, there being no division of the stakes on account of breed.

These seem to be the points of doubtful clearness, but if there are any others, I shall be pleased to answer any questions addressed to me at 874 Broadway, New York.

The indications are, that the entry which is confined to puppies born in 1895 will be a large one, and it is well for all interested to note that entry closes on Sept. 1.

Rowland P. Keasbey, Sec'y.

Toronto Show.

I would call attention of intending exhibitors at the Toronto Dog Show, Sept. 9 to 13, that the Pennsylvania R. R. will run a special excursion from Washington, Philadelphia and other points on the Northern Central R. R. on Saturday, Sept. 7. Besides the above there are cheap rates on the majority of American lines and on all the Canadian.

The American Mastiff Club will offer their diploma for the best dog and also for the best bitch. Class 11½ novice, both sexes, rough or smooth St. Bernards ($10, $5 and dip), has been added to the prize list. C. A. Stone, Sec'y

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address. Prepared Blanks sent free on application.

NAMES CLAIMED.

Dr. I. M. Schwab claims the name Lady Min for Irish setter bitch, whelped Feb. 17, 1895, by Onota Don—Floss A.

Mr. S. Penfield claims the names

Alice for bull-terrier bitch, whelped April 1, 1895, by Ben Caunt—Chatham Kit.

Ben Bolt for bull-terrier dog, whelped April 1, 1895, by Ben Caunt—Chatham Kit.

BRED.

Mr. H. J. Griswold's Bonnie Betty, smooth fox-terrier bitch, April 26, to Bonnie Brush.

Muckross Kennels' (Springfield, Vt.)

Rosamond, Irish setter bitch, July 7, to their Henmore Shamrock.

Gay, beagle bitch, July 2, to H. L. Kreuder's (Nanuet, N. Y.) Buckshot.

Mr. W. H. Collin's Lady Bute II., rough-coated St. Bernard bitch, July 22, to Mr. J. G. Barker's (San Francisco, Cal.) California Bernardo.

WHELPS.

Mr. A. D. Fiske's Lady Novice, beagle bitch, whelped, June 29, eight (seven dogs), by Clyde.

Mr. A. J. Griswold's

Bonnie Betty, smooth fox-terrier bitch, whelped, June 22, six (two dogs), by Bonnie Brush.

Wawaset Luna, smooth fox-terrier bitch, whelped, June 17, six (four dogs), by champion Warren Safeguard.

Mr. John Moorhead, Jr.'s, Streatham Monarch's Daughter, bull-terrier bitch, whelped, July 7, nine (five dogs), by Streatham Monarch.

Mr. W. H. Dixon's Kenora, St. Bernard bitch, whelped, June 21, nine (five dogs), by Diavolo II.

Mr. John E. Jewett's

Jane, bull bitch, whelped, May 29, three dogs, by Webb's Monarch.

Glorianna, Boston terrier bitch, whelped, June 9, five (four dogs), by Pilot.

Nellie, bull bitch, whelped, July 20, six (five dogs), by Webb's Monarch.

Mr. S. Penfield's Bashful Maid, bull-terrier bitch, whelped, July 31, six (three dogs), by Ben Caunt.

SALES.

Muckross Kennels (Springfield, Vt.) have sold

——, Irish setter dog puppy, whelped April 3, by Henmore Shamrock—Onota Peg, to Mr. Fred. Higgins.

——, Irish setter dog puppy, whelped June 12, by Mont—Floss II. to Mr. James E. Whitney, Jr.

Yachting.

FIXTURES.

SEPTEMBER.

7. First international race. This date is provisional and may be changed upon Lord Dunraven's arrival next week.

The Trial Races.

The first trial race of Defender and Vigilant was sailed on Tuesday, starting from the Scotland Lightship, and going 10 miles to windward and return. The course was to have been gone over twice, but after beating Vigilant by 4m. on the first round, Capt. Haff declined to sail the second round in the wind then blowing. The times were (stakeboat and Lightship not official): Preparatory signal, 11:35:00; starting signal, 11:45:00. Start: Vigilant, 11:45:56; Defender, 11:46:53. Rounding stakeboat: Defender, 1:09:40; Vigilant, 1:14:18. Turning Lightship: Defender, 2:04:00; Vigilant, 2:08:10.

At the time of our going to press it had not been announced whether the second race, set for Thursday, would be sailed or not.

Yampa.

All of those who know Mr. Richard S. Palmer, the spirited and generous owner of the schooner Yampa, will sympathize with him in the bad luck he has had in English waters, first in the serious damage to his handsome yacht through the fatal accident in Fay's yard, as told last week; then in the loss of a well-earned race through an unintentional neglect of the rules, and thirdly in a defeat in a special match with the protesting yacht. The first was sailed on Aug. 7, for yachts in cruising trim under the Y. R. A. rules, according to which no extra hands except a pilot are allowed when racing in cruising trim. Mr. Palmer, without thinking of the rule, carried some ladies as guests and also some extra hands; though sailing in real cruising rig and with the spars and sails with which the yacht sailed from New York for Gibraltar last winter. The starters in the first race were Yampa and the once famous old schooners Cetonia and Waterwitch and the schooner Amphitrite, Mr. Frederick Willis, designed and built by Camper & Nicholson in 1887. Yampa beat Amphitrite 13m. 9s. elapsed time and Cetonia 22m. 25s., but was protested by Mr. Willis on the ground quoted, the protest being of course sustained, as there was no question of the violation of the rule.

Arrangements were made for a private match between Yampa and Amphitrite in answer to a challenge from Mr. Palmer, for 100 guineas per side, the race to be over the Queen's Course, from off Cowes westward around the Lymington Spit Buoy, then eastward around the Bullock Patch Buoy near the Nab, and back, two rounds making 50 miles, Yampa allowing Amphitrite 7m. 41s. Each yacht was allowed to carry by special agreement as many persons as the owner desired. The start was made at 10 A. M., on Aug. 14, with a good westerly breeze, making a beat to the Lymington Buoy, Yampa crossing first and to windward. Yampa took the ground for a short time and Amphitrite passed her, increasing her lead until she had 11m. 33s. at the first mark. Off the wind, in the long run to the Bullock Patch, Yampa about held the other, the times at turning being:

Amphitrite	1 42 00	Yampa	1 52 15

The finished was timed:

Amphitrite	3 47 30	Yampa	3 58 42

Amphitrite won by 11m. 12s. corrected time. While Yampa lost some time in the grounding, she was fairly outsailed by Amphitrite.

Valkyrie is Here.

Valkyrie III. reached this port last Sunday night, after an uneventful passage. She left Gourock on July 27, and her daily runs are shown on the log as follows: Saturday, July 27, 2:40 P. M., Gourock; Sunday, July 28, Tory Island abeam, 10 miles, 148; Monday, July 29, 127; Tuesday, July 30, 83; Wednesday, July 31, 155; Thursday, Aug. 1, 204; Friday, Aug. 2, 81; Saturday, Aug. 3, 160; Sunday, Aug. 4, 93; Monday, Aug. 5, 91; Tuesday, Aug. 6, 123; Wednesday, Aug. 7, 81; Thursday, Aug. 8, 219; Friday, Aug. 9, 129; Saturday, Aug. 10, 189; Sunday, Aug. 11, 83; Monday, Aug. 12, 140; Tuesday, Aug. 13, 173; Wednesday, Aug. 14, 154; Thursday, Aug. 15, 145; Friday, Aug. 16, 140; Saturday, Aug. 17, 80; Sunday, Aug. 18, 159; to Sandy Hook, 59; total, 3,026.

From Malin Head, where she left the tug, to Sandy Hook, 2,770 nautical miles, her time was 21d. 9h. 30m., an average of 129 miles a day. She came to anchor Sunday night in the Upper Bay, and went on the dry dock at the Erie Basin on Wednesday, where her bottom was to be coppered and the yacht made ready for her preparatory work.

YACHTING NEWS NOTES.

On Saturday, Aug. 10, the Æolus, a 15ft. 4½in. l.w.l., 20ft. 1in. length over all, by 4ft. 6in. beam, "La Gloria" ¼-rater, took first place against everything entered at the Lake Beulah Y. C.'s regatta, at Lake Beulah, Wis., defeating among other competitors an 18ft. l.w.l. ¼-rater, carrying 400sq. ft. canvas; also a 17ft. l.w.l. sloop, with 500sq. ft., besides a number of other cats and sloops, all of larger classes than Æolus. The wind was due west and blowing a gale at times, and the latter boat stood up and made far better weather than any others in the race. The Æolus's sail plan was 220sq. ft., and was built in 1894 by the St. Lawrence River Skiff, Canoe and Steam Launch Company, from the designs of W. P. Stephens.

The Steam Yacht Eleanor.

THE accompanying photo shows the new steel steam yacht Eleanor, owned by Wm. A. Slater, of Norwich, Conn., now in Alaska waters on her way around the world. The yacht was designed by Chas. R. Hanscom and built by the Bath Iron works in 1894; her dimensions being: Over all 231ft., l.w.l. 208ft., beam 32ft., draft 13ft. 4in. A full description of the yacht appeared in the FOREST AND STREAM of April 14, 1894.

The Seawanhaka International Cup.

THIS week will be devoted to the trial races for the selection of a defender of the America's Cup, the contestants being upward of 90ft. waterline; next week the principal event in yachting will be the trial races of the Seawanhaka Corinthian Y. C. for the selection of a defender to represent the club in its coming matches with Mr. J. Arthur Brand in his new Spruce IV. for the possession of the handsome perpetual challenge trophy lately given by the club. While the larger trial races are discounted by the previous demonstrations of the superior speed of the new Defender to the older Vigilant, and serve really but to further perfect the former boat, the little fellows are so numerous, so different and so little known that the contests can hardly fail to be exciting to all lovers of small boat sailing.

Those not fully posted have no doubt been puzzled to know whether the boats should be called 15-footers or ½ raters, the latter term being generally used even by American writers. The class originated in England, and under the Y. R. A. rule its limit was ½-rating or say 200sq. ft. of sail to a waterline of 15ft.; the boats as a rule, however, running upward of 16ft. waterline, with a proportionately smaller sail plan. In arranging conditions with Mr. Brand last spring, the committee of the S. C. Y. C. suggested that the limit of the class should be 15ft. racing length by the Seawanhaka rule, with a special provision for the correct measurement of all styles of rig; which condition was agreed to. The class then should be properly designated as the 15ft. class, though the challenging boat, Spruce IV., is by birth a genuine ½-rater. The Y. R. A. measurement of Spruce IV., under which she has raced for some weeks, is l.w.l. 15.78, sail area 189.8. It is possible that these figures may be slightly changed in rigging and trimming her for the races on this side, but within the limit of 15ft. racing length. Mr. Brand will sail for New York about Sept. 1, and the races will take place as soon after his arrival as possible, allowing him the necessary time for preparation.

The trial races for the selection of a defending boat promise to be very interesting, as there is a probability of about a dozen contestants. The dates set are Aug. 26, 27, 28, the place being Oyster Bay. If possible, arrangements will be made to measure all the boats at that place on Saturday, Aug. 24.

Mr. Herreshoff will be represented in the races by three boats, the oldest being Trust Me, built last year for the late Walter Langdon and now owned by Charles M. Clark. She is a duplicate of the very successful Wee Winn, sent to England in 1892, a fin-keel with sloop rig. Another fin-keel is the new W. K. Vanderbilt boat Osprey, a very handsome little mahogany craft of about 4ft. 6in. beam, also sloop rigged, with cross-cut sails. She is built without bulkheads. The third Herreshoff boat is the centerboard built for Vice-Com. Rouse, S. C. Y. C., and named Olinda, also of mahogany, with two bulkheads and sloop rigged with the new sails. She will be raced by two old canoe sailors, C. B. Vaux and E. B. Burchard, and will presumably have the benefit of skillful handling, though she was delivered so late that but little time is left for working up.

The 15-footer Question is already well known about the Sound, where she has raced all the season, having earned the appellation of "Barndoor" from her peculiar model. She is almost flat below and on deck, with no hold, the crew lying flat on the deck. She has been quite successful and is very fast under certain conditions. She has a large mainsail and very small jib and a plate-iron centerboard.

Another of the new boats in the class is a fin-keel named Trilby, a distinction she shares with some thousand other yachts throughout the world, designed by Charles Olmstead and built by Wood & Son for Com. G. H. Tyson, Riverside Y. C. She is wide for a fin-keel, about 6ft., with a strong bilge. Mr. Olmstead is sailing her. Indienne is the name of a boat designed and built by Newell & McAlleece, of Passaic, N. J., two young builders, for a syndicate of the Indian Harbor Y. C., a centerboard boat and of lapstrake build.

Another centerboard boat is Ethelwynn, built for C. J. Field by the St. Lawrence River Co., from the design of W. P. Stevens. She is 23-ft. 4in. over all, about 14ft. 6in. l.w.l., 6ft. beam and 7in. draft, the beam at waterline being but 4ft. 9in., with a light bilge and easy midship section. The hull is quite light, the keel being of spruce, in one piece from stemhead to transom, the timbers of rock elm, steamed and bent, and the planking double with Union silk between, the inner skin of white cedar and the outer of mahogany, all copper riveted over burrs. There is a watertight bulkhead of the same double construction at each end of the cockpit, with hatches in the deck inside of the coaming. The floor is laid on the timbers, making as deep a cockpit as possible. The centerboard is of $^{3}/_{16}$in. manganese bronze, weighing 55lbs. and dropping to a depth of 5ft. below the waterline when vertical. The sail plan was made by Mr. C. J. Stevens and is the same as in his Scarecrow, a leg of mutton mainsail and one jib, the mainsail hoisting on a pole mast. The spars are hollow, made by L. K. Young, of Bridgeport, the details and fittings being the same as in Scarecrow. She will be sailed by Mr. Albert Ball and her owner. The class is likely to muster four or five other boats, among them one by Arthur Dyer, owned by Messrs. Burton, who will sail her.

The full conditions of the races are as follows:

A prize is offered by a member of the club in memory of the late Robert Center, to be known as the Center helmsman's prize. Under the terms of gift it will be awarded to the "amateur helmsman who, in the judgment of the race committee, handles his boat in the most seamanlike manner from the preparatory signal of the first to the finish of the last trial race."

COURSES.—(1.) The course for the first and third trial races shall be triangular and shall be as follows: From a line between Center Island Buoy and the committee steamer anchored S. E. of the same, E. by N. ½ N.—2 miles around a mark bearing a red flag or ball, leaving it on port hand; N. W.—2 miles around a mark bearing a red flag or ball, leaving it on port hand; S. by W. ½ W.—2 miles to the finish line between Center Island Buoy and the committee steamer anchored N.W. of the same. Course to be sailed over twice; total distance, 12 nautical miles. On the second round yachts will leave Center Island Buoy on the port hand.

Note.—The race committee may, in their discretion, direct the course to be sailed in the reverse direction, leaving buoy and marks on the starboard hand, and the signal for such reversal of course will be the anchoring of the committee steamer at the start to the N.W. of Center Island Buoy. In this case the committee steamer will be anchored S.E. of Center Island Buoy at the finish.

(2.) The course for the second trial race shall be a course to windward or leeward and return.

From a line between Center Island Buoy and the committee steamer around a mark bearing a red flag or ball, leaving it on starboard hand; distance 3 miles and return; course to be sailed over twice; total distance twelve nautical miles. The direction will be signaled by the general yacht signal code from the committee steamer at least fifteen minutes before the preparatory signal.

The start will be a one-gun flying start with a preparatory signal, and will be made at 12 o'clock noon across a line between Center Island Buoy and the committee steamer.

First signal, preparatory, whistle (fifteen seconds long). The club burgee on the committee steamer will be lowered and a blue peter hoisted.

There will be an interval of five minutes between the first and second signals.

Second signal, start, whistle (fifteen seconds long). The blue peter will be lowered and a red ball hoisted.

SPECIAL CONDITIONS.—(1.) The yacht selected to defend the cup shall be the one which, in the judgment of the race committee, shall be the best adapted therefor, and not necessarily the winner of a majority of the trial races.

(2.) On Saturday morning, Aug. 24, all yachts entering for the trial races will be measured in racing trim at the club anchorage, Oyster Bay.

(3.) Each yacht must carry a racing number (which may be obtained at the club house on the morning of the first race) fastened securely on both sides of the mainsail.

(4.) In the event of a race being postponed or ordered resailed, it will be sailed at as early a date as may be practicable.

ENTRIES.—Entries must be in writing and filed with the secretary of the race committee, Charles A. Sherman, 64 Leonard street, New York, by 12 o'clock noon, on Aug. 23, or at the club house at Oyster Bay by 10 o'clock on the morning of Aug. 26.

GENERAL CONDITIONS AND REGULATIONS.—As previously announced in a circular issued by the race committee on May 1 last, the Seawanhaka international challenge cup is this year offered for competition between yachts of not exceeding 15ft. racing length (S. C. Y. C. measurement). Entries in the trial races will therefore be confined to yachts of this class.

The defense of the cup is open to yachts owned by members of the yacht clubs of the United States in good standing.

The general conditions governing the cup and the general regulations for the control both of the international and trial races as amended are as follows:

I. The cup shall be a perpetual international challenge cup. The Seawanhaka Corinthian Y. C. shall have the custody of the cup in the first instance, and every challenge shall be through some recognized yacht club of a foreign country, and the cup when won shall be delivered to and held by the club through which the challenge was made.

II. A challenging yacht shall be met by only one competitor.

III. The races shall not be less than three nor more than five in number, the cup to be taken by the winner of the majority.

IV. The American courses, while the cup remains in the custody of the Seawanhaka Corinthian Y. C., shall be on the waters of Long Island Sound in the vicinity of Oyster Bay, or in the bay itself. They shall consist of a triangular course and a course to windward or leeward and return. For the 15ft. class each leg of the triangular course shall be two nautical miles in length and shall be sailed over twice, making a total of twelve miles. The course to windward or leeward and return shall be three nautical miles in each leg and shall be sailed over twice, making a total of twelve miles.

V. The start shall be a one-gun flying start.

VI. The races shall be sailed without time allowance.

VII. The challenge cup is offered this year for yachts of not exceeding 15ft. racing length (S. C. Y. C. measurement).

The formula for determining racing length under the S. C. Y. C. rules is as follows:

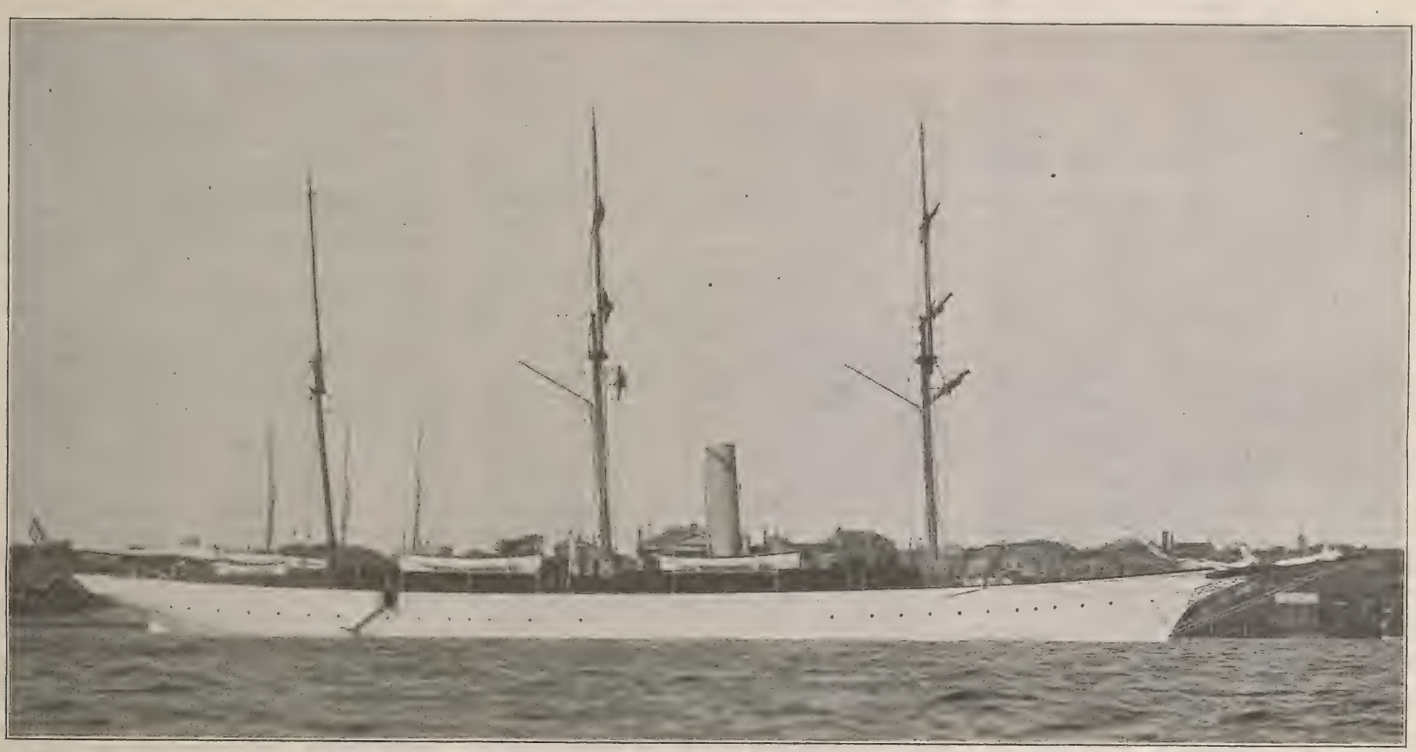
$$\frac{\text{L.W.L.} + \sqrt{\text{Sail Area}}}{2} = \text{Racing Length.}$$

VIII. In the 15ft. class yachts shall be measured without crew on board, but instead thereof a weight of 300lbs. shall be carried amidships during measurement to represent the crew.

IX. All ballast shall be fixed. (Weighted centerboards shall be considered fixed ballast.)

X. No outrigger or other mechanical device, for carrying live ballast to windward, shall be allowed.

XI. In determining sail area a system of measurement shall be employed which will give, as nearly as possible, the actual number of square feet thereof. Sails shall be limited to mainsail, jibs and spinaker. The combined area of mainsail and of the jib used in windward work shall constitute the factor of sail area in determining racing length. The area of spinaker and balloon jib shall each be limited to four-tenths of the total area of the mainsail and jib used in windward work.



XII. The helmsman shall be an amateur, and the total number of persons on board shall be limited to two.

XIII. Future competitions for the cup shall be limited to yachts of classes from 15ft. to 25ft. racing length, both inclusive.

Excepting in case of conflict with the foregoing conditions and regulations, the racing rules of the Seawanhaka Corinthian Y. C. shall govern the trial races.

Note.—Attention is called to the fact that it is expected to arrange a series of open races with Spruce IV. after the challenge cup races.

Duxbury Y. C.

DUXBURY, MASS.

Saturday, Aug. 10.

The fourth regatta of the Duxbury Y. C. was sailed on Aug. 10, starting in almost a calm, the wind coming in later and making a race. The principal event was the third contest for the Davenport challenge cup, already won twice by Fanny D. This time the older boat, Nancy Hanks, was the victor. The times were:

SPECIAL CLASS.

	Length.	Elapsed.	Corrected.
Myles Standish, Boyer Bros.	21.06	2 52 46	2 07 11
Vida, W. S. Maglathlin	22.09	2 55 08	2 10 29
Ida, C. S. Clark	18.06	Did not finish.	
Elaine, Graham	22.09	Did not finish.	

FIRST CLASS—21 TO 27FT.

Future, W. S. Whitman	21.01	3 09 51	2 26 57
Natana, N. W. Emerson	24.06	3 06 24	2 27 14

SECOND CLASS—17 TO 21FT.

Nancy Hanks, P. W. Maglathlin	19.11	2 36 32	1 50 17
Fanny D., M. W. MacDowell	19.10	2 38 57	1 52 34
In It, R. D. Williams	18.04	2 42 34	1 54 31
Emerald, W. H. Lowe	18.01	2 45 19	1 55 35
Cleopatra, M. MacDowell	20.07	2 42 34	1 57 29
Nemo, M. F. Carell	18.04	Did not finish.	

THIRD CLASS—UNDER 17FT.

Amie, M. S. Weston, Jr.	16.09	1 55 41	1 29 24
Bucket	17.00	2 14 48	1 48 48

FOURTH CLASS—SPRIT, FORESAIL AND MAINSAIL.

Vigilant, A. M. Watson, Jr.	16.11	1 41 03	1 14 57
Maj. D., C. H. Drew	16.02	1 47 52	1 20 55
Gipsy Girl, W. Steele	16.02	1 50 01	1 23 04
Henrietta, E. W. Watson	16.08	1 52 42	1 26 19
Eunice, B. I. Symmes	17.01	1 59 10	1 33 15
Natalie, H. M. Jones	16.10	Did not finish.	

FIFTH CLASS—GAFF, FORESAIL AND SPRIT MAINSAIL.

Solitaire, B. B. Baker	17.09	1 41 45	1 16 33
Dolphin, N. Morton	16.04	1 55 42	1 24 57
Ellen B., C. F. Bradford	16.06	1 53 10	1 26 13
Nereid, A. E. Walker	16.10	1 56 01	1 29 50
Waterwitch, Graham	17.01	1 54 28	1 33 33
Perhaps, T. S. Diman	16.00	Did not finish.	

Lake Geneva Y. C.

CLUB RACE.

Saturday, Aug. 10.

The 21ft. class course from the Village around the buoy off Camp Collie and return is twelve miles; weather, fair; wind, strong.

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Lorna, Julian M. Rumsey	24.4	1 34 50	2 34 50
Precept, J. Hodgkins	24.5½	1 42 15	2 42 15
Expert, Julian M. Rumsey	24.7	. . ..	. . ..

SECOND CLASS.

Maybe, H. H. Porter, Jr.	20.11½	1 33 10	2 33 10
Mahnahbezee, Geo. Hateley	21.00	1 35 42	2 35 42
Mystery, Benton Sturges	21.00	. . ..	. . ..
Satan, Byron Boyden	18.2	. . ..	. . ..

Winners: First prize, first class, Lorna; second class, Maybe. Second prize, first class, Precept; second class, Mahnahbezee.

The first class boats sailed with working rig and stationary weight and sailed the same course as the second class boats.

Judges: H. W. Marsh, H. G. Rich and L. C. Fuller.

Canoeing.

AMERICAN CANOE ASSOCIATION, 1895.

Commodore, Walter C. Witherbee, Port Henry, N. Y.
Sec'y-Treas., Chas. E. Cragg, Port Henry, New York.
Librarian, W. P. Stephens, Bayonne, N. J.

PURSERS.

Atlantic Division, Thomas Hale, Jr., Yonkers, N. Y.
Central Division, W. S. Hackett, Albany, N. Y.
Eastern Division, R. N. Cutter, Winchester, Mass.
Northern Division, E. F. Burritt, Ottawa, Canada.

Annual dues, $1; initiation fee, $1. Applications for membership must be made to the Purser of applicant's division, from whom blanks for the purpose may be obtained.

FIXTURES.

AUGUST.

9-28. A. C. A., 16th annual meeting, Bluff Point, Lake Champlain.

SEPTEMBER.

Red Dragon fall regatta, Delaware River.

The W. C. A. at Ballast.

Mr. Nat. H Cook kindly supplies the record of the W. C. A. '95 meet at Ballast Island with the accompanying information: There were 31 members present and 65 persons on the island, including ladies and non-members. There were 15 canoes, 1 war canoe, 1 catboat, 1 double cat, 1 naphtha launch.

The annual W. C. A. hop was held on Wednesday, July 17, at Werbie's Pavilion, Middle Bass Island. The Iowa State band with forty musicians was engaged for the occasion and the entertainment was a splendid success.

In the regatta the winners were as follows:

Race No. 1, passenger race, 7 starters: First, Lotus, Nat H. Cook, Captain; J. F. Turrill, crew; second, Wood, O. A. Woodruff, Captain; Ralph S. Huntington, crew.

Race No. 2, Gardner Cup race, 10 starters: First, Carrier Pigeon, N. B. Cook; second, Princess Alice, G. H. Gardner.

Race No. 3, Trophy Cup race, 6 starters: First, Wood, O. A. Woodruff; second, Carrier Pigeon, N. B. Cook.

Race No. 4, Longworth Cup race, 5 starters: First, Lotus, Nat H. Cook; second, Princess Alice, G. H. Gardner.

Race No. 5, sailing and paddling, 5 starters: First, Isabel, T. S. Gates; second, Phœnix, Ralph S. Huntington.

Race No. 6, paddling, class 1, 4 starters: First, Mud, A. D. Stearns; second, Whisper, G. E. McWilliams.

Race No. 7, paddling tandem, 3 starters: Mud, A. D. Stearns and G. E. McWilliams; second, Minnehaha, L. K. Liggett and S. C. Stearns.

Race No. 8, hurry-scurry: Not raced.

Race No. 9, consolation race: First, Anita, T. B. Stevens; second, Isabel, T. S. Gates.

RECORD.

	Points.
First, N. B. Cook, Carrier Pigeon	9
Second, O. A. Woodruff, Wood	5
Second, T. S. Gates, Isabel	5
Third, Ralph S. Huntington, Phœnix	4
Fourth, T. B. Stevens, Anita	3

The business meeting was held Saturday, July 13, and the following officers were elected: Com., C. F. Pennewell, Detroit; Vice-Com., N. H. Cook, Chicago; Rear-Com., E. H. Holmes, Milwaukee; Sec'y-Treas., W. D. Stearns, Detroit. Executive Committee: R. M. Lamp, Madison; C. J. Steadman, Cincinnati; F. W. Dickens, Milwaukee.

D. H. Crane, Chicago C. C., head of the regatta committee, says: "We had only a small crowd, but it was all one crowd—with no cliques. The races were very pleasant, and I never had so easy a time in getting the starts off, and that with a good sized entry. The racing was spirited all down the line, and the contest often was not with the crack or two at the head, but with some other fellow in a rival boat, as when Grandpa Gates and Mr. T. B. Stevens, of Cleveland, 'had it in' for each other."

Mr. O. A. Woodruff, Rockawa C. C., one of the old-time fathers of the W. C. A., says: "Any time we can find a place offering so many advantages as Ballast I am ready to go there. I am not prejudiced in favor of Ballast. I would not, however, be willing to go again to any inland lake."

Nat. Cook, Chicago C. C., says: "We never had any better sailing than we had this year at Ballast, and the summer girl was never better. I am willing to go anywhere for the '96 meet, but I want to go where I can get sailing. I would like to join a party to go up and have a look at Grand Traverse Bay, Michigan South Peninsula. They say that is a good place."

We received some time since, and have held for permission to use, a letter from Mr. Woodruff, which is printed below. It states fairly enough the many advantages of Ballast Island, though it hardly overcomes the logic of results, which would show that a Ballast meet is a small meet, and one made up only of the older and stronger W. C. A. element, without much accession of new material. We admit the force of the Ballast argument, but it really seems hard for us to believe that the only sailing and swimming waters of the West are to be found at Ballast. To go elsewhere might mean trouble and expense, it is true; but it might also mean a growth of membership, which would make the expense seem light. Moreover it might assure a reunion of the canoemen of the West, which should be more like canoeing and more like camping than can be possible at the "home of the W. C. A." Whatever most promotes canoeing must most please us, but a "home" for any body of sportsmen bound primarily to the outdoor air should be well watched that it does not become that long home to which we none of us want to see canoeing organizations come. Mr. Woodruff states the contrary of this very well, though perhaps had he not written so soon after the publication of the "Summer Girl's Diary" he would not have taken exceptions to that as deliberate criticism, but would have seen it as it was meant and really was, a good piece of fun and something of a novelty. His letter follows:

"Dayton, O., July 25.—We had a very pleasant time, with plenty of fine sailing and swimming and good grub, this year. The attendance was small, only thirty-one members; no one at all from the West except four from Chicago.

"I had rebuilt the canoe Wood and made a new suit of sails, hoping to get a crack at the fin-keels, but they didn't show up. However, I beat Nat Cook and his father, and they are good sailors, and they have fast canoes. Nat of course took the Longworth cup, his father the Gardner, and I got the trophy.

"I am very sorry that you felt it your duty to criticise the W. C. A. and Ballast the way you did in the summer girl story. If you had been present you would have seen the 'pretty little canoes' in the water most of the time and very little carrying on with the summer girls. I had my family established in a cottage, and they enjoyed it very much without at all interfering with my duties or pleasure in camp or on the water.

"As I was the first to advocate holding Western meets on alternate years, I feel that it is my privilege to express an opinion now on the same. We went to Oshkosh in '92 and the meet was attended by quite a number from that place, a very few of whom had canoes or row-boats, but the majority had not. Most of the men came out on bicycles or in buggies in the afternoon, and either returned to town that night or very early the next morning. Not one of them has attended a meet since, although the '94 meet was held at Madison, about two or three hours' ride from Oshkosh.

"In '94 we met at Madison, where we found a good, active club, and some of the best men who ever sat around a camp-fire, but they only had two or three canoes, and not one of them has attended the '95 meet. Here also a great many of the Madison men had to spend the day in the city, and only slept in camp.

"At both of the Western meets the building of docks, cook houses, renting of mess tent, etc., ran the expense up very high. The grub was very poor and in both cases we had to stand a raise in price of meals, made after we had gone into camp. At both places the winds were very poor for sailing (nearly every day a flat calm most of the day). The water was dirty or full of green scum, making it unfit for swimming, and worst of all, after all this, we failed in our object of getting new blood into the meets. Not one of these men from Oshkosh or Madison has attended a meet that was not held in front of his own boat house.

"At Ballast Island we own the lumber and cribs for our docks, and the expense of putting up and taking down is very little, and no trouble at all to the members or officers, as the only trouble is to write a letter ordering the docks put up for a certain date and it is done. As for the mess, we have no expense putting up the mess tent or cook house, no trouble getting a caterer and no wrangling with the caterer through the entire meet, and no raising of price after we get to camp. We just pay $1 per day for good grub well cooked, and sit at long tables and have just as good a time as if we were in a mess tent.

"At Ballast we never have a mosquito (which were a great pest at both Oshkosh and Madison). We have excellent water for swimming, clear and just cool enough to be refreshing. Being located in the middle of Lake Erie it is cool and the winds are steady and very seldom a calm. The surrounding islands break the force of the seas so that there is not a very bad sea even in a high wind.

"We have there quite a number of pleasant places to cruise to within a distance of from five to ten miles.

"There are plenty of yachts and yachtsmen in the neighborhood and they are congenial spirits.

"You think I am prejudiced in favor of Ballast. I am, but the prejudice is justified by the many advantages it has for the canoeist, and as a place for holding a canoe meet. There may be better places, but we have not found them, where the advantages for a canoe meet equal those of Ballast.

"When you accuse us of being Lah De Dahs and spending our time mixing drinks, and dancing attendance upon the women 'while the pretty little canoes lie upon the grass,' and 'the sails hang upon the trees, you do a great injustice, as the men who follow any one of these pursuits are a mighty small minority. O. A. Woodruff."

AMERICAN CANOE ASSOCIATION.

Sixteenth Annual Meet.

BLUFF POINT—LAKE CHAMPLAIN.

The sixteenth year of the American Canoe Association begins in one of the most charming camps that has yet been found in the course of many wanderings on Lake George, Lake Champlain, the St. Lawrence, the Canadian Lakes, the Hudson or Long Island Sound. In its adaptability to the purposes of an A.C.A. camp the present location is to be compared with Grindstone Island and Jessup's Neck rather than with the bogs of Willsborough and the arid dust hills of Croton Point, possessing natural features which leave nothing to be desired.

The central portion of the camp ground is a large plateau of rock, rising from the water's edge at an inclination of 1ft. in 12 to 15ft. until a height of 30 to 40ft. is reached back of the large meadow which forms the main camp. The first 30ft. of this rock adjoining the water is bare; immense flat slabs on which a canoe may be hauled up safely without a staging, though in some places the beach is formed of pebbles and small boulders, there being no sand anywhere. The rest of the rock is covered with a thin coat of dry sandy loam, just thick enough to give a hold for tent pegs, though the rock crops out in many places. The rock is broken by cracks and fissures in every direction, making a curious effect; where the soil is thin the grass is dry and brown, but in the deep fissures the grass is a bright green, the result being a brown surface covered with straight lines of bright green running in all directions.

Along the rocky beach is a scattered row of trees, mostly spruce, arbor vitæ and cedar, not close enough together to obstruct the outlook, but offering shade for tents. Other large trees are scattered at intervals over the field with many small evergreens. To the right and left (or south and north) are groves of evergreens, comparatively free from undergrowth and with the limbs high enough to admit of light, air and easy passage, with open spaces for the tents. That to the south is but little above the level of the beach, as it runs on into a pretty little bay. That to the north is in a rocky bluff, from 10 to 20ft. high, ending in a pretty little point.

On alighting from the Delaware & Hudson train at Bluff Point Station, carryalls are in waiting for a drive of ten minutes over a fine macadam road, turning off suddenly into a farm-yard, and there on over the rough meadows for a few minutes, finally drawing up at the highest point of the open field already described. Here, at an elevation of some 20ft. above the lake, the headquarters is arranged after the plan adopted by Com. Hume in 1892, the various tents being in a semi-circle, with the flagpoles in front. The central tent, or rather three tents in a row, belong to Com. Witherbee; on the north are tents for Secretary-Treasurer Cragg, the regatta committee and Signal Officer Holden. On the south are the tents of the campsite and transportation committees and Fleet Surgeon Nellis, the latter surmounted by the red cross flag. Each tent is on a platform about a foot above the ground, and Mr. Robertson, of the campsite committee, has amused himself by decorating the edge of each platform with a suitable inscription and appropriate emblems. In front of each tent is an open platform covered with an extra flag, making of headquarters a shady and comfortable rendezvous. A small dock has been built directly in front, but the water is too shoal for anything but a canoe or a naphtha launch.

The main camp begins just south of headquarters, and extends down through the south grove. Many tents are pitched in the open, or under the fringe of trees in the meadow, but others are among the trees in the grove, the Vespers as usual at the far end of the camp.

The north grove, the most beautiful portion of the grounds, is given up to the ladies' camp, a large one this year, and the most picturesque and pleasant location ever devoted to Squaw Point.

Just north of headquarters, between it and Squaw Point, a large mess shed and kitchen have been erected, with all the modern conveniences, a steam boiler and pump bringing water from the lake, while electric light wires have been run down the path from the Hotel Champlain, lights being strung along the path and also in the mess shed.

The mess service is conducted by an Albany caterer for the Hotel Champlain, and is the best for many years. The food is good, well cooked and well served by experienced colored waiters, the charge being $1 per day. The camp is readily accessible from New York, Boston, Albany and Montreal, though much less favorably situated for Toronto, Buffalo and Rochester. The round trip from New York costs $10 50 and from Boston $8.50, the time by rail being ten to twelve hours, or one night's journey. The nearness of the railroad station does away with the necessity for a launch, and makes the service prompt and cheap.

The water is excellent for sailing, Valcour Island offering a partial shelter. The outlook from the camp is very fine, the distant mountains of Vermont, the green shores of the lakes, the beautiful islands and the clear blue water making a perfect picture. There is no need of a trolley line to get from camp to a point where the races are visible, but a man may sit in the door of his tent and watch the whole course. Though but a few miles from Willsborough Point, the weather for this year at least is totally different. The frequent and violent thunderstorms and squalls that did so much to spoil the '91 and '92 meets have not troubled Bluff Point; they seem to pass over without harm. There have been several short storms during the camp, but mostly during the night, and the ground is so porous and so well drained by the broken rock beneath that one can walk dryshod within a few minutes after a heavy shower. The weather this year has been very pleasant, clear and bright by day throughout the meet, with summer skies of blue; not too warm for comfort at midday, and quite cool enough for extra blankets at night.

No previous camp has offered the same conveniences as this, nor been as much under the influences of civilization; but it cannot be said that the meet has suffered on this account. Plattsburgh, a large town, is but three miles distant; the Hotel Champlain is but half a mile from the camp, one of the largest, finest and most fashionable of American summer hotels; but very few townspeople have visited the camp, and on the other hand the canoeists have not left camp *en masse*, as on the daily expeditions to "Jag Harbor" in 1890. The canoeists have received every courtesy and attention from the management of the hotel, and have visited it by invitation on several occasions for dances and other entertainments; but the guests have made few visits to the camp, nor have the canoeists abandoned the camp for the hotel. Huyler's candy can be bought from a wagon in front of one's tent, clothes are taken for a laundry in Plattsburgh and returned in a couple of days, the mess shed and the walk to the hotel are lighted by electric lights, there is a telephone in the mess shed; but it must be admitted that with all of these elements of modern degeneration close at hand, with not one cwp outfit in use in the whole camp, the meet is made up of persons who have come here for a couple of weeks of healthy, happy tent life, and who are enjoying it thoroughly and sensibly. The camp has been troubled little by outsiders, and is troubling itself still less about matters outside its own limits.

The one pity is that with such a perfect location and such excellent arrangements, so few are present to enjoy them, the attendance up to race week being only about 130, and with few new arrivals promised. Comparatively few of the men who were present at the early meets are here this year, Will Wackerhazen, Brokaw, Butler, Huntington, Stephens, J. C. Edwards, of Ottawa; Moore, Winne, Wilkin, Goddard and the Leatts of Ottowa. Such old-time members as Oliver, Gibson, Leavy, Mix, Boux, Whitlock, Warder, Rathbun, Nickerson, E. B. Edwards, the Moekendricks, Foster, Ford, Jones, Bailey and Nate Smith, have not been seen or heard of. Among the later known A. C. A. men present known are Com. Witherbee and Secretary Cragg, members Lawrence, Lawson, Dorland, Hale, Sparrow, Gray, Schuyler, Dudley, Hand, Savage, McBean, Upham and Towne.

The New York C. C. has two representatives, the Ianthe one, the Red Dragon none, the Rochester one, the Toronto two, the Knickerbocker two, the Vesper four, the Puritan none, and so through the list; many clubs are not represented and none have more than a few members.

Why men do not come to a place like this it is hard to say; certainly those who have ventured this year have been well repaid, though the marked absence of familiar faces is rather saddening to the older men.

Of canoes there are a fair number, most of them open paddlers, a few old-time sailing canoes and very few racing craft—with no war canoes, no canoe yawls, cruisers, nor "Class C" craft. There are very few launches or yachts. Mr. Carpenter, of Sing Sing, has a naphtha launch, and Dr. Savage, of Newburgh, has cruised to the meet in a small kerosene launch. What may be expected from the racing is shown in the following list of entries up to Monday morning:

Canoe.	Name.	Club.	City.
Bug	Paul Butler	Vesper	Lowell.
Bee	D. S. Goddard	Vesper	Lowell.
Wasp	Howard Gray	Vesper	Lowell.
Fly	Butler Ames	Vesper	Lowell.
Torment	F. C. Moore	New York	New York.
Laidee	H. V. Backus	Irondequoit	Rochester.
Onajag	H. D. McVean	Irondequoit	Rochester.
Az Iz	J. R. Stewart	Irondequoit	Rochester.
Sevilla			
Kionilla	C. E. Cragg	Bulwagga	Port Henry.
Eel	J. W. Sparrow	Toronto	Toronto.
——	R. O. King	Toronto	Toronto.
Crescent	C. Cartwright	Cataragué	Kingston, Ont.
Black Diamond	Wendell Andreas	Bogota B. C.	Bogata, N. J.

The only specially notable canoe in the list is Bug, a new boat built by Stevens, of Lowell, from Butler's designs, a very fair and handsome model, the lines round and full. She has several peculiar features in her fittings, the centerboard is about 4ft. 6in. long, of aluminum, ¼in. thick, with a thick plate of lead on the lower corner. The trunk is placed just to port of the fore and aft centerline, while the mizenmast is placed abreast of the trunk and to starboard of the middle line, thus allowing the board to be raised or lifted clear out. The deck seat is very far forward, over the fore end of the board. The old Fly is fitted with a similar lead and aluminum board, placed on one side of the center. All of the Vesper canoes have solid plate rudders of aluminum, ¼in. thick, the usual rudder yoke and double lines to the deck tiller being replaced by a half yoke—one arm only—on the rudder, with a rod of wood connecting it with the deck tiller, an adaptation of arrangement known as the "Norwegian tiller," and once used by canoeists before the invention of the thwartship tiller. The four canoes carry the Butler hoisting rig, materially improved in cutting and making of sails and in small details of fittings, but with nothing new in shape The outfit of hollow spars, all of sail wood veneer after Mr. Butler's method, is the finest ever seen at a meet. As now rigged only two masts are needed for each canoe, the complete outfit of hoisting sails, from the two largest of a total of 180ft. downward, being interchangeable on these masts. The Vesper party still have their work tent, completely equipped with tools, and Mr. Butler did some very neat repair work in camp on Fly, mending four different breaks in the garboards caused by a badly fitting crate. The excellent work put into these light canoes by Stevens is shown by their condition after six or seven seasons of hard service.

Rifle Range and Gallery.

Dorman to Ross.

St. Louis, Mo., Aug. 16.—Some time since there was published in Forest and Stream a challenge from Mr. Gus. Zimmerman, of New York, offering to back Mr. F. C. Ross against Mr. A. J. Vandusen, of Winona, Minn., in a 100-shot race with a rifle at 200yds. for $1,000 or more a side. This was promptly accepted by the challenged party, and the time set for February, 1896, the challenged party giving as his reason for naming February that his business prevented him from taking a vacation at any other time during the year.

In the light of subsequent events and of Mr. Zimmerman's later article in regard to "climatic conditions," offering to shoot the match in "hot weather," after the Minnesota gentleman had expressly stated in his acceptance of the challenge that it would be impossible for him to shoot before February, the question arises, Was the New York gentleman in earnest when he made the challenges, or as a prominent rifleman suggested, "making a great big bluff?" I sincerely hope that time will prove that the last suggestion is not the true solution of the challenge, as the event would be of the greatest interest to all lovers of rifle shooting, and their name is legion.

Now, if the Eastern gentlemen are in earnest and really want to shoot the match, in the interest of "clean records" I will make this suggestion as a lover of fair play: Why not accept Mr. Vandusen's offer to shoot in February? Put up a forfeit and find out if the Western gentleman is bluffing.

I do not understand what objections Mr. Ross could have to shooting in February, when one of his best 100-shot scores was made at Wissel's Park on the 19th of March. And I know from experience that March weather in the vicinity of New York is not any better adapted to fine rifle shooting than February weather half way between Minnesota and the old Atlantic.

It is said a Kentucky gentleman will "shoot first" and apologize afterward. What will the New York gentleman do?

Sam G. Dorman.

Presque Island Rifle Club.

ERIE, Pa., Aug. 10.—The following scores were made to-day by members of the Presque Island Rifle Club:

Conditions: 200yds., off-hand, any rifle and trigger pull:

Revolver Shooting in England.

LONDON, England, Aug. 1.—Below are details of scores made at the North London Rifle Club, Mr. Winans having the best score yet made at 50yds. at the club:

July 31, 50yds., stationary targets: Walter Winans 38, Knapp 34, Comber 33, Capt. Earle 33, Major Munday 33, Lieut. Baxter 28, Lieut. Richardson 28, Howell 28, Carter 28, Gareud 26, Luff 24, Franzmann 23, W. Treadwell 21.

At the South London Rifle Club very few members shot last week as below:

July 25, 20yds., stationary target:	50yds.:		
Capt. T. W. Heath	666777—39	Capt. T. W. Heath	456757—34
Lieut. J. Howard	774677—38	Lieut. J. Howard	737737—34
E. Howe	577655—35	E. Howe	537774—33

Mr. Winans has scored now within two points of his winning score of last year for the revolver championship of the club; he intends to try and make up these two points before stopping for the season. It can be easiest done by improving on his score of 39 in the 20yds. range, made on a windy day.

Scores toward the revolver championship of the club to date:

	20yds.					50yds.				
Walter Winans	41	41	40	40	39	40	39	39		—319
T W Heath	39	39	39	39	38	37	37	36		—306
Knapp	40	40	38	38	30	38	35	31		—250

F Rand	42	36	..	..	..	35	..	..	..	—...

Lyman Rapid-Fire Target.

THE Lyman rapid fire rifle targets are finding much favor. They are in two sizes, for 25yds. and 50yds. The smaller one sent post-paid for 15 cents a dozen, the larger one for 25 cents a dozen, by the Forest and Stream Publishing Co.

Trap-Shooting.

All ties divided unless otherwise reported.

If you want your shoot to be announced here send in notice like the following:

*FIXTURES.

Aug. 27.—SPRINGFIELD, O.—Second monthly tournament of the Home City Gun Club; targets; professionals barred.

Aug. 27-29.—CHARLOTTE, N. C.—Tournament of the Interstate Association, under the auspices of the Charlotte Gun Club.

Aug. 28-29.—FREDERICK, Md.—Two days' tournament of the Frederick Gun Club, at targets.

Aug. 28-29.—IONIA, Ill.—State Meeting of the Michigan Trap-Shooters' League, under the auspices of the Ionia Gun Club.

Aug. 29-30.—SHERBURNE, N. Y.—Tournament of the Sherburne Gun Club.

Aug. 29-31.—HOT SPRINGS, S. D.—Hot Springs Gun Club's second annual tournament.

Aug. 30-31.—CHICAGO, Ill.—First monthly shoot of the Cook county Trap-Shooters' League, Chas. Grubbs, manager

Aug. 31.—SPRINGFIELD, N. J.—Team shoot between the Union Gun Club, of Springfield, and the Endeavor Gun Club, of Jersey City.

Sept. 2.—MARION, N. J.—Annual tournament of the Endeavor Gun Club; targets.

Sept. 3.—NEWARK, N. J.—Tournament of he South Side Gun Club; targets. New Jersey Trap Shooters' League contest at 2 P. M. W. R. Hobart, Sec'y.

Sept. 4-5.—UTICA, N. Y.—Two days tournament; live birds and targets.

Sept. 4-5.—SHEPHERDSTOWN, W. Va.—Morgan's Grove Fair Association's tournament, under the management of the Interstate Association

Sept. 5.—MICHIGAN CITY, Miss.—First semi-annual tournament of the Michigan City Gun Club.

Sept. 6-7.—WARREN, O.—Tournament of the Warren Gun Club. H. B. Perkins, Jr., Sec'y.

Sept. 10-12.—INDIANAPOLIS, Ind.—First annual tournament of the Limited Gun Club. Royal Robinson, Sec'y.

Sept. 10-13.—DETROIT, Mich.—The Des-Chree-Shos-Ka annual tournament, under the management of Jack Parker.

Sept. 10-13.—ST. PAUL, Minn.—Annual tournament of the St. Paul Gun Club; John P. Burkhard, Manager.

Sept. 11-12.—FRANKFORT, Kansas.—Tournament of the Frankfort Gun Club.

Sept. 11-13.—LANCASTER, Pa.—Tournament of the Lancaster Gun Club; first day, targets; second day, live birds.

Sept. —.—FREDONIA, N. Y.—Tournament of the Clover Trap and Target Company. $1,000 added money.

Sept. —.—ROCHESTER, N. Y.—Fourth annual tournament of the Rochester Rod and Gun Club; three days of the week following the Clover tournament.

Oct. 8-10.—SHERIDAN, Wyo.—Tournament of the Sheridan Gun Club, under the management of Frank Crabill and Mark R. Perkins.

Oct. 9-11.—NEWBURGH, N. Y.—West Newburgh G. and R. Association tournament. W. C. Gibb, Sec'y.

Oct. 15-17.—ALEDO, Ill.—Annual tournament of the Aledo Gun Club; live birds and targets. J. W. McRoberts, Chairman of programme committee.

Oct. 16-17.—WEIR CITY, Kan.—Live-bird championship of the State under the auspices of the Business Men's Gun Club.

Oct. 23-24.—ELIZABETH, N. J.—Fourth bi-monthly tournament of the Elizabeth Gun Club; first day, targets; second day, live birds.

Oct. 23-25.—ATLANTA, Ga.—Annual tournament of the Clarke Hardware Company; targets; $600 added money.

Oct. 25-26.—SEATTLE, Wash.—First annual tournament of the Washington State Sportsman's Association, under the auspices of the Seattle Gun Club; live birds and targets. C. F. Graff, Sec'y.

Oct. 27-30.—SAN ANTONIO, Texas.—First annual tournament of the San Antonio Gun Club; Willard L. Simpson, Sec'y.

Nov. 5-7.—KEWANEE, Ill.—Annual tournament of the Kewanee Gun Club.

1896.

Jan. 4-5—PHŒNIX, Ariz.—Annual tournament of the Arizona State Sportsmen's Association.

Jan. 9-11.—SAN ANTONIO, Texas.—Grand mid-winter tournament, under the management of Texas Field; $2,500 added.

April 1-3.—NEW YORK.—Interstate Association's Fourth Annual Grand American Handicap.

May 5-8.—New York.—Tournament of the American E. C. Powder Company; $2 000 added money.

May (second week).—MEMPHIS, Tenn.—Tournament of the Memphis Gun Club, $2,000 added money.

May 26-28.—FRANKFORT, Kan.—Annual tournament of the Kansas State Sportsmen's Association.

May 30-June 1.—MILWAUKEE, Wis.—Eleventh annual tournament of the South Side Gun Club.

June 17-19.—CLEVELAND, O.—Third annual tournament of the Chamberlin Cartridge and Target Company.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed.

While writing of Swody's ten-mile tramp, a good story on Frank Mason comes to mind. It occurred some time in '91, about two years prior to the organization of the Altoona (Pa.) Rod and Gun Club. The present grounds of the club at Wopsononock, where it holds its monthly shoots, had been laid out, and the club house built by Bill Clark, who gave a tournament up there. Frank Mason, as representative of FOREST AND STREAM, went to attend the shoot. To get to "Wopsy" one had then, as now, to take the A. C. & N. narrow-gauge railroad at Juniata, a suburb of Altoona. At that time it was a one-train-in-the-morning-and-one-in-the-afternoon schedule, and Mason, through some mishtake in the hour, missed the morning train, arriving at Juniata a few minutes after it had left. As the crow flies it is about three miles from Juniata to "Wopsy," and the mountain top looks invitingly near. By the high road it is but little more than three and one-half miles, and decent walking at that. Mason decided not to wait for the afternoon train—he'd walk up. Also he'd follow the railroad track; he knew where that would lead him, and he was uncertain about the highway. Anybody who has attended one of the Altoona Club's enjoyable shoots knows how that railroad twists and turns in its endeavors to climb the 1,100ft. to the summit. Well, Mason followed that track. There's about eight miles of it before you get to the top of the mountain, and tough walking, too. He didn't beat the afternoon train by many minutes either.

The opening shoot at Elkwood Park was a success. With a little better accommodation for shooters, cashier, scorer and spectators, the place will be a popular resort for trap-shooters. Handicaps, such as that which was brought off at Elkwood Park on August 15, are bound to become favorites with the masses, and if they do seem a little severe on experts, the latter have no cause for grumbling, as they get the best end of the stick on every other occasion. We think, however, that in all similar races, where the background is at all dark, a couple of judges, one at each end of the score, should be selected in order that they may assist the referee. Had that been done at Elkwood, one or more apparently "dusted" targets might have been scored as breaks to the advantage of the shooter. To us, Apgar's last cypher in his fourth string looked like a "dusted" target, and although challenged promptly, no one spoke to us in favor of a break until after the event was over. We have maintained over and over again that no one man can referee absolutely correctly, although he decides as the target appears to him. He has seen *no perceptible piece*, whereas men in other position have seen two or three perceptible pieces. That one target meant a half of fourth money to Apgar.

Mr. C. F. Rood, secretary of the Valley City Gun Club, of Grand Rapids, Mich., writes under date of Aug. 15 as follows: "The Valley City Gun Club has been notified that the Zeeland (Mich.) Gun Club is after its scalp, and after the trophy emblematic of the State championship, presented by *Shooting and Fishing*, which is now held by this club. The challenge has been accepted, and the shoot arranged to take place at 1 P. M., Aug. 24, on our grounds. It is going to be no walkover for either club, for though the Grand Rapids men have held the title of champion undisputed since they won the trophy from the Battle Creek team, yet the Zeeland team is composed of thorough sportsmen and crack field shots. The names of the members of the different teams are: Valley City G. C.—M. K. Walton (captain), R. C. Wharton, H. J. Gilmore, R. C. Widdicomb and W. S. Coleman; substitutes, G. A. Gould and A. L. Holcomb. Zeeland G. C.—H. H. Karsters (captain), H. R. Van Eyck, F. Heifte, P. Smits and A. Smits; substitutes, A. Kamps and D. Borst.

Talk about being fond of a gun! Of course, there are plenty of men who will tramp over mountains or marshes all day long and come back at night with precious little to show for their self-imposed labor. But J. Swody, a member of the Climax Gun Club (and who, by the way, scored 20 out of 25 for his club on Aug. 7), has pretty nearly a record. His club had its monthly shoot during haying time, but Swody was bound to be there and shoot his score. First thing in the morning he got up and cut a swath all round his hayfield, so that his men could go right on with the machine. Then, as his horses were all busy in the hayfield, Swody shouldered his gun, pocketed his shells, and walked the five miles that lay between his home and the club's grounds. When all was over he covered the same five miles on foot once more. That's a record that is seldom beaten—at least, we think so.

Elmer E. Shaner, manager of the Interstate Association, was in New York last week *en route* from New Orleans. He said that the shoot in that city, a report of which appears elsewhere, was one of the most successful ever held by his Association, and prophesies that the Charlotte, N. C., tournament next week will add another big success to the record of 1895. "Charlotte will be a corker," said he.

The Aledo (Ill.) Gun Club announces that it will hold its annual tournament on Oct. 15-17. There will be events at live birds and targets, the distribution of these events being arranged in the programme that will be issued shortly by the programme committee, of which J. W. McRoberts is chairman. Cash and merchandise prizes will be offered by the club.

The Maplewood (N. J.)—Peekskill (N. Y.) team race, which was set for last Saturday, Aug. 17, at Maplewood, had to be postponed owing to the sickness of some of the members of the Peekskill Club. It will take place to-day, Aug. 24, and at Maplewood, of course. It will be a great race and well worth seeing.

We have received the following letter from Major R. H. Breintnall, President of the South Side Gun Club, of Newark, N. J.: "I understand that the Endeavor Gun Club have claimed Labor Day for their annual shoots. The South Side will therefore cheerfully give way, so kindly cancel our shoot for that day. The league shoot will be as advertised, Tuesday, Sept. 3. Our shooting stand will be inclosed by next Saturday, so our shoots will take place rain or shine." As there will be nothing now to conflict with the Endeavor's shoot on Sept. 2, there should be a good crowd at Marion.

The Des-Chree-Shos-Ka programme is noted elsewhere. Jack Parker probably knows as well as anybody what will draw the boys to his shoot, and has embodied in his schedule for Sept. 10-13 several attractive events.

W. C. Preston, of Charlotte, N. Y., won the Skinner badge of the Manitou Rod and Gun Club, of Rochester, N. Y., on Aug. 10. The members are handicapped by extra allowance of targets, Preston shooting at 40. He broke 29 of them and took the badge. There were two 28s and seven 27s.

W. W. Bennett, the "Bill Jones" of Massachusetts (?), did some great work on Aug. 8 at the Richmond (Me.) Gun Club's tournament. His score was 143 out of a possible 150.

In a live bird sweep at 20 pigeons, shot recently on the grounds of the Independent Gun Club, of Reading, Pa., the following scores were made: O. I. Melott 20, J. E. Smeck and J. Shaaber 19, John Becker and George Zellers 17, George Gruber 13, and John Dunkel 9.

C. Riley, of the Armstrong's Point Club, of Winnipeg, Man., has won his club's championship and the gold medal presented by E. J. MacKay, the honorary president of the club.

The Hollywood, N. J., championship, set for Aug. 20, fell through, owing to lack of entries. The event may be brought off at some future date.

There was some little regret expressed at Elkwood Park, N. J., on Aug. 15 that Dickey's 97 out of 100 didn't bring him first money. But Dickey himself did not appear to regret it, while "Puck's" victory was a very popular one, and Boston got it after all.

Isn't it time that some one was challenging somebody else for a championship of some kind? This sounds vague, but it's on a par with most of the championship challenges during the past twelve months.

Owing to the date, Aug. 31, being unsatisfactory to the Union Gun Club, of Springfield, N. J., the team race between that club and the Endeavor Gun Club, of Jersey City, N. J., has been postponed until Sept. 7.

The Nyack (N. Y.), Gun Club will hold a shoot to-day at West Nyack, near the West Shore depot. There will be both live-bird and target events, shooting commencing at 10 A. M. The live-bird events will be started at 1 P. M.

Noel Money returned from his Southern trip on Monday, Aug. 19 He was brown as a berry, more in love with the South than he ever was, and full of the excellent sport he had while in Memphis on his way home from the New Orleans tournament. He says those doves down there can fly pretty fast too.

Mr. Mark R. Perkins, of Sheridan, Wyo., writes that the Sheridan Gun Club will hold a three days' tournament, Oct. 8-10, at live birds and targets, $250 being added to the purses.

EDWARD BANKS.

Boston Kept the Trophy.

WELLINGTON, Mass., Aug. 16.—To-day saw an old-time attendance at the grounds of the Boston Shooting Association. The chief attraction was the contest for the *Shooting and Fishing* State team championship trophy, which was held by the members of the home club. The Worcester (Mass.) Sportsmen's Club had challenged for this trophy and were on hand to fight for State championship honors. The contest is at 50 targets per man, 250 to the team of five men, 30 targets shot one man up, five unknown traps, and 10 pairs, regular order. The result was a win for the Boston men by the score of 187 to 147. The winners in the other events were:

No. 1, 10 targets, unknown angles: Davis, first; Eager, Barrett and Mascroft, second; Jones, Snow, Puck, Kenerson and Herbert, third; A. W. Walls, fourth.

No. 2, 10 targets, known angles: Eager, first; Jones, second; Barrett, Davis, Wesley, Kenerson and Puck, third; Herbert, fourth.

No. 3, 10 targets, unknown angles: Herbert and Mascroft, first; Eager, Davis and Walls, second; Wesley and Kenerson, third; Puck, fourth.

No. 4, 5 pairs: Jones, Herbert and Puck, first; Eager and Walls, second; Barrett, Wesley, Kenerson and Snow, third; Buck and Davis, fourth.

No. 5, 15 targets, known angles: Eager and Herbert, first; Jones and Kenerson, second; Barrett, third.

No. 6, 10 targets, unknown angles: Jones and Herbert, first: Davis and Puck, second; Eager, Barrett and Wesley, third; Buck, fourth.

No. 7, 10 targets, reversed traps: White and Barrett, first; Herbert and Wesley, second; LeRoy and Kenerson, third; Eager, fourth.

No. 8, 5 pairs: LeRoy, first; Dickey, second; Jones, Herbert, White and Davis, third; Eager, Barrett, Puck and Walls, fourth.

No. 9, 10 targets, unknown angles: Barrett, Puck and Bartlett, first; Herbert, Davis, Wesley and Kenerson, second; Gore, White and LeRoy, third; Eager and Jones, fourth.

No. 10, 10 targets, known angles: Eager, Barrett, LeRoy and Jones, first; Herbert, Wesley, Buck and White, second; Davis, Puck, Walls, Parker and Mascroft, third; Snow and Kenerson, fourth.

No. 11, 10 targets, unknown angles: Barrett, first; Eager, Herbert, LeRoy and Kenerson, second; Wesley, third; Davis, Puck, White, Parker and Mascroft, fourth.

No. 12, 10 targets, known angles: Climax, LeRoy, Bartlett, Jones and Herbert, first; Gore, Rule, Yarp and Eager, second; Parker, Wood and Barrett, third; Puck, fourth.

No. 13, 10 targets, unknown angles: Bartlett, Rule and Herbert, first; Climax and Barrett, second; Yarp, LeRoy and Parker, third; Puck, Davis, Eager and Kenerson, fourth.

No. 14, 5 pairs: LeRoy and Herbert, first; Wesley, second; Davis and Gore, third; Eager, Bartlett and Barrett, fourth.

No. 15, 10 targets, unknown angles: LeRoy and Kenerson, first; Jones, Puck, Herbert and Bartlett, second; Eager, Climax and Barrett, third; Parker and Rule, fourth.

No. 16, 10 targets, known angles: Yarp and Climax, first; Parker, Rule, Wood, Jones and Kenerson, second; LeRoy, Davis, Bartlett and Herbert, third; Eager and Wesley, fourth.

No. 17, 10 targets, reversed traps: LeRoy, Eager and Bartlett, first; Parker, Barrett and Rule, second; Climax and Herbert, third.

No. 18, 10 targets, known angles: LeRoy and Herbert, first; Puck, Jones, Rule and Barrett, second; Climax and Bartlett, third.

No. 19, 25 targets, known angles: Climax, first; Barrett, second; Herbert, third.

No. 20, 10 targets, unknown angles: Bartlett, first; Parker, Barrett, Rule, Eager and Wood, second; LeRoy, Puck and Herbert, third.

No. 21, 10 targets, known angles: Climax, Eager and Barrett, first; Parker, second; Puck and Herbert, third.

No. 22, 30 singles and 5 pairs, sweep on trophy contest: Herbert, first; LeRoy, second; Davis, Dickey and Barrett, third; Eager, Climax and Jones, fourth. MEDFORD.

Valley City Gun Club.

GRAND RAPIDS, Mich., Aug. 10.—The table given below shows the scores made at the two recent weekly shoots of the Valley City Gun Club. Nos. 1-5 were shot on Aug. 2, Nos. 6-10 to-day. The hot weather and the attractions offered at the many summer resorts in this vicinity tend to keep all but the most enthusiastic shooters from attending these weekly shoots. Table is as follows:

Events:	1	2	3	4	5	6	7	8	9	10*
Targets:	10	25	20	15	10	20	20	20	15	10
Karsters	9	21	14	12	..	..	..	..	..	..
Coleman	9	11	14	13	8	16	19	17	10	5
Smith	6	16	14	10	..	11	14	9	9	6
Calkins	10	..	11	..	8	..	..	..	..	..
Bennett	..	8	4	12	6	..	..	..	..	..
Kelsey	..	..	w	9	8	13	14	14	9	..
Nixon	..	..	..	..	4	..	..	..	..	..
Plant	..	..	..	..	6	..	..	..	..	..
Norris	..	..	..	..	..	..	w	17	..	3
Wharton	..	..	..	..	..	..	..	..	12	7

* No. 10 was at 5 pairs. C. F. ROOD, Sec'y.

Drake Defeats Class.

MORRISTOWN, N. J., Aug. 16.—The following are the scores made on these grounds to-day; as will be noticed W. N. Drake was in capital form, shooting well in both his matches:

Match, 50 targets per man, unknown angles:

W N Drake.....0111111111111111101101101111101011111111111111111111—43

Frank Class.....0101111101111011100111101101111111101101011w —34

After the above the following match was shot off, Drake shooting at 50 targets and Shelley at 60. Score:

W N Drake.....1111111111111111111111101011111111111111111111—48

Bert Shelley.....1101110100011110110111111111100101101111110110111 0010111111 —45

WESTERN TRAPS.

TOM MAGRUDER'S TOWN.

CHICAGO, Ill., Aug. 14.—It would hardly do to pass with so brief a notice as that of last week the successful tournament at Kankakee, Ill., which experts like Eddie Bingham, Abe Kleinman and Mayor Tom Marshall call the best shoot held in this section since June. All the foregoing and many others say that the happiness and smoothness of the Kankakee shoot was due to the management, and the management, it was Tom Magruder. All the money advertised was actually hung up, and it was good money too. Visiting shooters were royally entertained, and next year will see a still larger attendance of shooters at Tom Magruder's town. FOREST AND STREAM presents exclusively tabulated scores in full of the Kankakee shoot:

First and Second Days.

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20

Ten dollars was added to Nos. 3 and 5, $25 to No. 6 and $30 to No. 9; merchandise prizes were added in No. 2. No. 3 was at 10 pairs and 5 singles.

EUREKA AND GARFIELD AGAIN.

As was stated earlier, the two leading target clubs of Chicago met again last Wednesday, Aug. 14, in friendly rivalry, this time with 5-men teams, and under the conditions of the *Shooting and Fishing* Cup competition for the State championship, at 30 singles and 10 pairs. This race was shot on Eureka Club grounds and was a close and pretty thing throughout. Victory was again with the Eurekas, who ran out 11 birds to the good. In the practice sweep before the race it became evident that about all the men could smash doubles a good many, and this ability continued about even for both teams till toward the close of the race. At the end of the first 25 birds the teams were tied. At 30 birds they were only 1 bird apart, Eureka leading. At the end of the first 5 pairs they were again tied, and from there out it was ding-dong. Half through the last 5 pairs Eureka was seen to be 6 birds ahead, and in the home stretch she added another 5 birds and won.

The top score, and a very good one at this sort of shooting, was made by Eddie Bingham, who pushed a large diamond horseshoe against the scoring line to the extent of 46 out of the 50. Abe Kleinman, the old and reliable, who is shooting targets very strong these days, was second man with 42, so it was nearly horse and horse. The shooting was one man up, 5 traps down. Silas Palmer and Gen. Airey judged, Mr. Lanphere refereed. Score:

Eureka.

Garfield will challenge as early as possible under time limit. On Aug. 24 the two clubs will again shoot 18-men teams at Garfield grounds.

SOUTHERN WISCONSIN SERIES.

In the series of club shoots for the Burnham medal, among Milwaukee and lower Wisconsin clubs, the South Side Gun Club, of Milwaukee, leads, with five wins out of eight shoots. It next shoots Hartland Gun Club. On Aug. 13 Columbus Gun Club defeated the South Siders, 113 to 107. Score:

Columbus Gun Club—R. S. Rockwell 24, H. O. Anderson 16, T. S. Maxwell 25, R. Peck 22, G. N. Deering 25.

South Side Gun Club—G. C. H. Sehfeld 23, J. P. Carmichael 21, L. J. Pettit 20, Rock 20, J. H. Johnson 24.

NIP AND TUCK AT NEPONSET.

A rattling little tournament was held Wednesday, Aug. 14, at Neponset, Ill., entries running into the two dozen or more, with some good shooting company. The event of most interest was the 6-men team shoot, 20 birds, between Neponset, Princeton, Kewanee and Sheffield clubs, Neponset winning. Scores:

Neponset: Studley 18, Snow 18, Lyle 19, Kopp 20, Stuart 18, Robinson 17—110.

Kewanee: Baker 17, Huckins 19, Crain 15, Norton 17, Sharp 18, Miller 12—98

Sheffield: Humphrey 16, Stapleton 15, Klock 16, Alexander 17, Kildow 6, Battey 17—97.

Princeton: Bailey 16, Priestly 13, Wagner 19, Brown 18, Stewart 17, Powell 11—94.

EVANSTON MONTHLY.

Evanston Gun Club, of Cook county, held its regular monthly shoot Aug. 14, with practice at live birds and targets. Leading live bird scores follow:

Twenty-bird sweep: Geo. Franklin 20, J. J. Smith 18, Fred. Delick 18, Charles Steinbuck 16, L. Gilbert 15, Geo. Beck 12.

CANTON CRACKAJACK.

Canton, Ill., is holding a crackajack shoot this week, Aug. 14 and 15. The entry was unexpectedly large. Rolla Heikes and Tom Marshall blew in, and they found good pacemakers on hand for them. Following are some of the leading scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
Targets:	10	15	10	20	25	10	15	10	20	25	15	10	15	20	25

Nos. 1 to 5 were shot on the first day, Nos. 6 to 15 on the second day.

COLUMBUS ANNUAL.

The gun club of Columbus, Wis., held its first annual shoot this week, Aug. 15 and 16. I observe that W. H. (or perhaps one might say "W. A.") Skinner was with them. Some of the winning scores follow:

No. 2, 15 birds: Reed and Dering, 15 each; Wallace and Johnson, 14 each; Dr. Ford, third.

No. 4, 10 live birds: Wallace and Johnson, 10 each; Dering and Reed, 9 each.

No. 5, 10 singles and 5 pairs: Dering 19, Johnson 17.

No. 6, 15 birds: Dering, Wallace, Reed, Johnson and T. S. Maxwell, 14 each.

No. 7, 15 birds: Jack Rabbit, Johnson, Reed, Wallace and H. Anderson, 15 each.

No. 8, 15 birds: Dering and Johnson, 15 each.

No. 9, 15 birds, reversed traps: Johnson, 14; Skinner and Wallace, 13 each.

No. 11, California sweep, miss and out: Dering and Johnson, 23 each.

No. 12, 15 birds: Johnson, 15; Skinner, Rockwell and Dering, 14 each.

Second Day.

No. 2, 15 birds: Jack Rabbit, Johnson and Deering, 15; Skinner, Bellack and Jones, 14.

No. 3, 20 birds: Deering and Johnson, 20; Drought, Skinner and Rockwell, 18.

No. 4, 15 birds, unknown angles: Bryant, Skinner, Deering and Jones, 14; E P. Jones and Rockwell, 13.

No. 5, 10 singles and 5 pairs: Johnson, 18; Deering and Skinner, second.

No. 6, 7 live birds: Cosbrant and E. P. Jones, 7; Deering and Marvin, 6.

No. 7, 15 birds: Deering and Anderson, 15; Skinner, Vogle, Rockwell, Johnson, Dr. Jones and Drought, 14.

No. 8, 15 singles, unknown angles: Deering, Skinner and Johnson, 14; Bryant, Keeley, Dr. Jones and Drought, second.

No. 9, 6 live birds: Drought, Rockwell and Deering, 6; Johnson, Henry and Peck, 5.

LAKE CITY SHOOT.

The second annual shoot of the Lake City Gun Club, of Warsaw, Ind., will occur Aug. 21 and 22. Mr. Joe S. Campfield, secretary, puts out a good practical programme, about half of it on English sparrows. "Ten English sparrows, $2.50," ought to mean something to somebody. The shooting at the sparrows to be rapid-fire, "no birds retrieved." This clause one can only deprecate emphatically. A sparrow is a small bird, it is true, and its life seems of small moment, but in shooting at sparrows with No. 9 shot a great many birds will be crippled, not killed; and if the non-retrieving rule be adhered to, as I hope it will not, the ground will in a short time be covered with hopping, moving, suffering, crippled birds. Sportsmen owe it to themselves and to the sport of the gun to shoot a sparrow race just as they would a pigeon race, retrieving each bird as shot. If this cannot be done, let them dismiss this form of sport as impractical. The bird may be small, but the cruelty and inhumanity to it are monstrous. I have seen enough of sparrow shooting where retrieving is not done, and I hope the gentlemen at Warsaw will change this rule and hold a shoot over which they need feel no mental reservations. Railroads leading to Warsaw have an excursion rate to Eagle Lake, two miles from Warsaw, and shooters can get over for half fare. There should be a pleasant tournament.

ST. PAUL GRAND ANNUAL.

The St. Paul, Minn., Gun Club will give its grand annual shoot the week of the State Fair, four days, Sept. 10-13. There will be good money up and plenty of good shooting and good shooters. The tournament is open to the world, and everybody ought to be there.

REMEMBER.

Remember Charlie Grubbs's shoot (and the Cook County League), Aug. 30-31, at Cicero grounds, Chicago.

GARFIELD-ELGIN.

Aug. 17.—Elgin Gun Club, of Elgin, Ill., sent over a baker's dozen of good shooters to-day to try conclusions with Garfield Gun Club, of Chicago. The race was shot this afternoon on the Garfield grounds, and was a very pretty little affair, of a sort to interest both clubs and keep alive the spirit of friendly competition which is the soul of the sport. It was intended to shoot two races, one of 12-men teams, then one of 5-men teams, but the former race took up the afternoon, 3 men entering on each side who did not shoot on the teams, but shot out the 50 birds with the others. The contest was even for such large teams, but Garfield proved too strong, winning by a score of 508 to 470. The race was at 50 singles, unknown angles, known traps. Eddie Bingham refereed. The feature of the game was the shooting of Old Hoss Stanuard (the head of Montgomery Ward & Co.'s gun repair department), who only lost one bird out of the 50. Stannard is shooting a very stiff gait these days, even better than he used to before he moved down from Milwaukee. The Chicago boys can scare up a pretty good target team when they try.

In the evening after the shooting the Garfield boys entertained the Elginites at a little dinner at the Tremont Hotel.

Vice-President Dole, of the Illinois Association, was one of the Elgin team and shot a good gait.

Mr. D. F. Pride, long identified with sporting journalism and recently located in business at Santa Aña, Cal., was at the grounds this afternoon and was greeted by many old friends. Mr. Pride is in Chicago on a long visit, and many friends wish he were back to stay.

Following are the scores of the team race. It should be explained that Mr. Coppernoll ("Cop") shot the first 10 birds on Mr. Hawthorn's score, the latter finishing. Mr. Patterson, one of the Garfield standbys, was obliged to leave after shooting 20 birds. Mr. Coppernoll finished his score for him on the last 30.

DOUGLAS GUN CLUB.

Douglas Gun Club, of Chicago, had nine members out at its club shoot to-day, Aug. 17, on the grounds at Fifty-fourth street. The regular club event was shot at 25 singles. Mr. M. J. Eich was in the lead with 24. This was his score also at the last club shoot.

REMEMBER AGAIN.

Remember Charlie Grubbs's shoot, Cicero grounds, Aug. 30-31. Charlie has his programme out to-day, a very good and promising one. Be with him.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

Des-Chree-Shos-Ka's Programme.

In arranging a programme for the four days of his tournament at Des-Chree-Shos-Ka, Sept. 10-13, Jack Parker has offered to intending visitors something similar to that which tickled the shooters at his "joke-shoot" last year. But he also offers them a schedule of ordinary events with specially attractive features interspersed and with good, solid money guarantees. As a rule guarantees don't carry much weight, but in this instance they "go," as the phrase has it. Special features are numerous. They run as follows:

First day: Event No. 5, two-men team championship of the United States and Canada, any two men to constitute a team, 25 targets per man, 50 per team, unknown angles, entrance $1.50. The prizes offered are: First, two diamond buttons (to become property of winners); second, $30; third, Marlin safety take-down rifle; fourth, split bamboo fly rod; fifth, 500 Peters Cartridge Co.'s loaded shells. On this day there are also three 10-target events, $1.50 entrance; two 15-target events, $2.75 entrance, $75 guaranteed in each event; one 20-target event, $3.75 entrance, $100 guaranteed, and one 25-target event, $4.75 entrance, $150 guaranteed.

Second day: No. 6, 100 targets, J. F. Schmelzer & Sons' trophy contest, representing the championship of the world at inanimate targets thrown from traps in reversed order. There are also two 10-target, three 15-target events and one 20-target event similar to those on the first day.

Third day: No. 6, 25 targets, 75 cents entrance, for the Gillman & Barnes gold medal, value $150, representing the expert championship of the United States and Canada. The other events on this day are two 10-target, two 15-target, one 20 target and one 25-target event, under conditions as to guarantees similar to those on the first day.

Fourth day: No. 6, American E. C. Powder Company's championship cup for the handicap championship of the United States and Canada, the cup to become the property of the winner; scratch men to receive 50 targets, allowance of extra targets to others, $1.50 entrance, unknown angles. There are six prizes for this contest: First, cup; second, Colt's .22cal. repeating rifle; third, 500 Cruttenden & Card's hand-loaded shells; fourth, 500 Peters Cartridge Co.'s new metal-lined loaded shells; fifth, split bamboo trout rod (one of Fred. Divine's best); sixth, Genicke's. On this day the programme is exactly similar to the one for the third day, except event No. 6, which is as above.

The most interesting portion of the programme, and one which will be read by others besides intending shooters, is that which refers to the conditions of the shoot.

Note carefully that all 10-target events will be shot at 21yds. rise, use of both barrels, unknown traps and unknown angles, everybody shooting on equal terms. The conditions are severe enough, but just think of the following rewards: $8 for 10 straight, $5 for 9, $4 for 8, $3 for 7, $2 for 6, $1 for 5! This also should be read:

"All the guaranteed purses will be shot at 16yds. rise, use of one barrel, known traps and unknown angles, American Association revised rules to govern, and will be divided 30, 25, 20, 15 and 10 per cent. All amateurs, that is, those whose regular average is below 88 per cent. at unknown angles, will be allowed one extra bird to shoot at in the 15 and 20-bird races and two extra in the 25-bird races. This comes the nearest to putting the amateur on an equal footing with the expert, and was tried at the Grand Rapids, Mich., shoot this year, and met with general approval. All surplus (if any) arising from 10-bird races or guaranteed purses, will be shot for in an extra 15-bird race at the close of each day's programme events, entrance price of birds. Those eligible to surplus shoot must shoot in at least two-thirds of the guaranteed purses and 10-bird races. Amateurs will have the benefit of one additional bird in this race, which will be divided 40, 30, 20 and 10 per cent."

In regard to the conditions governing the Gillman & Barnes medal, the programme has the following:

"The Gillman & Barnes medal, which was formerly the Des-Chree-Shos-Ka live bird medal, will be shot for (live birds style of shooting) unknown traps and unknown angles, 21yds. rise, use of both barrels, former winnings of medal on live birds to count just the same, to become the property of person winning it first three times."

Does the above synopsis of Jack Parker's programme hold out any promise of good things in store for a man who can shoot? We think it does. The outcome of all his previous efforts in this line also warrants us in guaranteeing every visitor a good time at Des-Chree-Shos-Ka.

Rhode Island Trap-Shooting Association.

PROVIDENCE, R. I., Aug. 13.—The table below gives the winners in the different events shot to-day. Nos. 1, 3, 5, 6, 8 and 10 were at known angles; Nos. 2, 4, 7 and 9 at traps in reversed order, known angles:

Events:	1	2	3	4	5	6	7	8	9	10

J. F. RUSSELL, Sec'y.

Trap at Little Rock.

LITTLE ROCK, Ark., Aug. 13.—At a practice shoot which took place here to-day, some of the uncertainties of trap-shooting were brought to light. Dr. Lenow, who is considered only an ordinary target shot, made the fine score of 45 out of 50, while your correspondent, who is conceded to be the poorest target shot in the club, scored 43. On the other hand Woodson and Duley, two of our local crackerjacks, who are always considered good for an 85 per cent. gait, were entirely out of form, each scoring 38. Dr. Miller only scored 22, but when it is known that this is the Doctor's first effort at the trap, his score will not be rated so bad, as he scored 16 out of his final string of 25. The conditions were 50 targets, unknown angles:

Lenow	1101111111111111111111111111111111111111111111110011—45

ORRIN J. LODER, Sec'y.

Pekin Defeats Petersburg.

PETERSBURG, Ill., Aug. 10.—Arriving here to-day for the first time it did not take long to be very favorably impressed with the town and its enterprising gun club. It was the occasion of the visit of the Pekin, Ills., Gun Club to engage in a team contest with the town club. The members and visitors were met at the depot and conveyed by free bus to the shooting grounds, where we found everything ready for the boys to try their guns. The grounds are located in a wooded pasture belonging to Mr. Hurd, captain of the Club. Five expert Peoria traps and Peoria targets were used. For the very short time that this club has been organized it has some very good trappers. Everything being in working order, after a 10 target sweep to warm up the guns, the team shoot was started.

The weather had been threatening and during most of the shoot rain fell, but it did not dampen the ardor of the target smashers, some good scores being made. By request of both clubs Mr. W. T. Irwin had come down especially to referee the match. His first duty was to set the traps in order, and with a can of oil, a screwdriver and a monkey wrench, he soon had everything adjusted to suit all, and the race was on.

The members of each team shot in squads alternating so as to put them on equal footing, but they are for convenience placed together. The scores:

Pekin Team.

Lemm	0101111111111101101011011011111011101011111111 —41
Ruhaak	1111101111111111111111111111111111111111111110011 —47

Godley	0011110000111111111101110011111111100110011111101 —37—336

Thus Pekin wins by 15 targets, scoring their second victory. The first contest was held at Pekin three weeks ago, Pekin scoring 320 to Petersburg 274, so that to-day's scores show a decided improvement in both teams, more especially in the Petersburg team. It must be borne in mind that Petersburg has a new club and has only been shooting about three months, and has but one man who has had any experience at trap-shooting, but in Mr. Hurd they have a good wheel horse. The first contest at Pekin was the first shooting for the Petersburg boys over 5 traps and at bluerocks, added to which Pekin has a bad background of thick trees.

The club here is coming up so very well that it proposes soon to give a big tournament and hold it on the fair grounds, shooting toward the north. I can vouch for good treatment and good hotel accommodations for all who attend.

The club set up a good dinner free to the visitors. As they did not have to leave the ground for it, there was a popping of guns all the while, and several sweeps were shot. It was in the sweeps that the Petersburg boys got the best of the Pekin by winning the lion's share of the cash.

No. 1, 15 targets, entrance $1.25: J. Abbott and Lucas first with 15; Plattner second on 14, Lemm, Strickfodden, Shipley, Brahn, Baker, Garmer, Heilman third with 13, R. Abbott and Ruhaak fourth.

No. 2, 10 targets, entrance $1, 24 entries: Strickfodden, Lucas, Hurd and Shipley first; Baker, Calloway, Ruhaak, Helme, Lemm, Gorman and Irwin second; Bennett, Hurd and R. Abbott third.

No. 3, 10 targets, entrance 50 cents: J. Abbott and Hurd first; Goldby, Strickfodden, Calloway and Abbott second; Heilman, Kumpf, Shipley, Lemm, Garmer and Lucas third.

No. 4, 20 targets, entrance $1.25: Hurd first; Kennedy and Heilman second; R. Abbott, Lemm, Baker, J. Abbott and Brahn third; Kumpf, Ruhaak and Lucas fourth.

No. 5, same: Hurd 20; J. Abbott, Lemm and Kennedy 19, R. Abbott, Heilman and Baker 18; Patton, Kumpf, Garmer, Plattner and Ruhaak 17.

No. 6, 20 targets, entrance $2: R. Abbott 20; Lemm 19; Heilman, Brahn, Baker, Abbott and Patton 18; Hurd 17.

No. 7, 10 targets, entrance 50 cents: J. Abbott, Irwin and Baker first on 10; Lucas, Garmers and Goldby second on 9; Kennedy, Kumpf, Bennett, Plattner, Patton, Lemm and Smith third on 8; Shipley, Strickfodden, Heilman, Calloway, R. Abbott and Ruhaak fourth on 7. (Out of 21 entries only one man left out of the money.)

No. 8, 15 targets, entrance $1.50: Heilman first with 14; R. Abbott, Ruhaak, Hurd and Lemm second; Shipley, Brahn and Calloway third.

No. 9, 10 targets, entrance 50 cents: R. Abbott and Hurd first; Collaway, J. Abbott, Shipley and Goldby second; Bennett third.

Thus ended a great day's sport for the Petersburg initial shoot. Judging by this one, their coming shoots will be of the highest order. Petersburg is situated on two lines of railroad and easily reached from all parts of the State. PETER.

The New Orleans Interstate.

NEW ORLEANS, La., Aug. 10.—The seventh tournament of the Interstate Association's series for 1895 was held here yesterday and to-day under the auspices of the Louisiana Gun Club. One more success is credited to the already long list of that organization. Why shouldn't we have had a good tournament? New Orleans is one of the liveliest, sportiest towns in the South, and we would have rather lost a big "jack pot" than allowed any of the Southern towns to get the best of us. "Macon had a very clever tournament last month," said Manager Elmer E. Shaner when he registered at the Cosmopolitan Hotel on the morning of his arrival and chatted with some of the boys who had greeted him. "You just wait and we will show you another good shoot," was the reply of Chas. Urquhart, of the local club, and he kept his word.

This was the first tournament we have had for some time and the onlookers comprised a good-sized crowd; some, I believe, had never seen anything like it before. So much interest was taken by non-shooters that I believe if an admission fee had been charged quite a sum would have been realized. The reduced railroad rate idea was a good one, as it brought in a number of shooters from a distance.

The Louisiana Gun Club boys had their grounds well prepared. The club added $300 to the purses and were not a bit backward in any move which would add to the comfort and accommodation of the contestants. Captain H. C. Ludlow was here, there and everywhere, and Manager Shaner had able assistants in Messrs. White, Faure and Saucier. Geo. White and Geo. P. Faure looked after the cash, while Adolphe Faure and Paul Choudet were official scorers. What a good thing it is to have first-class men in the cashiers' office. There are no "jiggles or jaggles." The boys walk up, plank down their money and go away with a "jolly" which makes them feel as if they had already won first money.

The tournament was down to start at 9:30 A. M., and in this respect it was like a well-regulated railroad, as no time was lost and the events were rattled off. In the evenings some of the boys frequented the Cosmopolitan Hotel, while a good many took in the sights. We have them here—French, Italian, Portuguese, Russian, Sicilian, German, Irish and all sorts of quarters. Besides being the Metropolis of the South, New Orleans is the third cotton market of the world. The sugar, rice and grain industries are rather extensive. There are very few mule street cars and our light system is about the best in the States. Doubtless many Northerners think it is extremely hot here. Why, it is cooler in summer than any Northern city. Our hotels, clubs, theaters, etc., are rated high and the town is full of sport-loving people.

The opening day of the tournament found quite a delegation of visitors present. It was the first time the majority of the sportsmen had ever visited New Orleans, so the climate and the quaint old city made a lasting impression. They were unanimous in their praise of the shooting grounds, but they were handicapped to a certain extent by the clouds. Facing the traps, 150yds. away, is a large bulkhead, which was erected by the gun club to prevent the shot from the gun striking a pavilion situated in a private park just beyond; this made the background poor and the targets hard to see. During the morning the air was clear and the light good, and the scores ran fairly high and even. But during the afternoon it began to cloud over, and then, with the shadows, the scores dropped off to only an average. The Louisiana Gun Club was represented by Messrs. L. A. Jung, S. P. "Nap," H. "Jefferson," E. Keplinger, W. Nust, S. C. Thornhill, R. E. Saucier, W. N. Moore and Maurice Kaufman. A glance at the scores will show that the entire day they held their own. Memphis sent quite a delegation of men to represent both the business and society of that city. The party was composed of Irby Bennett, T. A. Divine, F. P. Poston, Fred. Schmidt, Abe Frank and A. B. Allen. H. B. Foote, of Rolling Fork, Miss., also accompanied the party. A feature of the Memphis boys' shooting was that they all used the Winchester repeating shotgun on the first day and were known as the pump squad; this was quite a compliment to their captain, Irby Bennett, who is the Southern representative of the Winchester Repeating Arms Co. The North was represented by U. M. C. Thomas, of the Union Metallic Cartridge Co.; Noel E. Money, of the American E. C. Powder Co., and Lieut. A. W. DuBray, of Parker Bros. From Monroe, La., the delegation of shooters was composed of Dr. T. L. Aby, Dr. A. A. Forsythe and Dr. C. W. Hilton. Donaldson, La., sent as her representatives K. A. Aucoin, J. Solozano and N. Colomb. From Burnside, La., W. B. Stewart, S. A. Bringler and S. J. Boote were the representatives. C. W. Tway, of Michigan City, Miss., and David Porterfield, of Vicksburg, Miss., were also present.

During the first day a very interesting team race was shot between Noel Money and Irby Bennett against T. A. Divine and F. P. Poston. It was at 50 targets per man, the losing side to pay for supper for fourteen. Money and Bennett were the winners by a score of 88 to 80. Two more special team races were shot the second day after the regular programme was finished. They proved very interesting. The tournament as a whole was a success, and all left for home fully satisfied that they had a royal good time.

The scores follow:

First Day.

Events:	1	2	3	4	5	6	7	8	9	10	11

R. H. MCHIE, Sec.

Paducah Gun Club.

PADUCAH, Ky., Aug. 9.—A round dozen of the members of the Paducah Gun Club put in an appearance at La Belle Park this afternoon. Four events were shot as follows: No. 1, 25 targets, unknown angles; No. 2, same conditions, the six men shooting in this event being the team chosen to represent the gun club in the team shoot on Aug. 19; No. 3, same conditions as No. 1; No. 4, 10 targets, unknown angles. Bill Jones was in great form, breaking 82 out of his 85 targets at unknown angles. Bill is having a Winchester repeating shotgun built to order; when he receives that weapon he doesn't expect to miss a target. Scores:

No. 1.	No. 2.

Aug. 12.—Below are the scores made to-day at our club trophy shoot. This event is a handicap, Class A men shooting at 25 empires, Class B at 26, Class C at 27. Score:

Class A, 25 targets:

Geo H Robertson	0101111011101111111111011—20
Erhardt	0111011111101111001111110—19
Rawleigh	1111111101111101111100111—21
Lang	0001111111111111111111111—21
Fowler	1111100111111111101011011—20
Hinkle	1011111111111111111111101—22
Craft	1000111111111111111011111—21

Class B, 26 targets:

Hoyer	0111111101111111101111111—22
Ingram	1111001111111001111000111—19
Womack	0001111110011111111011111—20

Class C, 27 targets:

Taylor	1000011100111101001100111—15
Young	1010111111111101101001011—19
Beadles	1111111100111010101100111—21

Hinkle and Hayer tied on 22 for the medal and shot off the tie at 5 birds each, which resulted as follows: Hinkle 5, Hayer 4. Hinkle wears the medal another week. This makes the second time that Hinkle has won the trophy since June. This shoot puts Hayer in Class A, as it is a rule of the club that whenever a member breaks 22 or over he belongs in Class A.

The above was followed by a 5-men team race, 25 targets per man, the teams being captained by Messrs. Lang and Craft respectively. The result shows that the teams were as evenly matched as possible.

Team No. 1.

Lang	0100011111111111111011111—20
Geo Robertson	1011011111111001111011101—20
Erhardt	0100101111011111101111111—19
Rawleigh	1111001111111111111111111—22
Ingram	1111101111111111011011001—20—101

Team No. 2.

Craft	1111111111101101101111111—22
Hinkle	1111011101111111111111101—22
Beadles	1101010111101101000111111—20
Womack	1110110110111111111100101—19
Gist	1110001111111101101111100—18—101

Owing to the lateness of the hour it was decided the two captains shoot off the tie at 10 birds. Craft had no trouble in winning the honors from Mr. Lang, breaking straight to Lang's 8.

No. 3, 5 pairs: Lang 6, Erhardt 7, Hayer 9, Geo. Robertson 10, Hinkle 10, Fowler 8, Pitt 6, Ingram 8, Taylor 7. T. G. MOORE, Sec.

Endeavor Gun Club.

JERSEY CITY, N. J., Aug. 17.—The scores given below were made at the monthly prize shoot of the Endeavor Gun Club on the Marion grounds.

Club shoot, 25 targets, unknown angles:

F. M. D.

Binghamton Gun Club.

BINGHAMTON, N. Y., Aug. 15.—The scores below were made to-day at our weekly shoot, all being 10-target events, unknown angles, entrance $1.50. A special feature of to-day's shoot was a match at 100 targets between A. W. Adams, of Chicago, Ill., and H. W. Brown, of this city, the match being shot off in the first ten of the events given below. The result was a victory for Adams by one target, as he scored 95 to Brown's 94, both great scores indeed. As this is a good game section, and as most of our shooters are devoted to field shooting, this will probably be the last weekly club shoot for some time. Scores are as follows:

Kendall	6	9	9	5	9	9	10	10	7	9	10
A W Adams	10	10	9	10	10	9	9	9	10	10	8
Brown	9	10	9	10	10	9	10	9	8	10	..

Bell	6	4	9	4	6	..	..	..	..	..	..
Stone	6	8	7	9	8	8	7	9	9	8	6

H. W. B.

Climax Club Shoot.

The regular monthly shoot of the Climax Gun Club, of Plainfield, N. J., was held on Wednesday, Aug. 14. The weather was all that could be desired for target-shooting, with the exception perhaps of the extreme heat of the sun, which was untempered by even a breath of air. Fifteen members put in an appearance and shot their strings in the club handicap for prizes. The race for first place, as shown below, is close and exciting. On this occasion Neaf Apgar went straight, scoring in all 44 out of 45 at unknown angles. Charlie Smith and Tom Keller, two other scratch men, broke 23. Grier, with an allowance of 8 extra targets, broke 29 out of his 33, while J. Singer scored 26 out of his 35. Edwards, with 30 targets to shoot at, broke 25, while Schortemeier missed but 2 out of his 26. J. Swody, with an allowance of 6, broke 23; in fact all but two of the shooters added points to their records. Points are scored as follows: one point for 20 breaks, and one point for each additional break up to 25, the maximum being six points, no shooter being entitled to more breaks than the highest possible scratch score.

To-day's scores were as follows:

J Grier (8)	11011101111111111111111111101111101 —29
J Singer (10)	10110010111110000110110111111111111—26
N Apgar (0)	11111111111111111111111 —25
E Edwards (5)	11111101011101111111111111110 —25
L H Schortemeier (1)	11111111011111111111111011 —24
T H Keller (0)	11111111101111111111111011 —23
C Smith (0)	11111111111111111111100 —23
J Swody (6)	11110101111111001101111101101110 —23
D Terry (1)	11111110111110111111010111 —22
R Manning (2)	10111111011111111111111011110 —22
A Woodruff (2)	10111111101111100111111111 —22
P Williams (4)	01010111100111101111111101011 —21
D Darby (5)	11110111000110111111101011010 —21
J Goodman (6)	10111000010001110010101000111 —16
T Brantingham (0)	01111100001001011101011 —15

The following sweeps were also shot:

No. 1, 10 targets, unknown angles: C. Smith and Manning 10, Apgar and Schortemeier 9, Keller, Swody, Terry and D. Darby 8, Woodruff and Grier 7, Edwards and Brantingham 6, Singer and Goodman 5,

No. 2, same: Apgar 10, Terry 9, Schorty 8, Smith, Manning, Grier and Singer 7, Edwards and Woodruff 6, Goodman 4.

No. 3, 5 pairs: Smith and Grier 9, Terry 9, Apgar 7, Woodruff 6, Edwards and Schorty 5, Manning 2.

Four miss-and-outs were shot. No. 1 was won by Apgar with 6, No. 2 was divided between Apgar and Edwards, No. 3 was won by Schorty, No. 4 was divided between Manning and Woodruff. These events were shot one man up, unknown traps and angles.

The club shoots for prizes are conducted on principles that are in vogue with many clubs. Handicaps of extra targets to shoot at are apportioned prior to the first monthly shoot of the year, and prizes are awarded to a certain number of the highest scores who have qualified for such prizes. In order to qualify a shooter must attend a majority of the shoots—seven. Points are scored as above. This system is very popular wherever it is used and has been found to bring out the club members in larger numbers than any other system. The following table shows the position of each man who has scored any points and also tells the number of shoots he has attended. Ciphers are inserted when a shooter has taken part in a contest, but has scored no points in that shoot:

	Jan.	Feb.	M'ch.	Ap'l.	May.	June.	July.	Aug.	Points
N Apgar (0)	..	3	1	6	4	..	5	6	25

The following have also shot in one or more contests, but have scored no points: "Scott" (3), J. Zeglio (4), W. Squires (2), W. Terry (4), Trust (5), N. Astfalk (0).

The Elkwood Park Handicap.

Thursday, August 15, was the formal opening of the new shooting grounds at Elkwood Park, near Long Branch, N. J. Elkwood Park is reached from New York either by rail over the Pennsylvania or Central of New Jersey railroads, or by steamer to Atlantic Highlands pier and thence by rail to Branchport.

On the above date we chose the latter route, leaving New York at 9 A. M., reaching Atlantic Highlands pier shortly after 10, and Branchport at 10:55. A stage met us and conveyed us to the park, the distance to be covered being about a mile and a half, perhaps a little less. At the park itself, Phil Daly, Jr., who has charge of Elkwood, has placed in position a set of live bird traps and also a set of the new empire traps for target shooting. The accommodations for shooters at the score at present are only temporary, but were sufficient for the occasion. The Elkwood Inn, inside the driving park, afforded the means for a comfortable dinner, etc. So much for the surroundings.

As an opener for his new grounds, Phil Daly elected to run a 100-target handicap race, $10 entrance. The idea proved a popular one, as, despite the short notice given, seventeen shooters paid up their $10 and took part in the event of the day. The morning was passed in shooting 15 and 20-target events, the scores of which are given below. The handicap race was not started until well on toward 2 P. M.; maybe it was later than that before the first shot was fired.

A new departure was made in the system of handicapping, not a man knowing his handicap until he had fired his last shot, an exception being made in the case of the scratch men, Van Dyke, Apgar and Dickey, these three being publicly announced as the scratch men. The contestants shot in three squads, two of six and one of five men. Each squad fired at 25 targets and then retired, and so on until each man had fired at 100 targets. Then the first six men on the list with a handicap stepped to the score with their pockets filled with shells. As soon as the man in that squad with the lowest handicap had shot up his allowance, he was told to retire; the balance kept on shooting, dropping out one by one as their allowance was exhausted. This kept up the interest in the race to the end, and entirely prevented dropping for place. It was with that idea in view that the scheme was originated, as there was more than a suspicion expressed by several shooters that one of the contestants had willfully dropped his last target in a previous event. As we were at dinner while the occurrence in question took place, it is impossible to speak with any authority on the matter. Anyway, the secrecy scheme worked well in the handicap race, and the boys approved of it. The handicapping was in the hands of Jacob Pentz, T. H. Keller (proxy for Major J. M. Taylor), and the trap editor of Forest and Stream, the latter also acting as referee.

No less than six States were represented in the handicap: New Jersey—F. V. Van Dyke, Dayton; C. Smith, T. H. Keller and Neaf Apgar, Plainfield; T. W. Morfey, Paterson; Eddie Collins, Jersey City; Gus. E. Greiff, Carlstadt; J. "Shaw," Hollywood; Phil. Daly, Jr., Long Branch; A. L. Ivins, Seabright, and J. "Grier," Dunellen. Massachusetts—Capt. E. B. Wadsworth ("Puck") and O. R. Dickey, Boston. Kentucky—B. Ballard. Pennsylvania—H. L. David ("Landis"), Philadelphia. South Carolina—L. W. Bicaise, Charleston. Georgia—G. S. McAlpin. New York did not send a single representative.

The winner turned up in "Puck," who broke 89 out of his 100, and then broke 11 out of his 12 extra targets. Dickey shot a splendid race, making a 25 and three scores of 24, totaling 97—one more than he set himself to break at the start of the race. Owing to pressure on our columns the story of the details of the race must be left to the score.

An unlucky feature was the mistake made in adding up Morfey's total for his last 25. The carbon copies show plainly that he missed three targets, his 11th, 17th and 21st, whereas he was credited with breaking 23, making his total for the 100 just 92. With a clean score on his five extra targets, he really totaled only 96, whereas he was scored 97, tieing Dickey and Charley Smith for second money. His right place was tied for third with Keller and McAlpin. The difference was appreciable, but the error was just one of those things which is always likely to occur when there is no adequate protection for the scorer or cashier.

Empire traps and targets were used, the total of the latter thrown during the day being close on to 3,000. The trappers were green hands and took some breaking in. During that process a lot of twine was wasted and much annoyance caused to the shooters and the management. Toward the end of the day everything worked very nicely, squad after squad shooting its score in quick time. All the details appear below;

Handicap race, 100 to 117 targets per man, unknown angles, $10 entrance, targets at 2 cents included, four moneys:

In the other events shot during the day, the targets, of course, were thrown at unknown angles; the entrance fees in each event were at the rate of 10 cents per target. The quality of the shooting may be gathered from the following figures, which show that out of the 18 shooters who took part in three or more events, no less than 13 averaged better than 85 per cent:

	Shot at.	Broke.	Per Cent.		Shot at.	Broke.	Per Cent.
Dickey	195	189	95.6	Ballard	186	165	88.7
Apgar	165	157	95.1	Keller	303	179	88.1
Van Dyke	195	181	93	Landis	169	149	87.6
Morfey	185	169	91.3	Hebbard	80	70	87.5
Greiff	174	157	90.4	"Puck"	192	168	87.4
Smith	191	170	89	Collins	158	135	85.4
McAlpin	190	169	88.9				

This table shows that out of 2,283 targets shot at by 13 men, 2,055 were breaking, giving a general average of 90 per cent. Dickey's percentage shows that the Boston man is in great form, and is unquestionably one of the best target shots in the country. Apgar's totals in the four events he shot in, outside of the handicap race, are 64 out of 65. Out of his last 615 targets, all thrown at unknown angles, he has to date broken 584, making an average of only a slight fraction under 95 per cent. Van Dyke shot a great gait too, while Morfey and Greiff were also well up in the list. All things considered the averages at Elkwood Park are remarkable. The following table gives the scores made in the events decided before and after the main event:

Events:	1	2	3	4	5	6
Targets:	10	20	15	20	15	15

A Big Shoot for Baltimore.

From present appearances there will be held in Baltimore, Md., during the last week of October, a live-bird tournament that will in all probability be an exact reproduction of the Interstate Association's successful tournament at Paterson, N. J., the first week of April this year. The programme as arranged now is as follows:

Tuesday, First Day—First event, 5 birds, $5 entrance; second, 7 birds, $7; third, 10 birds, $10; fourth, Baltimore Handicap, 15 birds, $15; fifth, $5 entrance, miss and out.

Wednesday, Second Day—Same as first day, except that the fourth event will be the Monumental Handicap of 20 birds, $20 entrance.

Thursday, Third Day—Grand Dupont Handicap, 25 birds, $25 entrance, $1,000 guaranteed, divided 40, 30, 20 and 10 per cent., high guns to take the money, and champion to hold the trophy in trust from year to year, subject to redemption for $100 cash.

The trophy in this last event will be valued at $500 and will be held in trust, subject to challenge, and will be redeemed annually from the holder for $100. Full particulars in regard to this shoot will doubtless reach us in the near future.

Maplewood Gun Club.

Maplewood, N. J., Aug. 17.—The following scores were made by members of the Maplewood Gun Club this afternoon:

Events:	1	2	3	4	5	6	7	8
Targets:	10	10	10	10	10	10	10	25
Drake	10	10	8	10	10	9	7	20
A Sickley	10	10	..	..	..	..	..	23
Geoffroy	10	10	9	10	8	10	4	21
E Sickley	9	7	8	9	9	9	5	24
W Smith	8	9	9	8	8	6	5	25
Jackson	7	9	6	7	..	..	..	13
Eager	..	..	..	..	..	5	8	2 17

Events:	1	2	3	4	5	6	7	8
Targets:	10	10	10	10	10	10	10	25
Van Ider-stine	..	..	..	..	5	..	..	.. 21
G H Smith	..	..	..	..	8	7	6	4 20
Fisher	..	..	..	..	..	..	..	7 17
Sofer	..	..	..	..	..	..	..	6 20
Howard	..	..	..	..	..	..	..	17

No. 1 was at known angles; Nos. 2, 4, 5, 6 and 8 at unknown angles; No. 3 under expert rules, and No. 7 was at 5 pairs, known angles; No. 8 was shot as a team race, Drake's team beating Geoffroy's team by the score of 125 to 113. The following were the teams: Drake, E. Sickley, A. Sickley, Van Iderstine, G. H. Smith and Fisher, against Geoffroy, W. Smith, Sofer, Eager, Howard and Jackson. W. N. D.

Trap around Pittsburgh.

Pittsburgh, Pa., Aug. 9.—The 5-men team race between seven of the leading clubs in this vicinity was brought off to-day on Brunot's Island, the Spring Hill Club winning by the narrowest possible majority—1 target. A similar distance separated the Braddock, Iroquois and Wilkinsburg teams, which finished second, third and fourth respectively. The collapse of the Herron Hill was a remarkable feature of the contest. The North Side Gun Club was shy two men, while the Pittsburg Gun Club, one of the strongest organizations in this vicinity, was unrepresented. The scores in the team race were as follows:

Spring Hill.

D S Boyd	11111101111111111111111111—24

Aug. 13.—The members of the Wilkinsburg, Pa., Gun Club have been competing for a silver trophy, the conditions being that it should be won three times before becoming the personal property of any individual. J. G. Messner has accomplished the task by winning the trophy three times out of four races. The scores were as follows:

First race:

J G Messner	11111111111111111111111111111111101001111—47
O D McElroy	11111111111111111010110111111111111101110111110—44

Choke-Bore.

Essex Gun Club.

Newark, N. J., Aug. 15.—The monthly shoot of the Essex Gun Club of this place was held to-day at John Erb's grounds. The club shoot, which is a handicap on the usual point system, had but five entries. Of that number, L. H. Schortemeier was the only one to kill straight. During the afternoon he shot at 18 birds, scoring 17. Asa Whitehead acted as scorer and referee. The birds were a better lot than might have been expected when the hot, sultry nature of the day is taken into account. The scores are as follows:

L H Schortemeier	2122121221—10	1210—3	1212—4
W G Hollis	2111111021— 9	22●2—3	1110—3
C M Heddon	1012121210— 8	....	....
L Thomas	0121213011— 8	1221—4	●020—1
Griffin	201●211231— 8	....	1120—3
J Erb	....	111●—3	1112—4

The Utica Shoot.

Utica, N. Y., Aug. 19.—In order to aid in making the shoot here in September a success, I give $25 to winning team of four men, 50 targets each man, and optional sweep $5, which will be the main event the first day. The second will be the Central New York Handicap, 26 to 32yds., 20 birds, $15 entrance, birds included. They will be a good, lively lot, fresh from the country. A good number west of this place have arranged to be present. Rochester, Binghamton and Syracuse have arranged to come; these parties I saw in person, and think it is safe to say the shoot will be a success. J. W. Fulford.

Ten Days of Delightful Travel through the South for $55.00.

Two early autumn tours, Sept. 24 and Oct. 8, under the personally conducted tourist system of the Pennsylvania Railroad Company. Gettysburgh Battle-field, Blue Mountain, Luray Caverns, Basic City, the Natural Bridge of Virginia, Grottoes of the Shenandoah, Richmond, Washington and Mount Vernon visited during the tour. Parlor car and hotel accommodations, guides, carriages and all necessary expenses covered by the rate. A tourist agent, chaperon and baggage master will accompany party. For detailed itinerary address Tourist Agent, Pennsylvania Railroad, 1196 Broadway, New York.—*Adv,*

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where we get back a good deal more than cost of catalogue and postage.

ABBEY & IMBRIE,

18 Vesey Street, New York City

MARSTERS HAS WORMS.

Sand Worms, 12c. per dozen. White or Blood Worms, 25c. per dozen.

I am with you again with lower prices for Fishing Tackle. I find by experience that putting down the prices and increasing the quality, increases my business every year.

One lot of Split Bamboo Fly and Bass Rods will be sold at 98c. until all are sold. These Rods are all nickel mounted, solid reel seats, beaded butts, silk wound. Extra tip. Complete in wood form and cloth bag, and will give satisfaction. REWARDS FOR ERRORS.

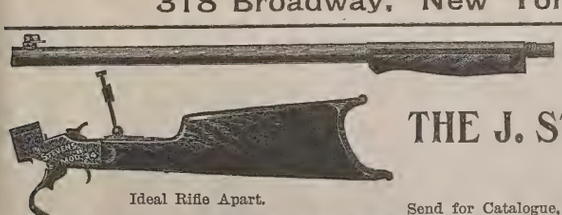
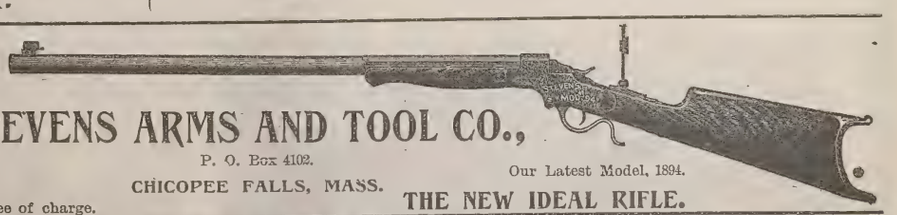
The *Game Laws in Brief* is believed to be correct and complete within the conditions printed on Page 2. I will reward any person first advising me of an error that may be discovered, as follows:

For the first notice of an instance where the law quoted in the *Brief*, prescribing game and fish seasons of any State or Territory, is not the general law in force at the time of this revision, I will give $5.



For first notice of an erroneous statement of a game or fish season in any State or Territory, or of an omission of a prescribed season, I will give $1.

These offers relate to general, not local, laws, and to recognized game and fish (not, for example, to the Connecticut bobolink, rice bird and robin season).



CHARLES B. REYNOLDS.

Office of *Forest and Stream*, New York.

All leading dealers in sportsmen's supplies handle the *Brief*. Price 25 cents. Forest and Stream Pub. Co. sends it postpaid.

There can be no looseness from wear. Write for catalogue to

THE MARLIN FIRE ARMS COMPANY, - - New Haven, Conn.

Send fifteen cents and we will mail you a pack of best quality playing cards, special design.

WHY DID

The Knoxville Gun Club, the Dupont Co., the Inter-State Association, the Grand Rapids Gun Club, Louis Erhardt & Co., J. F. Schmeizer & Sons Arms Co., the Ohio State League, the New York State Association, the Arkansas State Association, and hundreds of other Clubs and Associations all use **Blue Rock Targets, Expert Traps,** and **North's Electric Pulls** at their tournaments?

WHY DID a few other Clubs that used **other** targets, traps and electric pulls (with wire pulls on the side) wish **they** had used **Blue Rock Targets, Expert Traps,** and **North's Electric Pulls?**

Because they are the only **Targets, Traps,** and **Electric Pulls** that give **Entire Satisfaction.**

THE ONLY PERFECT FISHING LINE IS THE

Natchaug Braided Silk Line.

Made from the choicest stock braided 16-strand three-cord silk. They will outwear three ordinary lines. Spool perfectly when in use.
Never flatten or become water soaked.

NATCHAUG WATERPROOF BAIT & FLY LINES

will float on the water. The finish cannot be broken. Those who have used them will have no others. Send four cents for samples and prices and pamphlet containing our awards of prices for last season and cash prizes for 1895. For sale by all dealers.

$225 in Gold Given Away!

WE offer the following Prizes for the Season of 1895, **$225 in Gold** for the largest fish caught on the

NATCHAUG SILK LINES

From April 1st to November 1st, 1895.

First Prize—$25 in Gold for the heaviest Muskallonge.
Second Prize—$25 in Gold for the heaviest small-mouthed Bass.
Third Prize—$25 in Gold for the heaviest large-mouthed Bass.
Fourth Prize—$25 in Gold for the heaviest Lake Trout.
Fifth Prize—$25 in Gold for the heaviest Mountain Trout caught west of the Mississippi River.
Sixth Prize.—$25 in Gold for the heaviest Brook Trout caught in Maine or Canada.
Seventh Prize—$25 in Gold for the heaviest Brook Trout caught in the United States, east of the Mississippi River, outside of Maine and Canada.
Eighth Prize—$25 in Gold for the heaviest Pickerel, Pike or Salmon.
Ninth Prize—$25 in Gold for the heaviest fish of any kind caught with the **Natchaug Silk Line** in fresh or salt water.

CONDITIONS:

All of these fish must be caught with the **Natchaug Silk Fishing Line,** and by fair angling.
Competitors must forward to us their full name, P. O. address, together with description and weight of fish caught, and name of dealer from whom line was purchased, within thirty days after such catch is made, together with the name of one reputable witness affixed. On November 7, 1895, the award will be made and the list of successful competitors announced in the FOREST AND STREAM and the *American Field*.
All successful competitors before receiving their prizes will be required to send an affidavit as to their statement of fish caught.
If your dealer does not keep the **Natchaug Silk Fishing Lines,** order direct from

THE NATCHAUG SILK CO., Willimantic, Conn.
Or, 213-215 Fifth Avenue, Chicago.

"Outside the Danger Line."

Mr. Wilmot Townsend's new drawing, "Outside the Danger Line," depicts a flock of broadbills alighting; and the study of action will readily be recognized by observing gunners as true to the life. The scene is on a calm day, when, with nothing to alarm them the ducks have concluded to rest a while far from shore. Reproduced by the artotype process, the plate being 16×21in. Edition limited to 100. Price is $3.

FOREST AND STREAM'S OUTDOOR SCENES.

FROM ORIGINALS IN WATER COLORS AND OIL, PAINTED EXPRESSLY FOR THE FOREST AND STREAM.

HE'S GOT THEM.

AS PREMIUMS.

We have prepared as premiums a set of four beautiful and artistic reproductions of original paintings of realistic outdoor scenes. The art work is the best obtainable in New York; the pictures are rich in effect and are intended for framing. They are done in 12 colors. The yacht race is from an oil painting; the others from water colors. The scenes are shown in the small cuts herewith. The plates are 14¾ x 19in. The pictures are sent both to **new** subscribers and to **old** subscribers upon renewal, on the following terms:

Forest and Stream *one year and the four pictures,* **$5.**
Forest and Stream *6 months and any two pictures,* **$3.**

If subscribing for 6 mos. designate by title the two pictures desired. Single pictures will be sold separately, price $1.50 each, or the set, $5. Remit by express or postal money order, payable to Forest and Stream Publishing Co., 318 Broadway, New York.

The pictures are sent by mail, postpaid, wrapped in tube.

Copies of them may be seen at this office, and inspection is invited.

BASS FISHING AT BLOCK ISLAND.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2. | NEW YORK, SATURDAY, AUGUST 31, 1895. | VOL. XLV.—No. 9. No. 318 BROADWAY NEW YORK.

For Prospectus and Advertising Rates see Page vii.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures,* **$5.**
Forest and Stream *6 months and any two of the pictures,* **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

SNAP SHOTS.

OF the New York *World's* five column attack upon the United States Fish Commission, one day last week, not much more need be said than that it was an instance of malignant journalism. The charges were, in brief, that the Commission's work had been wrongfully directed into scientific channels, and that the public funds had been squandered in useless investigation. None of the charges were new; they had all been made before, and had been investigated by a special committee of the Senate, whose long and thorough report concluded thus:

In view of the great importance to the country of the work of the Commission, and the urgent necessity for its continuance, we ask a careful examination of the testimony presented, believing that it is sufficient to convince all fair-minded persons that there is no just cause to criticise the policy of the Commission or the course of the Commissioner in the matter of administering the affairs of the office, but on the contrary he deserves commendation for the conscientious manner in which he performed his work.

The exhaustive character of the investigation and the unreserved testimony it elicited in support of the honesty and wisdom of the Commissioner left nothing whatever of the attacks which had given occasion for the committee's work. A public officer might not ask for a more complete exoneration from the slanders of his enemies, nor for a more substantial indorsement of his course and conduct. Commissioner McDonald is now ill and absent from Washington. The *World* prefaced its attack upon him by asserting that he was too ill ever to return to Washington. If this be true the *World's* revamping of these lying accusations at such a juncture is brutal and inhuman. The only excuse for such an attack is the truly journalistic one that it helps sell papers. Whatever increases sales is in modern journalism justified and defended. We cannot expect daily newspaper editors to be more squeamish on these points than the showmen; and honors are easy between the *World* man and the Asbury Park genius who has made a cycloramic show of the Crucifixion of Christ and charges only modest gate money to see it.

It is eleven thousand miles from New York to the Cape of Good Hope; but the New York Legislature appears to have traveled that course when it made a law for Long Island meadow hens. The open season prescribed is Jan. 1 to Aug. 15, which includes the nesting season; and the law of course is all foolishness for Long Island, but would be quite sensible for Zululand, where the seasons of nesting and maturity are reversed. Most persons probably think of Africa as a wild country full of game, large and small, which everyone is at liberty to kill as freely as Henry M. Stanley used to butcher the human beings he encountered in his explorations. But large territories in Africa are covered by game laws, and shooting regulations are year by year being drawn more narrowly. In Zululand, for instance, game birds, partridge, pheasant, guinea fowl, etc., may not be killed from Aug. 1 to March 31. Rabbits, buffalo, quagga, zebra, and various antelope and deer are protected from Sept. 1 to March. A long list of animals, including elephants, rhinoceros, hippopotamus, various antelope and deer, with the ostrich and secretary bird, are designated as royal game, and may never be killed except with the rarely granted permission of the Governor.

"The Destructive Egg Hunters," cries the New York *Times*, in a headline. "Is there no way of putting a stop to heir ravages?" Why, bless your simplicity, yes. The FOREST AND STREAM put a stop to the ravages all at once, suddenly and forever, when it exposed the whole business as a silly fake. The *Times* gets its scare from the Chicago *Tribune*, and the *Tribune* gets its scare from the Seattle *Argus*, and the *Argus* makes its out of its own noddle. And there you have it. So the duck-egg story is going the rounds again, with Indians, albumen cake, Senator Mitchell's speech, vanished buffalo, and all the other conventional appurtenances.

A letter just received from an Oregon correspondent furnishes additional reason for the belief we have expressed that the promoters of the duck-egg story have been working in the interest of some one who wants a $5,000 Government commission to go to Alaska. We believe that after the FOREST AND STREAM'S exposure of the nature of the duck-egg campaign Senator Mitchell will not suffer himself to be used for the promotion of such a steal from the treasury.

Governor Richards, of Wyoming, last Saturday wired instructions to the prosecuting attorney of Natrona county to cause the arrest of a party of Princeton students who had reported the killing of antelope by them while on a geological exploration in the northern part of the State. According to the press dispatches, the Princeton boys had already crossed the line and were safe from pursuit by the Wyoming authorities. If they did kill antelope, as they boasted, these young men may cross all the State lines between Wyoming and New Jersey and yet not escape the odium of their lawlessness. We hear magnified stories of the killing of game by Indians, but not so much about the butchery by certain Eastern sportsmen and resident hunters. Governor Richards declares that the game laws shall not be violated with impunity neither by Indians nor by whites. We trust that the Governor may have the courage and the power to make good that declaration with respect to the whites; for if they can be compelled to respect the law there will be no difficulty about maintaining a game supply.

Over the Indians as hunters the Governor of Wyoming has no jurisdiction. One result of the recent cold-blooded murder of Bannocks by white men is the definition anew of the Indian's hunting privileges. The Attorney-General has advised the Commissioner of Indian Affairs that under their treaty stipulations the Bannocks and Shoshones have an unquestionable right to hunt upon unoccupied lands; and that the State of Wyoming has no power by its game laws to abridge these privileges. Under this advice the Indian Bureau will proceed to secure by writs of habeas corpus the release of Indians now held or in future arrested for violation of the game laws. At the same time the announcement is given that the Indian Bureau will discourage hunting by the Indians.

The report of the legislative committee appointed one year ago by the members of the Pennsylvania State Sportsmen's Association was presented at the fifth annual convention last week. The text of the report appears in our trap columns. It is instructive reading, for it shows what can be accomplished by an energetic body of sports men. Perhaps we should have said, what might have been accomplished; for, as a matter of fact, game legislation in Pennsylvania is now exactly where it was. But the labor of the committee has not been absolutely fruitless, and there are great grounds for hope that the next Legislature of the Keystone State may realize that the sportsmen who love the gun have at least equal claim upon the State's exchequer as have their brethren of the rod, for purposes of protection.

The passage of a bill preventing the sale of game, which gave every promise of speedily becoming a law, was most encouraging. But Governor Hastings put an effectual damper upon all such hopes for a period of at least two years by placing a veto upon the bill. Nevertheless if the Association shall follow out the plans it has laid out for a campaign of education, in the end it must triumph.

The value put upon the FOREST AND STREAM as current literature deserving of permanent preservation is indicated by the increasingly large demand for the index, twice a year, for bound volumes kept up by public libraries and y individuals. There is a constant call for special numbers which are wanted to complete files, while a suggestive indication of the lasting value of FOREST AND STREAM advertising is afforded by instances, so frequent as long since to have lost their novelty, of orders received for goods advertised years ago. In a case brought to our notice last week the call with the cash was for an article which had been advertised seven years ago. What a study there will be in those bound volumes in years to come, not in the reading pages only, but in the advertising columns, where the whole art and appurtenances of the craft will be set out.

Give the "chained" a chance. The one man who has twelve months in which to go fishing or shooting may reasonably be left to look out for his own interests; but we ought jealously to guard the rights and privileges of the hundreds and thousands who have but brief opportunity to get away from work and business. State Fish Commissioner Wampler, of Kansas, shrewdly observes: "If the pleasing occupation of angling is truly the delight of the contemplative man, it is a lamentable fact that the ignorant, lazy lout among mankind energizes himself to prowl around every inviting locality where fish are reputed to abound." When that "lazy lout" cleans out the fish, he is robbing some better man who will come after him only to meet disappointment. By reason of the fishing assiduity of the "lazy lout" the contemplative features of angling often consist only in a rosy contemplation of what one thinks he is going to find when he goes fishing, and a somber contemplation of what he does not find when he gets there. This ought not so to be. Give the "chained" a chance.

The principle applies in Kansas and in New York. The resident gunners of Moriches on Long Island have awakened to the wisdom of protecting the interests of their "chained" friends in the city. These gunners derive a substantial revenue from the town sportsmeh who go to Moriches for black duck shooting. But piratos from near by districts have been accustomed to kill the fowl by fire-hunting at night, until because of the lessened game supply the city shooters no longer think it worth while to visit the Moriches. The guides have taken up arms. They propose to put the night-shooters through a course of sprouts. Their first step was to have one of their number, a fearless and determined individual, made Special Deputy Sheriff. The law gives such an officer all the powers of a game protector. He is committed to a rigorous course. The offenders will find no leniency in the local courts. We undertake to assure the Moriches reformers that they will have the backing of the State authorities. Night shooting of ducks is not to be tolerated. It must be broken up. In effecting this the Long Island gunners will give not only the "chained" but themselves too a chance.

There is a little incident, which is every bit true and carries its own teaching. Early in July, a hostess in the country, near New York city, had upon her table at dinner ruffed grouse. One of her guests asked her how it was that she allowed these out of season birds to appear, and she explained that as she ordered such birds when in town in autumn and winter, she saw no reason why she should not have them in summer. A brief explanation of the natural seasons for game enlightened her ignorance, and she is now a consumer who will not hereafter allow out of season game to appear on her table.

There are thousands of women who are just as ignorant and thoughtless as this one was, and who have no one tactfully to explain to them the rights and the wrongs of this game out of season traffic.

To offset in a measure the outrage of the Donaldson game law, teach the women.

The recent destruction of fish in the ponds of the New York State hatchery, at Caledonia, was caused by a flow of poisonous water from a mill pond on the stream above the hatchery. The pond had long been low and stagnant. When the water rose it flooded the hatchery ponds, from which it could not be kept out; and killed the fish in them. For this no blame whatever may justly be attached to any of the hatchery employees.

The world would not be nearly so interesting as a place of abode if we all thought precisely alike, on the leaping of the bass, for instance. He that converteth a dissenting brother to his own way of thinking is a greater Kingfisher than he that taketh a record breaker from the waters.

The Sportsman Tourist.

GAME NOTES WITH PENCIL AND CAMERA.

When Jock Darling was in New York at the time of the Sportsmen's Exposition, as was natural for a good sportsman he visited the office of Forest and Stream, and while there he suggested an expedition to Maine for the purpose of photographing deer and other wild game. His proposition touched a responsive chord in the editor's heart, for it has always been the policy of the paper not only to look after the reading needs of the man who is "Chained to Business," but also to place before him the pictured life of the woods and waters, and it did not take long to come to a decision.

As a result Darling and the writer met at Patten, Me., the latter part of July, provided with canoe, tent, photographic apparatus and provisions for a campaign of a week or ten days in the woods.

Patten is seven miles from its port of entry, Sherman, a station on the Bangor & Aroostook R. R. It is delightfully situated and has a good hotel of its class. In the immediate neighborhood are some of the finest mountain views in the State. The great mass of Katahdin is distant less than twenty miles, while Sugar Loaf, the Traveler and Chase Mountain are all nearer. Lesser mountains and ridges stretch away in every direction to the horizon line and give charm and variety to the outlook.

At Patten we secured a canoe "rigging" and traveled by wagon seventeen miles north and west to a point on Hay Brook just above its juncture with Sebois Stream. Here we pitched our first camp, intending to remain in the neighborhood a few days, as we had good reason to expect a sight of moose.

Two years ago one of Darling's "sports" killed a large bull near by that had come to Jock's seductive call; and only a few weeks before he had seen another bull feeding in the stream near the same spot. It was of this bull that Darling wrote Forest and Stream, telling how he had tried to scare him away, as he feared the place was not safe. If this bull had gone for good there were abundant chances for others, and we proposed to go over the ground carefully.

Incidentally it may be well to remark that this is the real Hay Brook upon which we were encamped, and not the stream shown upon some of the maps under that name as emptying into Sebois Grand Lake. The correct name for the latter is Warderley Brook. It runs its entire course through bogs that grow nothing nearer hay than pucker bushes and cranberries, while on the other hand the real Hay Brook is bordered by fields of the genuine article.

We camped here from July 24 to 26, but the hardest kind of hunting failed to reveal any description of living game. The water was high, and at first we attributed the absence of game to this cause, but gradually the real reason forced itself upon us. As Jock expressed it, we "smelled the reason." At several points our nostrils were greeted in passing by unbefitting odors, while at other places on the bottom of the stream we saw pieces of deer skin and freshly cut leg bones, companion pieces to the two unborn fawns that Darling had previously found floating upon these same waters.

The many signs bore unmistakable witness to a shocking slaughter of unseasonable game, but through it all, as little by little the evidence unfolded, we clung to the hope of finding our moose. Jock knew how difficult it was to make a moose leave a section of stream to which it has taken a liking at this time of year, and it seemed reasonable to believe that the animal was still in the same neighborhood. It was. But we did not find it as we had expected.

The day we broke camp, paddling close along a beautiful birch fringed shore, we noticed trodden grass and a small tree from which the bark had recently been peeled. The place was pervaded with an unpleasantly suggestive odor, and influenced by these and other inferences we made a landing. A short search confirmed our worst fears. There, only a few rods from the river bank, lay parts of a bull moose—head, legs, hide and entrails—tainting the air, and furnishing an eloquent example of the non-enforcement of the Maine game laws.

We took a few photographs of the remains and then sadly left the place. A magnificent game animal had met an unworthy end at a time when it should have been safe from attack. The evidence showed that its assassins were a mean and ignorant lot, and its capture could have brought them little profit and less pleasure. The horns were only about half grown and were slowly rotting away. Later I shall have more to say about this moose and a photograph of the head will be shown.

The Photographing Outfit

consisted of one large camera taking a 6½×8½ plate, and a 5×7 Kodak. The Kodak was taken along to pick up stray notes and to supplement the other, but all our hopes were pinned on the big camera. This camera was fitted with a lens capable of covering a plate nearly twice as large as that used, and was of long focus, conditions calculated to secure better pictures and at longer range than could be obtained with an ordinary camera of the same size. These were its advantages.

Its disadvantages were that it was bulky and hard to manipulate, and that its shutter was very noisy. It measured nearly 3ft. in length, which of necessity confined its usefulness almost wholly to the canoe, and the shutter could only be set from the front of the camera and only when the sensitive plate was covered.

The slowest "instantaneous" exposure within the range of this shutter was also too quick for many of the conditions of game photography. These defects, however, were only discovered in their entirety after the camera was in practical operation.

Our outfit included plates and film for the cameras and also material for flash light photography. Unfortunately we had no opportunity to test the latter, as we had no good jacking weather while in the woods. A night photograph of game is by no means an impossibility, though we believe it has never yet been secured.

In Action.

When in the neighborhood of game the large camera was placed on a rough stand in the bow of the canoe, with shutter set and ready for instant use. The bulb by which the exposure was secured hung in position at the right side of the camera, where it could easily be reached, and the camera itself, with the exception of the neighborhood of the lens, was screened by a blind of green boughs. The canoe which we used for stalking was painted a shade of gray matching very closely the color of dead trees, and seen from the bow there was nothing obtrusive or calculated unduly to startle our game. Owing to the difficulty of reloading and resetting the shutter, we had for all practical purposes but one shot at our command, and it was a matter of nice judgment to reserve this for the best possible opportunity.

It is the last fifty feet of the approach in game photography that counts for most. At anything over 100ft. with our equipment the game in the photograph did not come out distinctly enough for practical use. The only pictures considered worthy of reproduction with this article were all taken short of this distance. In fact, from 50ft. to

SUSPICIOUS.

100ft. may be considered the range for successful game photography in the East with a good camera such as ours, and every foot inside the limit counts surprisingly in the results.

In the West, where the game is out in the open and where they have the advantage of a perfect atmosphere and solid ground to stand upon, pictures capable of reproduction can no doubt be secured at a considerably greater distance. The size alone is of course not of so great importance, if the game comes out in the photograph perfectly sharp and standing out free from the undergrowth, for the photo can be enlarged.

Difficulties.

Game photography under any conditions is one of the most difficult things in the world. Setting aside for the moment the difficulties in the way of approaching your game to the requisite short range, the difficulties of a technical character are generally almost insurmountable. When photographing from a boat, which is almost the only practical way in the forest regions of the East, a quick exposure is absolutely necessary. A boat will not sit still enough for exposures of the "slow instantaneous" kind, even though the game stands with statue-like rigidity. This condition makes a good strong light a prime requisite, but unfortunately it is a requisite that is most often absent. At the time best suited for photography the game is off enjoying its siesta, and when it does appear the chances are that it is sneaking close to shore in the shadow of the trees or up to its ear in brush.

White-tail deer especially seem to shun publicity, and hate to see their pictures in the sporting press.

Our experience with other game was very limited, but personally I got the impression that caribou when found would not be difficult to photograph, and Darling assured me that moose also were easy of approach and had better taste than deer in the selection of their surroundings from a photographic standpoint.

Having learned by experience all the difficulties of game photography I shall henceforth have the most profound admiration for any man who takes successful pictures of the untamed denizens of the forest. The skillful hunter who kills game alone is as a child compared to the game photographer. It is only necessary for him to break through the outermost circle of wild nature's protective environment to accomplish his object, while the photographer must penetrate to the very center of things, relying upon an infinitely greater patience and skill. Most of the game included in the enumeration which follows was within rifle shot of us, much within pistol shot, yet very insignificant was the number within photographic range.

It was between White Horse and Snowshoe lakes that we came upon our first deer. Jock was working hard with the setting pole lifting the canoe over the lower rapids on the stream, when suddenly something caught my eye in the swift water above. It was a glimpse of color and of motion, and though seen in an unexpected place the explanation was apparent. I signaled to Jock, and the canoe dropped back out of sight. But before we were wholly concealed we had seen, one after another, six deer enter the water. It was a beautiful bit of nature. The red deer, the white water, and the dark green woods that framed it, made a picture that will long linger in memory. Unfortunately the deer were out of camera range, being more than a hundred yards distant. We did not notice any bucks among them, the deer seeming to be all does or fawns.

As soon as we were down behind the bend I jumped out of the canoe, and, armed with the small camera attempted to stalk the game. From the concealment of the cedars that fringed the bank I saw them leisurely wade through the shallowest water, and then just as leisurely disappear in the woods on the other side. They were scarcely 70yds. away, but too far for the 5×7 Kodak. These were the first deer that we had seen, and made a corresponding impression. It was an unusual opportunity to get a number of individuals on the same plate, and an opportunity that was not duplicated. Out of the six dozen and odd deer we saw during the next six days, the largest group that came to our knowledge consisted of but three individuals—a doe and two fawns. It was common to see three or four or even six feeding within a few hundred yards of the same spot; but these deer were not in any sense banded, and it was only chance that threw them together. Aside from the does and fawns, the deer we saw all seemed to be unattached.

We reached Sebois Grand Lake without seeing any more game, and at once directed our course for the "Thoroughfare," where we intended to camp that night. On the way we sighted our seventh deer.

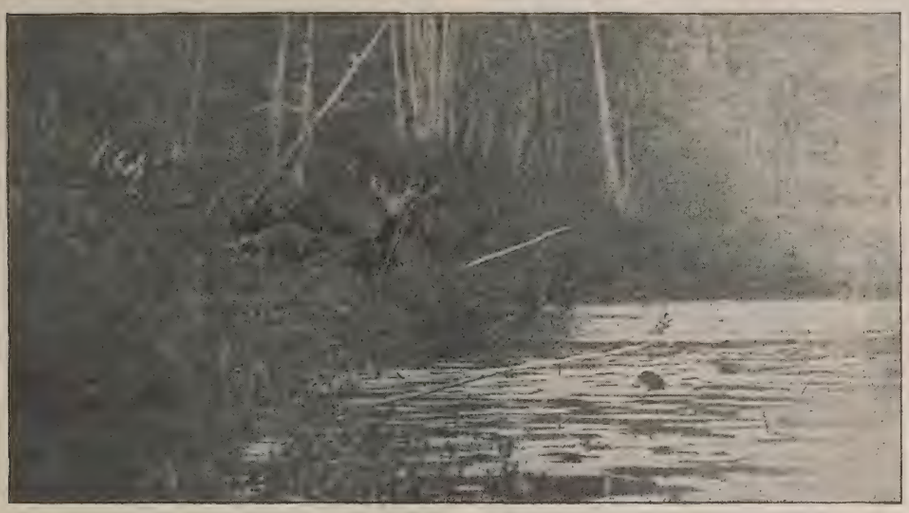
As we shot across the mouth of a deep cove we saw a doe feeding among the lilypads near shore. I looked directly at this deer for some time without seeing her, and had turned my attention to a different part of the shore when Jack pointed her out. The wind was blowing full in the cove, and it was useless to attempt a photograph, so we contented ourselves with a good look at the deer and continued our way to camp.

Sebois Grand Lake is eight miles long and of very irregular shape. In its widest places it is possibly two miles across, but at the "Thoroughfare," near the center of the lake, it narrows to as many hundred yards. Here two hardwood ridges terminate, one on the east side of the lake and the other on the west. Near the west side there is also a small wooded island, and the ridges approach each other so closely that they appear to cut the lake in two, and one not familiar with the country might come very close to the connecting channel without suspecting the presence of the complementary body of water.

This is a great place for game to cross. Last fall a party camping near by killed a bear in the water, and deer frequently make the passage. During the close season last year Darling saw a caribou swim the channel, and later members of his party fired a number of unsuccessful shots at one on the point across from where they were camped. Deer were so plenty along the shore in this neighborhood a year ago that the camp was given the name of "Deer Town." This year, however, they have changed their range, and we saw only one near the "Thoroughfare."

Later in the day we paddled over to a beach at the north end of the lake and examined on the sand a curious chirography of deer tracks. The deer seemed to appreciate the smooth footing afforded by the beach, and as the evidence showed had come there to play. We could see where they had jumped and cavorted, striking the ground with toes spread and legs so crooked that the dew-claws left their mark. The accompanying photograph will tell it all much more graphically than words.

As we left the shore we saw a buck that had just come out of the woods above us, but he almost immediately disappeared, having no doubt winded us.



We landed a second time to visit an old lumber camp which is situated a little distance back from the lake. The clearing around the camp has all grown up to wild raspberries, and Jock and I regaled ourselves with the fruit. As we approached the fast mouldering buildings we heard a raucus guawing within, and Jock sententiously remarked, "Hedgehog." The door of the main camp was closed, but a broken window explained the presence of the porcupine on the inside. Jock opened the door and went in, and presently I saw the monkey face of the bad-smelling rodent appear at the window. It was a comically expressive face, and betokened lack of decision and uncertainty. The porcupine had run up

FOOT-PRINTS OF JUMPING DEER.

against a dilemma. With Jock Darling on the inside and the FOREST AND STREAM camera on the outside it was a case of between the devil and the deep sea, and Master Porkey couldn't solve it. Like some human beings in similar situations, he preferred not to come to a decision, but to remain "on the fence." Eventually Jock persuaded him with the aid of a club to come out and have his photograph taken. Afterward we watched the old thief waddle off. He was so nervous in his haste that he fell over backward several times in attempting to climb logs, and he probably hasn't yet gotten over the shock of our unexpected visit.

While rounding a point a few minutes later we came upon deer No. 9. This deer, which was a buck, was feeding some distance from shore. Every now and then he would put his head down in the water and bring it up with his mouth full of grass. Jock informed me that he was eating a kind of flat grass that grows entirely under water and which is very plentiful about the lake. The deer had not seen us, but there was little chance of approaching him closely in the canoe, as there was no concealment whatever on the water. Acting on Jock's advice I determined to attempt a stalk from the shore.

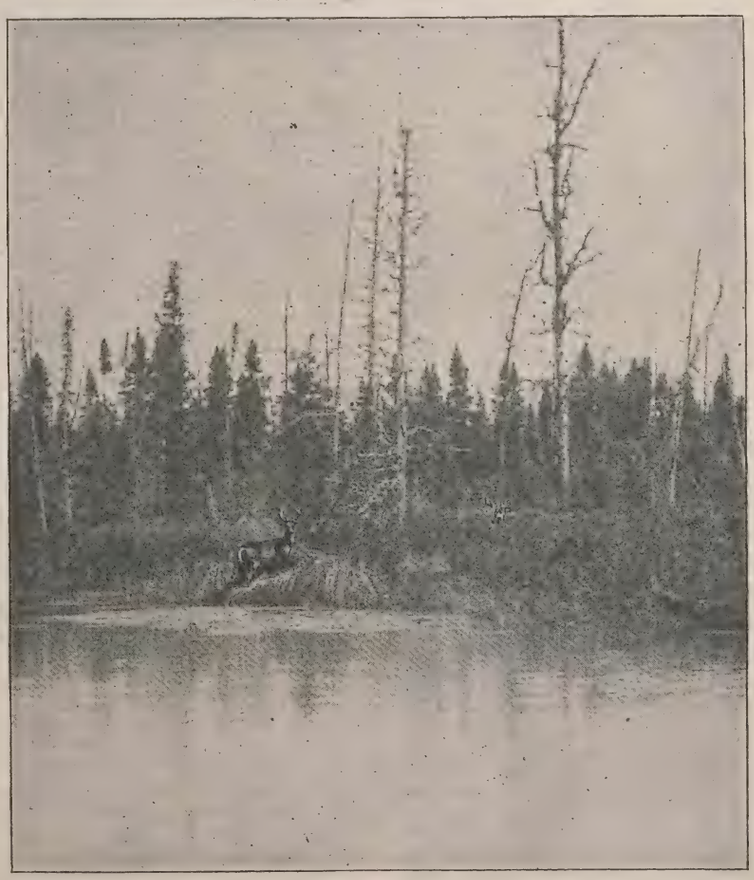
AN INTERRUPTED MEAL.

Making a mental note that the nearest point opposite the buck was distant about 200yds., and taking the large camera in my arms, I began the approach. The formation of the land at this point was a good deal the same as that of some North Carolina cypress swamps along tidal rivers. The waters of the lake had heaped up a natural levee that served to keep the land behind in a swampy condition, and here flourished a network of cedars. Two hundred yards under such circumstances was hardly similar to 200yds. on Broadway and it required more than two minutes to walk it. In fact, I think Jock came to the conclusion that I was lost long before I got to the point opposite the deer. At first I made fairly good progress, but as I advanced the number of fallen trees increased, and the footing became wetter and more slippery. As the deer was only a couple of hundred feet from shore it became necessary to avoid any possible noise, and this was no easy matter for a man encumbered with a camera 3ft. in length that rivaled a drum for the volume of its tone when hit by a stray branch.

There were mosquitoes and midges in that swamp, too, and they soon found that my hands were useless for purposes of defense. They explored the openings at my wrists and throat, and some crawled up my legs till met by others journeying downward, and every exploring party blazed its trail.

Coming to the conclusion at length that I had gone the required distance, I began working my way toward the shore, and soon saw the buck. He was perhaps 150ft. from shore, and presented the easiest kind of a shot for a rifle, but was a little beyond the range of the camera.

It took a long while to find an opening in the trees that fringed the shore from which I could see the deer and work the camera to advantage without being seen, but at last such a place was secured and a picture taken. The buck heard the click of the shutter and raised his head with a quick jerk. He scanned the shore carefully, but evidently could see nothing suspicious, for he did not attempt to leave the spot.



Slowly I began reloading the camera for another shot, and, I suppose it is just as well to confess it, I never had a worse case of buck fever in my life. My hands began to tremble and I was obliged to resort to my old hunting prescription, viz., to stand still and take a number of long breaths. This soon quieted my nerves, and being able presently to hold my hand steady, I essayed another photograph.

The deer recognized the click of the shutter, which seemed to confirm his former suspicions that all was not right, and this time he began moving in toward shore. Seeing that his course would take him much nearer than he had yet been, I hurriedly attempted to reload. In doing so, however, I made so much unavoidable noise with plate holder and shutter that the buck veered off and was out of range before I had the camera ready. One of the pictures taken at this time came out fairly well. After this, as it was growing dusk, we paddled leisurely back to camp. We had seen nine deer that day, but had secured photographs of only one of the number.

That night it rained. In fact at one time or another it rained each day we were in the woods. Add to this the fact that, with one exception, every day was windy and it will be seen that the conditions for our success were not the most favorable.

Our first deer the following day were seen near the mouth of Warderley Brook. They were two bucks and were feeding in the afore-mentioned flat grass that grows under water. We made a half circle of the bay in plain sight of the deer, but they took no notice of us and did not seem to see us. At one time, however, I thought they were off, for with a common impulse both started for shore at a great rate, jumping and making the water fly in sheets of spray. It was almost immediately evident, however, that they were only playing, and the fact showed how totally the presence of the human onlookers was ignored. The play was but a momentary ebullition, and soon they were back again at their leisurely breakfast.

After making the circle of the bay we approached very cautiously under the protection of irregularities in the shore until we came in sight of the bucks again. They were only 100yds. away, and by very adroit work with the paddle Jock decreased this distance nearly one-half, the water grass in a measure shielding us from the deer. Then we found our way blocked by a long submerged log, and as the deer were beginning to grow nervous and as we knew it would be impossible to turn the canoe to go around without stampeding them, we took the chance such as it was and got an unsatisfactory photograph.

THERE ARE TWO HERE.

After which the deer walked ashore and disappeared in the woods.

Our twelfth deer was also a buck. In fact, the great majority of deer seen on this trip were bucks. It is hard to account for this except under the supposition that the does, having mostly fawns to look after, came less frequently into the open. The does, however, proved to be the easiest to photograph, for when they fed they were always in a hurry to get back to their fawns, and did not look about much. The bucks on the contrary fed along leisurely as if they did not have a care in the world, and were sure to see our canoe if near by the moment it came out from the protection of the shore. Such a sight, however, did not always alarm them, and frequently they exhibited great curiosity until they got a scent of us. That was enough, and it wasn't very complimentary to the superior beings to see how a single whiff affected them.

The twelfth deer was feeding in the thick bog undergrowth on the north shore of the stream, and we got within 75ft. of him, but then—up popped his head and he was off with a crash without showing us enough of his shapely form to photograph.

The wind was wrong for going up the brook, so we soon turned around. Reaching the lake again, we saw a deer on the south side of the bay, but on account of the direction of the wind did not attempt to stalk it.

Later in the day we paddled down the lake toward the outlet, before a gale of wind that raised our light canoe and swept it along over the white caps at an exhilarating rate.

On a projecting point to leeward we saw what we took to be three deer. When we got closer, however, they had gone.

We ascended the stream that empties into a bay at the southeastern extremity of the lake, but as the wind carried tidings of our presence a long way ahead we saw no deer. On our way back to camp we saw a solitary deer on an exposed shore, where it would have been useless to attempt a close approach. This was the last deer seen that day and made a total of eight—or seventeen in all—since reaching Sebois. Only one opportunity for a photograph, and that at an unsatisfactory range, had been obtained.

The following day, however, we had better luck despite baffling weather conditions. We paddled up the lake against a strong head wind to the East Bay. Rounding the last point, we come in sight of the beach where we had previously photographed deer tracks. We looked the shore over carefully, but no deer were to be seen. The place was too promising to leave at once, and Jock remarked, "We'll go a little further and wait to see if a deer won't come out on the sand beach." The words were prophetic, for hardly were they out of his mouth when one appeared. Jock had time to say, "There's one now," when a second deer appeared, closely following the first.

These deer, we estimated, were less than one-quarter mile distant. In fact, they were so close that with the unaided eye we could see they both carried horns, one especially having a very fine pair. But they did not seem at all concerned with the presence of an 18ft. canoe creeping along the opposite shore.

Though paddling down wind, for a wonder, we ran right on a small spike buck wading in the shallow water. No doubt the point that concealed him from view also prevented him winding us. He got our wind and a view of us the same instant such as must have filled his youthful soul with terror, for he jumped so quick that a hundredth second exposure shows him on the photograph twice his actual length.

Before we made the circle of the bog we caught a glimpse of another deer about 200yds. off, but this deer moved back into the woods almost at once. About the same time a third deer joined the others at the sand beach. The day had begun well, with five deer in sight in less than as many minutes.

We worked very cautiously up the shore toward the sand beach till according to our calculations the deer were only concealed by one little projection, when we noticed a movement in the bushes. The next instant a graceful doe stepped out and hurried with little mincing steps toward the water. We held our breath and looked on as though watching some wood nymph at her bath. The doe continued her way till the water reached her

body, and then stopped. She lowered her head and plucked a lilypad, and then—looked straight into our eyes only 50ft. away.

Poor little girl, I regret from the bottom of my soul our intrusion and the shock we gave you. For an instant she stood rooted to the spot, a perfect picture of startled innocence, and then she had disappeared in the friendly bushes, but long afterward we could hear her whistling and upbraiding us. I had secured a picture, which should have been the prettiest of our trip, but one of the exasperating things which are sure to fall to the lot of the game photographer happened and lost us the negative. When I replaced the plate-holder slide I found that the plate had become dislodged and fallen outside and consequently was worthless. Mournfully I consigned it to the bottom of the lake, and having reloaded, we proceeded to see what lay beyond the point.

We soon came in sight of a buck with fine horns standing knee-deep in the water and grass watching us. We could not go ahead further on account of the noise the grass made rubbing against the sides of the canoe, and for an hour sat there watching and hoping for a favorable opportunity to get closer, or for the deer to come closer to us.

The first buck was soon joined by another with even finer horns, some of the points of which turned downward like a crumpled cow's. The bucks were about 100yds. distant, and seemed to recognize in our boat something unusual. They had evidently heard the doe's outcry and suspected that all was not right.

Occasionally an eddy in the wind would give them a faint taint of our presence, and though they waited a long while and occasionally took a mouthful to eat, they were always on their guard. Eventually they moved off without giving us the desired picture, one of them whistling for fully five minutes. J. B. BURNHAM.

OFFICE OF FOREST AND STREAM.

THE OUTING OF SIX.—I.

From Provo to Panguitch.

FOR weeks I had eagerly awaited the 1st of June. It had been three years since I enjoyed my last real outing, and the homesickness for fragrant pines and fondly-remembered trout streams made the chains gall more than they had ever done before. Especially did I feel the friction with each fresh arrival of FOREST AND STREAM, and when vacation came I was ready to go, almost aimlessly, and yet in hopes of exploring either the Henry Mountains of Utah or the Buckskins and the Grand Cañon of the Colorado before my return home. In either event the study of flora and fauna was to go hand in hand with rod and gun.

Casting about for companions, I naturally chose some of my own students who had shown marked ability in the field of natural science, so the *personnel* of the party was as follows: Andrew C., specialist in botany and the best rustler of the outfit; Ted, specialist in ornithology; Doc (with a sheepskin from some Ohio medical college and a fair knowledge of taxidermy)—Doc is Ted's older brother; Perry and Collie (prospective pedagogues), adepts in the art of enjoying pure and simple loafing; lastly, Shoshone, to whom you need no introduction. As I was supposed to play mentor for the party, it might not be amiss to mention the books that I took from my library, as they will prove of use to any student who traverses southern Utah or northern Colorado: "Geology of the Henry Mountains," "Physical Geography of the Grand Cañon District," "Tertiary History of the Grand Cañon District," Ridgway's "Manual of North American Birds," Hornaday's "Taxidermy and Zoölogical Collecting," while the botanies made quite a load of themselves. Where books can be transported without too great discomfort, they should never be considered useless *impedimenta*. For my part, I know only that which I gather in its chosen habitat. With dried, wrapped and labeled museum and laboratory specimens I can strike but a casual acquaintance.

Our outfit included six rods with tackle, three rifles, two guns (10-gauge and 12-gauge), one tank for alcoholic specimens, taxidermy implements, botany presses, provisions for two weeks, cooking utensils, two wagon covers, bedding and plenty of extra clothing. We took no tent for reasons that will appear later on. Doc also took his setter Elsie and pointer Rex, and I had intended taking my thoroughbred mastiff Rex, but changed my mind before it was too late, as such a trip would have killed so heavy a dog.

At 3 o'clock Monday morning, June 3, my alarm clock routed me out. It was a short matter to have a fire going and coffee on. Then my horse was fed and saddled, and, faithfully promising that I would return within five weeks, I sat down to the last breakfast at home for many a long day. Before the meal was finished Doc and Ted drove up in a buckboard that carried half the duffle of the expedition, and at 5 o'clock the start was made.

The morning was perfect. Far to the south Mt. Nebo glistened in the early sunlight, crowned with snow and forming a landmark for fifty miles. On either side were purple fields of fragrant lucern, and already the music of the mowing machine was humming through the valley. Two miles to the west stretched Utah Lake, and in and out amid the tule islands swam thousands of teal and mallards and redheads in conscious security. By 10 o'clock we had left the valley, crossed Mapleton Bench and were well in Spanish Fork Cañon. Here we experienced our first delay. The blast of a gang of road makers completely blockaded our way and we were obliged to wait three hours for the debris to be removed and the trail made passable. This within two miles of Castilla Hot Springs, where we had expected to take dinner. But we made the best of our luck, rested our horses and ate lunch by the side of Spanish Fork River, at this time so high and muddy that it seemed impossible for trout to exist in it.

The afternoon drive was noteworthy on account of the windstorm that prevailed. Clouds of dust shut out the landscape, making traveling anything but enjoyable. The effects of this storm, which was much more severe in Southern Utah, were visible as far south as the Grand Cañon. Leaving Spanish Fork Cañon, we went up Thistle Creek, where the mountains withdrew on either side, leaving a valley twelve miles long by two miles wide. Here the crops are at least four weeks behind those of Utah Valley. Thistle Creek is an excellent trout stream, and a few deer are to be found in the east and west hills, though the tie-choppers have made big game almost as scarce as hen's teeth. The heavy roads and clouds of sand made speed or comfort an impossibility. It was dusk when we reached Indianola, thirty-seven miles from Provo and 1,500ft. above Utah Valley. As Indianola is made up principally of semi-civilized Indians, we concluded that it was better to camp out than to accept cabin hospitality. After graining and pasturing our horses, we managed to make a fire in spite of the gale, and Doc and Ted had their first experience in outdoor cookery. I was awakened about midnight by cool, refreshing snow drifting softly across my face. Tucking my head under the wagon sheet I slept peacefully until morn.

Tuesday, June 4, was cloudy in the morning and stormy in the afternoon. The weather was propitious neither for hunting nor collecting. During the day we crossed the divide between Utah and Sanpete valleys (elevation 6,500ft.) and at nightfall found ourselves at Ephraim, wet, hungry and seventy-five miles from home. Needless to say we did not attempt to camp out, but enjoyed a good supper and feather beds at a commodious farmhouse. We left Ephraim on Wednesday morning in a tremendous storm, which lasted until we reached Manti. Then the sky cleared and I rode ahead to Gunnison, ninety-seven miles from Provo, and the end of the first stage of our journey. The scenery after leaving Manti was entirely different from the scenery about Provo. The Wasatch Mountains have given place to the Wasatch Plateau and the rolling mountains on either side are either barren or covered with cedars. The prevailing color of the bottom lands is the alkaline gray; of the hills, red. We are in a region of salt and gypsum, of black, isolated trachyte domes and towers, a region of bad water—the sinkhole, perhaps, of some pleistocene or neocene lake.

Gunnison perpetuates the name of Capt. Gunnison, U. S. A., an indefatigable and scientific explorer, who, in the early fifties, was here massacred by the Utes. Five years ago Gunnison had no future. To-day it is the most prosperous town in south central Utah. It cuts more hay and winters more cattle than any other settlement in the Territory. Reason, water! water!! water!!! When the Gunnisonians found that they could not get water enough in their ditches, they deliberately dammed the Sanpitch River, backed water and successfully completed the first great irrigation reservoir in Utah. The artificial lake is five or six miles long by about three-quarters of a mile in width. Already it is a great resort of ducks. Unfortunately it has been stocked with carp. It would make an excellent bass pond, and I am in hopes that it will yet be filled with game fish. In this vicinity are several large Indian mounds that are well worthy of investigation, but we had no time to devote to them.

At Gunnison Andrew had a sheep wagon ready for us, and Perry and Collie were to meet us at this point. This was our first experience with a sheep wagon as part of a camping outfit, and while it was commodious and saved a tent, it was too heavy and uncomfortable for traveling purposes. Our two neophytes put in an appearance Thursday afternoon, and at 4 o'clock, having transferred all our duffle to the sheep wagon, we set out for Salina. This place was reached about 7:30. The trip had been made slowly in order to let the boys target their rifles on jack rabbits.

Friday, June 7.—This morning dawned threatening. All about the surrounding hills hung low storm clouds, and we changed our route on this account. We had purposed going through Grass Valley and up the East Fork of the Sevier; but that being the rainiest valley in the south, we determined to follow the main stream to Panguitch, and so saved many a ducking. Here we left the railroad, having followed the line of the Rio Grande Western & Sevier Valley branch all the way from Provo. And now our collecting began. Flora and fauna commenced to change, but our first specimens were geological, consisting of obsidians, volcanic glass, chalcedony and curious water formations that are of not infrequent occurrence in recent volcanic districts. We made a long noon camp at the Vermilion Bridge over the Sevier. Collie made the bread, and our appetites did full justice to the viands, though as yet we had neither fish, flesh nor fowl of our own providing. The afternoon drive lay over a long, hot sagebrush bench, between the river and Richfield. I took Andrew's place as driver of the sheep wagon, while he used my pony for botanical purposes. We found about fifteen species not found in Provo—mostly compositæ, chenopodiveæ, krinitzkias, gilias and phacelias. Of avifauna the most common was the desert horned lark (*O. alpestris arenicola*), which seemed to me to be almost identical with its prairie congener.

At 5:30 we passed through Richfield, and at half-past 7 we pitched camp in Elsinore, 139 miles from Provo. The drive during the latter part of the afternoon was in a most delightful farming country. Elsinore provides almost all of Utah south of this point with flour and bacon. All day long we had traveled through a country that commonly abounds in jack rabbits and chickens, but on this particular day chickens are nesting and rabbits *non sunt*. The only game we saw were a few cotton-tails in the willows where we camped at noon.

Saturday, June 8.—We left Elsinore about 9 o'clock, but before we were fairly out of the settlement the ornithologists had their inning, and they kept it up for more than an hour. The orchards in the south part of town were fairly alive with birds that I had not noticed in northern Utah, some being new to all of us. It did seem wanton cruelty to take any of them, and I am heartily opposed to shooting in the vicinity of dwellings, but this case seemed to warrant a breaking of our rule; so I told the boys to get what they needed, not to exceed one pair of any one species. I determined the species, but as Doc was going to mount the specimens he retained the field notes, so I can recall only the following: *Sphyrapicus thyroidens*, Cass; *Icterus bullocki*, Sevains, and *Denaroica aestiva morcomi*.

Three or four miles from town we passed above the ditch line, and for some miles had a rocky, sagebush, uphill road. The only specimens added to the collection were two small brown ground squirrels, gravid females in each instance. As a rule nine-tenths of the ground squirrels, gophers and prairie dogs that we shot were of this kind. I can recall but two males taken during the entire trip. About 1 o'clock, when we had given up all hope of water for dinner, we came upon a swale where was a spring and water enough for a couple of acres of grain. Here, too, was a lumber house, with log stable and corral, and here we saw our first game. About the place limped a broken-legged doe that had evidently been raised on the bottle, while on the stable was nailed a fresh coyote skin, its heretofore annexed carcass lying on the ground beside it. A small boy told us that it (carcass and skin) had got into the chicken coop on the preceding night and that the five dogs belonging to the ranch had used it up. This was our place for dinner, and that meal, with the skinning of the birds and the pressing of plants, took us until 3 o'clock. Then in a drenching shower we started to find Marysvale Hill, making four miles in three hours. From the pines at the summit of this divide I should judge its elevation to be about 7,000ft. Botanically the climb resulted in a new *pentstemon* and a new *gilia*—new to us, not *sp. nov.*

The descent was speedy and easy. Unfortunately Doc took one of the saddle horses and lost himself in the cedars. When we came down into the valley we found ducks (mostly mallards) on every slough. It was dark when we reached Thompson's ranch. Here our horses enjoyed the luxury of a stable. Four of the boys occupied the camp house. Andrew and I made our bed in the sheep wagon, and then, while the storm raged outside, we cooked supper in the large camp house chimney place. We had made but twenty miles during the day, but these were more trying than any thirty that we had made before.

Sunday morning broke clear. The storm that, ever since we left Provo, had hung around us had entirely disappeared and in gratitude we slept until 8:30. Our start was made shortly after 10 o'clock, and remembering the day we jogged along at a Sabbath gait, making camp at 3 o'clock on a slough between Junction and Circleville—distance from Provo 171 miles. This was our first camp that was located out of range of a farm house, and the horses hardly knew how to act when they were hobbled and turned out to pick for themselves. With the 6yds. of mosquito netting that we brought for insect nets we seined the slough and secured enough chubs for supper and breakfast as well as two or three quarts of minnows that were salted down for bait at Panguitch Lake.

Monday, June 10.—Our early morning ride led through Circle Valley, a rich farming country about six miles in diameter. Here we had an hour's fine sport with jack rabbits which were to be counted by dozens. A few young and tender ones were reserved for dinner while the rest were to be parboiled for dog meat. By the way, the young dogs were standing the trip in the best manner possible. Elsie would follow a gun all over. She was a natural retriever, and many a little warbler did she find that we would otherwise have lost. Her brother, Rex, was somewhat lazy and gun shy. He made an excellent camp dog, as he hated to wander. My saddle horse had become so lame and tender-footed that we were obliged to lead him, so I had to be content with sheep wagon or buckboards.

At 11 o'clock we entered the gateway of Circle Cañon, and for eight or ten miles we were hemmed in by low and picturesque walls riding beside the river under the shade of willows and birches. We had expected to find numerous new plants and birds here, but we were disappointed. Our noon was noted for the agility with which dinner was cooked and at 1:30 we were under way. At 3 o'clock we emerged from the cañon into the beautiful valley of the upper Sevier, a valley too cold for shade trees, but a splendid grazing country. At 5 o'clock my horse, which had been tied behind the sheep wagon, was discovered to be missing and Collie went back on horseback to recover the truant. He was so lame that he could scarcely walk and I determined to leave him in the first good pasture. During the delay of an hour our time was spent in shooting rabbits and prairie dogs. Of the latter we secured two fine large specimens. At 7:30 we made camp just south of Cleveland settlement by the banks of the Sevier and in sight of Panguitch, which town we hailed with a shout of delight, as here our genuine sport was to begin.

We were up with the sun on the following morning, and after a hasty breakfast all indulged in the luxury of a shave. Overalls and shooting coats gave place to the suits that had been brought for "best," and we were evidently determined to make an impression. At 7 o'clock, Doc, Andrew and I set out in the buckboard for Panguitch, leaving the rest to follow at leisure. Two miles from town we met an old pupil of mine, and it goes without saying that our accommodations were at once insured. By 11 o'clock all mail had been received and answered, my horse had been turned out to pasture and the entire outfit were enjoying themselves at Houston's home. I was too near my ideal camp to rest contented, so I told the boys to follow me up South Cañon after they had had dinner, and I would go in advance and prepare a place for them. I then took Collie's horse and Panguitch was soon in the background.

This "screed" is long for an introduction. The nine days and 210 miles of travel were somewhat monotonous to us, and may prove so to the reader; but now that is past and we are in the land of deer and only a few hours from a trout supper. Henceforth we travel less and accomplish more. SHOSHONE.

A Long Island Deer Proclamation.

SHERIFF'S OFFICE, Riverhead, L. I., July 30, 1895.—Public notice is hereby given that by Chapter 974 of the laws of 1895, which refers to the counties of Kings, Queens and Suffolk and to Long Island Sound, which became a law on the 7th of June, 1895, it is enacted as follows:

"SECTION 170. Shooting at, hunting with dogs or otherwise, or killing deer is prohibited for the period of two years from the passage of this act, and during a like period of every alternate two years thereafter. During the open seasons or intermediate periods of two years, deer shall not be shot at, hunted with dogs or otherwise, or killed, except from the tenth to the sixteenth day of November, both inclusive. Whoever shall violate or attempt to violate the provisions of this section shall be deemed guilty of misdemeanor and in addition thereto shall be liable to a penalty of one hundred dollars for each violation thereof."

It is also provided by the Penal Code, Section 15, that upon the conviction for a misdemeanor for the unlawful killing of deer, the guilty party is punishable by imprisonment in the penitentiary or county jail, for not more than one year, or by a fine of not more than five hundred dollars, or by both.

Any person violating or attempting to violate the provisions of the above act will be dealt with according to law. JNO. Z. O'BRIEN, Sheriff of Suffolk County.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

AFTER TURKEYS IN THE CHOCTAW NATION.

In the very early morning of a day in last December our car was coupled on to a southbound train at Parsons, Kan., and we began the run to our point of departure from the railroad in the Choctaw Nation. We were a jolly party, drawn together by a feeling of good fellowship as well as by the love of hunting, and we knew that all kinds of good times were before us. Most of our number had hunted in the Indian Territory in former years, and some of us had come from far beyond the Mississippi for this last hunt in that land of lawlessness.

We had boarded the car late the night before, but it was not yet light when we tumbled out of our blankets and gathered in a group to look at the country through which we were passing. Then, after the manner all hunters know so well, the talk flitted gayly about—banter that recalled hunts of the past, plans that promised well for the future, discussions of the merits of various calibers, and the hundred other things that concern the sportsman. We were so occupied when the Blackstone siding was reached, and one of the party who was on the train that was robbed there the month before told the story of the "hold up." Muscogee, a few miles below, is a breakfast station, and our hunting-coated party invaded the dining-room to get the last meal we were to have from a real kitchen for many a day. One may find more peaceful places than the little town of Muscogee, but the eleven deputy U. S. marshals who were patrolling its streets with their Winchesters had a decidedly quieting effect upon the disorderly element. At that time the Bill Cook gang of outlaws was engaged in its wildest depredations, and some of the residents were nervously apprehensive that they might raid the town.

OUR CAMP.

CHOCTAW INDIAN AND "POOR WHITE" FROM ARKANSAS.

Then southward again to South McAlister, a town that presents many of the features of the Western mining camp. It is a little city of wooden buildings with unpaved streets and sidewalks of every grade. Two laws are rigidly enforced there—one against selling liquor and one prohibiting the carrying of firearms. At night especially it has a mushroom, temporary, unsettled appearance, with its ill-lighted, irregular streets and its crowds of restless men wandering aimlessly about. It is essentially a town of men; one might almost say of men only. Here our car was switched on to the old Choctaw Coal road and pulled east through the coal region to the 'Frisco road. We began to feel that at last our campaign was about to commence, and rifles were taken from their cases, cartridge belts were filled, hunting knives were whetted, and we talked more earnestly of what should be done when we struck the trail at Talihina. A two hours' wait at Wister Junction for a train on the 'Frisco gave us time to pick up a few quail on the rolling prairie near the railway. Then a south-bound local picked us up and we headed for Talihina, where we were to leave the railway and start across country for the mountains. The character of the region changed as the miles slipped away under us. It was new country to us all, even to the two Indians whom we had brought down with the hounds. Until almost evening we climbed up a grade winding between low mountains that suggested portions of the Alleghany range, and the sun had set before our car was left on the siding at Talihina. In the failing light we scurried out to get a glimpse of the town. It is not a pretty place, and it has not even the merit of cleanliness to recommend it, but in spite of all it has an atmosphere that is attractive in a way to a man from the "States." Not a bit of gay color lightens the scene. The prevailing tone is a dark slate color, even the earth has this tinge, and many of the inhabitants have the alert, death-suggesting air of the well-trained funeral director. They did not receive us cordially, or at least those only did who expected to participate in reducing our financial resources. We left no friends in Talihina, but it was through no fault of ours. That night we stayed on the car and several of the citizens spent the evening in parading up and down the track and commenting upon us. They may be good shots—we did not know—but they are not well grounded in the rules of etiquette. The town is neither large, quiet nor religious, and there is as much lawless entertainment per capita there as in any locality in the country. If the accident insurance rate is not high in Talihina it should be. Perhaps the most sincere spirit of good will to one's fellow men does not prevail, but the universal custom of carrying firearms has engendered some respect for the rights and feelings of others. This, however, is not allowed to prevent the free use of these weapons.

Shortly after sunrise we transferred our camp kit and provisions to wagons and loaded another with baled hay for the horses. In an hour we were on the march across the somewhat broken prairie under the guidance of two resident Indians. To the left lay the Winding Stair Mountains, far down to the right were the mountains of the Seven Devils, and behind us in the distance were the San Bois Mountains. Dead ahead, but not yet in sight, was our destination in the Kiamichi Mountains. At noon we stopped on the bank of a small stream, and just as the coffee began to boil a sharp-featured, brisk little man galloped up on a black horse, and the following conversation ensued with the leader of our party:

"Is your name Don?"

"Yes."

"You're leadin' this outfit?"

"Yes."

"I'm a United States Marshal and I'm after one of your party."

There are many annoying contingencies in life and arrest is not the least of them. We were disturbed, though innocent of wrongdoing. Further questioning, however, showed that it was one of our teamsters whom the law desired. We promptly admitted the marshal's greater right to the man and parted company, we keeping his team. Later developments caused us to think that the heavily armed gentleman might have arrested two of our teamsters without taking an innocent man. Before we were under way again a second deputy marshal rode in from another direction with an illicit distiller in custody. Perhaps these evidences of the power of the law should have been reassuring to us; nevertheless we felt that there was yet something to be desired in the way of peace and quiet.

All day we followed the Polk county road toward Arkansas and at night camped in a bit of heavy timber near a small creek. It was a hurriedly made camp, but a picturesque one. The big cedar logs of our fire made a brilliant circle of light in the surrounding gloom and shone brightly on the faces that clustered round and on the white tent and wagon tops. A camp on a prairie usually seems lonely and often cheerless; a camp in the mountains is sometimes almost oppressive with its sense of awe, and the gayest camp one can make is that in a heavily timbered country where great trees confine the firelight in a narrow space and throw it back upon the campers. Such was our bivouac that night.

At ten o'clock the next morning we forded the Kiamichi River and headed southeast to our camp ground. We had intended to go up into the Kiamichi Mountains, but found only one place where even a packhorse could ascend. To take the wagons up was out of the question, and so we pitched our tents in a grove of white oaks at the mountains' base, near a little stream that came tumbling down a ravine. The first half day we spent in learning the country. It presented a great diversity of kind; along the river were the prairies of the bottom land; then low hills covered here and there with cedar and oak trees; behind them rose the first long unbroken ridge of the mountains. There was joy in the camp when the first turkey was brought in; there was greater joy the day following when three more were hung up in a tree beside the cook-tent. We kicked a bit each time one of them disappeared to reappear on the table, but the cook always laughed and did it again the next day. We wanted to make a big show of game when we marched out of the wilderness; he was determined to feed us well if it took all we could shoot, and possibly our remonstrances were not altogether sincere. In spite of our appetites the game bag grew until when we broke camp thirty-two turkeys were hanging on ropes stretched from tree to tree and three deer were slung from the branches, while several fox skins that were to make rugs for far-away homes decorated neighboring saplings. We hunted bear with considerable persistence; we had the hounds out after deer; but our only good luck was with the turkeys. Not even a glimpse of a bear did we get, only two bleached skulls, from which we took the teeth to keep as souvenirs of the hunt. Now and then we stumbled on things that surprised and interested us and set our imaginations to building stories on the suggestions they offered. One such was a little "shack" in a valley near the foot of the mountains at a spot where the trampled ground and the quantity of manure showed that horse thieves had been wont to corral their stolen stock there. Perhaps, too, it had been a stopping place for the itinerant and hard hunted whisky peddler, the curse of the Indian nation. At another place nearer the river we found an old slab of stone telling that in that corner of the wilderness lay the body of a member of the Indian Council. It may be he had desired to be buried in a country as wild and primitive as that of his forefathers. If so, his wish had been fulfilled.

Breaking camp is often a mixed pleasure, and so it was as we moved out of the "Kimish." A part of our camp kit had been sent on the day before, and thus lightened we made the railroad in one day. Talihina did not welcome us, and we did not stay long there, but loaded our traps and coupled on to the first north-bound train. The last act of one of our party before leaving Talihina was to tear down and take away from a wall of the railroad station a handbill reading as follows:

$3,500 REWARD.

By authority of the Attorney General of the United States I hereby offer a reward of $250 each for the bodies of the following named outlaws, delivered to me, the reward payable on special approval of court. Deputy U. S. Marshal cannot receive the reward.

Names of outlaws: Bill Cook, Crawford Crosby, alias Cherokee Bill; Buck Wightman, alias Bitter Creek; Columbus Means, Skeeter, James French, Sam Brown, Perry Brown, Thomas Quarles, Joe Jennings, Charles Clifton, George Newton, Slaughter Kid, Bill Doolin.

Reward to be accepted in full of all expenses so far as the Government is concerned. G. J. CRUMP, U. S. Marshal.

Oct. 27, 1894.

This offer of reward by the Federal authorities gives a hint of the condition of lawlessness prevalent in the territory. In addition to the sum offered by the Government the express companies doing business in the Nation had offered rewards for the men who had taken part in the robberies in which they suffered. In some instances the totals had run up to very large sums. The various Indian governments of the "Nation" are wholly unable or unwilling to put a stop to the reign of disorder there, and the territory is to-day the resort and asylum of desperate criminals from the Alleghany Mountains to the Rockies. The act of Congress, approved March 1, 1895, providing for the establishment in the "Nation" of two additional Federal courts and the appointment of their officers, may aid in restoring quiet, but if it is not successful something else must be tried.

JACK ELLIS, DEPUTY U. S. MARSHAL.

A few miles northeast of Talihina we passed through the now notorious town of La Flore, where Silas Lewis was executed by the Choctaw authorities in November, 1894, for complicity in the killing of several men during a political row, the result of attempts of rival candidates to secure the position of Governor of the Choctaw Nation. The party to which Lewis belonged was defeated and his trial was conducted by the other faction. A death sentence was passed and he was ordered shot. The execution was deferred upon the request of President Cleveland, but at last feeling that there was no danger of Federal interference, the sentence was carried out in the most brutal manner possible. It was decided that the prisoner should be shot by one of his political enemies in accordance with Choctaw custom, and a member of the victorious political party was chosen to do it. As had been prearranged, the shot was not fatal and the condemned man did not fall. No second shot was fired, but he was thrown to the ground and strangled to death by the fingers of his political opponents. He lived thirty-two minutes. There was no pretense of a fair trial and the death was made as horrible and painful as possible.

At Wister Junction we made the acquaintance of Jack Ellis, a Deputy U. S. Marshal, who has a "record" of twelve men and a wide reputation in that country for bravery. He told us that the train we were to take north from South McAlister would probably be held up by the Cook gang near Eufala, and he was corroborated at McAlister by the conductor of the train. We did not need to be told, however, that trouble was expected, for the number of guards on the train showed that it was true. One or two at a time these well-armed U. S. marshals strolled into our car to smoke and learn of our luck in the field. They were good fellows, and one of them was carrying a bullet from "Cherokee Bill's" Winchester. The express car was only opened when absolutely necessary and then but one door at a time, while two marshals, one at each side of it, kept a careful lookout for danger.

Thus we rode on through the night and in the early morning were again at Parsons. To bed for four hours' sleep; then for those of us who were to go on east the labor of packing our personal effects, and the party disbanded—no, not yet, for before we said good-by we were all to have dinner with "Joe"—"Joe," the jolliest man in the party; "Joe," whose eggnogs were dreams in alcohol, poems in whisky; "Joe," who was never tired and whose luck in the field came late, but it came large. Once more we gathered round a table and once more we hunted the "Kimish" together in retrospect, separating in the hope that we may again come together for another hunt in the "Nation."

ALLAN HENDRICKS.

AROUND THE CAMP-FIRE.

Those who have ever spent an evening around an Adirondack camp-fire will each and every one without question put it among their pleasantest experiences and recollections. There is no place where people come into closer relationship and more congenial comradeship than when seated before the blazing pile of logs in some secluded camp.

There is something about camp-life that sweeps away the conventional bars and barriers of modern social life, and brings out the inner man and his personality. Living in the close companionship of every-day life, being seen under all circumstances, little traits of character come to light and one is "sized up" very correctly. The utter simplicity of the mode of living, the share and share alike methods, the bearing and forbearing that are so necessary for peace, the absolute freedom from the outside world, all tend to give insight into character such as cannot be obtained elsewhere, and to bring people closer than they can ever come in the rush and whirl of city life. Away from the feverish excitement, far from the noise and roar of the city, close to the heart of nature, in the sweetness and purity of the mountain air, the veneer of conventional restriction is worn off and a man becomes in a degree like his environments, perfectly natural. So the social intercourse of camp-life, where the party is made up of congenial souls, is pure and sweet, and the friendships formed are as lasting as the eternal hills amid which they are made.

But the truly delicious hours of a sojourn in the woods are those spent around the fire. When the day's work is over, the guns cleaned and the various simple details of living attended to, the banjos tuned and the "briar-woods" lit, then comes the climax to all the joys of a day in camp.

The back log is rolled up, some fragrant cedar split for kindling, the hardwood sticks put on and the fire is ready. As it blazes and snaps the flames leap up, the outside world grows dark until nothing is seen beyond the little circle of light but the moon sailing over the pine treetops. On every face lit up by the glow of the fire there is a look of contentment, on every lip a smile.

For a while each one sits in silence, for there is something almost awe-inspiring in the great veil of darkness that envelops the camp. The great busy workaday world with its joys and sorrows, its riches and its poverty, its successes and disappointments, seems so far away, and the peace and quiet of the forest seem so near to heaven.

The only sounds to mar the stillness are the hoarse croaking of a frog on the shore, the wild weird cry of a loon on the lake or the solemn hoot of an owl in a neighboring pine.

As the fire grows warmer and the pipes roll out clouds of fragrant smoke, each one seems to wake from his reverie, and soon the conversation becomes general and spirited. Each one has his share of hunting or fishing experiences to relate, and one realizes the old saying, "Truth is stranger than fiction." From one to another it goes, from grave to gay, from sober truth to unvarnished fiction. Snatches of song and bursts of joyous laughter from time to time make the forest ring, and the fire crackles merrily, as if it desired to express its enjoyment of this jovial good-fellowship around it. There is a genuineness about these fireside festivities that seems sweet and refreshing to the city bred man after his winter's round of "society events."

Soon the pipes are out, the last story told, and one by one, tired from the day's exertions, the campers "turn in." The last one to go gives the fire a gentle shaking up and then joins the row of blanketed forms stretched out on the fragrant balsam boughs. Left to itself, the fire gently snaps and sings, until nothing is left but a bed of glowing embers, while lulled by the music of the wind in the pines and the gentle lapping of the waves on the shore the wearied sleepers are resting for the morrow's sport. The frog sits silent in his marshy home, the loon is sleeping on the gentle wave, and over all is silent peace, so calm and sweet. Away beyond yonder dark mountains is the world of strife and discord, but here in nature's solitude one seems to feel a foretaste of heaven's peace, that peace which passeth understanding.

There is no experience that is as sweet to the man whose nerves are jarred and jaded from the wear and tear of our modern city life as such a night in camp. One is surprised to see how much pleasure can be found in simple amusement, and realizes how foolish the endless rushing for excitement in society life is. Given a good camp, plenty of duffle, and two or three congenial spirits to share them, a man can work out more solid enjoyment than in a whole season of balls and parties.

After a summer's jaunt in the woods a man looks back longingly on those quiet evenings around the fire, and all his life long the memory will come back to him, and in his dreams he will see again that firelit circle with its merry voices and happy faces. In fancy he will live over again those careless, happy hours when with rod and gun he roamed the wilderness in search of sport and health.

M. J. DURYEA.

BUCK MOUNTAIN POINT, Long Lake, N. Y.

Natural History.

MRS. AND MR. OUSEL.

FOR as many years as I can remember, fly-fishing has been one of my hobbies; and keeping my eyes and ears open for bird life on the creeks and rivers part of the pleasures of the sport.

Necessarily in such situations the water ousel has come in for a good share of my habit of observation. I have watched closely their feeding habits and have endeavored to learn something of their domestic life, with what success you will see, as I have found two nests in rather singular situations, so I think.

Seven years ago, while industriously wading Cedar River, in King county, I noticed an ousel fly to the limb of an alder, which extended out over the river. That struck me as being rather a singular proceeding, and I decided to investigate. The limb was about eight inches in diameter, had been broken off, and was dead for about four feet from the end and partially decayed. As I came close to it I noticed a hole about on the level with my face and about ten inches from the end of the limb. The hole apparently had been made by a woodpecker. As I approached, Mrs. Ousel flew out. Looking inside what was my surprise and delight to find three baby ousels, as snug as you please. After feasting my eyes on the first nest and young of that queer bird it had ever been my pleasure to find, I came away fully resolved to see more of them, which I did several times afterward.

The other nest was discovered on Bear River, in this county, on June 8 last. Having walked up stream for about five miles, without seeing anything of much interest but elk, bear and deer sign, I started to fish down, and had fished perhaps a mile when I saw an ousel flying toward me. Standing still in hopes that it would come close to me, I was rewarded by having it light not over 20ft. away. I noticed then for the first time that it was carrying something white in its mouth. Ha ha, my beauty, a nest somewhere; you shall be watched until you go home. To my left at a distance of about 6ft. were the upturned roots of a giant fir, with the body of the tree lying up the river. Mrs. Ousel would run up the bank for a few feet, then stop and eye me; a few feet further and another look; until she was about 8ft. from me, and there she stood for at least two minutes. To my intense surprise the white thing in her mouth was a tiny trout—surprise, because I was not aware that they caught fish. Suddenly she made up her mind that I was all right, and sprang up into the roots of the fir, returning in perhaps ten seconds, but without the fish. Stepping to the root it took but a minute to discover the nest snugly ensconced in a hole formed by the interlacing of some of the smaller rootlets. It was lined with grass and had all the appearance of being warm and comfortable, and contained three little ousels just about ready to fly. They looked at me with as much curiosity as I did at them and did not appear to be the least bit afraid.

Now here is another curious thing about their feeding habits. Situated on Cedar River, about twenty miles from Seattle, there was a dam, at the foot of the dam an apron. When the river was low in the fall of the year, while endeavoring to get over the dam, salmon would run on to this apron, where they became an easy prey to the neighboring population. When an overripe female was struck, some eggs would squirt out, and of course would sink, resting on this apron, and whirling around in the little eddies, where the water was say 8 or 10in. deep and with little current. When a salmon egg is dead it turns a whitish pink. Noticing the ousels diving there several times, investigation prompted by curiosity led me to get in the brush on the bank and watch them, and to all appearances they were having a lovely time diving for those eggs, and I presume feeding them to their young, for after every successful dive the possessor of the choice morsel would immediately fly off with it.

Mr. and Mrs. Ousel are queer little folk with queer little ways, and well worth watching as a side issue to the pleasures of enticing the wary trout from his pool and riffle.

JIM MAC.

SHOAL WATER BAY, Wash.

A Free Country.

Editor Forest and Stream:

This is surely a free country, where every man can do as he pleases so long as he complies with the law; and our laws are so liberal that no man should want to violate them, and if he is much of a man he won't.

Here we can have any kind of a gun we want. Those of us who want to carry a 10 or even 16lbs. gun can do so, while others want to carry as light a gun as the manufactories turn out. And as to the different calibers, there will always be a difference of opinion among sportsmen.

For quite a number of years I carried a heavy rifle, and wanted the largest cartridge I could get after I got to using breechloaders. But for the last twenty years I have used a 7½lbs. rifle and a small cartridge, and I do better than I used to with a heavy one. In a hard day's tramp on the mountains a pound or two makes a big difference. Take it when a man is five or six miles from camp and the sun has gone down. He gets very tired of his gun, especialy if it is a 10 or 12-pounder. He has to carry it on his shoulder; he cannot take it in first one hand, then the other, or run it through his arms across his back. No matter how much his shoulder may ache there he must keep it.

I have often been asked what kind of a rifle I like best. I invariably tell them. I practice what I preach. They can see my two rifles. I would not have any other kind. For big game I keep a .38-55, and for small game a .22, long cartride.

And so it is in regard to the different kinds of game. If any man wants to believe there is a family of fantail deer, or mule deer; cinnamon, brown, black, pine-nut, grizzly, silver-tip, baldface, white, polar or any other kind of bear; or two kinds of panther or cougar, mountain lion or catamount, he can do so.

All we want is for him to believe it.

I have killed a good many fantailed deer, from the Cimmaron to the Bitter Root. Among those I have never killed a buck or an old doe. The tails on the yearlings and even two-year-olds seem to have attained their full growth and reach nearly to the hock. The hair, when it is prime, is 6 or 7in. long. When they run with their tails up, which they usually do, it makes quite a fan, one a foot and a half long and over one foot wide.

Now the blacktail deer from the Cimmaron to the British line, I think, are the same deer. The yearling's ears are as large as they ever get; and take a yearling or a fawn in the winter and from its color and the size of its ears most every one thinks they are a different deer.

So it is with the bear. I have killed quite a number, but not much of a variety—the black and the grizzly. Yet I have never been so fortunate as to find one that was not a rank coward and would get away if it could. Bears will run further when they get the scent of a hunter than any animal that has been hunted by

LEW WILMOT.

A Man-Eating Shark Fake.

Editor Forest and Stream:

The question whether there are man-eating sharks in the bays and waters off the New Jersey coast is a matter of interest to fishermen in this locality. It therefore behooves us to investigate all sensational stories of attacks by sharks on men, and sift them down to a basis of truth.

In the daily papers of Aug. 3 there were varying accounts of an attack in Raritan Bay by a shark on a man. The following are two of the statements published concerning the occurrence:

Philadelphia Times.

Rescued from a shark. A man jumps to the aid of a companion whom the monster had dragged overboard. Special telegram to the *Times*. New Brunswick, Aug. 2. While out rowing in Raritan Bay to-day Elias Turner, of Woodbridge, was pulled overboard by a shark. His hand was trailing in the water when the man-eater grabbed him. Jacob Van Hess, a companion, plunged overboard with a sheath knife, and after a desperate struggle drove the shark away and rescued Turner from his perilous position.

Philadelphia Press.

Seized by a shark. Elias Turner pulled out of a boat by a man-eater. Seized his arm, which was trailing in the water, and broke it in two places. Special dispatch to the *Press*. New Brunswick, Aug. 2. Jacob Van Hess and Elias Turner, of Woodbridge, had a thrilling experience to-day with a shark. They were rowing in Raritan Bay, and Turner fell asleep with his left arm trailing in the water. He was suddenly awakened by a fierce tug at his arm, and before Van Hess could hasten to his assistance he was pulled overboard by a big man-eater. Van Hess quickly dived to the assistance of his companion. With a sharp knife he attacked the shark, and after stabbing it repeatedly caused the man-eater to release his hold on Turner. Then he got Turner in the boat and rowed ashore. Turner was suffering severely from the rough treatment he received. The shark caught his left arm, which had been broken, and fractured it a second time.

The New York *World* amplifies the shark story and tells it with great detail.

Feeling interested in getting at the truth, I made inquiry through friends located at New Brunswick and Woodbridge, who I knew would investigate the matter thoroughly. They have done so with the usual result of finding no foundation in fact for the story.

One of my friends writes: "I have thoroughly investigated the shark story, and I am fully satisfied that there is absolutely nothing in it. It originated in the mind of a newspaper reporter."

Another says: "I have investigated the subject matter contained in the inclosed clippings, and find to my satisfaction that it is all a fake, or a joke on some one, presumably a reporter. While at this season there are many large sharks off Sewaren and Boynton's Beach (one having been caught measuring abour 8ft. long), and hundreds of men, women and children are bathing there, no one has heard of anything of the kind."

H. S. D.

The Gray Wolf in Tennessee.

BROWNSVILLE, Tenn.—I have been much interested in the snake controversy, and am glad the horn brood has been represented in other sections. I am satisfied that we are not to furnish the one to split the wagon tongue. A moccasin nipped my finger while I was fishing in June, but beyond a terrible scare little damage was done.

There are several of us who would like an answer through your columns as to whence comes a species of large gray wolf which in the last four years has taken possession of our river bottoms and seems to have gone to permanent housekeeping. Twenty-five years since the small black wolf was exterminated, and now, as though dropping from the sky, comes this gray monster that none of our dogs can successfully tackle; in fact, for a dog to leave the pack a few yards in a chase is always fatal. This creature has little fear of man, and renders his range useless as a place to raise stock or hogs. Perhaps some correspondent can tell us what he is, whence he comes, and what of him, and why he has waited for this late day to make his appearance, for until very recent years we knew him not. Good luck to the paper and its correspondents—may the tribe increase.

BENJ. C. MILES.

Bluebird's Nest in an Electric Lamp.

BREWER, Me.—The prospect for game this fall is good. A plenty of deer, some moose and a few caribou are reported. Small birds have been extremely scarce. I have seen but one bluebird this whole season and this one built in a singular place, in the shade of an electric lamp. English sparrows often do this, but I never knew of any other bird doing so.

MANLY HARDY.

Birds and Insects.

BROWNSVILLE, Tenn.—I have noted with much interest the reports in several issues of the scarcity of summer birds in the North. "Von W." recently calls attention to the great number of insects in his section, and imputes their presence to the absence of the birds. I have been, in an amateur way, a student of our birds for thirty years, and I never saw as many in our forests and fields; half of them are total strangers to me; never saw such before and don't know whence they come. Of catbirds, robins and several others which are familiar I have never seen such numbers as have mated with us. I have heretofore been attributing their stay to our immense crop of fruit. I had noted before the absence of insects, and was seeking for the cause, when "Von W.'s" article appeared, which is a satisfactory explanation, and I am certain the birds' presence is accountable for the insects' absence. Could any argument for bird protection be stronger?

B. C. M.

The Deer's Cry.

IT is a good while that I have been sending random scrawls to FOREST AND STREAM, and very rarely in that time have I needed to "wrassle" with the printer. But as I am interested in the question propounded in a recent letter (issue of Aug. 10), I write to knock out a negative which got in "unbeknownst." A shot which renders a deer helpless, in the matter of escape, is the one which, according to my observation, usually makes him bawl. The master Tennyson suggests something of the same kind in "Enid":

> "Sent forth a sudden sharp and bitter cry,
> As of a wild thing taken in the trap,
> Which sees the trapper coming through the wood."

A calf, too, will bleat when frightened by dogs or otherwise, even though not hurt. AZTEC.

MEXICO.

Game Birds at Home.

WABASHA, Minn., Aug. 16.—*Editor Forest and Stream:* Through the courtesy of the author I have lately received a copy of "Game Birds at Home," so favorably mentioned in your issue of Aug. 10. The work has a peculiar interest to me, more particularly for the reason that I was the author's companion in many hunting trips in this vicinity about twenty-five years ago, when the pinnated and sharp-tailed grouse were in abundance, and Bob White's merry whistle was heard in even our door yards. And never shall I forget some of the wonderful shooting done by the author, for as an all-round wing shot I have never met his superior. And many were the points I learned from him that were of great benefit to me in later years. I also "am satisfied that my lot was cast in the nineteenth century." H. B. JEWELL.

Game Bag and Gun.

GAME SHOOTING RANGE.

HALIFAX, N. S., Aug. 16.—*Editor Forest and Stream:* Your issue of Aug. 17 contains an article by "Dick of Connecticut" in which he accuses me of acting in a manner neither "humane nor sportsmanlike," also of committing an "odious" act. Now, with all due deference to Master "Dick" I think he might have let me down a little easier, seeing that I have such a mistaken idea of sport from his standpoint. Might I ask our friend if he ever shot a moose; if in fact he ever went moose hunting. I would almost wager not.

Again, is the aim of the sportsman in his part of the country to shoot game for food? In this part of the country it is the lumbermen and market-hunters who shoot their game for food purposes. Whenever Nova Scotian sportsmen go hunting they take sufficient food from home to render the precarious supply of moose meat unnecessary. I would honestly be sorry for "Dick" if he was landed in the woods with only a moose, which he had not yet shot, to feed upon.

He says I could have no certainty of hitting the moose 200yds. off when it was running away through cover. Now, our boys here have a fringe of bushes and low spruces, above and through which the animal was plainly visible for a length of time, which enabled me to fire two shots at him, and I have practiced long and faithfully with my rifle so as to take just such shots as the one in question, and I am so far confident of myself that I am reasonably sure of hitting very close to my mark; and in this particular instance I did hit him; and according to my guide's opinion the shot had entered one side of the animal and come out of his breast in front. He says he could tell by the color of the two patches of hair, mentioned in my article of Aug. 10. It thus went through the lung and would kill, although not instantly; the moose could well travel ten miles.

During the calling season it is more often the case than not that you need to shoot your moose by moonlight, anywhere between 8 P. M. and 6 A. M., at say 50yds. away. Now I defy anyone to make a sure shot in such precarious light at even a shorter distance than 50yds. And yet "Dick" can hardly call his own countrymen, numbers of whom have shot their moose under exactly similar conditions, unsportsmanlike.

Can the New England sportsmen, who go "floating" for deer, be more sure of their shot, if even so sure?

Another exuse still, I know men who have spent season after season in the woods trying for their moose, and have never had a chance for years (one man, I know, spent seven consecutive years); and yet when a chance presents itself, must they, for the sake of being humane and sportsmanlike, refrain from shooting, unless they are absolutely sure of their shot? Oh! I would like to see "Dick" under just such conditions. I know men who would be so rattled at the sight of the game that they could scarcely hit the side of a house at 50yds.

He compares sport here with sport in Europe. Now, deer hunting in Scotland is all the experience I have of European sport, and it cannot be compared to moose hunting. Why, I remember, when as a boy I was living near the estate of the Duke of Argyle, seeing deer almost on the roadside, and all they cared for us would be to move on a little, and again commence to feed. I would much like to see a moose act so.

And to justify shooting at a second moose, when we already had one, I would only say there were two in the party and we naturally each wanted our head to take home.

I was hunting on one occasion with a man who shot a moose which was so well concealed by the surrounding foliage that the only visible portion was one ear, moving back and forward. He shot and killed that moose.

Mr. C. M. Stark, of Dunbarton, N. H., whose numerous articles in *our* journal are so much appreciated, and who is, I believe, an acknowledged sportsman, shot a moose under circumstances precisely similar to the case in point: and I think I can rely on him to uphold my action.

I must deny most emphatically the assertion that I fired at my moose, as "Dick" says, from a spirit of mere wantonness, also that "the moose shot at was out of the range established by humane reasoning or the conventions of sportsmanship." If "Dick" has ever hunted either moose or caribou, he must know how often your only chance of getting your animal lies in your ability to shoot and kill at distances up to 500yds., and occasionally further even than that.

In "Dick's" article he quotes me as "confessing" to this, that and the next thing. I confessed nothing in my article. I stated facts, and facts of which I am not yet ashamed. He expresses surprise that I uttered no "word of regret." Pray, what had I to regret? I was happy, very happy, in having killed one moose, any way, for that season.

I can close my reply on the same terms as did "Dick," with a wish to hear the views of other sportsmen on the subject; and if any (who have some experience, mind you) speak, we will see what we shall see. TIAM.

CHATTANOOGA, Tenn., Aug. 20.—*Editor Forest and Stream:* In reading your number of Aug. 17 I notice a comment or criticism of "Tiam" in his "A Moose Paradise" by one signed "Dick of Connecticut." This sporting gentleman expounds or promulgates, or rather advocates, very fine principles. But where on this God-favored globe will you find a human being, sportsman or no sportsman, who will not shoot at a wild moose in the woods when he jumps one, providing he has not got the buck ague so badly that cannot shoot? Mr. "Dick of Connecticut" asks for the opinions of the sportsmen upon the propriety of "Tiam's" action. Has Mr. "Dick of Connecticut" ever run up against a moose in the woods? If so, did he shoot at it? If he did not, why did he not shoot at it? If you ask me to solve this problem I would say if he did not shoot it was because he had the buck ague so badly that he could not pull the trigger.

I am neither philosopher nor critic, but human nature is the same the whole world over. I have hunted almost all kinds of game included in the furred, feathered and amphibious tribes that inhabit this grand old country of ours. I never jumped an animal of any game variety when I was hunting in proper season that I did not shoot at it, and do my darned level best to kill it. Now, the idea of spurting about a man jumping a moose and shooting at it just because he had one down is preposterous. "Dick of Connecticut" or any other mortal would have done just as "Tiam" did.

I journeyed through the Yellowstone Park in '93 with a party of fellow hunters and you can bet your last shilling that I gave my rifle into the safe custody of Uncle Sam's representatives, the bonny boys of the 6th Cavalry. I could have allowed them to seal it with a little string or piece of tape and sealing wax with the holy and awe-inspiring insignia of the United States of America on it, but I was fearful lest that might not answer the purpose. I was well convinced that my lack of confidence in myself was well taken during my trip through the park, as on one occasion when I walked up within 50yds. of a beautiful silver-tipped wolf. This was the most beautiful creature I ever saw in the woods. I knew his fur was very valuable. I was twenty-five miles from the nearest soldiers' encampment; so do you think that piece of linen tape with sealing wax and the United States seal would have remained long on my trusty rifle? Not much! all would have disappeared in half the time it took to put it there, bang would have gone my gun and I would have been the possessor of a rare specimen. The fur of a silver-tip wolf, almost as valuable now as the hide of a silver-tip bear. As the old saying goes, "Man proposes and God disposes." You cannot tell just what you would do until the drama is over.

Is not that true, reader? A. B. WINGFIELD.

A Tale of Woe and Praise.

LEXINGTON, Greene County, N. Y., Aug. 20.—*Editor Forest and Stream:* To be laid up and have your head bandaged while all around the reports of guns are heard is a lesson in patience. Such is my luck just now. The partridge season has opened, and thanks to you, Mr. Editor, for your kind and prompt answer. For the benefit of those who might find themselves in similar difficulties some day I will just tell my tale of woe and praise.

Some time in July I went up into the Catskills to spend my summer vacation and to do a little shooting if possible. For, having read in the *Game Laws in Brief* that the law was off partridges Aug. 16, I figured out that I would have about two weeks of shooting, having to be back in the city Sept. 1.

As soon as I arrived I started out without gun to locate the birds, so that I would afterward know where to look for them. This I kept up for three weeks, and had found quite a number of coveys. On the morning of Aug. 15—the day before the open season—I was informed by the supervisor of the town of Lexington that the board of supervisors had passed a law last year to change the law on partridges so that the open season would commence Sept. 14 instead of Aug. 15. The printed records of the board were brought as proof, and there it was—black on white. When I asked the supervisor what the reason could be for this change he answered innocently, "We don't want the summer boarders to shoot our partridges," I ventured to ask the gentleman to publish that in his advertisement, so that they might know before what they had to expect.

Now, here I was and what should I do? Should I go out shooting the next day and run the risk of being arrested. Thinking it over and over, I finally concluded to wire to the headquarters of the sportsmen, and that I did. Four hours had hardly elapsed when I received the following dispatch: "Aug. 15.—Partridge season opens 12 o'clock midnight to-night.—FOREST AND STREAM."

That settled it. The supervisor said he had no objection. The other townspeople, who had heard of the dispute and had come to hear the answer of FOREST AND STREAM, allowed when they heard it that it must be so after all; and I—well, I went hunting the next morning; and when I held my first partridge of the season in my hand I thought if a partridge could be sent to New York as fast as a telegram this nice fat bird would go to FOREST AND STREAM, "the headquarters of the sportsmen."

REV. E. C. J. KEARLING.

[As set forth in the *Brief* the New York game law now in force repeals all county supervisors' special laws, those of Greene county included.]

NEW ENGLAND SHORE NOTES.

BOSTON, Aug. 22.—Shore bird shooting is better. One or two very good flights of summer yellowlegs have been seen in the vicinity of Plum and Castle Islands, at the mouth of the Ipswich River, and some of the gunners have made one or two good hauls. Mr. Harry Powers, of the Boston Chamber of Commerce, with his friend Mr. Dodd, was out the other day in their stand on Castle Island. They had out their decoys and were looking for yellowlegs. Soon a big flock came in sight, but very high up in the air. The hunters did their best at calling, but soon saw that the birds had stopped in a bewildered sort of a manner. Another caller's shrill whistle was evidently bothering the birds. They soon settled down, however, in the direction of another stand, where the other calls came from. Two shots were given as soon as the birds had touched the water, and two more barrels as they rose and turned. It was plain to Mr. Powers and his friend that the other gunners had made a splendid shot and taken a good many birds. But the flock was broken up and bewildered. Two stray birds came down and were secured by the defeated gunners, who then went along to learn of the success of the gunners at the other stand. They found whom they expected: Mr. Charles Canterbury with his friend Mr. Henry, both of Boston. Mr. Canterbury is regarded as an expert gunner, and he does a good deal of it. It is said of him that he has made shore birds more of a study than almost any other man in Boston, and that he can call almost any game bird that is ever to be found in the sections where he guns.

In the above instance Mr. Powers says that it was a beautiful sight to see the flock of yellowlegs called out of the air, and then, with their two barrels each, for the two gunners to take seventeen birds out of the flock. It seemed to be a case of pure skill. It was evident that the birds were old ones, from the fact that the flight is not the first one, which was due in that vicinity as early as July 15. The flight has been further seen. Mr. Claude H. Tarbox, with his friend Charlie Bailey, have had shots at the same birds on Plum Island, where they have stands. They secured ten birds the first time out. But the crack bag out of the flock has just been made. Mr. Tarbox saw a gunner get on to the train a few mornings later, with a bundle of birds that he estimated to contain from seventy-five to one hundred. The gunner he did not know, but as he came evidently from the shooting grounds near the mouth of the Ipswich River, there was no doubt about the identity of the flock. On Wednesday Harry Powers's wife wrote him that the gunners had got ten more of the birds at Castle Island. He calculates that the flock will stay around for some days, and he will get another pull at them if possible.

Massachusetts Quail and Maine Grouse.

There are reports of a good many quail in Massachusetts. The gunners believe that the close time during the whole of the year 1894 has been productive of good results, and they are anxiously looking forward to the the 15th of October, the beginning of the legal open season. A number of broods are mentioned in Reading and in Stoneham. In the western part of the State also a number of broods are located. The woods of Plymouth county are mentioned as having more quail this year than usual. Partridge, or ruffed grouse, are scarce, if all reports are true; at least the birds have not been seen. Not so in Maine, however. Reports for partridge shooting in that State are very favorable thus far. I have letters from one or two guides in the Rangeley region, and both mention that partridges have not been as plenty for several years. A gentleman who has been up the Penobscot for a long distance, on business that took him into the woods a good deal, tells me that he saw more partridges than he has ever seen before on trips of the same nature. SPECIAL.

The Duck-egg Fake.

NOT long ago FOREST AND STREAM published what appeared to be a reasonably complete refutation of the reports of great destruction of wildfowl eggs in the Northwest for commercial purposes. These reports have been industriously circulated, apparently backed by good authority, to the effect that millions of duck and other wildfowl eggs were gathered in Alaska and the British possessions and from there shipped to eastern points for manufacture into egg albumen cake. Senator Mitchell, of Oregon, in a speech favoring an appropriation for investigating the subject, reiterated the charge in strong terms, and the National Game, Fish and Bird Protective Association earnestly backed up the demand for Congressional action. The inquiry of FOREST AND STREAM extended to agents of all the transportation companies, the various revenue collectors and others, who deny that any shipments of eggs have been made, or that there is any foundation whatever for the story. But now comes the Seattle *Argus* with an emphatic reiteration of the charges and a promise to gather proofs. Upon the face of the returns so far reported FOREST AND STREAM has the best of the argument. Evidence and not talk will be required to change that aspect of the case. If it exists it should be forthcoming.—*Road and Inn.*

Loose Hounds and Rabbits.

WHITE HOUSE, N. J., Aug. 19.—Jno. Burdette living in this place keeps two hound dogs. They have been and are allowed to run at will and have been killing rabbits in this section all summer. Will you please refer this to the game protector of this State or advise me what to do to get rid of them. C. W. DAGGETT.

[Communicate with the Fish and Game Commission, whose president is H. P. Frothingham, Mount Arlington, N. J.]

SOME HUNTING NOTES.

[Continued from page 71.]

Editor Forest and Stream:

Some weeks ago I stated in these columns that local white hunters and Indians kill deer the year round in Michigan.

I neither meant that the hunters kill all the deer, nor that all the hunters kill deer; but I have it pretty straight that deer are killed in the closed season in Michigan. And in support of the statement I have some evidence of my own. I chanced one day to see at some distance through the brush a small object that reflected the sun's rays like a mirror. On investigation I found it to be a large lard can buried to within 2in. of the top in the earth and water and covered with hay and weeds held down by some chunks of wood. Removing the covering and lid, I found about one-half of a deer. The cache was at the edge of the timber near the railroad and about a mile from a station house which was occupied by the section crew. The section foreman is not there now, and I will take the liberty of repeating his statement to the effect that he kept venison in that can the summer through. He shot mostly after night, by shining. He said he liked his venison fresh. Yes, we all do; and we had fresh venison for supper on the day mentioned in my last, and venison for breakfast on the following morning. Then for a day or two I loitered about camp, taking my inning at camp work, and fishing for a change.

One of the essential qualifications of a true sportsman, I hold, is to be able to cook a good meal. I cannot therefore be accused of boasting when I say that my hunting party has never found it necessary to employ a cook nor a guide.

It was about this time of the hunt that Sam had some experiences that were not as amusing to him as they were to us. He shot a doe out in what, for a better name, we call a dry lake, knocking her down. Her two fawns, which were near, ran up to her, but scampered into the brush when a ball from Sam's gun whizzed near one of them. Sam leisurely walked around to where the doe had fallen, but when he got there he saw only the print of her body in the moss and weeds. He had creased her, and she had recovered and run off into the forest while he was looking in another direction. On another occasion he shot at a doe, and judging from her actions that she was wounded, he thought he would profit by past experience and keep her in sight. So he ran after her until winded before being convinced that he could not outrun a deer.

Nat and Charley enjoyed fishing, and in lieu of a boat they drifted around on the lake on a raft. While anchored in about 4ft. of water, and discussing some amusing subject, Charley's risibles got the better of him and he staggered against Nat and knocked him off the raft. Though a dealer in clothing and dry goods, Charley kept on laughing, while Nat climbed back on the raft like a half-drowned rat.

There were some very fine brook trout in Witch Lake, the outlet of which ran into the Michigamme River; but as it was the close season for trout we did not fish for them. One old fellow, that I judge would weigh 3lbs., drew a ball from my Winchester one day while we were crossing the lake. He was jumping after flies; and it might interest the anglers who are discussing leaping bass to know that I had time to bring my gun to my shoulder and catch a pretty fair bead on him while he was above water.

Pine squirrels were very plentiful around camp, and when any one felt inclined he picked up the Flobert rifle and tried his hand on them, partly for sport and partly because these little squirrels make a very appetizing dish when properly cooked. Sometimes we stewed a potful of them, then thickened the broth with flour and milk (condensed milk dissolved in broth or warm water). At other times we filled our largest frying-pan and kept water on them until stewed tender; then they were allowed to stew dry, at which period butter was added, and they came to the table fried brown. This is our favorite way of cooking grouse and rabbit also.

Bread and butter will keep fresh for weeks in this region in September and October. Simply pack the bread in a close box, the butter in tin pails, and set away from the fire. Though the middle of the day was so warm as to bring blow flies in numbers, we had sweet, solid butter and fresh, spongy bread which we had brought from home.

One morning, while crossing the railroad for a bucket of water, Reube discovered the tracks of four deer that had passed along in the night, and had stopped opposite our tents and over 40ft. distant to take a look at our outfit. A passing freight interrupted their nocturnal visit, and gave them quite a chase up the road.

As our first week was drawing to a close Nat, Charley, Sam and I concluded to make a drive hunt in the hope that some of the less experienced might get a shot at deer. I was at the right of the line, moving slowly along, when a shot from Charley's gun was followed by his voice shouting, "George, a bear, a bear!"

I thought he said deer, and seeing a high ridge in front, quickened my pace in order to reach its summit, naturally supposing the deer would wind me and pass beyond the ridge. I had taken but a few steps, when hearing a twig break I looked to the left and saw a black bear coming straight toward me. He was about 60yds. distant as he emerged from some brush, and as I quartered around and brought my gun to shoulder he saw me, and turning to the left gave me a running shot at his right shoulder. I was surprised to see how fast he could run, and also at my inability to stop him, for, though I got five shots in all, and felt sure from the way he winced that I hit him more than once, he passed across my front and got into a gully and then into a large cedar swamp, leaving only a quantity of his blood on some weeds he passed through. I never wanted to fight so badly as I did then, and right there I denounced the American black bear as a cowardly cur.

The next morning I started out alone for a still-hunt. I followed an old wagon supply road that wound around Witch Lake until I came to the edge of an extensive burned area and found myself on the top of a hill. To my right the hill sloped off into a kind of ravine, and there met a wooded hill that lay beyond. While looking in that direction I saw a portion of a deer move behind some bushes. After watching for some moments I concluded it had probably lain down, and as the distance was too great for my .38 Winchester and the wind was in my favor, I decided I would try to slip up on it—or down, rather, for I was above it and could get a running shot any moment it broke cover. Keeping my eye on its hiding-place I carefully approached to within about 150yds. and stopped on a large flat rock that lay on a level on the hillside. Here I took my stand, determined to wait for something to stir that deer up. I had waited twenty or thirty minutes when the report of a gun in the forest beyond was answered by some persons hallooing in the same direction. Presently I heard them again, and much nearer. The deer, however, clung to his cover until longer delay was dangerous, when he came loping up the hill toward me. When about 150yds. distant he bore off to my right, keeping in the edge of the woods. I let him come until he was nearly opposite and about 60yds. distant, then whistled at him, intending if he did not stop to commence shooting. When he heard my whistle he stopped and threw up his head to locate the noise, but I had a bead on his shoulder, and when my gun cracked he fell. The hunters who drove him to me were from a camp some miles away, and were of that noisy kind that scare up plenty of game, but kill very little of it. This deer went to camp on a stretcher the same as the former one, and again venison steak had its place along with fish, fowl, squirrel, rabbit, beans, potatoes, onions, cabbage, etc.

George and I found a number of grouse in a thicket between two lakes one afternoon and I picked the first head at just thirty-nine steps. I felt a little proud over that shot and when another bird became confused and lit on a small log about 25yds. from me I did not take much interest in it until I saw George, who was off to my right, draw up his .38 Colt's to shoot at it. The effect of that shot was a perfect panorama on a small scale as it impressed itself on my vision. There stood the perfect bird, and as I looked intently at its head I saw a small puff of atoms resembling smoke, then for an instant the headless bird stood as erect and rigid as before.

A few days before breaking camp I got a shot at a fawn across a bit of prairie or dried up lake and killed it. I stepped the distance 169 steps. As it happened none of the other hunters killed a deer on this hunt, though they had some adventures and bushels of fun.

The day before breaking camp I went out for grouse, saw six and shot the heads off five of them. And toward evening of the following day, when a couple of our boys returned from the station with our tickets countersigned and stamped and checks for our baggage, we piled the trunks by the railroad track, signaled the through train for Chicago, boarded her and bid farewell for a twelvemonth to our camp on Witch Lake.

G. W. CUNNINGHAM.

CHICAGO AND THE WEST.

The Kewanee Freezer Case.

CHICAGO, Ill., Aug. 24.—The information in regard to the last stages of the Kewanee freezer case is covered by a dispatch to the Chicago *Tribune*, which states: "In the Criminal Court a jury found H. Clay Merritt, the game dealer, guilty of but 161 counts of the 27,000 contained in the information filed by State's Attorney Graves, of Geneseo. The defense immediately entered a motion for a new trial, but the motion was overruled by Judge A. R. Mock, when Merritt's fine was fixed at $5 per bird, making a total of $805. This was the least fine that could be fixed, the maximum being $25 per bird. By this verdict Merritt is freed from all danger of having to pay the enormous fines, amounting to $675,000, which Game Warden Blow hoped to have imposed upon him."

Warden Blow didn't hope anything of the kind. If Warden Blow hoped or wanted to have Merritt fined, why didn't he prosecute him on that basis in the first place? The truth is, Warden Blow has mishandled this whole business, and now sees it brought to an inglorious and unsuccessful end.

The appeal in the original case still pends in the Circuit Court and should come up this fall. The game in storage was replevined and is now under bond, Merritt being in this conditional possession of it. It is therefore not the case now that Merritt will be prosecuted further, as has been erroneously stated (as usual) in a local sporting paper. All that can be done on that appeal case is to determine the ownership of that game, and a shrewd guesser might think that Merritt is now out of the worst of his trials. The Illinois State Sportsmen's Association has had its great chance on the cold storage question, and it has let it go. Opportunity does not usually knock twice at any man's door. The record of this Association, composed of internal dissension and lack of harmony, of misunderstandings and of apathetic indifference, furnishes opportunity for comment which one would be loath to make.

Minnesota Protectors.

Wilkin county, Minnesota, has a game protective association which has done good work. I think the members of it are the right sort, for they are this week trying to find and punish some tough "sports" who have been shooting the tame chickens of the local farmers. The grade of sportsmanship is higher than it once was. To-day everyone knows that no man is a sportsman who is not also a gentleman.

Fate of The Prairie Chicken.

Mr. C. E. Grun, of Pipestone, Minn., has some timely comment on the prairie chicken supply, which I give as he has written it. It is not apt to be true that the birds are everywhere so scarce as in the locality mentioned, but it undoubtedly is that if the past methods of market butchers and so called "sportsmen" be continued, the pinnated grouse is doomed to practical extinction, just as much as the wild pigeon. Mr. Grun says:

"I would like to say a few words through FOREST AND STREAM about our native bird the prairie chicken. The State law of South Dakota expired Aug. 15 and was looked to as a great day for our local sportsmen, as it is only seven miles to the State line, and guns, dogs, etc., were in great demand. Those who went were greatly disappointed, and I happened to be one of the unfortunate ones to go.

"The morning of the 15th found us in the beautiful stubble fields of South Dakota at 6 o'clock, and our dog came to a stand after running only about half an hour. We supposed by his actions he had a nice large covey, but upon walking up only three birds rose, one old one and two little fellows about as big as quail. We then drove on and went over thirty miles—in fact, we hunted all day through the most favorite places for chickens, where last year I found from three to five coveys, but not another bird did we find that day.

"Where are our prairie chickens? They are getting to be a thing of the past. From reports I received from other parties that were out that day the best bag any party made was eight by a party of three, and they were mostly old birds.

"On Aug. 20 I again drove out, and after driving and walking over section after section found three old birds and one young one. Sportsmen here are very much discouraged on account of the scarcity of birds, and from reports I fear they are very scarce throughout this part of the State.

"Either the cold weather we had in hatching killed the little fellows or the old chickens have gone to a more uncivilized country to breed, Some say they were trapped last winter and shipped East, but I don't think that would in any way interfere with them, as they migrate in the spring. I will give you more on this subject after Sept. 1."

From Michigan.

A perfect skeleton of an elk, in an excellent state of preservation, was found about two feet under ground at Fitchburg, Mich., a few days ago, according to reports from local sources. This lends interest to the assertion, which I believe to be true, that there are a few elk still alive in Michigan south peninsula.

From Pere Marquette Club, of Kinne Creek, come reports of fishing in which Saginaw folk figure among others. George M. Brown, W. B. Mershon, with their guests, H. A. Conant, of Monroe; Dr. C. F. Sterling, of Detroit, and W. F. Potter, caught 88 fine trout; and G. W. Morley, with his brother John Morley, of Ashtabula, O., caught a nice lot of bass.

W. C. Rowley and wife, with their guests, Walter Clark and wife, of Battle Creek, spent a few days at the club, besides fishing on the Danaher and down the Pere Marquette River in a boat as far as Danaher's rollway.

W. B. Mershon, W. F. Potter, Harry Conant, Dr. Sterling, George M. Brown, A. H. Morley and the Rowley party were at Wingleton the 10th, 11th and 12th.

Lawyer Grant, of the firm of Grant & Humphrey, with his son, came to try his hand at the club headquarters.

Junior Baker caught one rainbow trout weighing 3lbs. 3oz. when dressed.

'Squire Decker and A. S. Randall returned from Sable Lake with a fine catch of black bass.

From Arkansas.

Mr. Irwin advises me from Little Rock that wood ducks are now in season, but are very scarce this year, owing to the past hard winter, he thinks. Mr. Irwin adds:

"I am expecting and looking forward to the early flight of mallards with great hopes. Mr. Duly and I have bought a Chesapeake to retrieve for us. The pin-oak mast is very heavy, which means the ducks will remain a long time with us. Harvey McMurchy will be on hand to try your duck "Inferno," where we had such fine sport last November. Mr. Pemberton and I start in early September to locate our camp for duck shooting later on, and hope to get a lease on the ground and marshes and have a place to take our friends to enjoy it with us."

Has Another Snake Horn.

A gentleman who wishes to be known as "Deacon," because he is afraid of being laughed at for speaking of a horn snake, writes me as follows from Greensburg, Pa.:

"I send you herewith what purports to be the true horn of a snake, detached from the tail of a species resembling a common black snake—*Ophidia, serpens nigger*—killed near here by a well-known citizen. When I heard of the capture of the snake I hitched up my horse and visited the locality, saw the reptile, which was three feet seven inches in length, and secured the end of him. The inclosed 'horn' was hard and dry just as it now appears, too dry for a joke.

"I have instructed the captor not to kill the next specimen he finds, but to give him an opportunity to establish his ability to 'dig bait' with his *fin de tail*. I won't sign my name to this because I don't like to be laughed at, having never forgotten being ridiculed once when I was a small baby."

The horn arrived in due course. It is a hard, rigid concern, tipped with a bony scale, but it has not the appearance of pure ivory, which I desire in my snake. We shall see if we can't teach science a few things before we get done with the business. Bring on your horns, attached or detached. I ask this for the benefit of science, which methinks sometimes needs a benefit.

Another In Alcohol.

But now comes Mr. R. S. Withers, of Edwards, Miss., with a horn snake which bids fair to be a dandy. He describes it thus:

"I have been reading the fantailed deer and hoop snake controversy and can now settle the snake end of the affair. A man on my winter home, Belle Isle, La. (away down in the marshes), has a perfect specimen, five feet long, in alcohol, which he has sent me to dispose of. Do you want him, and what will you give him for it?

"This is undoubtedly the fellow which you are looking for, and if he is not the kind, of course nothing is to pay. The folks down there say that when he is red-hot mad he takes his tail in his mouth and rolls along over the the ground *dla bike*, and that whatever his sting comes in contact with meets with a speedy death. Trees have been killed by them, they say.

"I have seen them alive in their native haunts, but fear of his wonderfully acute caudal appendage has always outranked my desire to study his habits and peculiarities. Let me know whether or not you want this specimen. This fellow has no fangs, but certainly has a sting right in the end of his tail."

I dislike to buy a pig in a poke bonnet, and am cautious about buying a horn snake in soak without getting a look at it first. Still, I shall forward a proposition to Mr. Withers for his snake. This I do for the benefit of science, which I am willing to help along all I can, because I think she needs it sometimes. I assert again that I shall get my horn snake. I wish I could also get his red-hot anger and his tree-blighting proclivities in the same bottle, but on these I do not insist. If I get the snake, I shall, albeit with regret, forego the ruined wagon tongue.

Jumps on Science's Neck.

A mountain man, Mr. M. P. Dunham, of Cameron

Wyo., thus scornfully jumps upon the neck of science *in re* fantail deer and other things. He remarks in a letter just at hand:

"If the FOREST AND STREAM will send those men that have offered $100 for a pair of fantails alive out here, I will take them to where the fantails are and get them in sight of the game, and then I will double their offer for a pair, and I will furnish all the outfit on condition that they are to get the fantails. How long after the old hunter knew that antelope shed their horns was it before science would acknowledge it? Then some dude got the credit of the discovery instead of the hunter.

"I saw the two bear heads or skulls that were sent to FOREST AND STREAM, and the scientist that pronounced one of them a wolverine will have to convert me with muscle instead of talk. I can't say it is a 'pine-nut bear,' but I can say it was not a wolverine. I am certain that it is a bear's skull, and an old bear; but as to the species, I give it up."

I have myself much confidence in the powers of observation of the old hunters who have spent their lives among the game, although with them I "give it up" about the species, sometimes. A hunter friend covers the situation well enough for me when he says, "I don't know about the fantail species, but I know they are fantails."

E. HOUGH.

909 SECURITY BUILDING, Chicago, Ill.

Time to be Thinking.

BOSTON, Mass., Aug. 21.—The early departure of the North Atlantic Squadron from Bar Harbor and the close of the series of coaching parades at the mountain resorts will undoubtedly force the hotel and railroad proprietors to the unwelcome conclusion that the present summer season is drawing to a close.

And this conclusion on their part is pretty apt to be soon followed by "specials" from different parts of the country citing the great discomfort and pecuniary loss which the farmers are subjected to through the ravages of deer and bear in their fields and gardens.

On the approach of autumn a reader of the daily papers, if he be at all credulous, is moved to wonder how the farmers in some of the rural districts are able to harvest enough of their crops to supply their needs through the long winter.

That deer are plenty in the Maine woods this year there is little doubt, and that they are up to their old tricks again seems equally true; as of course no native would so far forget his respect for the laws of the State as to use a gun on deer in August, unless said deer were destroying property, as is their pernicious habit just previous to each hunting season.

The case which I have in mind terminated sadly, as notice the inclosed special, which I clipped from this morning's Boston *Herald*. It comes from Bangor and reports under date of Aug. 20: "An accident occurred at South Twin Lake this morning which will result in the death of Fred Willard. Willard saw two deer and borrowed a rifle. He chased the deer some distance and fired one shot without effect. While running he fell, and the .44-caliber rifle was disharged, the ball passing through his body about an inch from the heart. He was taken to Oldtown, and is at the point of death. He is 26 years of age and lives at LaGrange.

And this reminds me that, to quote from a letter received recently from a friend who frequently shares the delights of following a setter through the birches and alders with me, "It is getting along toward the time of year when we begin to think about things," and from now till the woodcock flight is due in October I expect to do a good deal of hard thinking—thinking, principally, as to how under the sun I can afford to take a month's vacation this fall, having already taken the last two weeks in June for a trouting trip down into Maine.

But that trip didn't really count, as it rained nearly every day we were there, and, oh! of course that didn't hurt the fishing any; but still, a man ought to have good weather when he takes his vacation. He's entitled to it. It wasn't my fault; I took the only two weeks I could get, and the weather man didn't use me right, so I feel entitled to another trip this fall. And if I can "get things together" and convince my family that I am all run down (I've gained about 15lbs. since I came back from the other trip), I shall head for the woods again. We saw deer sign this summer thick enough and large enough to drive a man most crazy, and after I show a few "woodies" and "Old Pats" what my disposition is toward them I'm going over there to see about things. C. H. MORSE.

The Winchester .236 Rifle.

THE .236 Winchester single shot rifle taking the new heavy cartridge represents some radical changes in the art of rifle building, necessitated by the new conditions of smokeless powders, small bores and tremendous velocities. The barrel is constructed very much on the principle of a whip stock or the butt piece of a fishing rod. It is very heavy near the breech, and from there tapers gradually to the muzzle, where it measures probably less than ¼in. in diameter. The front sight necessitated by this construction resembles a miniature church steeple.

The interior of the barrel is a maze of spirals, there being one complete revolution in the rifling every 6¼in.

Though light and delicate in appearance, the gun has plenty of metal, and it is surprising how heavy it really is. Its center of gravity is much further back than one is accustomed to expect in a rifle.

The Sportsmen's Exposition Association.

A MEETING of the Sportsmen's Exposition Association was held on Tuesday at the Winchester Repeating Arms Co.'s store, 312 Broadway, New York. The object of this meeting was to determine the advisability of another Sportsmen's Exposition for 1896, similar to that which was carried on so successfully May 13 to 18, 1895. There were present: Mr. Sanford, of the Winchester Repeating Arms Company; Mr. Daly, of Schoverling, Daly & Gales; Mr. Hart, of Wm. W. Hart & Co.; Mr. Dressel, of the Union Metallic Cartridge Company; Mr. Chas. Tatham, of Tatham & Brothers; Mr. Studor, of the Natural Science Association; Mr. Von Lengerke, of Von Lengerke & Detmold; Mr. Chassaud, of the Overman Wheel Company; Mr. Wiebusch, of Wiebusch & Hilger, and Mr. Webster, of the Webster Studio. President Tatham in the chair. Treasurer Dressel made his report of the finances, covering the receipts and expenditures of the first Sportsmen's Exposition. This report while favorable upon the whole showed a slight deficiency, which of course falls upon the Madison Square Garden Company. Secretary Webster made a brief report touching upon the success of the first exposition and the general satisfaction of the exhibitors.

Treasurer Dressel made a motion which, as finally passed, was to the effect that the Association should hold another exhibition, and that a committee should be appointed to confer with exhibitors to decide the date of the exposition and find out the best arrangements to be made for the place for the exposition. The president appointed Messrs. Dressel, Daly and Chassaud, and they were instructed to report to the trustees Sept. 17. The opinion seemed to be that a successful and largely attended exposition could be held in 1896. It was acknowledged that the direct returns from sales of the first exposition were not so great as had been hoped, but all conceded the indirect benefits from an advertising standpoint and in the nature of increasing the interest of the public in sport.

Judging from the results achieved, it seems likely that a second exhibition can be held which would not only clear expenses, but also return a margin of profits to the exhibitors.

The fact that the Exposition this year received so little support from the daily press was commented upon, and arrangements for overcoming this serious omission were suggested. Reduced railroad rates, etc., were discussed, and it seemed to be the general opinion that the date of the exposition could advantageously be changed.

Tennessee Small Game.

BROWNSVILLE, Tenn., Aug. 10.—The fishing season is numbered with things of the past and while not first-rate, nearly all the brethren can look back to a few days of good sport and fair strings. Squirrels were not plentiful, though thanks to the heavy mast we will have them in the fall. Dove shooting is very poor, the past hard winter proving fatal to many of them, and owing to this fact we seem to have tacitly agreed to leave what there are for seed. Quail are fairly plentiful, though the wet weather has killed many of the young, I fear, and I fail to account for seeing so many pairs together—a thing I never noticed at this season of the year before; however, there will be enough for good sport in November, and we hope Mr. Hough is slated for a portion of that month with us.

B. C. M.

Connecticut Rail Birds.

EAST HADDAM, Conn., Aug. 24.—The rail bird shooting promises to be better this season than for many years. Already the birds have begun to show themselves in large quantities and lovers of this grand sport will find no better place than the Connecticut River from Essex to East Haddam.

The best place to my knowledge is at East Haddam, as there are no less than three coves or inlets that you can get at in one tide. The law is off Sept. 1 and from appearances the birds will be in good condition by that time.

Boats and man can be procured for $2.50 a tide, which is very low, as a very poor shot can bag from 25 to 50 birds at a tide. B. A. RAY.

Sea and River Fishing.

THE LEAPING QUESTION AND ANOTHER

CAMP OF THE KINGFISHERS, Manistique Lakes, Mich.—*Editor Forest and Stream:* Surrounded once again by the jolly Kingfishers, whose tents make a miniature "white city" on the bank of the green Manistique, I have read the FOREST AND STREAM of Aug. 3, and of course the defense made by your Canadian correspondent, "Simpson," to the criticisms of sundry bass fishermen on Dr. Ellzey's notes of the "leaping bass."

It has been topic of discussion by the camp-fire, around which sat old "Kingfisher" and the white-hatted philosopher of the Cuvier Club and half a dozen others of the "boys" who love to pull their boats over the crested waves and in the shadowy nooks in search of that gallant warrior to whom Henshall has devoted an entire book. Not one agrees with Dr. Ellzey, and still less with "Simpson," whose spear seems to wound friend and foe alike.

In truth, after all that has been said or written, the question is wholly one of observation—as to how high or how far a bass can leap, what the direction of ascent or descent, whether he shakes his head or opens his jaws in air, and why the bass undertakes these unusual evolutions. The last query is one of motive—resting in the intelligence or instinct of whatever brain power the bass has, and to be interpreted solely by its actions at the time.

The allusion made to the deceptiveness of the eye is a simple begging of the question. It does not explain. It does not demonstrate anything. It is merely a cover, a blind to cover either weakness or an unwillingness to recognize and accept what others see and know.

If "Simpson" will permit us, we will say that in dealing with the "leaping bass" we are not dealing with magicians nor Indian jugglers, nor giving the bass the benefit of sleight-of-hand performances learned only after long schooling and intended to fool the eye of man. When we have probable reason to believe that the bass has undergone an education devoted to sleight of hand, we shall be ready to enter that field in search of solutions to the problem of why or whether a bass does certain things when he leaps above the water.

So far, we shall take eye testimony just as "Simpson" takes it when he undertakes a piece of surgery. He does not say, "the eye is easily deceived," and begin to doubt what is muscle and tendon and flesh and bone, and dismiss his patient because he cannot be sure which is which, and damage may result. He relies on the eye and proceeds—even in a case of life and death.

So we rely on the eye to see what the bass does. That much is observation. Experience strengthens observation. The strength of the testimony, the number of the reliable witnesses, establishes the truth or falsity of the facts alleged. One solitary witness in part corroborates Dr. Ellzey's observations. All the rest differ—both in observations and conclusions.

"Simpson" would strengthen Ellzey by suggesting the contradiction of anatomy—that a bass cannot shake his jaws—"the anatomy of a bass's head and neck will not allow that," but "they apparently shake themselves." What he means by "apparently" I don't know; I think I have seen bass sometimes actually shake themselves.

The jaw of the bass is not a detached part of the fish, nor connected by a clearly defined neck, and yet when the fore-front of the bass was violently shaken, the jaw being in the extremity most agitated, it does seem to me it stood a good chance to be shaken. Our friend "Simpson" is hypercritical.

He further insists the bass is crazed with fright and all efforts to escape are without motive or purpose. And adds, "why does he not go to the bottom, take a turn of the line around stone or snag, and free himself at leisure, laughing the while at the simple fisherman?" Why, bless your soul, "Simpson," that is exactly what the wily rascal has done with me, over and over again. The only bass of any size struck by any of the Kingfishers at Green Lake, Mich., in a three days' search, got fastened to my hook and line and straightway made for a stake, wrapped the line around it and broke away, all in plain sight of "Kelpie," whose testimony will corroborate. Several days ago, in the larger Manistique, I hooked a bass that broke water, and then repeatedly attempted to get to a stake near by.

It took my best maneuvering and strongest strain on rod and line to keep him away. Bring a hooked bass near your boat and he will try to get under it, bring him near the anchor line and five chances to one he fouls you. I have lost many bass by their going around stakes and into brush or around and under rocks and breaking away. My comrades in camp vouch for similar experiences.

Go slow, Brother "Simpson," I don't claim the bass has the intelligence of a man, but its natural instinct gives it the art or capacity for self-preservation which it often indulges to a remarkable degree—just as the fox on the ground or the crow in the air.

How does Brother "Simpson" know that when the bass leaves the water it leaves it "by mistake," and consequently its "savigerous shakings" are simply efforts to get back? When, with C. C. Furr, of the Kingfishers, I saw a bass at Hubbard Lake, Mich., stand on its lower body (I would say tail, but "Simpson" is captious) and shake its upper body (I would say head, but——) with open mouth, in which the hook was fastened, would Brother Simpson say the bass was doing that "by mistake?" Note also the case I have heretofore reported of a small bass leaping from the water of Elkhorn Creek, Ky., and striking and killing a butterfly as it winged its way over and near the surface. No mistake that time.

Once more. "Simpson" asks, "Does not every fisherman lower his tip the moment he sees a fish leaving the water?" No. Some do and some do not. It is largely a matter of judgment. If I have an elastic rod I aim always to keep my line taut. I know many others who do the same. The lowering of the tip loosens the line and takes the tension off the hook and it is more easily thrown out of the fish's mouth. The elasticity of the rod will bend to the fish's weight in the leap and no harm occur. Try it.

If my rod is stiff I usually relax the strain on the leap—that is, if I know when the fish is going out of water. Those who always know when a fish is going out of water, or can always adapt the rod to his motions during his short stay above water, are better skilled than I. As the result of long experience in bass fishing my advice would be always keep a tight line on your fish and always give him the benefit of the spring of the rod. In this way you will save many fish where they are lightly or loosely hooked, and guard against broken hooks or lines in unexpected movements. It is much easier to know when a fish is going out of water on a short line than a long one. When a bass is hooked 100 or 125ft. from the boat it is next to impossible to tell whether he will go out of water on the strike.

Now, if Dr. Ellzey or Brother "Simpson" will tell me when bass will bite—that is, when it is a good time to go bass fishing, predicated on the fact that they are on their feed—I shall consider myself more than compensated for the little discussion to which I have in small part contributed on the question of "leaping bass." OLD SAM.

NEW JERSEY COAST FISHING.

ASBURY PARK, N. J., Aug. 23.—The proverbial patience of fishermen has been put to a severe test the past three weeks so far as surf fishing is concerned. Bass have apparently entirely deserted the waters. Other than an occasional kingfish and plaice, nothing presents itself to enliven the interest at our piers. Hundreds of ardent anglers may now be seen making the best of the unpleasant situation by perch and black bass fishing in the lakes, or journeying to Barnegat or the Raritan. Bluefish are fairly abundant in the last-named waters, and may be taken by chumming with menhaden. Boats and bait can be procured either at Perth Amboy or at Atlantic Highlands. The sea yielded some of her best treasures this season in the shape of rare specimens; first a leather-back turtle of 650lbs., followed a few days later by one of 875lbs., drew immense crowds to the pier where they were placed on exhibition by Senator Bradley. Although tanks were built and every effort was made to keep them alive, the effort was useless and they both died after a few days of captivity. The largest one was donated to the Academy of Natural Science of Philadelphia, where it has been mounted and will be kept on permanent exhibition. But the most interesting event took place on Monday afternoon of this week in the capture of a fine seal within a few feet of the Ocean Grove fishing pier. Evidently the northern stranger had by some error wandered from its native haunts, and becoming exhausted crawled up on the beach for rest. It was captured by laying a fish net around and over it. Messrs. Stokes and Pridham promptly bought it and have had it on exhibition since. It appears to be in perfect health, and is a rare curiosity in these parts. Mr. Pridham said last evening that he would not feel quite content until he secures a veritable sea serpent to round out the season with. LEONARD HULIT.

Wisconsin Muskallonge.

THREE LAKES, Wis., Aug. 23.—Chas. French caught 248 black bass at Butternut Lake last week, and F. R. French caught five muskallonge, largest 32lbs. Butternut is a new place, just opened, prospects good.

CHAS. FRENCH.

NEW ENGLAND FISHING WATERS.

BOSTON, Mass., Aug. 24.—On Sept. 1 Mr. E. H. Wood, of Boston, leaves for a four weeks' trip to Portage Lake, Maine. This pretty sheet of water is situated very near the Canada line, and Henderson & Hughey's camps, where Mr. Wood will make his headquarters, are said to be a banner place for both shooting and fishing. The latter is done mostly in Maine, but the shooting at that time must be done in Canada, where, fortunately enough, the open season on moose and caribou begins Sept. 1. The whole region is a fine game country. On a previous visit to these camps Mr. Wood took four trout on his first day's fishing, all of which measured about 19in. in length. He says he could easily have captured twenty-five more of the same kind, but as he had no use for them he refrained from doing so. One each caribou and deer killed the same afternoon was another occurrence on which he likes to dwell. He expects to be at the camps four weeks this time, and probably his wife will accompany him. It is a pretty hard place to get to, but they will make it in easy stages, thereby lessening the fatigue. One of the pleasant features of his last trip to this place was the journey out. It was made in canoes from the camps to Penobscot Lake, then a hard carry to Long Pond, from there to Long Pond Brook, then to Dole Pond, to Dole Brook, to Northwest Branch of the Penobscot and then to the Northwest Carry at Moosehead Lake. It was altogether a delightful journey, and may be repeated this year when they are ready to come back to civilization.

L. B. Jewell, of Hartford, Conn., passed through Boston this week *en route* to Moosehead Lake. He fishes principally at the outlet, stopping with Wilson, and is one of the old-timers at that place, having been there for many successive years. It takes some knowledge of the place to get the big fish, but Mr. Jewell knows the trick, and does it.

A very jolly party, consisting of James M. Kline, Dr. E. B. Campbell, Chas. R. Stearns, H. C. Bubb and John G. Reading, Jr., all of Williamsport, Pa., passed through Boston on Thursday last, bound for Moosehead Lake. They will stop at Kineo long enough to find good guides and equip themselves with camping utensils, etc., and will then make a canoe trip to Eagle Lake. One of the party has been over the proposed route before, and has promised the others good fishing and an interesting time during the two weeks they will be away.

Chas. A. Clark and J. M. Bassett, of Boston, left on Saturday for a fishing trip to Kinne's Camps, at Holeb Lake, Maine. The camps are placed on an island which rises nearly 50ft. from the level of the water, and the surrounding country is said to be one of the most beautiful parts of the Pine Tree State. Mr. Bassett was up there a year or two ago, and is still enthusiastic over the good time he had. Lots of trout ranging from 5½lbs. down were the fruits of his last visit, and the two gentlemen have every hope of doing as well on this trip.

H. H. Bemis, of Boston, leaves about Sept. 1 for a two or three weeks' trip to Lake St. John. He went up there last year also, but did not do much fishing there, devoting the time principally to a long tramp of about 160 miles back in the woods, camping here and there and taking just fish enough to use. He is very fond of this style of outing and enjoyed every moment of it. This year he expects to fish pretty hard and hopes to do well with the ouananiche.

Mr. F. B. Greene, a well-known lawyer of New Bedford, whose home is in Boston, has left in company with his nephew for Parmachenee Lake. Mr. Clark is a member of the Parmachenee Club, and has been an extensive traveler. Salmon fishing is one of his chief pleasures. The two gentlemen will make a stay of some weeks at Parmachenee.

Camp life in the Dead River region seems to be much in favor with large parties this season. It has become something of a fad to make the grand circuit to Tim Pond or Round Mountain Lake, the Megantic camps and King and Bartlett. A party that left Boston a day or two ago consisted of Dr. L. F. Wood, of Westerly, R. I.; Reon Barnes, senior and junior, of New York city; a reverend gentleman from Long Island, I believe, and four ladies. They will go first to Tim Pond, then to Round Mountain and King and Bartlett. Here the ladies of the party will probably stay, while the men journey on to Aroostook county in search of more sport. It is their third consecutive season, and as they know every inch of the territory they are surely booked for good sport.

Reports continue to reach Boston of great quantities of large game seen in Maine. Two men who have just returned from the region north of Moosehead declare that 200 deer would not cover the number seen by them while on a ten days' trip. They are said to have photographs of about forty of them, and describe them as playing and feeding when seen. One big buck moose with large horns was seen in a small stream, and the sight of game was so abundant that the trip was declared a great success outside of the fishing they had, which was also good.

Mr. M. N. Smith and his friend Mr. Cady, of Boston, accompanied by their families, have gone to Capt. Fred Barker's camps at Bemis, in the Rangeley region. They will be away a month and expect to devote the time especially to fishing.

Megantic members are turning out in force this year. Dr. Ball, of Boston, has just left for the preserve, and W. K. McClure, one of the directors, passed through Boston *en route* to the same place a few days ago. Mr. McClure will go in at the club house and out by the way of Eustis, stopping for a time at all the camps. He will be on the preserve about three weeks.

Dr. Stevens and party, of Cambridge, have just returned from Parlin Pond, Maine. They had the best kind of a time and were well satisfied with the fishing. The trout averaged small, but were plentiful and very game.

Dr. Brown, of Boston, who only a short time ago returned from the Romaine River, where he went salmon fishing with the Fitch party, has been fishing on Lake George, N. Y. One 16½-pound pickerel and several lake trout and big bass were the results of this last trip, but the Doctor thinks it was pretty tame fun at that. His next trip will probably be after moose in the Aroostook region, in Maine, late in the fall.

Few men who visit the Rangeley Lakes are so comfortably placed in the way of camps as Mr. Harry Dutton, of Boston, on Pleasant Island, Cupsuptic Lake. Temple R. Fay, William Scott and Edward Houghton, of Boston, have just returned from a short visit there, and all are delighted over the good time they have had. The fishing was good enough to satisfy them all. Mr. Fay has left Boston again, with Frank G. Webster, for a trip into Canada. Both are members of the Winchester Club, whose preserve is found principally in the parish of St. Elie, where they have 10,000 acres containing seven good ponds, and covered with virgin forest. It is a good country for deer and moose, and fishing is very fine. The square-tail trout runs up to five pounds in weight, and good lake trout fishing can be had. They will be up there two weeks.

Congressman John Simpkins, of Yarmouthport, left on Friday last to spend the next ten days at Birch Lodge, Mr. Thayer's handsome place at the Rangeleys, near the Upper Dam. The Misses Mabel and Ruth Simpkins accompanied their brother, I believe, and a strong effort will be made to find and capture some of the big trout which are occasionally taken from the Upper Dam pool and the waters near by. The ladies are good casters, and will do their share of the fishing.

Jerome Hilbourn and A. C. Sturtevant, of Boston, have just returned from the Moose River country. With Edward Graft and George Henderson as guides, they entered the woods from Jackman, going from there to Holeb Falls and then to Tobey Pond, where they had good fishing. Returning to Jackman, they left again for Heald Pond, a picturesque sheet of water lying under Ball Mountain. Mr. Hilbourn was high line there, taking the largest fish (2lbs.) ever caught on a fly in this water so far as known. On the last Sunday of their stay they saw five deer on the shore of the pond. A Mr. Hoffman and friend, of Philadelphia, whom they met in the woods, had been in the region forty days, and reported seeing both moose and caribou and a large number of deer. Traces of large game were visible everywhere, and the prospect for the fall shooting seems first class.

Charles Randall's camps on the West Branch Ponds of the Penobscot seem to be a pretty hard place to get to, but this fact does not deter Boston sportsmen from making the effort. Leaving here on Friday afternoon, it takes until Sunday night to get there, and both buckboarding and canoeing must be overcome before the goal is reached. Ample payment in good sport is the reward, for it is a splendid shooting country, and the trout are too numerous to mention. H. Ware Lincoln, of Boston, has been in there several times, and started again on Friday for a two weeks' trip. He says the fishing cannot be excelled, and has taken 200 trout in a morning on one occasion, returning all but twenty-five to the water. The method of reaching the camps is to go to Moosehead, then to Lily Bay, buckboard to Roach's Pond or river, and canoeing and a good tramp to the ponds.

M. G. Cochrane and his friend Mr. Ames, who have just returned from the King and Bartlett preserve, emphatically assert that they have never had an enjoyable vacation before, so taken were they with the sport and beauty of that country. They visited all of the many interesting places on the preserve, and were particularly well impressed with the trout fishing which fell to their lot on Spencer and Kibbe streams. They bring back the story of a lost pond-re-discovered lately by Chas. Haley and a Mr. Robbins, of Boston. The pond is about one and one-half miles west of Big Spencer Lake, and the two men had a tremendous tramp before they finally found it. It is a small sheet of water, to which they have very properly given the name of Lost Pond. Evidences of its being a well frequented resort for large game were visible everywhere, and the place is at present so inaccessible that it is not liable to be disturbed.

To see man and wife both devoted to the pleasure of fishing, and taking equal delight in all that pertains to the sport, is to see ideal companionship indeed. Such a couple are Dr. Geo. F. Emerson and wife, of Boston. The Doctor is a Knights Templar, and is detained in the city during a part of next week to take part in the great conclave, but on Thursday evening they will leave for Maine, going first to Kineo and then to Parlin Pond. They will be away until October; Mrs. Emerson has the reputation of being a fine and very graceful caster.

Another party who will go to Parlin Pond in a few days consists of Warren White, well known to the shoe trade; John D. Merrill, of the Boston *Globe;* Geo. E. Howe and Bancroft G. Davis, all of Boston. They go first to Murphy's camps, staying there about two weeks, and then will go to Indian Pond, from which so many reports of good fishing have come this season.

The Allimoosic chain of lakes in Maine was the destination of C. D. Haskin and wife, of Boston, who left the city on Aug. 23, expecting to stay two weeks in that interesting country. Trout, salmon and black bass is their object in the way of fishing, but the one great ambition of Mr. Haskin is to bring back the pelt of a black bear, and he is going to make a determined effort to kill one of those fellows before his return.

Westport Harbor, R. I., seems to be doing the lion's share toward furnishing good striped bass fishing this season. Reports come to me of fine sport being had in that locality. One gentleman captured a bass of 56lbs. a short time ago, and a number of others not much smaller have lately been taken.

At Lake Memphremagog Capt. Philip Little and wife, of Salem, and Jas. T. Soutter, of Boston, are having some very good bass fishing. John Mason Little, of Boston, who has just returned from the lake, tells me that his brother and he on one occasion took twenty-seven bass weighing nearly 60lbs. Mr. J. M. Little is principally interested in salt-water fishing, or, more properly speaking, has been. His recent experience in bass fishing seemed to be very much to his taste. He likes to use fine tackle and realizes that to do well and get the best sport in fresh-water fishing the tackle must be kept in the best of condition.

J. R. Burnett, Dr. F. S. Howard and F. McGourkey formed a jolly party of New York gentlemen who stopped long enough in Boston to add a few necessary things to their outfit before leaving for the Dead River region. They go to the Blakesley camps and will stay three or four weeks. Dr. Howard was up there last year and thinks the place pretty near right for good trout fishing.

A. D. Boss, of Willimantic, and J. O. de Wolf, of Boston, will leave early in September to stay a few weeks at Camps Kibbe and Jack in the Dead River country in Maine. The writer made the stage trip of nineteen miles from Dead River station to Eustis one night a year ago with Mr. Boss and another Willimantic friend and found them pleasant companions indeed. Mr. Boss is a son of General Boss, the well-known angler of Willimantic.

HACKLE.

PARASITES OF BLACK BASS.

WOODSTOCK, Ohio, Aug. 7th.—*Editor Forest and Stream:*—Having been entertained at fishing for black bass around here for the past few weeks, I write, asking you to publish an answer to this note, which will be of considerable consequence to your readers in this neighborhood, and may be worthy of notice to many others.

I will speak only of my last morning's fish—last Thursday—upon one of our noted bass streams, the Big Darby.

Arriving upon its banks at daybreak, accompanied by my wife, we soon had four fine chubs in the water underneath the foliage of some beautiful sycamores.

Our floaters did not go out of sight in the deep water soon enough to satisfy me, so I moved with two of the rods and part of our minnows down the stream a couple hundred yards, leaving my wife at the first location. After an hour spent below at throwing the minnows here and there, I only succeeded in getting one bite, which was of a small black bass, 12in. in length.

Then upon returning around the bend of the creek to see how she was getting along, I was startled to see her tugging at her eighth black bass, which she landed in good style, it being the largest of the eight, weighing 3¼ lbs. Her hat was off and she was very much excited over her fine success, stating that she had lost several fine bites, trying to attend to two rods at once.

I will never forget her expressive laugh as she saw me and my equipment coming up the bank, with only that one little bass on a willow stringer. This was extra fine luck and a credit to a young lady, as the stream bass are very gamy here now, and exceedingly hard to manage and land safely where they run from 1½ to 3½lbs. This was all we caught that morning and I was feeling somewhat badly defeated.

Well, what I was going to ask you about is this:

After arriving home and having shown *her* fine string to all the fishermen, we skinned the lovely fellows instead of scaling them, as I have for the past five years been afraid to eat fish caught around here until they were skinned and carefully examined for *worms*, which seem to be located under the skin near the base of the tail, and up along the back, having the appearance of a yellow radish seed, easily seen down in the flesh. When cut out and opened, they are nearly ¼in. in length and shaped like a leech and are alive. Whenever I have found a fish affected with these, I have never had any anxiety to eat him. Now, five of these last morning's catch I threw away on this account. This was a great disappointment to my wife as well as myself, as we are both very fond of eating black bass, and it seemed a terrible waste to catch the beautiful fish and then throw them away.

I would like very much for you to give some account of this worm and if you think it safe to eat the fish this warm weather or at any time when so affected. They are found to be the same in our spring water inland lakes here and more especially at our most prominent fishing resort, the Lewistown Reservoir. SCOTT CUSHMAN.

[Professor Edwin Linton, to whom a description of the above parasites was referred, writes: "I am inclined to think that they must be a larval *Dibothrium* (*Bothriocephalus*). Dr. Leidy published brief notices of parasites in the black bass in the Proceedings of the Phila. Academy, 1882, page 69; 1887, page 20; 1890, page 413. and possibly in other places; but none that I have apply to the case in hand."]

THE ANGLER IN CAPE BRETON.

In Cape Breton the fly-fisherman will find almost a virgin field. To begin with, there are the Great and Little Bras d'Or lakes, as they are called, but really estuaries of the sea, entering the island on the north and extending through its heart to within half a mile of the Strait of Canso on the south, a distance of 110 miles, and covering an area of 450 square miles. To say nothing of the sea trout and salmon to be taken in this great landlocked basin, the hundreds of streams that flow into it abound in splecked trout always eager to rise to the sportsman's fly.

There is also excellent salmon fishing, I am told, in the harbor of Sydney, the metropolis of Cape Breton, on the north coast.

I have no personal knowledge of any of these waters, but simply repeat what was told me. The Mira, the great tidal river of the east coast, which has been called the Hudson of Cape Breton, I visited personally. I also tried the deep-sea fishing and whipped the streams in the vicinity of Louisbourg, the once famous French fortress of Cape Breton, and can insure the angler plenty of sport in this district, provided he can secure a capable man and honest guide, and is not afraid of swarms of black flies and mosquitoes.

There are numerous coves and harbors indenting the rock-bound coast in the vicinity of Louisbourg, and at the head of each a trout stream enters, that has come babbling down from its birthplace in some forest-hung lake a few miles in the interior. In nearly all one may find abundance of brook trout, and in spring salmon and sea trout. My first essay was at a small stream about two miles from Louisbourg, in a deep pool just below where the brook issued from Grand Lake. A Maine fisherman in the village told me of the place and advised me to try it, remarking that he had often whipped it and usually with success. I landed but one trout. In the first place some one had preceded me and decimated the pool. Then the day was bright and warm. Lastly, the black flies and mosquitoes assailed me in such wise that after a few moments I was forced to beat a retreat.

My next attempt was with a clergyman of the village, a keen sportsman, but so modest that I will not incur his displeasure by printing his name. We drove three miles over a road so rough and rocky that anything but a Cape Breton horse would have rebelled, outspanned and tied the beast in the wood, then made our way half a mile through the forest to a stream flowing lazily with only one rapid in sight. Below it expanded into a large lake, and above there was a reach of perfectly still water extending for miles—in fact my friend said he did not know how far above the pool continued. In this still water we took thirty-five trout in two hours, although the day was most unpropitious, being hot and cloudless.

"I can take my rod immediately after a storm," said my friend, "go to a place I know of, and fill my basket in a few hours with trout ranging from 2 to 4lbs. each in weight." He referred to the Mira River and its tributaries.

The Mira is a tidal river intersecting the eastern shore

of Cape Breton, curving around from its mouth at the head of Mira Bay west and then south for thirty miles, until it nearly meets the Atlantic again at Gabarus Bay on the south shore. The Salmon and Gaspereau rivers, both considerable streams, enter it at its head; and there are numerous smaller affluents abounding in salmon and trout during the season. The scenery of the Mira is wild and picturesque. The shores are rolling and covered with the somber fir and spruce forests of Cape Breton, and alternately fall away and contract, so that at times the river is a lake one, two or three miles wide, and again so narrow that a good slinger could throw a pebble across. In the wide portions are wooded points and many gemlike islands. Although its banks are generally wild and forest hung, as one reaches the upper portion the meadows and farms of Salmon River open before him a paradise of plenty and fertility.

The season for salmon and trout opens about May 1, with the breaking up of the ice, and continues until September, although at its best in May and June. In the latter months both salmon and trout are taken in the main stream, but as the season advances the salmon return to the sea, and the trout seek the cooler water and spring holes of the affluents. Up to a recent period the Mira was famous for both salmon and trout, and tales of fabulous catches are told. This summer the catch has not been so good perhaps because of the multiplication of set nets in the river, but even this summer sport was to be had there.

The Mira is but twelve miles from Sidney, over one of the worst roads—truth compels me to say—I ever traveled on, and the same distance from Louisbourg by a road equally bad. The Sidney road crosses the Mira at Burke's Ferry, where one may find comfortable accommodations. The railway about being opened by the Dominion Coal Company from Sidney to Louisbourg crosses the Mira at its mouth, about eight miles below Burke's, and will, I believe, have a station there.

The Mira offers special attractions to the canoeist, as it has neither falls nor rapids, and if one is indolently inclined he may float up with the tide at flood and return on the ebb; or he can mount his canoe on a farm wagon at Salmon River, and after a ride of twelve miles embark on the head waters of the Great Bras d'Or Lake.

CHARLES B. TODD.

BOSTON AND MAINE.

THE Maine woods and waters are getting to be particularly popular with Harvard students. Quite a number are spending the vacation season in the woods and on the waters in that State. J. W. Edson, F. Y. Hall and L. A. Brown, of Roxbury, and J. L. Valintine, of Dorchester, are spending the month of August camping, canoeing and fishing in the vicinity of Lakeville, Penobscot county. Glowing reports are received thus far from the young men, to a part of whom such sport is entirely new.

Late reports from the Rangeleys say that Birch Lodge, at the head of Lake Molechunkamunk, is to be opened about the 1st of September, and that Bayard Thayer, the owner, Col. John E. Thayer, his brother, and ex-Gov. Russell will be there to try for trout, and to remain till after the partridge season opens, Sept. 20.

Bar Harbor visitors are enjoying deep-sea fishing trips. Gen. J. M. Schofield arrived there last week and immediately Frank Jones, of Portsmouth fame, took him on a fishing trip off Baker's Island in company with Secretary Lamont, Chief Justice Fuller, L. A. Christy and W. H. Lawrence. Report says that Gen. Schofield was high line, and also secured the head of a very large cod, which was squarely bitten off by a shark as the General was drawing him in.

SPECIAL.

On Lake Winnipesaukee.

BOSTON, Aug. 24.—*Editor Forest and Stream:* I have just returned from a four weeks' sojourn at the cottage of my friend, Wm. F. Seaver, of East Boston, at Spring Haven, Lake Winnipesaukee. The two Mrs. S.'s were with us, and to say that the time passed all too quickly is to put it in the mildest possible way. The weather was of the most delightful sort, the occasional rains keeping the abundant foliage fresh and green. My new cedar lapstreak, copper-fastened, built by Davis, of East Boston, proved to be all that was expected of her, and I passed many pleasant hours rowing and fishing. I did considerable of the latter, but with indifferent success, for the bass seemed to be following my example, *i. e.*, taking a vacation, and I was forced to coincide with the remark of one of the natives living near by that "The darned pesky critters won't bite unless they've a mind to." I tried them with all sorts of lures, but the biggest I brought to net was 2lbs. The partridge shooting will be good up in that section, as one couldn't go into the woods and bushes in any direction without getting into one or more flocks. As I don't use a gun I give this pointer to any readers of your valuable paper who may be looking for a place to try their skill any time after Sept. 15. Spring Haven is reached by rail either by way of Alton Bay or Lakeport. The bass fishing will no doubt be better in September than it was in August. It certainly can't be much worse. I am going down to the Cape this week and shall probably give the tautog a try.

WILLIAM B. SMART.

Another Veteran Heard From.

COLUMBUS, O.—*Editor Forest and Stream:* The *Leader* of this city recently reported the fishing luck of Mr. Charles Hathaway, Sr., of this city, on Georgia Bay. His score was one giant muscallonge, weight 41lbs., length 4ft. 6in. His second best muscallonge weighed 28½lbs. On top of that he added on pike weighing 15lbs., another weighing 12lbs. and a third weight 9lbs. Ex-Mayor Blee caught the other big fish that were left in the lake. His best attempt in the muscallonge line was a beauty weighing 28¾lbs., and 4ft. 2in. in length. He caught a pike weighing 12lbs., another weighing 9lbs. and a third weighing 6lbs.

Mr. Hathaway got four fish, weighing respectively 18, 30, 41 and 21½lbs., which makes the weight of the four fish come to 123½lbs. He had but six bites and saved four out of the six fish. Mr. Hathaway is a man close on to 80 and spends most of his time fishing in Canada and hunting geese and duck in North Dakota. If you can beat this record for a man of his age please let me know.

ALFRED G. HATHAWAY.

Round Mountain Lake.

EUSTIS, Me., Aug. 17.—*Editor Forest and Stream:* The camps at Round Mountain Lake are just far enough from so-called civilization to make them an Eden for fishing and hunting. Here a man may bring his family during the summer and early autumn, for fishing in the lake and its tributaries close at hand, as well as for perfect rest. The purest air that can be found to breathe is here. All the restraint of hotel life is wanting, and one can be comfortable and at ease in every respect. There are good beds and tables, with neat cosy cabins.

The fishing is fine; some phenomenal catches have been made; large trout are being caught every day, rising to flies in great numbers.

The prospect for game this fall is very flattering and we prophesy a busy season. Guides are already being engaged and sportsmen are sending for accommodations for October and November. Not long since a big moose came in to the lake, swimming about in broad daylight, while a boat was out not far from him with three persons in it, giving the occupants a fine view of his royal highness. Deer were never so abundant as now, quite a number being seen daily near to camp, and partridge—well, "The woods are full of them."

J.

Seining Small Mackerel.

BOSTON, Aug. 23.—Let the dear public talk as much as they will about the scarcity and high prices for mackerel. What can be expected when they are caught and put in quantities upon the market at retail for 10 cents per dozen and of a length of less than 4in.: in fact, about the size of Eastern smelt? To-day our market is full of them as above, and they were caught in seines "on the Cape," thus giving ocular proof that seining does not decrease the quantity of fish food. By and by we shall see when cool weather sets in striped bass of like immaturity and quantities in the market. Long live netting! Down with the lines! Score, results.

FRED.

Kibby and Camp Jack.

EUSTIS, Me., Aug. 23.—I have just finished a ten days' outing at Camp Kibby, which is situated nine miles from Eustis, Me., and is owned by Otis R. Witham. This camp consists of nine well furnished cabins and overlooks Spectacle Lake on one hand and the Kibby stream on the other.

While here I have caught over 300 trout, both large and small, all of which were returned to the water except those which were used in camp.

Large and small game must be very plenty in this section, as I have seen nine deer, one beaver and several grouse.

M. R. SCOTT.

Texas Tarpon Fishing.

ROPESVILLE, Texas, Aug. 17.—I this day caught within half an hour's time two tarpon measuring 6ft. and 5ft. 3in. Had ten strikes within an hour.

W. C. STOCKLEY.

The Kennel.

FIXTURES.

BENCH SHOWS.

Sept. 9 to 13.—Industrial Exhibition Association's annual bench show, Toronto, Ont. C. A. Stone, Sec'y and Sup't.

Sept. 10 to 13.—Binghampton Industrial Exposition's fifth annual bench show, Binghampton, N. Y. A. P. Fish, Sec'y.

Sept. 17 to 20.—Rhode Island State Fair Association's third annual bench show, Narragansett Park, Providence, R. I.

Sept. 17 to 20.—Orange county Fair Bench Show, Newburgh, N. Y. Robert Johnson, Sec'y.

Sept. 17 to 20.—Montreal Kennel Association's show, Montreal, Can. Geo. K. Lanigan, Hon Sec'y-Treas.

Sept. 17 to 20.—Milwaukee Kennel and Pet Stock Association's first annual bench show, Milwaukee, Wis. F. S. Morrison, Sec'y.

Sept. 18 to 20.—Omaha Kennel Club's second annual show, Omaha, Neb. E. L. Marston, Sec'y.

Oct. 8 to 11.—Danbury, Conn.—Danbury Agricultural Society. G. L. Rundle, Sec'y.

1896.

Feb 19 to 22.—Westminster Kennel Club's twentieth annual dog show, Madison Square Garden, New York. James Mortimer, Supt.

FIELD TRIALS.

Sept. 2.—Continental Field Trials Club's chicken trials at Morris, Man. P. T. Madison, Sec'y, Indianapolis, Ind.

Sept. 10.—Morris, Man.—Manitoba F. T. C. John Wootton, Sec'y, Manitou.

Oct. 22.—Columbus, Wis.—Northwestern Beagle Club's third annual trials. Louis Steffen, Sec'y, Milwaukee.

Oct. 29.—Assonet Neck, Mass.—New England Field Trial Club's fourth annual trials. Arthur R. Sharp, Sec'y, Taunton, Mass.

—. Morris, Man.—Northwestern Field Trials Club's Champion Stake. Thos. Johnson, Sec'y, Winnipeg.

Nov. 5.—Chatham, Ont.—International F. T. Club. W. B. Wells, Sec'y.

Nov. 5.—Oxford, Miss.—New England Beagle Club trials. W. S. Clark, Sec'y.

Nov. 7.—Newton, N. C.—U. S. Field Trial Club's Trials A. W. B. Stafford, Sec'y, Trenton, Tenn.

Nov. 11.—Hempstead, L. I.—National Beagle Club of America, fifth annual trials. Geo. W. Rogers. Sec'y, 250 West Twenty-second street, New York.

Nov. 18.—Eastern F. T. Club, at Newton, N. C. W. A. Coster, Sec'y, Saratoga Springs, N. Y.

Nov. 25.—Continental Field Trials Club's quail trials at Newton. P. T. Madison, Sec'y, Indianapolis, Ind.

Dec. 2 to 4.—High Point, N. C.—Irish Setter Club's trials. Geo. H. Thompson, Sec'y.

1896.

Jan. 20.—Bakersfield, Cal.—Pacific Coast Field Trial Club. J. M. Kilgarif, Sec'y.

Jan. 20.—West Point, Miss.—U. S. F. T. C. trials. W. B. Stafford, Sec'y.

Feb. 3.—West Point, Miss.—Southern F. T. C. seventh annual trials. T. M. Brumby, Sec'y.

COURSING.

Sept. 24.—Lisbon, N. D.—Cheyenne Valley Coursing Club's meeting. B. C. Waterhouse, Sec'y.

Oct 1.—Aberdeen, S. D.—Aberdeen Coursing Club's meeting. J. H. Davis, Sec'y.

Oct. 8.—Huron, S. D.—American Waterloo Cup F. R. Coyne, Sec'y.

Oct. 23.—Goodland, Kan.—Altcar Coursing Club's meeting. T. W. Bartels, Sec'y.

Oct. 28.—Goodland, Kan.—Kenmore Coursing Club's meeting. C. F. Weber, Sec'y.

Providence Show.

PROVIDENCE, R. I., Aug. 26.—Please remind intending exhibitors that entries for the Providence Bench Show close on Sept. 2. Everything points to a large entry, and a pleasant reunion of exhibitors. The R. I. State Fair this year is on a larger and better scale than last year, and nothing will be left undone by the management to make the Bench Show a success.

E. M. OLDHAM, Superintendent.

NATURAL METHOD OF RETRIEVING.

(From "Fetch and Carry," by B. Waters.)

ALTHOUGH radically imperfect in itself and uncertain in its application and results, the natural method, so called, is an important factor in teaching retrieving by either suasion or force.

It is the method which is commonly first employed by the amateur. It rarely, as a method, finds favor with the professional trainers.

This method is an important part of the method miscalled the force system, since it is employed at nearly all stages of it and is complementary to it. Being considered a distinct method it will be so treated here. Yet the term "natural method" is a misnomer. It more properly should be termed the amusement method. It is misleading in its implication, since, as an art, there is very little method in it. Nor is it correct to say that it is natural. The term probably was adopted at a time when observation of what was natural and what was artificial was imperfect, and it probably has since been used as a matter of convenience. Indeed, the nomenclature of the dog and gun is neither voluminous nor exact.

Retrieving comes from education, be the same little or much. It is no more natural for the dog to learn retrieving than it is for him to learn anything else, nor is it more natural for him to work for his master for nothing than it is for the latter to work for some other man for nothing. We may consider that the term, fixed as it is in the nomenclature of dog training, has simply a technical meaning, though accepted in its common meaning it is misleading and confusing to the amateur, as it erroneously implies a system which the dog follows by his intuitions or hereditary proclivities.

The beginner should divest himself of such preconceived ideas of a natural system as conflict with sensible teaching, and instead consider that the education of the dog is the result of prolonged and diligent effort skillfully applied.

The natural method is not the best one. It is simple. It requires but little skill in the manner commonly taught, and it also requires comparatively but little thought or knowledge in its application. It is not a system, though it may be considered a part of a system.

It readily suggests itself to the beginner from the natural inclination and practice of puppies to carry objects in play, and from their fondness for a playmate; nevertheless, the puppy is intent on amusing himself. It is beneficial to him, however, since nearly all his play is a close imitation of pursuit, capture, battle and escape—incidents common in wild life and necessary to his existence.

The faults of the system will be briefly enumerated. In its practical application, when the dog is being taught, the system is entirely dependent upon the dog's fondness for play or amusement, combined in a lesser degree with his desire to gain his master's approbation, all of which are uncertain and variable factors. The desire for play is variable in one dog as compared with another, and from time to time it is variable in the same dog.

Such dogs as refuse to play, or ones which take no pleasure in gaining their master's praises, are outside of the application of this system.

As frolic and praise are the groundwork of each lesson, the dog seldom treats retrieving in a sober, business-like way before he reaches maturity. When he becomes sober and serious from age he often retains as part of his education many frivolous ways and faults which became habitual in conjunction with the lessons.

The manner in which the dog is pleased to perform the act of retrieving is almost entirely out of the trainer's control. In respect to details, if the dog does them well or ill, he does them as best pleases himself. Having the idea that the lesson is a frolic, it is natural that he should conduct himself accordingly—thus the natural or amusement method of retrieving shows in its results all the faults engendered by play. The finished manner and obedience of the correctly trained retriever are rarely established. Hard mouths are a very common result of the system.

The natural retriever sooner or later finds the work irksome or disagreeable, whereupon he performs in a slovenly manner, is more or less disobedient, or perhaps refuses to retrieve under any circumstances. This at first commonly occurs at a juncture when the dog is overworked and weary, or when there is obnoxious cover or heavy footing, as in briers or in mud, or he may be feeling rebellious after punishment for some fault, when he has, in whole or in part, lost his interest in field work.

As the dog's own willingness to participate was the peculiarity of his nature through which the trainer gradually decoyed him into retrieving, it is quite as natural that he should refuse to work when it ceased to be either pleasurable or profitable to him. As to work or not to work rested with himself, according to his own inclination, he could refuse to work quite as readily as he could accept.

So much for the faults of the system. The peculiarities of dog nature will now be touched, as they relate to the subject.

Nearly all puppies have a passionate fondness for frolicking. They will, by hours together, play with their master, with children or with each other. In the absence of a playmate, the puppy's irrepressible fondness for play, a trait implanted by nature for his best mental and physical development, stimulates him to find ways and means for its gratification. He takes an old shoe or other object to his liking, and carries or throws it about till he is wearied. At play, his joy and enthusiasm are without bounds. He goes through the forms of fierce, mimic battle, of chasing and being chased, of hostile surprise and bold defiance. All the fun may end by a brave onslaught and complete destruction of the old shoe. The frolic rarely ends before weariness supervenes. In due order, sleep and rest follow, whereafter the fun is boisterously and vigorously resumed. Thus he goes through the necessary development in the manner ordained by nature's laws. Therefrom he acquires activity, strength, a sharp judgment and a healthful development of body and mind.

In short, the play develops the puppy for the serious part of dog life, regardless of education or fine pedigree. On this trait, this fondness for play, the trainer must base all his educational efforts, supplemented by praise and rewards for such acts as are well done, and disapproval of such acts as are faulty. The dog's desire for approbation can be greatly developed by judicious praise and approval.

Now, as to the method itself, there is nothing fixed or arbitrary about it.

The intermediate stages of education, from carrying an object in play at the beginning to retrieving it usefully to command, are complex and numerous, and vary greatly in every respect, as much so as one dog's character and mental capacity differ from those of another. Even the same dog will vary from time to time in his progress and interest. The different dispositions, likes and dislikes, intelligence and stupidity, whims and peculiarities, are traits which the trainer must study and play upon. All the peculiarities may appear in a multitude of ways while the dog is in training. Even the trainer's own skill will vary. The capabilities of the dog should be carefully noted. Useful peculiarities should be cultivated and undesirable ones should be suppressed or discouraged, though always modifying and adapting the training to the puppy's capacity and temperament.

As before intimated, a course of training which may be a perfect success when applied to one dog may be a failure when applied to another. Each dog must be treated according to his peculiarities.

In the application of the natural method very little punishment can be given even when the dog is willfully wrong. To the dog the lesson means merely an enjoyable time, though to the trainer the pretense of fun has a serious purpose. Thus both are actuated by widely different motives. Punishment would therefore spoil the dog's fun and end the lesson. On the other hand, to make it unrestricted fun would defeat the trainer's purpose. Under the pretext of frolic a compromise must be established. By imperceptible stages the fun is gradually merged into business; that is to say, into retrieving.

There are times, however, when the puppy will not play; times when he does nor care to be amused; times when he wishes to be let alone. Then there is no lesson —or at least no lesson which is a gain.

Mature dogs care little for frolic. For that reason, with few exceptions, this system, in its application, is limited to puppies. A dog which will not play is beyond the scope of the system. Even in the rare instances in which an aged dog can be induced to play, he, having wisdom with age, soon discerns the purpose of the trainer and thereupon loses interest and quits.

The progress of the puppy, in the play system, is often extremely irregular, slow and faulty. He may express too much of his animal spirits by violently shaking the object to be retrieved, in imitation of combat with an enemy; he may stop to tear it, or race away with it, or do any one of a dozen other things he ought not to do—from the trainer's standpoint. When at a certain stage, which particularly pleases him, it is difficult to advance him to the next higher one. Or he may have some whim or whims which are all wrong as the trainer sees them, and which may require weeks of careful effort to correct.

In his training, both trainer and method are subservient to the pleasure of the puppy. At best, the trainer can only bide patiently the puppy's whims and inclinations, and the amusement features often last many weeks after the trainer heartily wishes them ended.

Playfulness gradually disappears as maturity is reached. In most instances, the lessons, when successful, are given from puppyhood to maturity. During this period, the discipline may become so firmly fixed by constant repetition that at maturity the dog may obey from force of habit, supplemented by the ascendency which the trainer, by his superior will power and intelligence, gains over him.

To entirely restrain one's own purposes and individuality within such limitations as are required by the puppy's whims or pleasure requires a great deal of tact, patience and good temper; or, in respect to the latter, a suppression of ill temper.

Punishment can only be administered cautiously, and then only as a corrective; that is, to prevent him from doing something which is wrong, not to force him to do that which is right. It is much easier to prevent him from doing something which he wishes to do than it is to make him do something that the trainer wishes done. Yet withal it is an easy matter to chill the dog's ardor by punishment under this system. By attempting to check him in one detail of the sport, he may be checked in all.

Generally speaking, the fewer alarming demonstrations that are made while training, the greater will be the success. A single miscalculation in punishment may temporarily or permanently end the whole affair under this system, the ever-recurring fact that the puppy can quit asserting itself whenever he is so pleased.

The lessons are greatly helped if the trainer can join heartily and sympathetically in the fun; if not so in reality, then so in appearance. A spirited participation on his part adds greatly to the dog's enjoyment and serves to engage his interest permanently. The system is based on deception, and the better the puppy is deceived the better he will learn, if skillfully managed. However, it is extremely difficult for many staid, serious men to simulate a gaiety and playfulness which they do not feel, or at least not in accordance with the puppy's standard. Sham cheerfulness and heavy capers are not likely to last long, and such grim attempts at fun, with a too rapid attempt at mixing work therewith, are sure to excite the puppy's distrust or to chill his interest. Once his interest is destroyed it is no easy matter to again engage it, and afterward it is easy to offend his sense of fun. The play must be genuine if the puppy's interest is to be engaged permanently.

It should not be inferred that all dogs taught after this manner retrieve well. Only a relatively small number do so. The work of retrievers thus taught is commonly inferior, showing the loose and unfinished effects of the playful lessons. Therewith may be added such peculiar faults and idiosyncrasies as are natural to the dog, or which are incidentally acquired by him.

However, a dog taught after this system may retrieve in a perfect manner, yet the perfection is not from any inherent virtue of the system. It is simply the manner which the dog has been pleased to adopt.

Boston Terrier Show Abandoned.

NEW ENGLAND KENNEL CLUB.—Boston, Mass., Aug. 24. We have been compelled to abandon our Terrier Show for this year owing to our having been unable to secure a suitable place for holding same.

D. E. LOVELAND, Sec'y.

POINTS AND FLUSHES.

It is complimentary to the human race that the most venerable of the physical sciences is astronomy, whose fragmentary ephemerides may be faintly traced to the dimmest antiquity of Babylon and Egypt. In those early ages Sirius figured prominently, both in the scientific study of the skies and the economics of the times. The Thebans determined the length of the year by the number of its risings, and the entire population of the valley of the Nile leaned upon its prognostications of the swelling of that fateful stream. That Sirius might look upon fields and flocks with favor, the Romans rendered him yearly a sacrifice of a dog, and so to this season, when Sirius rose with the sun, was given the name of the "dog days." Besides, mythology records that Canis Major, the constellation in which Sirius is leader, was one of Orion's hounds, and was purposely placed near the Nimrod of the skies But time has its revenges, and the precession of the equi-

EWING DERBY CUP FOR NEWTON.

noxes has maladjusted the relation of the Dog-star to the sun, and dissipated in their proper connection the baleful beams of which Virgil wrote, yet the "dog days" serenely hold their own and are likely to exert their potent influence until the turning point in the sun's energy is reached and it begins to grow cold.—*Standard Union.*

We publish cuts of the two cups presented to the Continental Field Trials Club by Mr. Geo. W. Ewing, New Islip, L. I. They are of simple yet elegant design, and are trophies worthy of friendly competition. Each bears an inscription commemorating the event where won. Mr. Ewing is deserving of much praise for his generosity and sportsmanship.

In a letter of recent date, from a friend in Manitoba, it was mentioned that on Aug. 11 the thermometer registered 34°. Quite a contrast to the 90s prevailing in the States.

Trainer Jack Bradford Befriended.

MARLIN, Falls Co., Tex., Aug. 19.—A couple of members of the gun club drove down to the Brazos River yesterday to look after Jack Bradford, who has been prospering until recently, fishing and training dogs, at Willow Point, about seven miles from town, below the falls. They found him sick and destitute. One of his horses had drowned and his dogs were nearly starved. The boys immediately secured medical aid and provisions for him and his dogs, but he would not leave his camp, which

EWING DERBY CUP FOR MORRIS.

he has made into quite a park. We have arranged a home for him in town, where he will have proper attention, and have sent after him imperatively. He is about 45 years old and is said to be an expert florist as well as dog fancier, and is a quiet sort of a fellow that everyone likes when acquainted with him.

He had charge of the Waco Fishing Club property for some time before coming here. THE NEWSMAN.

Orange County Show.

ENTRIES for the Orange County Dog Show at Newburgh will close Sept. 10. The premium list may be had of Sec'y David A. Morrison, Newburgh. Prizes run $5, $3, $2 for firsts, and $3, $2 and $1 for seconds, with $5 special for fox-terrier bitch, collies, English setter, bull terrier, pointer, and miscellaneous. The judges will be: Mr. Edwin H. Morris, Hackensack, N. J.; Mr. John Brett, Cloister, N. J.; Mr. Chas. D. Purroy, New York City; Mr. R. K. Armstrong, Cragston Kennels; Dr. C. P. Stansbrough, Vet. Surgeon.

Toronto Show.

TORONTO, Aug. 24.—Dog owners and breeders when exhibiting in Toronto will see one of the largest and finest exhibitions in the Toronto Industrial Fair. It would be worth while for anyone to come hundreds of miles to see it, bringing their dogs with them. The following classes and prizes have been added: Class 35½, greyhound puppies, both sexes; class 11½, novice St. Bernards, dogs and bitches; and class 16½, puppy dogs and bitches, same breed; the prizes are for the three classes, 1st $10, 2d $5, 3d diploma.

Thomas Denney kindly donates a very handsome silver cup for the best cocker spaniel stud dog and two of his get, any color. A valuable trophy is given for the best St. Bernard.

C. A. STONE.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address. Prepared Blanks sent free on application.

NAMES CLAIMED.

Mr. R. F. Maher claims the names
Red Duke, for cocker spaniel dog, whelped April, 1895, by Cherry—Brantford Bonita.
Reham Bene Silk, for cocker spaniel dog, whelped April, 1895, by Cherry—Brantford Bonita.
Mr. G. E Call claims the names
Chief, for pointer dog, whelped March 8, 1895, by Halt—Blodwin.
General, for pointer dog, whelped March 8, 1895, by Halt—Blodwin.
Peperell, for pointer dog, whelped March 8, 1895, by Halt—Blodwin.
Mass, for pointer dog, whelped March 8, 1895, by Halt—Blodwin.
Mr. D. C. Coleman claims the name Gath's Belle, for English setter bitch, whelped May 30, 1895, by champion Gath's Mark—Belle of Blue Ridge.

WHELPS.

Standard Kennels' Velma, beagle bitch, whelped, Aug. 2, four (two dogs), by champion Tricotrin.
Rochester-Pittsburg Bull-Terrier Kennels' Lady Dinah, bull-terrier bitch, whelped, July 20, nine (three dogs), by champion Streatham Monarch.
Mr. R. F. Maher's Reham Raven Beauty, cocker spaniel bitch, whelped, Aug. 1, seven (three dogs), by King Raven.
Rice St. Bernard Kennels' Arline, St. Bernard bitch, whelped, Aug. 14, eleven (five dogs), by Grand Master.
Mr. H. F. de B. Cameron's Dowsabel, cocker spaniel bitch, whelped, Aug. 10, six (two dogs), by Willie Silk.

SALES.

Mr. J. F. Stoddard has sold Tulip, beagle bitch, to Mr. J. P. Haller.
Mr. G. E. Call has sold
Mass and Peperal, pointer dogs, to Mr. C. F. Lawrence.
General and Chief, pointer dogs, to Mr. E. Thompson.
Mr. Chas. A. Paetzel has sold
——, pointer dog, to Mr. T. T. Ashford.
——, pointer bitch, to Mr. T. T. Ashford.
Mr. G. G. Williamson has sold
——, English setter bitch, to Mr. D. C. Coleman.
——, English setter bitch, to Mr. H. B. Ledbetter.
——, English setter dog, to Mr. J. H. Cornell.

DEATHS.

Mr. G. G. Williamson's Red Bandanna, English setter dog, on July 24. Poisoned.

Yachting.

FIXTURES.

SEPTEMBER.

7. **First international race. This date is provisional and may be changed upon Lord Dunraven's arrival next week.**

THE action of the America's Cup Committee in concealing the official measurements of Defender and Vigilant is by no means what might be expected from men of long practical experience in yachting. Assuming that any real harm could come from the knowledge of the waterline and sail area of the two yachts, it is still an open question whether the Cup and regatta committees are justified in defying a fixed rule of the club; and it is further questionable whether the precedent thus established may not be a most mischievous and harmful one in yachting.

It is a recognized principle in yacht racing, founded on obvious reasons, that no yacht be allowed to start in a race without being officially measured, and also officially recorded as entering in one particular class with a given allowance to or from other boats in the class. This much is due to the other competitors, and the regatta committee should compel a proper measurement and entry in justice to all. Only lately complaints have reached us of neglect in this particular by smaller clubs; and the action of the New York Y. C. committees establishes a precedent for similar laxity in enforcing the rule.

What we are most surprised at, considering the make up of the Cup committee, is the technical ignorance which it has displayed in ascribing such an exaggerated importance to the other side of a knowledge of Defender's length and sail area. Such ideas might pass with the average piazza yachtsman and the bold skippers of the rocking-chair fleet, but one does not look for them to-day among men who are thoroughly familiar with the details of design and measurement. The working out of a design is a matter of weeks at least, and the construction a matter of months; all the dimensions and details of Valkyrie III. were decided on months ago, and even the spar plan, the one thing that is most susceptible of alteration, must have been finally completed in June. In a great craft like this, the first thing for the designer to do is to try her as nearly as possible at the designed waterline and with her original spar plan, making such changes of ballast, trim and rig as seem necessary to correct certain faults or to generally improve her speed. With the experience of Thistle and Valkyrie II. to guide him, it is unlikely that Mr. Watson will attempt anything more than to get the highest possible speed out of Valkyrie III., whether he has to slightly shorten or lengthen her waterline; this alone is a difficult task in two weeks with no trial boat. It is in the highest degree improbable that he will, after knowing the measurements of Defender and Vigilant, attempt to improve Valkyrie's allowance by alterations of trim or rig which may affect her speed. The approximate sail area of Defender has been disclosed long ago by photographs, and though her waterline is still unknown, it cannot vary very far from 89ft. 6in. That Valkyrie must allow a minute or two to Defender and Vigilant is quite certain. She is prepared to do so, and her designer would hardly be so foolish as to risk the loss of a minute in speed from an alteration which would save a few seconds in allowance.

The effect of this extreme "foxiness" on the part of the New York Y. C. has been to awaken a feeling of suspicion abroad, and, we believe, to disgust a great many American yachtsmen who believe in making the best possible rules for the regulation of yachting and living up to them rigidly.

All lovers of consistency will appreciate the remark of one member of the Cup committee, that it would be obviously unfair to Defender to disclose her length and sail area three weeks before the race, when it is remembered that this same gentleman was largely responsible

for the demand for all the hull dimensions of a challenger ten months before a race.

THE present "scare" policy of some American papers toward Defender is both harmful and silly; a mere sensation that can do no possible good and must appear ridiculous in the extreme to outsiders. The lists of fateful mishaps and horrible occurrences to Defender since she was begun are detailed at doleful length up to the number of a baker's dozen. It has been known from the first that lightness of construction has been deliberately carried to an extreme point, a dangerously small factor of safety being used in dealing with great dimensions and unknown materials. Under these circumstances the failure of a mast or the breaking of a gaff are to be looked on not as extraordinary accidents or special omens of evil, but as natural consequences of a deliberate act. There was nothing mysterious in the loss of Vigilant's bowsprit in her first race in 1893 when one measured the diameter of the bowsprit shroud; and there is nothing especially strange in the failure of Defender's mast last week. The designer of both yachts has placed his faith not alone in the more legitimate features of design such as the selection of type and dimensions and the adjustment of centers, but in extreme light construction. Thus far the failure has been confined to the rig, but it would be no surprise if the same extreme experiments in the hull were attended with the same unpleasant results.

Much has been made of the fact that Defender has twice taken the ground, but the only surprising fact in this connection is that with a draft of 19 to 20ft. she has sailed or towed so much without more frequent and serious grounding. If any one thinks that it is an easy task to take 20ft. of water around the Sound or Narragansett Bay by the Government charts, let him borrow a 46-footer with 10 to 11ft. of draft and try a little navigation in her. The grounding of Defender off Newport, and again last week off Hog Island, were mere matters of course that have no special moral save the uselessness of such deep craft.

ANOTHER story now going the rounds is to the effect that there is trouble in Defender's crew. This is probably quite true. If it is not, the Deer Island crew is a notable exception to human nature among sailor men. The captains of all these great racing boats will tell the same story, that while it is possible to keep a crew of twenty or twenty-five men in a proper state of discipline, it is a very different matter with double the number. There will certainly be some sea lawyers and black sheep, and at the best the captain is called on constantly to settle small disputes, to punish breaches of discipline and to exert no small amount of tact and diplomacy in maintaining a proper spirit of contentment and obedience among his crew. After all the reports, there is no reason to believe that Defender's Yankee crew is any more discontented and unruly than might be supposed, or that it will not do all that is expected of it. The inevitable trouble with these big crews, such as in the case of Ailsa this summer, is another reason for the return of the Cup racing to a smaller class of yacht, with a crew of half the number.

SHORTLY after the arrival of Valkyrie III. Mr. H. Maitland Kersey, Lord Dunraven's representative, notified the America's Cup Committee that the challenging yacht would require no extension of time for preparation, but would be ready by the date originally fixed, Saturday, Sept. 7. On Aug. 24 a special meeting of the Cup and regatta committees was held, at which it was decided to sail the first race on the original date, Sept. 7, and an official notice to this effect was posted on Saturday. Lord Dunraven and Mr. Watson sailed on the Teutonic last Wednesday and are due in New York on Aug. 28, when the final arrangements will be completed. It is hardly likely that Lord Dunraven will object to the date as thus fixed, but there is a possibility that more time may be needed by the defender after a final selection has been made.

The Trial Races.

THE final trial races for the selection of the defender of the America's Cup against the British challenger, Valkyrie III., were set for Aug. 20-22, the conditions, as announced on Aug. 19 by the America's Cup committee, being as follows:

The start will be made off Sandy Hook or Scotland Lightship, the preparatory signal being given at 11 A. M.

Courses—No. 1 (letter C): From the starting line to and around a mark 10 miles to windward or to leeward and return, leaving the mark on the starboard hand.

No. 2 (letter D): From the starting line, 8 miles to and around a mark, thence 8 miles to and around a second mark, and thence 8 miles to finish line, turning the marks on the outside of the triangle, to port or starboard, according as the yachts are sent around.

Starting and Finish Lines—Will be between a point on the committee boat, indicated by a white flag, and the mainmast of the lightship. These lines will be at right angles with the outward and home courses respectively.

To Sail Twice Over—Two red balls will be displayed, vertically; and in turning the lightship it must be left on the same hand as the outer mark or marks.

Compass Courses—Will be signaled before the preparatory signal is made. The signals for course No. 2 must be read beginning forward.

Marks—Will be floats displaying a red flag with white stripe.

Starting Signals—Each signal will be accompanied by a 15-second blast of whistle.

Preparatory—The blue peter will be hoisted.

Signal for the Start—Ten minutes later the blue peter will be lowered and a red ball hoisted.

Handicap Time—Two minutes later the ball will drop.

Recall Signals—A yacht crossing the line before the starting signal is made will be recalled by a blast of the whistle and the display of her private signal on the fore.

Letter F—All yachts come within hail.

All signals will be made by the club code.

The only two entries for the trials were Vigilant, the defender of 1893, and Defender, built this year. These two yachts were docked together in the Erie Basin dry dock on Aug. 16, being then measured, Defender for the first time, and Vigilant for the first time this season, by Mr. John Hyslop, the official measurer of the New York Y. C. Vigilant was the first to enter the big dock, early on Friday morning, warping up to the extreme end. She was first thoroughly and systematically stripped, nothing being left aboard but an anchor and cable, and then her load line and spars were very carefully measured by Mr. Hyslop and his assistant, in the presence of Mr. Willard and Capt. Barr. This operation was finished shortly after noon, by which time Defender was outside the dock, having towed down from New Rochelle. She was warped in and stripped to the last chip, and then Mr. Hyslop boarded her.

For the first time in American yachting, the crews were on board and amidship at the time of measurement, each being counted and the number recorded so that it may not be exceeded in any race so long as the measurement stands. Heretofore it has been optional with owners to have the crew aboard, and while they have not been counted, the custom has been to measure the waterline with most of the crew on board. In the Cup races of 1893 the then defender, Vigilant, chose to be measured with no one on board, her regular crew being greatly in excess of that carried by Valkyrie II. The latter yacht availed herself of the same privilege, only Lord Dunraven being on board at the time of measurement. By the agreement this year, both yachts must be measured with crew aboard, the number not to be exceeded in the races, and the same conditions have been made to cover the trial races as well.

By the positive orders of the America's Cup committee, the measurer was prohibited from revealing the racing lengths or any of the measurements to any one outside the committee, so that the allowances in the various races sailed are yet unknown, and some of them cannot now be ascertained. We understand that while Defender drew 19ft. 8in. when she was first docked on July 25, she had been so lightened at the time of measurement that she drew barely 19ft. We cannot vouch for these figures, which would indicate a reduction of weight of some twenty tons, but there is no doubt that the trim of the yacht had been changed, and that in her early races she measured more and should have allowed more time to Vigilant than in the trial race of last week. How much more, and whether the results of these races would be affected, no one can now know. The course of the two committees of the club, in deliberately violating Rule IV., is responsible for this very unsatisfactory state of affairs.

The docking served to show that Defender received no external injury in the grounding off Goat Island, the surface of the hull being bright and clean. Both yachts were thoroughly polished below and painted above, a special composition invented by a New Rochelle painter being used on Defender, the ordinary paint showing very badly on the aluminum plates. Much small work was done on sails, gear and hull while in the dock and in the interval between the floating, on Sunday morning, and the race on Tuesday. Mr. N. G. Herreshoff was with Defender from Aug. 14, superintending alterations to the sails at New Rochelle previous to the docking, and he stayed by her through the first race.

Tuesday was an exceptionally fine day, even for August, clear and bright, with a strong and cool S. W. wind in the morning which freshened until it was blowing from 20 to 25 miles an hour in the afternoon. The tug L. Luckenback, with the Cup and regatta committees aboard, steamed out to the Scotland Lightship about 10 o'clock, in company with a small fleet of yachts and steamers, but the direction of the wind made a windward course impossible from that point. The tug set a message in the code signals and steamed further offshore to the Sandy Hook Lightship, where a course of 10 nautical miles S. S. W., or in near the Jersey beach abreast of Long Branch, was laid off. The preparatory gun was fired at 10:35, but there was a marked absence of any attempt at maneuvering for position, Defender kept away and left Vigilant to cross alone, the times at the line being: Vigilant 11:45:56, Defender 11:46:53.

Both carried all lower sail and club topsail, though there was a good breeze and a promise of more, Vigilant also carrying a baby jibtopsail. Vigilant, after crossing on the starboard tack, luffed up for a moment and paid away on the same tack, offshore. Defender also crossed on the starboard tack, but went about as soon as she was well clear of the line, and headed inshore. There was little sea at the start, but as they worked out the water grew rougher until after some five miles there was a very lively jump to worry them.

Both heeled more than in any previous races, but Defender showed a very decided superiority in this respect.

Defender held her inshore tack for about three minutes, and then came about with a good weather berth. For the next half hour the spectators were treated to a fine bit of racing; each boat had plenty of wind—more than enough for the clubtopsails which they carried—and both wind and sea were increasing. Vigilant had clear wind and water, and every change on her best, but this time the centerboard boat was clearly overmatched by the keel. Defender held on better and pointed quite as high, showing a steady and marked gain. At the end of half an hour from the start Vigilant found herself under Defender's lee and made her first tack at 12:17, Defender crossing her bows as she headed inshore. Defender also tacked at 12:18:30 on Vigilant's weather bow; thus having made up the minute lost at the start and added another minute or more to it.

The remainder of the course was made on one long leg of 50 minutes, Defender doing the better work in the head seas and stronger wind. Both would have gone faster and easier without club topsails, but they were lugged to the outer mark for the sake of the running.

When Defender, with a long lead, came up to the turning mark, she executed a maneuver which caused much surprise to all who saw it; instead of making a close turn and a jibe at the mark, she stood on some distance beyond the mark, to all appearances imitating the wild runaway of Pilgrim, in the second Astor cup race off Newport, in 1893. The yacht failed to answer her helm, as it appeared, and some time was lost before she was headed off the wind on her course home. Even then she was not jibed over, but still carried her boom to starboard; the spinaker was set very slowly and the whole work of turning was badly done. When Vigilant came up she made a short turn and a quick jibe, at once breaking out her spinaker and afterward setting a jibtopsail. The times at the mark were:

	Actual.	Elapsed.	Gain.
Defender	1 09 18	1 22 25	6 33
Vigilant	1 14 54	1 28 58	——

Vigilant was the better fitted for a quick run home, having her boom on the right side, while Defender was obliged to run off her course a little. When she came up to the lightship she took in her spinaker and jibtopsail and prepared to jibe, but the same refusal to answer her helm followed, and some little time was lost before the boom came over and she was on her proper course around the mark. It was still early in the day, the yachts had sailed but 20 miles, and the conditions were just those most desired—a good whole sail breeze and sea—so before Defender reached the mark boat the signals were set on the Luckenback for a second round.

The two were timed at the turn:

	Actual.	Elapsed.	Gain.
Defender	2 04 29	0 55 11	
Vigilant	2 08 32	0 53 38	0 1 33

Defender started on the second round with her clubtopsail still aloft, going off on port tack. Vigilant, however, lowered her clubtopsail at the turn and carried a bare topmast, still having sail enough. Defender started the second round on the starboard tack, but Vigilant rounded the lightship and headed inshore on port tack, Defender at once tacking. They went along for a time with too much wind for Defender's clubtopsail, though she was lugging it well and hammering into a head sea, Defender showing the best at this work. At 2:23, however, she suddenly bore away, started sheet and headed back for Sandy Hook, being soon picked up by a tug. Vigilant continued the course, though at 2:27 her jib split and she sailed without it until a new one was set. Shortly after 3 o'clock the Luckenback ran up to her and ordered her to discontinue the race, which was awarded to her.

The cause of the withdrawal of Defender was not known until some time later, when the press tugs visited her and were told that the steel masthead band which carries the main rigging had drawn down over an inch, crushing into the mast and leaving the rigging slack, the damage being so serious that the mast would in all probability have gone before the windward mark could have been reached. The yacht was at once towed to New Rochelle, and on Monday morning she started in tow for Bristol with Mr. and Mrs. Iselin on board. She laid in New London all Wednesday night and started on Thursday morning for Bristol, arriving late on Thursday, after a little delay caused by taking the ground on the point of Hog Island, just off Bristol. The spring tide was unusually low, and on the last of the ebb she grounded, going easily into the soft mud and lying for a time until the tide lifted her clear. The incident was of no moment, though greatly exaggerated by some papers.

The work on the new steel gaff and boom was already being hurried, and immediately after the break down a telegram was sent to Boston ordering a new mast, to be 2ft. longer and 1in. greater in diameter than the old one, which was but 22in. The increased size of the mast called for entire new fittings, and the smiths were at once set to work on new steel bands, heavier in all dimensions than the old; all of the gear and rigging being materially strengthened. The new mast and a new topmast arrived at Bristol from Boston by rail on Friday night, on a special train of four flat cars; the crew was ready at the station, and as soon as the train was run on to a siding near the water the spars were slid overboard and towed by the Hattie Palmer to the railway in Walker's Cove, where they were hauled up for further work. The mast was only in the rough at the ends, and much work remained to be done in fitting the metal work before it could be stepped.

The condition of the hull and the full extent of the injury are still matters of mystery; those connected with the yacht admit that the masthead band drew down and the shrouds slackened, but deny positively that the hull was in any way injured or has showed any signs of straining since launched, and also that the yacht was at any time unmanageable. The statement concerning the hull is borne out by the fact that there is apparently no work being done on it now at Bristol except the addition of some longer chain plates for the runners and backstays, 5ft. long, thus going well down to the manganese bronze plating. The statement denying the bad behavior of the boat at three different times—at the first turn, the jibe, and when she finally gave up—is contradicted by the occurrence itself, as seen by many yachtsmen.

The new mast cannot fail to be a serious disadvantage, being a green stick, in addition to the extra size, and tending to depress the bows, being stepped so far forward. The change, though absolutely necessary, is in this way not for the better. It is generally reported that the old mast was sprung, but, as the Herreshoffs are guarding it as they know how to on their dock at Bristol, it is impossible to say whether this is the case. That the mast was too light for the increased sail plan, if not for the original one, is very certain, and this error cannot fail to be attended with serious effects, in addition to the loss of time.

Immediately after the breakdown the Cup committee announced that the second race would be postponed until Tuesday, Aug. 27, with a third trial on Wednesday; but the progress of the work was so slow up to Saturday that in the evening a notice was posted by the committee that the first race would be sailed on Thursday of this week. The new mast was stepped on Sunday.

YACHTING NEWS NOTES.

Adelaide, sloop, owned by R. W. Inman, was run down near the Narrows on Monday night by the iron steamer Perseus, and at the time we go to press Mr. Inman is reported missing, the others on the yacht being saved. The yacht was badly damaged, but was able to return to Bay Ridge.

Valkyrie III.

THE NINTH CUP CONTESTANT.

YACHTSMEN were prepared in advance for the arrival of the latest Cup challenger, she having been reported several times between Cape Race and Montauk Point, and when she was sighted off Fire Island station at 3 P. M. on Sunday, Aug. 18, a number of tugs were already off Sandy Hook awaiting her. The news was sent by telegraph from Fire Island to Sandy Hook, and there made known by signals, the fleet starting off toward Fire Island. The tug F. B. Dalzell was the first to meet the yacht and pass her a line, the wind being light from the westward and sunset approaching. The steam tender City of Bridgeport, chartered some time since by Mr. Kersey to wait upon Valkyrie throughout the series of races, was off the Hook with Rear-Com. Arthur H. Glennie, Royal Portsmouth Corinthian Y. C., on board. Mr. Glennie, who is an intimate friend of Lord Dunraven, has been in New York for some days, having come to witness the races. On the deck of Valkyrie was Capt. Cranfield, as ruddy and jolly as ever, with Capt. Sycamore, who will assist him in the sailing of the big boat, and Capt. James Harrison, of the Anchor Line, the navigator. The first mate of the yacht is W. Tyler, the second mate Luther Gould and the boatswain Wm. Cook. The party numbered forty-two all told, not including the ship's dog. Capt. Cranfield's son, who was in the second Valkyrie in 1893 and last year with Lord Dunraven in Audrey I., is again in the crew.

The yacht looked well under her ketch rig, which proved very serviceable on the long voyage, far better than the cutter rig under which Queen Mab and Valkyrie II. crossed. She was well washed by the sea, the paint and varnish being the worse for wear, but the hull seemed perfectly sound. Just forward of the rudderhead was the steering wheel made at the Erie Basin for Valkyrie II. when she sailed for home last year, a stout oak frame bolted to the deck and carrying a plain wheel and barrel. A jury tiller of steel, about 4ft. long, was shipped in place of the racing tiller, and steering lines and tackles were led from this tiller to the barrel of the wheel, a strong and simple arrangement. The yacht towed up the Bay and anchored just by Liberty Island. The Boston *Globe* gives the following summary of the voyage:

Sailed from Gourock on Saturday, July 27, towing down the Clyde; fresh northwesterly wind to start with and heavy swell, the yacht pitching heavily. On Sunday, July 28, the wind continued fresh from the northwest, and when Troy Island was abeam had covered 148 miles.

There was a light northwesterly wind on Monday, July 29, and a high swell, Valkyrie covering 127 miles.

On Tuesday, July 30, the wind still continued light from the northwest and the weather was clear, Valkyrie only making 83 miles. With a moderate breeze fanning her along, 155 miles were covered in the 24 hours.

A gale commenced on the forenoon of Aug. 1, which lasted four days, varying from north to southwest, and the new Cup challenger fairly flew through the water, covering 204 miles.

On Aug. 2 they were to hove to at intervals, because of the wind and sea, and only covered 81 miles.

On the evening of Aug. 2 they showed signal lights to a sailing vessel bound east. They were carrying their three lower sails and topsail, with reefed foresail.

The gale continued, and there was a confused sea until Aug. 3, when the weather and sea commenced to moderate.

On Sunday, Aug. 4, Valkyrie still continued to pitch heavily, and shipped considerable water.

At 9 on Sunday morning, however, Capt. Cranfield shook out reefs and again started westward under full lower canvas.

On Monday, Aug. 5, they spoke the German steamer Rotterdam and made fair progress in the light northwesterly wind. The sky was clear and the warm sun dried out their sails.

On Tuesday, Aug. 6, they carried away their topsail sheet and boom guy in a strong northeasterly wind, which was accompanied by a heavy sea.

The wind was lighter on Aug. 8, and despite a high swell Valkyrie covered 219 knots, her best day's run of the trip.

On Friday, Aug. 9, there was a strong breeze from the southeast and a high following sea.

On Aug. 10 they had a fresh breeze from the southwest, and at 5:30 o'clock on Sunday morning, Aug. 11, they signaled Cape Race. They ran into a thick fog in the afternoon, which lifted enough at 8:25 o'clock to show them Cape Race abeam.

On Monday and Tuesday, Aug. 12 and 13, Valkyrie had a light easterly breeze to contend with, which shifted to the northwest and came in lighter on the following day.

On Thursday, Aug. 15, the breeze continued moderate from the northwest, while the air was clear and cool.

Friday, Aug. 16, saw the same general winds, except that Valkyrie was becalmed for four hours.

On Saturday, Aug. 17, Valkyrie encountered moderate northerly or northwesterly winds, which continued all Sunday until she signaled Fire Island light at 3 in the afternoon.

At 5:30 she gave a line to a tug and towed up to the city.

The latitude and longitude of Valkyrie III. on each day of her voyage, as well as the distance run, is shown in the following table:

	Latitude.	Longitude.	Miles.
Saturday, July 27	2.40 P. M. left Gourock.		
Sunday, July 28	Tory Island abeam.		
Monday, July 29	54.35	12.12	127
Tuesday, July 30	53.35	14.15	83
Wednesday, July 31	54.32	18.31	155
Thursday, Aug. 1	55.40	24.06	204
Friday, Aug. 2	54.52	25.45	81
Saturday, Aug. 3	52.53	29.04	160
Sunday, Aug. 4	62.08	31.20	93
Monday, Aug. 5	51.31	33.33	91
Tuesday, Aug. 6	50.32	35.12	123
Wednesday, Aug. 7	49.46	38.04	81
Thursday, Aug. 8	48.23	43.14	219
Friday, Aug. 9	47.41	46.16	129
Saturday, Aug. 10	47.16	50.51	189
Sunday, Aug. 11	46.52	52.47	83
Monday, Aug. 12	45.58	55.57	140
Tuesday, Aug. 13	44.41	59.30	173
Wednesday, Aug. 14	43.31	62.35	154
Thursday, Aug. 15	41.38	64.38	135
Friday, Aug. 16	40.42	67.38	140
Saturday, Aug. 17	40.43	69.14	80
Sunday, Aug. 18, to Sandy Hook	40.32	72.44	59

The total distance covered was 3,016 miles.

Bright and early on Monday morning the crew was astir, scrubbing down decks and cleaning up, and unreeving and stowing the sea gear. In the afternoon the tug Lewis J. Pulver, which attended the second Valkyrie, came down with Mr. Kersey on board and towed the yacht to the Erie Basin drydock, where the sea gear was carried ashore and stored. On Tuesday morning the two jury masts were unshipped and laid on the bulkhead in company with a lot of Vigilant's spare spars, including the much-traveled $1,600 hollow Herreshoff boom made in 1893, carried over to Europe last year and never taken from its original wrappings. The spars of Valkyrie were awaiting her and the mast was quickly cleared of its wrappings, disclosing a fine stick of great size; it was slung and stepped in place and the rigging sent up; the bowsprit was shipped and gaff and topmast taken aboard.

The boom proved a surprise, a "stick" of sheet steel in six segments, the longitudinal edges of each segment turned outward, making a flange through which the connecting rivets were driven. The spar is very long, probably 110ft., extending when shipped far beyond the long counter of the yacht. The adjoining flanges of the segments make six exterior ribs which stiffen it, the construction being identical with that of the steel pillar made by the Phœnix Bridge Company and seen in some of the elevated railway structures and in large buildings. The steel is $^3/_{16}$in. thick and galvanized; tie plates are used inside for additional stiffness. The form of construction makes the riveting a very easy matter, all the work being done from the outside, the construction of a cylindrical metal spar being difficult unless it is large enough in diameter to admit of a man lying inside to pass the rivets and hold on. This difficulty is avoided, at the expense perhaps of a little symmetry and shipshape appearance, but these matter little in a Cup contest. At four points on the spar the spaces between the flanges are filled with hardwood chocks, making circular bearings for the straps of the mainsheet blocks. The spars are large and heavy, but the crew worked with a will, and the rigging was well advanced by Tuesday night.

Early on Wednesday morning Valkyrie was floated in to the upper end of the north basin, where the keel blocks were ready to receive her. She was lined up over the blocks, the spur shores set up and the pumps started, while a crowd of curious spectators hurried in the open gates of the yard. Neither portfolios nor cameras were barred, and soon artists and photographers were busily at work. As the water fell the hull was scrubbed down, showing a fairly clean wooden bottom, with a triangle of copper indicating the lead keel, the wood covered with a black paint up to a point well above the waterline, the topsides being white.

As soon as the bottom was dry enough, the stages were rigged and men set to work everywhere to burn off the old paint, scrape, sandpaper, and where necessary plane the hull; this work being continued until by Friday night the whole surface of the yacht was clean, fair and smooth. On Saturday she was painted, the black paint being carried up until only a belt of white 2in. wide was left below the plank-sheer, this being relieved by the conventional scroll and gilt stripe. The effect was not unlike that seen in Mayflower when she defended the Cup in 1886. The bottom will be painted again when the yacht goes into the dock for the last time, probably on Sept. 4. It is also

reported that arrangements have been made to dock her after each race, so as to insure that the bottom is in perfect condition.

With such special precautions as these, there is no reason why a painted wooden bottom cannot be had which will be equal to or even better than copper; the advantage of the metal coming in when a yacht has to race for a couple of weeks or more without docking. In this respect the American boat will have a certain decided advantage over the challenger, the thick plates of Tobin bronze or manganese bronze being much more even than thin copper sheathing in small plates.

While the dockyard men were at work on the outside of the hull, carpenters were busy on deck removing the rail and bulwarks from a point forward of the mast back to the archboard and then replacing the rail on low chocks, leaving only a footrail without bulwarks. The interior fittings, light as they are, were also taken out, as the crew is berthed in hammocks on the City of Bridgeport. During the races the yacht will be entirely bare inside, the same as the American boats. The crew found plenty to occupy them about the decks, and in reeving off gear, scraping and varnishing spars, and similar work; but they stuck bravely to their task, and by Saturday night all was completed save the bending of the second mainsail which Mr. Ratsey brought over in the Paris, arriving on Saturday afternoon.

The usual stock reports of serious straining, seams started and rivets sheared, were set in circulation as soon as the yacht arrived, but the docking failed to show anything in corroboration of these canards; the hull showed even less straining than in the case of Valkyrie II., in which the oakum was loosened in the seams near the extreme end of the counter. The seams of the new boat showed little strain, the putty being in good condition, a few of the bolts through the planking had lost their nuts, and were replaced. There was no evidence, in either seams or bolts, that the yacht had strained or worked.

The form of the hull has been clearly shown by the various photographs published some time since, and there is comparatively little left to be said by way of description.

In view of the dangerous dimensions of the challenger, that patriotic

VALKYRIE III. IN DRY DOCK, ERIE BASIN.

policy which claims Queen Mab and Minerva as sloops is being followed by some writers in the attempt to show that Valkyrie III. is but a copy of Vigilant, but such a statement is very wide of the truth. The charge of copying naturally carries with it the inference that the copyist has appropriated blindly and ignorantly the good and bad features of the pattern, with no appreciation of their value. That the new boat is more like Vigilant than like Marjorie, Thistle or even Valkyrie II. is very true, so far as it goes; but no one who is familiar with Valkyrie III. and Vigilant can honestly claim that the two are alike save in a very general way. What is true is that this time Mr. Watson has considered solely the conditions of the Cup races and has designed his boat to meet them; and in doing this he has studied the successful boat of 1893 very thoroughly, accepting some features and rejecting others that are quite as characteristic and prominent.

The resemblance of Valkyrie III. to Vigilant rests on three points—the possession of the same extreme beam, the form of the midship section, and the keel contour. As far as the beam is concerned, 26ft. in each boat, in the one case it is employed on a waterline of 90ft and in the other of but 86ft, making quite a difference in the proportion. The midship sections of the two boats, apart from a very great difference due to the extra draft of Valkyrie, resemble each other when compared with older and very different boats, but when compared directly together each shows the individual characteristics of its designer. After watching the performance of Vigilant when heeled, rolling her weather side high out of water, it is hardly to be expected that Mr. Watson would adopt the same midship section, nor has he done so; there is less of the barrel bottom, and more of the straight deadrise and strongly marked bilge of Valkyrie II. The section, so far as it can be cut by eye from the solid form of the hull when surrounded by staging and half bare of paint, is a more carefully drawn and better one than that of Vigilant.

The beam and midship section of Vigilant are emphasized by their union with the extreme fullness of waterline, both forward and aft, which characterized Mr. Herreshoff's work in 1892-3, as in Wasp, Vigilant and the small fin keels—a fullness that has been abandoned this season. The extreme round of the midship section was carried forward to the hawsepipe and aft to the transom through this full waterline, making a long, full bilge extending from end to end.

In Valkyrie the beam and midship section are associated with a much finer waterline, the round of the middle frame disappearing quickly both forward and aft, the bow frames being of a marked V shape, while the counter and quarters may be termed fine, even with no comparison to the very full ones of Vigilant. While the yacht is not what some predicted, all middle and no ends, she is nevertheless fine and easy at both extremities, and with nothing to cause the tremendous waves which are said to have terrified the spectators on the shores of the Clyde. To our eye, however, she is not the fair and sweet boat that Valkyrie II. was, nor is she equal to Britannia; the extreme dimensions, not alone the beam, but the shallowness of the hull, prohibit the handsome lines of the more moderate craft.

Taking now the sheer plan, above water there is no resemblance to Vigilant, the counter radically different both in the deck outline and in the transverse sections, being more like that of Queen Mab and other well-known Watson boats. The sheer is very different from that of Vigilant, and the boat makes a better appearance afloat. Below water there is a certain resemblance in the keel contour, but under conditions which contradict all charges of mere copying.

The peculiar outline of keel which was one of the marked characteristics of Valkyrie II., and which has been adopted as closely as possible in Defender, is entirely absent in the new Valkyrie. The extreme angle of the sternpost has given place to much less rake, about the same as that of Vigilant; the rounded bottom of the keel in the second Valkyrie is replaced by a straight piece slightly raked upward as in Vigilant, in the third Valkyrie; for the rest, this straight keel is carried by a quick curve into the stempiece sharply raked at the waterline.

These points of resemblance, however, are accompanied by such strongly marked differences as to make the result anything but a copy. In Vigilant the extreme draft was but 18ft., the straight keel was about 50ft. long on the bottom, and the sternpost was directly at the after end of the waterline, while beneath the fore end of the straight keel was the deep triangle of the centerboard. The result was a long but shallow lateral plane, with the rudder at the surface and at the extreme after end; a plane that gave steadiness in running and in a quartering wind, but that was a fatal handicap to that quickness of maneuvering which is a prime requisite in modern match sailing.

In the new Valkyrie everything is different. With but 4ft. more length of waterline, the draft, as disclosed for the first time by the docking, and in the face of many "exclusive" stories, is at least 20ft., possibly an inch or two more; the sternpost is placed forward, well under the boat, and the straight bottom of the keel is less than 25ft. long in place of 50. The rudder is quite wide and carries its width down toward the heel; it is deeply immersed in solid water, far below the surface; the lateral plane is, roughly speaking, 90ft. long on the upper edge, 25ft. long on the lower edge and 20ft. deep—a very different thing from that of Vigilant, 86ft. on upper edge, 50ft. on lower and 13ft. deep. There can be little doubt that Valkyrie III. will be a quick-working boat, probably quite as lively in stays as her predecessor.

It is not impossible that Defender may be capable of swinging around in a few seconds less, but in practice, as long as a boat will tack surely and quickly and is not notably slow, like Vigilant, it makes no difference whether she takes 15 seconds or 20; nothing is gained by turning so quickly that the sheets cannot be handled fast enough. The probabilities are that both boats in the Cup races will be capable of quick turning and will be tested at it to the utmost in the starting.

The difference between Vigilant and Valkyrie II. off the wind, especially as shown in the last race of 1893, was too great to be passed unnoticed, and it looks as though Mr. Watson had "copied" Vigilant by a rigid comparison of the lateral planes, including the rudders and the centerboard of the two boats, discarding some of the prominent features of his old form and adopting with careful discrimination the best features of his rival. If he has really done this, he is just so much ahead of the designer of Defender, who has passed by Gloriana and Wasp and adopted a different and apparently faulty form, that of Valkyrie II.

The lead of Valkyrie is a very large mass, of triangular form and some 8ft. high at the fore end, the top raking down to a couple of feet at the heel. It is not bulbed, but is very thick through, and as it is probably nearly equal in weight to that of Defender, it must be still more effective through its lower center of gravity due to the greater draft and straight line of the bottom.

After seeing the yacht we have little doubt of her power under all normal conditions of Cup racing, or even in a blow under proper canvas; if Defender can stand up, as she undeniably does, with much less beam and bilge, and also less draft, Valkyrie should be able to carry easily her extra canvas and big spars.

The work above deck, which, by the way, is another "steal," purely American (?), is worth longer and more careful study than is possible on a first view. The first impression (after watching Defender in a number of races) is that the rig of Valkyrie is very heavy; the second impression, after a more careful view, is that it is about right, as fine a piece of rigging as has yet been seen on this side, with all regard to the many improvements of rig introduced by Mr. Herreshoff in the past four years.

The mast is long and large, a fine stick of Oregon pine, said to be 26in. in diameter at the largest part. The tendency for several years, on the part of Mr. Watson, as well as many others, has been to cross the cutter rig with the mongrel "Cape cat" with a jib, or to cut down the headsails, as in Queen Mab and Valkyrie II., for the sake of a large mainsail. In the new boat Mr. Watson has gone backward—several feet—the mast is noticeably further aft than in Defender and other modern boats. According to the latest ideas, this is the wrong thing to do for windward work; but again there comes in the superior speed of Vigilant over Valkyrie II. off the wind. The spars of a real 90-footer are immense sticks, the boats are boldly cut away forward, and whatever advantage may be gained by a large mainsail and small headsails on the wind, some consideration is due to the fact that when free an immense weight of mast, boom and gaff is thrown very far forward. Added to this is the question of size of spinaker; it looks as though the races of Vigilant with Valkyrie II. in 1893 and with Britannia in 1894 had left Mr. Watson well satisfied with the windward work of his boats, and that his efforts this year had been largely directed to improving them off the wind.

The boom we have already described; though a wooden one is in readiness, the steel one will probably be used. A steel mast is also on its way over, but the pine one will probably be kept in the boat. The gaff is very long, a fine hollow stick, and the topmast is a big spar. The rig is very carefully planned, with some entirely new details, though the leading of the shrouds to the masthead has been copied from the Herreshoff boats, and the forward strut and stay first put on Colonia by Capt. Haff is also used.

One striking feature is the use of single parts of flexible wire wherever possible, the throat halliards have a single block on the gaff and two single blocks aloft, one on each side of the masthead. The halliard is of flexible wire, rove through the three blocks, with one end to haul down and hook on deck, while the other is set up with a jig. The other halliards are rigged in a similar manner, and wherever possible single blocks are used in place of double or triple. The blocks have shells of thin sheet steel perforated with many small holes to reduce the weight. There are three travelers, the after one on the extreme taffrail.

The construction of the stern is peculiar; there is a strong inner framework of steel plate, ending in a steel plate transom, as in a metal vessel. The hood ends of the planking are carried out to the transom plate and cut off square to the outer surface of the planking, and not on a line with the face of the plate. The plate thus appears to be recessed or set in, being some 2in. inside of the extreme ends of the planking. The after traveler is carried on this steel frame of the transom.

One novelty is the double quarter-lift, two parts on each side, leading to two points on the boom, but running to the same block at the masthead. The mast carries the ordinary wooden masthoops, and the upper rib of the steel boom carries a light steel angle on which slide the toggles for the sail lacing. The wooden spreaders are very thoroughly braced in a different manner from the American boats, and many small details of the gear are new. The rig has a substantial and wholesome look that has met the approval of yachtsmen generally, and, though many comments are passed on its apparent weight as compared with that of Defender, its manifest advantages are fully appreciated.

On Sunday, while Capt. Cranfield stayed by the yacht, the men were rewarded for their hard week's work by a trip on the City of Bridgeport up the Hudson River. Mr. T. W. Ratsey, the sailmaker, with his assistants, arrived in New York by the Paris on Saturday, and at once joined the yacht, being domiciled with Mr. Glennie on the Bridgeport. On Monday morning the yacht was floated from the basin and went down the bay.

Beverly Y. C.

The 226th race, third open, was sailed off Quissett, Aug. 17, for prizes presented by gentlemen of Falmouth, and drew a good entry. Wind was S.E. by S., moderate at start, good wholesail breeze at finish. Special class sailed a triangle of — miles, one leg dead to windward; second and knockabouts tried little beating, a long and short leg. It was impossible to get good windward course. Other classes went round a mark that should have been 2½, but was 1¾ miles dead to windward and return; third and fourth classes sailing course twice. Allowances are based on the real length of course.

In special class Salmon and Ashumet sailed a good race; Zenobia, just home from a cruise, was hardly in it, while in first class Mistral beat Little Peter, the favorite, by 34s.

Kalama got her day in second class, while the old Surprise did well. Meiro won in third, with Crosby's new boat a good second. Sippican made third best time, but awaits measurement and the ascertainment of the number of men carried.

In fourth cats Howard won as usual, but Dawdle was close up, and in the fifth class sloops the two prizes lie between Raccoon and Laurel, depending on former's length.

Grilse led in fourth sloops, but Sylph won on allowance. Silence started in a race at last, but is too lightly built to hold together, and came back twisted out of shape and full of water.

Vif took first in fifth cats, with Frolic and Scup second and third. The spritsails sailed on actual time.

Knockabout prize is withheld till Hurricane is measured.

Winners of prizes: Special class, Ashumet first; first class sloops, Mistral first, Little Peter second; second class cats, Kalama first, Surprise second, Bernice third; third class cats, Meiro first, No Name second; fourth class sloops, Sylph first; fourth class cats, Howard first; fifth class cats, Vif first, Frolic second, Scup third; spritsails, E. Harding first, Hibbard second, Trilby third.

Judges: W. Lloyd Jeffries, A. H. Hardy, N. H. Emmons.

Seawanhaka C. Y. C. Cup.

The first trial race for the Seawanhaka C. Y. C. international challenge cup was sailed on Monday, Aug. 23, in a moderate breeze and smooth water, being won by Ethelwynn, with Olita second, out of a fleet of seven starters. The morning was very calm, the fleet turning out and making fast in a long string to the big spar buoy off Center Island. About 2 P. M., a light southerly breeze came in, and the starting gun was fired at 2:20. The course was a triangle of two mile sides, sailed twice or twelve miles, the third leg being to windward, so that the other two were sailed with booms well off the quarter, there being no spinaker work. The starters were the centerboard boats Olita, designed by N. G. Herreshoff; Ethelwynn, designed by W. P. Stephens; Indienne, Question, designed by L. K. Huntington; F. and R., designed and built by F. & R. Wyckoff, and the fin-keels, Trust Me, designed by Herreshoff, and Trilby, designed by Chas. Almstead.

Trilby made a good start, though fouled by Ethelwynn under the stern of the flagship. Ethelwynn took the lead in the first quarter of a mile, but was in turn passed by Olita, the latter showing great speed in reaching. These two soon led the fleet and had the race to themselves. Olita made a minute in the first two-mile reach and over two minutes on Ethelwynn in the second. On the beat to the line, Ethelwynn made up two minutes, doing better work on the wind than Olita, though the latter overstood a little. Question left the leaders and steered to the westward, coming to the turn a good third.

On the second round, with a fairly good breeze, Olita made over 3m. on Ethelwynn in the four miles of reaching. When she turned the second mark she took the same course as in the first round, a long port tack to the eastward, apparently the best course. Ethelwynn tacked at the mark and stood in a long starboard tack to the Lloyd's Neck shore, apparently getting the strong ebb from Oyster Bay in the weather bow. Though not evident to the spectators, the wind was stronger inshore, and when the two boats came together, Ethelwynn crossed Olita's bows very easily and came in first. This result was in part due to luck, but Ethelwynn showed up the better of the two on the wind. The official times were:

	Start.	First round.	Second round.	Elapsed.
Ethelwynn	2 20 15	1 46 40	1 29 55	3 16 15
Olita	2 20 30	1 44 57	1 33 12	3 18 09
Question	2 20 40	1 48 20	1 37 07	3 25 07
Trilby	2 20 13	1 50 27	1 35 57	3 26 37
Trust Me	2 20 37	1 56 48	1 43 45	3 40 33
F. and R.	2 20 33	1 57 52	1 54 12	3 52 14
Indienne	2 21 24	2 04 56	Withdrew.	

The races will be continued on Tuesday and Wednesday.

A correspondent of the *Field* criticises as follows the action of Mr. Brand in visiting America when he had already accepted a challenge to race at home:

"*Editor of the Field:*

"A few weeks ago some remarks were made in your columns which rather unjustly inferred that Mr. W. Willard Howard deliberately kept his canoe Yankee in America; and, by making his challenge months before, caused English canoemen to build to meet him, although he had no intention of racing whatever. Now, it has been fully explained, both in your and other yachting papers, why Yankee did not appear at Greenhithe for the B. C. C. challenge cup, so what say ye to the action of one of your own countrymen, and he no other than one who is thought to be your American representative? This gentleman accepted a challenge for a lady (Miss Bennett, winner of last year's B. C. A. ladies' race) to meet Mrs. Howard this summer on the Solent. No small amount of notice was taken of this race in embryo, both by the American and English press, and, being regarded as settled, the contest evoked great interest. Mr. Howard had a ½-rater specially built to meet Spruce IV., which was Miss Bennett's craft. Now, the acceptor of the challenge, finding that some pleasure trip

was more to his taste, calmly refused to race, and, in consequence Mr. Howard has found that his boat has been built in vain, and the yachting world have been befooled. I am of the opinion that some notice should be taken of such unsportsmanlike conduct, particularly by one who is about to receive the hospitality of the nation to which Mr. Howard belongs. I certainly think that the Minima Y. C. would be quite justified in withdrawing the backing of the challenge. Trusting for your valuable comments on the matter, I am, dear sir,

"Aug. 12. A Genuine Sportsman."

This genuine sportsman is evidently unaware that Mr. Brand's visit to America is entirely due to Mr. Howard, whose letter of last March resulted in the offering of the Seawanhaka C. Y. C. trophy. Under these circumstances it is hardly probable that Mr. Brand has treated Mr. Howard as badly as "Genuine Sportsman" asserts, as the two have worked together in arranging the American trip.

Yampa and Amphitrite.

Undoubtedly the match between the schooners Yampa and Amphitrite on Aug 14 was one of the most interesting features of the year. Yampa, by her fine performance in a moderate wind in the R. Y. S. match on Aug. 7, had made a great impression, but it was generally concluded that Amphitrite held her on the beat between Spithead and Cowes. Two days later Amphitrite upset all calculations of the R. Y. S. handicappers by beating Viking (late Wendur) in a long set-to by the wind. No doubt Amphitrite was laid on the wind as she never was before, and her achievement was regarded quite as one of the best things ever witnessed in the way of schooner racing. After all the praise had been bestowed on Amphitrite, it was only natural that Mr. Palmer should express a desire to try and straighten Amphitrite out again. He stated that the disqualification of Yampa by the R. Y. S. was justified—in fact, that there was no help for it in the face of the rule, of which, however, he was ignorant, and nothing stood in the way of another match with Amphitrite. The sailing committee of the R. Y. S. undertook the management of the race, and it was sailed in a humming breeze on the 14th. It has generally been supposed that Yampa is what is termed an up to-date schooner, but in point of fact she was built in the same year that Amphitrite was (1887), from designs by Mr Cary Smith, and she compares with the Gosport schooner as follows:

	L.W.L	Beam.	Draft.	Sail area.	Rating.
Yampa	111.4	27.0	13.7	10,033	157
Amphitrite	95.5	19.4	14.0	8,230	131

It will thus be seen that Yampa had an enormous advantage in length, beam and sail area, in fact the two yachts can be taken as fair representatives of the prevailing type of yacht of the two countries eight years ago, but in all probability some of the later American schooners would be able to sail round Yampa. However this may be, yachtsmen were delighted to see her in the match at Cowes for Lord Iveagh's cup. Her performance was much admired, and no one begrudged her what was at first thought a well-merited victory. Her defeat on the 14th was probably due to the greater strength in the wind and to the fine handling of Amphitrite.—*The Field.*

Canoeing.

The American Canoe Association has for several years been particularly fortunate in the selection of its chief officer, in each case the office seeking the man. The selection just made at the annual meet, of a commodore for 1896 is one that will meet the approval of every old A. C. A. man, and, we earnestly hope, will bring back many missing faces to the camp-fires of next summer. For a dozen years past, since the first Grindstone meets, Mr. W. R. Huntington has been a regular attendant, and of late years he has taken a very active part in the selection and arrangement of the camp site, being at the head of the camp site committee in 1893 and 1895. The office of commodore has been several times offered to him, but he has declined to accept it, and only consented this year on the solicitation of many old members. In his hands we have no fear of the success of the Association next year.

AMERICAN CANOE ASSOCIATION.

Sixteenth Annual Meet.

BLUFF POINT—LAKE CHAMPLAIN.

Again, for the sixteenth time in the history of the A. C. A., the tents have been struck, the duffle packed, and a pleasant camp abandoned reluctantly by a gay party of canoeists, and the meet of 1895 has become but a memory. It is safe to say that while to the older members the camps of to-day have lost some of the charms of ten years back, and even the new men, though they may not know it, miss the close *camaradie* and good fellowship which prevailed when the attendance was made up mainly of the same men year after year, that the present camp will be remembered with pleasure, and will be referred to in future years without the uncomplimentary comments called forth by recollections of trials and discomforts at some other meets. With the reservation, on our part at least, and many old canoeists will agree with us, that Lake Champlain is not the ideal water for canoe cruising or canoe racing, the present site, described last week, is one of the best yet selected for the Association, having some of the good features of two famous old camping grounds, Grindstone Island and Jessup's Neck. With all the drawbacks of the 1890 camp, the trouble and expense of transportation, the starvation and the tyranny of the ever-to-be-execrated caterer, there is but one opinion among A. C. A. men as to the advantages of the camp-site itself, the high open plateau between the two bays, the clean pebbly beaches and the deep blue waters; the camp was one of the most showy ones, with its long lines of white tents and bright flags; and with the long wharf, the promenade on the bluff in front of the main and ladies' camps, and the compact arrangement of the tents, there was a sociability and intimacy that was never found in the more scattered camps of Willsborough, Long Island, in Lake George, Croton Point or Bow-Arrow. This same compact arrangement of the main camp about the wharf as a center was one of the charms of Grindstone, though many tents were pitched apart in the grove, and after the experience of many years there is no excuse in the choice of future camps for selecting a site that is not adaptable to such an arrangement.

In the present case there was no wharf as a central point of the camp, and the tents, comparatively fewer than in many past years, were strung out over a long stretch of beach, but the ground offers every opportunity and inducement for just such a compact and showy camp as at Jessup's Neck and Grindstone; and, best of all, like these two places, the camp faces the morning sun. This in itself is no small matter, being one of the defects of Stave Island, Willsborough and Croton Point, which are cool in the early morning, when warmth is most needed, and hot in the August afternoons. While the center of the camp was an open meadow, there were a number of detached trees for those who preferred to camp in the shade, to say nothing of the grove beyond, where the Lowell and Knickerbocker men were camped.

The ladies' camp was much better than either Grindstone or Jessup's Neck, in both of which it was very small; here there was a fine grove of trees on a bluff above the lake, and on one side of the main camp, the headquarters and mess shed being between.

The sailing course was so laid out that it was visible from the entire waterfront, there was no walking half a mile for every race, as at Willsborough, or crawling through the briars as at Stave Island, or wading out to a little rocky point as at Long Island; all hands went about their ordinary vocations in camp, the racing men busy with their boats, an idle crowd of men and ladies sitting in the shade at headquarters, and when a race was on they could see all, or nearly all, of the course.

The general arrangements were most excellent, though far less picturesque and exciting than the arrival by steamer; the railroad and wagon service was very convenient and the camp could be reached quite readily by foot from the station. The mess was very well managed, the meals being plentiful and well cooked, and served in a comfortable pavilion specially built and fitted with electric lights. The charge was $1 per day, and the usual plan of selling meal tickets was not followed, each person registering on the occasion of his first meal and being left to his honor to pay on leaving for the number he had attended. The arrangements for tent floors, lumber, etc., were very satisfactory. The post-office facilities were poor, or the readers of the Forest and Stream would have been treated to a longer story last week, a portion of it arriving too late and being consigned to oblivion.

The weather was good, that is, it was at no time oppressively warm and there was comparatively little troublesome rain. On the night of the second Sunday there was a very heavy thunderstorm, but it did no damage. On the night of Aug. 22 there set in a heavy southeast gale, with rain and high winds, lasting all of next morning. There were one or two more minor rains and several heavy showers during the nights. Perhaps the worst part of the weather was that it was always just going to rain, even when the sun was shining and the sky brightest. On some of the finest days sharp short showers would drive all hands to shelter and wet the blankets and duffle laid out to air, passing away in a few minutes. The violent squalls of Willsborough, just a few miles south, were not experienced, but the neighborhood of the mountains, on both sides of the lake, makes a heavy rain a possible contingency at a few moments' notice.

The winds were very bad, not north and south, as they are supposed to be on Lake Champlain, but mainly N.W., and very strong and puffy. The camp was situated just north of a break in the hills, and north and south of the course were small bays, the wind coming out of each in different directions, in sudden and violent puffs. Never have the sailing men worked as hard and never have hulls and gear been tested as at this meet; many races have been sailed in stronger winds than most of those during this meet, but not in such hard, variable and vicious puffs, from several quarters in succession. If the opinion of the real racing men is of any value after the experience of 1887, 1891, 1892 and 1895, Lake Champlain is no place for canoe racing.

ATTENDANCE.

In point of numbers the meet this year was a disappointment, the register showing some 175 names. A comparison with other years would show nothing, as the attendance is often swelled by members and visitors from the immediate locality of the camp, as at Croton Point, thirty miles from New York, last year; and Brophy's Point, five miles from Kingston, in 1893. The fact is that the A. C. A. should show a much larger attendance at a meet, at least 300 instead of something like half that number. Why the attendance at the meets does not grow, in fact hardly holds its own, is a question frequently asked, and for which each man has his own pet answer and specific remedy; but in our opinion the chief cause is the disgust and disappointment due to bad arrangements, sometimes avoidable and sometimes not. The great expense

HEADQUARTERS.

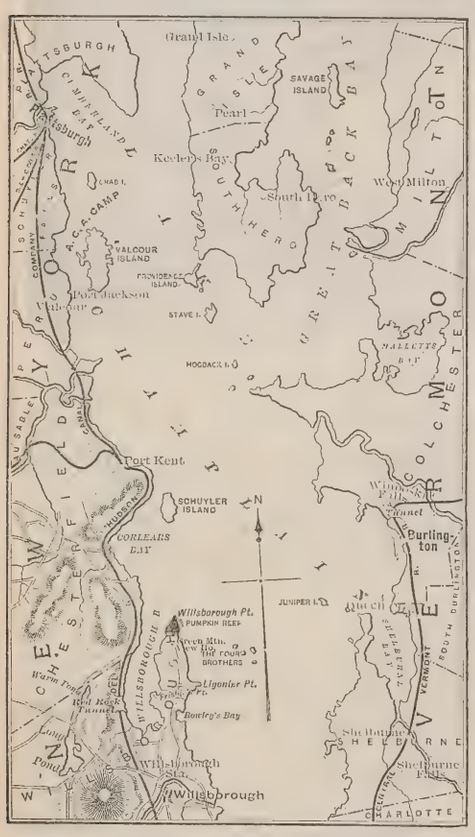
SHORE OF MAIN CAMP.

LADIES' CAMP AND MAIN LANDING.



and the very bad board in 1890 undoubtedly cost the Association some good men, missing from later camps; the all-night rowdyism that marked the meet of 1891 in particular, though not unknown at other meets, has done much to drive from the camps some of the older men of whom the Association was once so justly proud; and the heat, dust and malaria of the '94 meet have had their effect on others. The strongest incentive to a regular attendance at the A. C. A. camp every year would be the knowledge that the camp site will be selected with good judgment, both as to its accessibility at a moderate cost, its sanitary features, and its conveniences for camping, canoeing and racing; and that it will be a camp of gentlemen. The mess question we consider of but secondary importance, as, if everything else is satisfactory, the men who absent themselves because they do not care to cook alone or to go into a club mess of some kind are hardly the ones who will be missed. The same applies to many other things which some men and women consider should be furnished by the executive. With a well-located and easily-reached camp site, a clean, decent camp, and some arrangement for procuring supplies, there will be plenty of the right kind of campers and canoeists, even though some of the luxuries of city life are missing.

The attendance this year was made up of a very few of the older men permanently in camp, a few who dropped in for a day, a number of the men who have attended the last three or four meets and are tolerably well known to each other, and some entirely new men. Two of the latter who were particularly welcome were Mr. O. A. Woodruff, the retiring commodore of the Western C. A., and Mr. J. G. Turrill, of the Kenwood C. C., of Chicago, also of the W. C. A. The ladies, and there were quite a number of them, included few of the older members.

AMUSEMENTS.

The camp was a very sociable one, the new men quickly falling in with the older ones. No elaborate attempts at entertainments were made, but there were a number of very pleasant camp-fires, the ladies generally being present; in fact, some of the best camp-fires were held in an open glade in the middle of the Ladies' Camp, this place being less exposed than the hill at headquarters to the strong winds.

Among the amusements was a base ball game with the guests of the Hotel Champlain on Aug. 14, a burlesque affair that caused much fun; a number of camp-fires with very good congregational singing, in addition to the singing of Mr. Ashenden and the Francis brothers, and some trips to Au Sable Chasm. On the afternoon of Aug. 20 a special train of three cars was sent down from Plattsburgh by the officials of

the Delaware & Hudson road, who have been very accommodating at this meet as well as at Willsborough Point in previous years, and the canoeists to the number of about 150 were carried free to the army post, just south of Plattsburgh. Here they were entertained by the officers with a band concert and parade, returning at dark. The 21st Infantry Club, of the post, tendered its hospitalities to the members of the Association, as did the Lake Champlain Y. C., of Burlington. The Hotel Champlain, located just above the camp, did everything possible to make the meet pleasant, securing the grounds free, providing the mess, erecting the mess pavilion, and putting in the electric lights. The members were invited to the hotel for the dances during the meet.

RACING MEN AND CANOES.

The list of entries for the races, given last week, shows a meager array of racing men and racing boats. It may be extended by the addition of Mr. Archbald, of Montreal, in Mab, and several entries in the minor events. The canoes are all well known to canoeists, having raced at more than one meet, the only new boat being Bug, designed by Paul Butler and built by Stevens, of Lowell, under his supervision. She is a 16×30 canoe of the modern round and full form, but with less of the barrel shape than Wasp and the older Butler boats. In the races she was sailed by Mr. Butler and did not make as good a showing as Wasp, but the latter had the great advantage, in the puffy winds, of a long-legged man to hold her up; where Mr. Butler had to climb out to the end of his slide, Mr. Gray was able to hike out with his feet still against the side of the boat, and ready to get in at the very short notice given. The tests of the new model can hardly be called satisfactory under these conditions. So far as model goes in a canoe, this new boat is the handsomest which Mr. Butler has yet turned out.

The racing was very hard work, and not a few minor mishaps occurred. On the Saturday before the races Mr. Gray went out in a hard wind and finally capsized past righting through the breaking of his tiller, a very stout stick. He drifted for a time, his aluminum rudder dropping off in deep water. By hard work all next day he was able to repair another broken rudder so as to use it through the races.

Some very plucky sailing was seen, and the races were highly interesting to the spectators on shore, more so than to the men, who were slammed down almost under water one moment as a puff passed by, and lifted high into the air on the end of their long seats the next.

The paddling races amounted to very little this year, especially the trophy. Last year it was bad enough, the paddling trophy was won by a man who was hardly in camp save for the race and who left for home as soon as he got the cup in his hands, not taking the trouble to come to camp this year to defend it. This year the sole competitor was Mr. King, of Toronto, a new man with a light paddling racer—an old boat. As he had no competitor, Mr. R. Darcy Scott, of Ottawa, consented to go in against him, each using an ordinary open Canadian canoe. Mr. Scott was not in training and the race amounted to nothing, Mr. King of course winning. It is a pity that a handsome and valuable trophy awakens so little enthusiasm among paddling men.

THE RACES.

We can give now but a brief summary of the races, as the official records are not yet accessible. Out of the twenty-two races on the programme, to which must be added a race for the Jabberwock trophy, open to members of the Central Division, and the cup given by the Hotel Champlain, but fifteen programme races were run off, those omitted being the club sailing, cruising, go-as-you-please, unclassified, novice combined, hurry-scurry and war canoe. No war canoes were present and there were no entries for the unclassified; in fact, this class of cruisers, sneak boxes, canoe-yawls, etc., for which special races were held so long ago as 1887 at Bow-Arrow Point, has shown no vitality whatever at this meet, though better adapted than the 30in. canoe for Lake Champlain.

The chairman of the regatta committee, Mr. M. V. Brokaw, arrived in camp during the first week and had the courses laid out and everything in readiness by Friday, but of his two colleagues nothing has been heard since some time last spring; neither was present to assist him. Mr. E. M. Fulton, Jr., who spends his summers on Lake Champlain and has a camp near at hand, with a good naphtha launch, was appointed by Com. Witherbee to assist him, and Mr. J. A. Smith acted as clerk of the course.

The first race, called on Monday morning, was the unlimited, No. 7 of the programme, with 10 starters, including Wasp, Bug, Bee and Torment. The wind was strong and puffy, and the six-mile course called for some lively gymnastics. Wasp won, with Bug, Bee and Torment in order, beating Bug 7m. The next race was No. 2, the record paddling, at 5 P. M. of the same day, with 5 starters, finishing as follows: Eel, Kit, Az Iz, Wasp, Kiowilla. Some comment was occasioned by the action of Mr. King, who, in a very light paddling canoe, the others using their sailing craft, paced Mr. Sparrow, in Eel, keeping close beside him. Though this was a violation of Rule VII., no protest was made, nor did the committee take any action in the matter, Mr. Sparrow declaring that he had received no assistance.

The first race called for Tuesday was the combined, at 10 A. M., this time the wind being very light. The order at the finish was: Wasp, Az Iz, Eel, Kit, Kiowilla and Crescent.

The limited sailing race was next called, at 11:50, with 12 starters, in a heavy rain squall and lively breeze. The conditions, as printed, stated that the sail area would be limited to 100sq. ft. and the "sliding seat prohibited." This was interpreted in a broad and liberal manner by the Vesper men, who simply screwed fast their 5ft. slides so that they were not movable, though extending 15in. on each side of the canoe. Those who understood the rule to mean that no seat projecting beyond the sides of the canoe would be allowed stood very small chance under the circumstances. The start was a fine one, the boats going over with a rush together, but by the time that the round was ended the rain had stopped and the wind died out, the canoes drifting about in confusion. Over half an hour separated the first and last boat, but when the race ended with the second round the entire fleet came down in a bunch, wing and wing, from the second mark to the finish, with barely three minutes between the first and last boats. Bug won, with Bee second and Torment third, Wasp losing her centerboard and withdrawing.

The novice sailing was called at 3 P. M., with but 4 starters, the race for the Jabberwock trophy, also with 4 starters, being sailed in connection with it. The novice race ended: Az Iz, Fly, Crescent, Seila. The Jabberwock race ended: Az Iz, Zaidee, Kit, Kiowilla.

Wednesday was set for the sailing trophy, and Mr. Archbald ran down from Montreal on Tuesday evening, his business engagements calling him back on Wednesday night. In the morning, after a very cold night, there was a rattling N.W. breeze, squally and puffy as ever. Mr. Archbald was desirous of starting, but the other men, who had already sailed several races in still less severe weather, and who proposed to sail others before the meet was over, objected to going out in a blow that was certain to disable some of the boats. Undoubtedly had the race been called some one would have gone the course and won, but the weather was not suitable for canoe sailing, some of the boats would have been disabled and there were no steam craft to follow the canoes and give assistance, and the committee did well in declining to start the race. All day long the wind blew and there was nothing to do but to run off some paddling races under the lee of the shore.

The first called was the trophy paddling, with but two starters, as already mentioned, Mr. King winning easily by a length. The next race was No. 14, open paddling canoes of over 50lbs. weight, Mr. King beating Mr. Archbald. The next race, No. 15, was for decked canoes, tandem, Messrs. Sparrow and King beating Messrs. Ashenden and Hale. The victorious crew started in the next race, No. 16, open tandem with single blades, but was beaten by Mr. Ashenden with a new partner, Mr. Hall.

Mr. Archbald arranged to stay over another day, and on Thursday morning there was a fresh and fairly steady S. E. wind, the start being made at 10:19, with nine starters. Mab led at the line, followed by Wasp, Bee and Bug, and the order of the leaders through the first two rounds was Mab, Bug, Torment. On the third round Mab capsized and Mr. Archbald got under the mainsail, having a great deal of difficulty in freeing himself, and losing much time. Wasp sailed faster in the latter half of the race and finally won, the order at the finish being: Wasp, Bee, Zaidee, Mab, Bug.

After the trophy race the club fours was called, with three crews starting; Wawbewawa War Canoe Association of Boston, F. J. Burrage, A. H. Coolidge, Louis A. Hall and W. V. Forsaith; Northern Division, R. Darcy Scott, R. O. King, J. W. Sparrow and Fred S. Howard; Atlantic Division, William M. Carpenter, Thomas Hale, Jr., J. Hamilton Braine and Raymond Appollonio. The Northern Division crew made a good start and led for a time, but the overloaded canoe filled and left her crew to swim. The Wawbewawa crew succeeded in getting over the line first and then their canoe filled.

The absurdity of crowding four men into a canoe built for one and driving it at racing speed, even in smooth water, has been demonstrated long ago, though the attempt of the regatta committee last year to admit a larger and more suitable boat aroused some very hostile criticism. This sort of club four racing is of little use, and there is almost a certainty of some canoes swamping in a little ripple of sea. If the club four race is worth keeping up, and we believe it is, the limit of size should be definitely fixed at something larger than a 16×30 canoe.

The race for the Dolphin trophy was called at 2:50, the starters being: Mab, Bee, Zaidee, Torment and Bug, and the course 7½ miles. At the same time the race for the Hotel Champlain cup, to be won twice in succession before becoming the permanent property of the winner, was started, the course of 4½ miles being three rounds of the triangle, or two less than for the Dolphin trophy. The entries for the Hotel Champlain cup were: Bug, Az Iz, Bee, Wasp, Zaidee and Mab, Az Iz being sailed by H. L. Quick. At the end of the third round the leaders were Mab and Az Iz, the former taking the Hotel Champlain cup. The race finished with Mab first and Bug second.

The final races took place on Thursday, No. 19, the sailing upset and maneuvering, being called at 3:20 P. M., the morning having been very stormy. There were but two starters, Messrs. Stewart and Lansing, the latter winning. In the next race, the paddling upset, these gentlemen were joined by Mr. Hale, Mr. Stewart winning. The swimming race was won by R. Darcy Scott, beating W. F. Brown and Wendell Andreas.

The meeting of the executive committee for the election of a commodore and secretary-treasurer was held on Thursday evening, and Mr. William R. Huntington, of the Deowainsta C. C., of Rome, N. Y., was elected commodore and Mr. T. H. Stryker, of the same club, secretary-treasurer.

Friday proved very stormy and unpleasant, with a prospect of continued bad weather, and the camp broke up. We are obliged to defer fuller accounts of the racing and of the division elections until next week.

The British Canoe Association Meet.

From the Field.

Now that the B. C. A. sails and tents are being rapidly stowed after use at perhaps the most beautiful site ever chosen for a camp of the Association, it may interest boating readers to give a brief *resumé* of our doings up to this day in the third and final week of our sojourn.

With Englishmen the weather must form the opening phrase, and on this subject we cannot, any more than of yore, be congratulated. It has been bad, indifferent, and worse than that. Two consecutive fine days have once been our maximum, but throughout the gales and rains the true spirit animating us has kept all lively and hopeful under adverse climatic conditions.

The race *par excellence* was that for the Lord Erne challenge cup on the regatta day programme, and Rogue (last year's winner) was again a competitor, together with Cherub, Vestal, May, Spruce I., Marjorie (formerly Serpent), Tavie, La Babet, and last, but not least, Yankee.

The wind was fresh and steady from S.W., the force about five; sea moderately smooth, and the course, of about eight miles, was from the Boom Beacon, off the Wootton Creek, to the first Red Buoy about E.N.E., then to the Peel Buoy, and to the starting mark, leaving all to port, twice round. This made the sail practically all free, or it would have been so to close-winded boats, but with our little craft the turn from the Red Buoy to the conical Peel Buoy, with a leegoing tide, made it a close pinch. The nine boats got over the line in somewhat open order, and Yankee, well sailed by Mr. Howard, showed her immense superiority off the wind in the dead run down to the Red Buoy, as, with her sails goose-winged, she simply floated away, and, when sheets were hardened in for the close reach to the Peel Buoy, she was still going marvelously for her size and construction: in fact, her superb handling won universal encomiums. Just before the Peel Buoy was reached something went wrong, and Yankee was seen to be in the wind, and so she remained for about twenty minutes. The rest of the fleet were in a cluster at the Peel Buoy, and May, forgetting the lee-going tide, nearly, if not quite, carried away the mark with her broadside, getting sternway on. She compelled La Babet, the next boat, to keep away a long piece to avoid a foul, as there was not room for a sheet of paper between May and the mark. However, all got round in turn, and May was again set going, also Yankee, whose damage to fore-hatch cover Mr. Howard had repaired by going overboard and doing his shipwrighting swimming alongside his craft, thereby demonstrating the *quasi*-advantage of a low freeboard, and want of that initial stability which allows the crew to remain on deck in emergency. His long slide has a thwartship action only; if it could be improved to act as a fore and aft stage, Mr. Howard might have stayed in board and battened down his fore-hatch, and saved the wetting of his perfect camping and cruising outfit which had been improvised for him by sundry contributors for this occasion only.

However, his mastheads did not stick in the Solent mud, and he succeeded in quickly overhauling that Triton the Cherub, and the other leaders in the latter portion of the course. There can be no question that but for his accident he would easily have won the coveted trophy.

Between the Peel Buoy and the Wootton Beacon La Babet's rudder gear snapped off short, and, although her owner quickly fished his yoke with a spare roller spar, the others were too far ahead to render pursuit hopeful, so La Babet gave up. During the second round Marjorie capsized, but her crew righted her and sailed on for a short time, but subsequently gave up and she was towed in. Rogue waltzed along, making complete circles twice when running. It was supposed that she was down by the head with her cruising kit aboard. Spruce I. was well sailed by Mr. E. Kipling alone, but she would have done far better with a double crew and a whole sail.

Vestal and Cherub continued to be well sailed throughout the second round and were fairly matched, in the breeze prevailing. Cherub no doubt would have done better with more wind and sea to contend against, as she is an undoubtedly powerful boat. The handicap was a sealed one, not disclosed until after the race, and the times were as follows:

	First Round.	Finish.		First Round.	Finish.
Tavie	11 52 45	12 59 00	Spruce I.	11 52 15	12 49 45
Cherub	11 51 45	12 47 37	Vestal	11 51 50	12 49 15
Yankee	11 58 35	12 48 32	Majorie	11 53 30	Gave up.
La Babet	12 18 25	Gave up.	May	11 36 55	12 51 00
Rogue	11 55 45	Gave up.			

The sailing and paddling race resulted in a win for the commodore (Mr. T. H. R. Bartley) in the Lily, with Mr. Percy Nisbet in the double canoe Irene as a single hand, and Mr. T. M. Porter in Argo, and Mr. E. Mason in the Pinafore. Pinafore would have won but for mistaking the course. The ladies' race was sailed in a hard breeze in the entrance

to the creek, and the beat back against a falling tide was exciting to onlookers and contestants, when May, steered by Mrs. Trinder, just did Spruce, steered by Mrs. Lane, on the post by a few seconds, and Miss Lane brought La Babet home close behind, while Vestal, steered by Mrs. E. S. Hodson, brought up the rear. There have been twenty-two tents pitched during the meet, and about thirty-four members have been present.

The annual meeting and subsequent dinner at the Royal Esplanade Hotel, Ryde, on Aug 9, were both well attended, and the official reports disclosed a satisfactory state of affairs, and the general onward progress of the Association, which, in its aims and objects, if properly pursued, cannot fail to be an increasing success in the future, and of great service to the cause of canoeing, canoe yawling, and campings, as in all these branches of pleasant outdoor sport men meeting under the neutral flag of the B. C. A. have many opportunities of comparison of gear and fitment that cannot be otherwise obtained.

Several visits from members unable to camp, and the advent of Mr. and Mrs. W. L. Wylie in the Sea Maiden, and Capt. Edwards in the Heron, have made the anchorage and camp lively. The boats present, in addition to those mentioned, are Deva, Mr. Garnet Martlet and Mr. E. S. Hodson.

F. Cecil Lane, Vice-Commodore, B. C. A.

The W. C. A. and Ballast Island.

Milwaukee, Aug. 22.—*Editor Forest and Stream:* Forest and Stream of the 24th inst. is just to hand, and the account of the W. C. A. meet and Mr. Woodruff's letter are both read with interest. I have been a member of the association for the past five years and during that time have regularly attended the meetings, with the exception of the last camp at Ballast Island, which it was not my privilege to attend. I take issue with Mr. Woodruff on the advisability of holding the meets at Ballast Island. No one can or will deny that Ballast is a good place for sailing; in fact, a good place generally—"But there are others," and conspicuous among them are Oshkosh and Madison. At the former place, during the meet of '92, we had both sailing and swimming, a large number of canoes, and a whole lot of enthusiasm. At the meet of '94 at Madison we were unfortunate in striking four or five oppressively hot days and a calm during the second week. Our races were gotten off during the first in good shape and we had plenty of wind. The weather of the second week should not be charged against this particular location, as we have since learned that the same conditions prevailed very generally at that time.

The meets of the Association will always be more or less neighborhood affairs. A good local attendance is generally assured and a much larger attendance from a distance expected than realized.

The records will bear me out in the assertion that the active and numerical strength of the Association is in the West. Ballast is located at the extreme eastern end of the territory, and many Western men argue that if they must go to Ballast to attend the meet, they may as well go on to the A. C. A. meet and have done with it. At the mid-winter meeting in Chicago last winter the executive committee was made up as follows: Commodore Cook, Chicago, Ill.; Vice-Commodore Porter, Madison, Wis.; Rear-Commodore Spencer, Bloomington

Ill.; Secretary-Treasurer Dickens, Milwaukee, Wis.; R. M. Lamp, Madison, Wis.; W. H. Yardley, St. Paul, Minn.; F. B. Huntington, Milwaukee, Wis. Mr. Yardley was not represented, Messrs. Cook and Spencer favored Ballast, while Messrs. Porter, Dickens, Lamp and Huntington favored a central location. In deference to the wishes of such old and faithful W. C. A. men as Com Cook, Dave Crane, Woodruff and a few others, we four, contrary to our better judgment, fixed Ballast as the location of the '95 meet. I cite this to show that the Western men, even though elected to office and controlling the vote, have no disposition to monopolize things.

Mr. Hough's "Summer Girl's Diary" was certainly all that you claim for it, viz.: "A good piece of fun and something of a novelty," and if it did the '95 meet an injustice it will perhaps have the effect of stimulating a discussion and locating the '96 meet more nearly in the geographical center of the Association. F. B. HUNTINGTON.

Trap-Shooting.

All ties divided unless otherwise reported.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Aug. 29-31.—HOT SPRINGS, S. D.—Hot Springs Gun Club's second annual tournament.

Aug. 30-31.—CHICAGO, Ill.—First monthly shoot of the Cook county Trap-Shooters' League. Chas. Grubbs, manager

Sept. 2.—MARION, N. J.—Annual tournament of the Endeavor Gun Club; targets.

Sept. 3.—NEWARK, N. J.—Tournament of he South Side Gun Club; targets. New Jersey Trap Shooters' League contest at 2 P. M. W. R. Hobart, Sec'y.

Sept. 4-5.—UTICA, N. Y.—Two days tournament; live birds and targets.

Sept. 4-5.—SHEPHERDSTOWN, W. Va.—Morgan's Grove Fair Association's tournament, under the management of the Interstate Association

Sept. 5.—MICHIGAN CITY, Miss.—First semi-annual tournament of the Michigan City Gun Club.

Sept. 6-7.—WARREN, O.—Tournament of the Warren Gun Club. H. B. Perkins, Jr., Sec'y.

Sept. 7.—SPRINGFIELD, N. J.—Team shoot between the Union Gun Club, of Springfield, and the Endeavor Gun Club, of Jersey City.

Sept. 10-12.—INDIANAPOLIS, Ind.—First annual tournament of the Limited Gun Club. Royal Robinson, Sec'y.

Sept. 10-13.—DETROIT, Mich.—The Des-Chree-Shos-Ka annual tournament, under the management of Jack Parker.

Sept. 10-13.—ST. PAUL, Minn.—Annual tournament of the St. Paul Gun Club; John P. Burkhard, Manager.

Sept. 11-12.—FRANKFORT, Kansas.—Tournament of the Frankfort Gun Club.

Sept. 11-13.—LANCASTER, Pa.—Tournament of the Lancaster Gun Club; first day, targets; second day, live birds.

Sept. —.—FREDONIA, N. Y.—Tournament of the Clover Trap and Target Company. $1,000 added money.

Sept. 24-26.—ROCHESTER, N. Y.—Fourth annual tournament of the Rochester Rod and Gun Club; three days of the week following the Clover tournament

Oct. 3.—RED BANK, N. J.—Ninth tournament of the New Jersey Trap-Shooters' League, under the auspices of the Riverside Gun Club. Shooting commences at 10 A. M.; league contest at 2 P. M.

Oct. 8-10.—SHERIDAN, Wyo.—Tournament of the Sheridan Gun Club, under the management of Frank Crabill and Mark R Perkins.

Oct. 9-11.—NEWBURGH, N. Y.—West Newburgh G. and R. Association tournament. W. C. Gibb, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed.

The Rochester Gun Club is going to hold a good tournament next month. It has chosen the dates of Sept. 24, 25, 26, and announces that it will add $500 to the purses—not to all the purses, but to some of them. Mr. H. H. Stewart, of Rochester, writing under date of Aug. 24, says: "Our plan for the added money is somewhat different from the usual custom. Instead of adding the money to every event, thus cutting it into small amounts, we will add to every other event. The first day there will be six 20-target events with $30 added to three of them, and two 25-target events with $50 added to one of them. The second day will be the same. On the third day we add $35 to each of two 20-target races and $50 to each 25-target race. Then we also give $50 for general average prizes. Bluerock targets will be used and North's expert traps. A. S. A rules to govern all events."

Another programme that we have received, unfortunately too late for any extended notice, is that which has been issued by the Limited Gun Club, of Indianapolis, Ind., for its tournament, Sept. 10-12. On its cover are the following words: "Manufacturers' agents, professionals, 10-gauge guns, black powder—barred." It is evident that this is an amateur's shoot, and that the amateurs are going to be looked after. That accommodation will be of the best is guaranteed by the fact that the club has expended this summer "over $5,000 in the purchase, improvement and equipment" of its grounds. The following note is important: "Shooters will be classified as they enter, and will be shifted only when it is clear that they are out of their class. Class A will shoot known angles from traps pulled in reverse order. Class B will shoot known angles from traps pulled in regular order."

The programme for the fall tournament of the Lancaster, Pa., Gun Club, on Sept. 12 and 13, is one that is apt to draw shooters. A six-men team race on the first afternoon between Harrisburg and Lancaster teams insures at least one dozen shooters. Others will always draw up to such a nucleus. The first day is given up to targets, event No. 6 being worthy of special mention: 50 targets, unknown traps and angles, 4 high guns, $3 entrance; 2 cents will be charged for targets throughout the day. The second is live-bird day. No. 3 is shot at 10 birds, 21yds. rise, gun below the elbow, use of one barrel, $7 entrance. No. 3 is described as follows: "Event No. 3 will be a handicap of 30 to 26yds.—given by a competent committee. The first prize will be a Chas. Lancaster Special Pigeon gun, two sets of barrels, valued at $110. All moneys over that amount to be divided 40 and 60 per cent. as second and third."

The Altoona team and the Keystone team No. 1 tied for second place in the L. C. Smith trophy on Saturday, August 24, the extra day of the Pennsylvania State shoot. The wording of the conditions governing that event as set forth in the programme are as follows, so far as the division of the purse is concerned: "To the team making the highest score, 40 per cent. of the money and the trophy; to the next highest, 35 per cent. of the money; the next highest, 25 per cent. of the money." That certainly reads like "three high guns." On this understanding the teams shot off for place at 5 birds per man, the result being again a tie, with 12 each. At that point the management decided that it was "class shooting," not "high guns," so further shooting was stopped.

In our notice last week of Jack Parker's tournament at Detroit, Mich., on Sept. 10-13, we gave the location of the grounds as Des-Chree-Shos-Ka, thinking, in the absence of all information to the contrary, that that would be the place which would be chosen by Jack in which to amuse the boys. It appears, however, that the tournament will be held on the Rusch House grounds, which can be reached easily by electric cars which pass every 15 minutes within half a block of the Normandie Hotel—the headquarters for shooters. There is a clear sky background, and the events will be shot, rain or shine.

A Bureau of Press Clippings is a great institution. Among a number of clippings sent in to the Trap Department of FOREST AND STREAM by the New York office of the Bureau of Press Clippings was the following, taken from the Grand Rapids, Mich., *Reporter* of Aug. 8: "Miss Lena Carley will teach the young idea how to shoot for the next ten months in the Robinson district." Our hat is off to Miss Carley, and we wish her luck. She is evidently a capital specimen of the new woman. If Miss Carley will forward the scores made by "the young idea" of "the Robinson district" who may be fortunate enough to be under her tuition for the next ten months, we shall be glad to run them.

Statistical fiends may be glad to know that a census taken of the powders in use at the Pennsylvania State shoot on Aug. 20-23 shows as follows: E. C. 28, Dupont 16, Schultze 11, Wood 9, Walsrode 4, W. A. 1 and King's Smokeless 1. The latter powder is not yet on the market, but "Wanda" was using it, being naturally a privileged party. Guns were distributed as follows: L. C. Smith 23, Greener 8, Parker 5, Lefever and Scott, 4 each; Francotte, Winchester and Remington, 2 each; Ithaca, Daly, Wilkesbarre and Cashmore, 1 each.

Elmer E. Shaner, manager of the Interstate Association, writes as follows: "The membership of the Interstate Association for the Encouragement of Trap-Shooting is now as follows: Union Metallic Cartridge Co., Winchester Repeating Arms Co., American E. C. Powder Co., Von Lengerke & Detmold, Hazard Powder Co., Cleveland Target Co., Tatham & Bros., Le Roy Shot & Lead Works, Parker Bros., Wiebusch & Hilger, Ltd.; the Excelsior Target Co., H. A. Penrose, president, having forfeited its membership."

The Equitable (Pumphrey) system of division of prizes will be used at the Warren, O., Gun Club's tournament on September 6, 7, in all events except the last one on the first day, and the 4th and 7th on the second day. No. 4 on the second day is 15 targets, $2 entrance, four high guns. No. 7 on that day is a handicap, $2 entrance, the contestants shooting at from 15 to 20 targets.

F. F. Waddell, of Chattanooga, Tenn., the popular Southern representative of Dupont's Smokeless, was in this city on Monday of this week. Although Fred complains of being ill, and in need of a rest to recoup, his general appearance aroused no sympathy in our editorial breast. He looked the picture of health and a dangerous man to invite to lunch. (He received no such invitation.)

Allen Willey, of Hartford, Conn., and W. H. Green, of the Newark (N. J.) Gun Club, shot a match at 50 live birds per man, $50 a side, on Tuesday, Aug. 20. Green won, scoring 47 to Willey's 46. As will be noticed elsewhere, Willey defeated Post, of Paterson, N. J., on Thursday, Aug. 22, by the score of 44-43. Willey and Post will shoot a return match the latter part of September.

The first annual tournament of the Washington State Sportsmen's Association for the Protection of Fish and Game will be held at Seattle, Wash., on Oct. 25 and 26, under the auspices of the Seattle Rod and Gun Club. Both live birds and targets will be used. Further particulars may be obtained by addressing C. F. Graff, secretary-treasurer of the Association, Seattle.

On Labor Day, Sept. 2, District Assembly No. 147, I. O. K. of L., will hold a tournament on the Fair Grounds, Troy Road, near Albany, N. Y. The principal event is a merchandise shoot, 50 bluerocks, $1.50 entrance. The shooting is an incident of a big picnic to be held by the order on that day.

On Friday of this week, Aug. 30, Bland Ballard, of Louisville, Ky., and A. L. Ivins, of Seabright, N. J., shot a race against E. G. Murphy, of New York, and Fred. Hoey, of Hollywood, N. J. The match was at 100 birds per man, 200 to the team, 30yds. rise, $250 a side.

"Billy" Hobart, whom every trap-shooter knows, has returned from summering on the bosom of the St. Lawrence at a place called Gananoque. His fish stories are worth listening to and believing—some of them.

New Jersey shooters must not forgot that the last but one of the 1895 series of shoots promoted by the New Jersey Trap-Shooters' League takes place on Tuesday next, September 3, on the grounds of the South Side Gun Club, Newark, N. J.

The Labor Day tournament of the Endeavor Gun Club, of Jersey City, N. J., at the Marion grounds, is bound to be a success. The programme is one that will attract a lot of shooters from this neck of the woods.

"Chained to business." Col. Anthony will appreciate that such was our case this week. Had it been otherwise, Charlotte, N. C., would have seen us this week.

The Parker Gun Club, of Meriden, Conn., holds an all-day shoot on Labor Day, September 2. Targets will be thrown at 2 cents each, four moneys.

EDWARD BANKS.

Trap Around Altoona.

ALTOONA, Pa., Aug. 19.—A very interesting three-cornered two-men team live-bird race was shot off at Mifflin, Pa., on Monday, Aug. 12. The contesting teams were Shoop and Whiteman, of Harrisburg; Adams and Kane, of Mifflin, and Clark and Sands, of Altoona. The race, which was for a private consideration, was viewed with much interest by friends of each team. They were considered evenly matched and the scores show that estimate to have been a correct one. All shot from the 28yds. mark except Shoop, whose 10-gauge gun put him back 2yds. Five traps were used and a 40yds. boundary separated the dead from the lost. Shoop, Kane and Clark, whose scores were respectively 25, 24 and 23, were in great form, especially the former, who missed his first bird in the first event and then killed straight throughout the day. The birds were a well selected lot, which with the short boundary line and the high grass in which the traps were located made the shooting very difficult.

A preliminary miss and out was indulged in previous to the main event, which was also followed by the same kind of events.

It being agreed upon that the team making the lowest score pay for the birds, the tie between Altoona and Mifflin was shot off at 10 birds each team with a result in favor of Altoona as shown below:

Team race, 25 live birds per man:

	Altoona.	
Clark	2210222202212221222211221—23	
Sands	1222211011210100121201122—20	—43
	Harrisburg.	
Whiteman	1100121210011122211021021—19	
Shoop	1121121211111112111111112—25	—44
	Mifflin.	
Adams	1020211220002211012312222—19	
Kane	1211112211112221212201211—24	—43

On the shoot-off Clark and Sands killed all their birds; Kane killed his 5, but Adams dropped 2, Altoona winning by 10-8, and Mifflin paying for the birds.

The miss-and-out events were decided as follows:

	No. 1.	No. 2.	No. 3.
Clark	1221211120—8	2—1	2220—3
Adams	2222222322—9	0—0	20 —1
Sands	2120 —3	0—0	210 —2
Shoop	0 —0	1—1	1111—4
Whiteman	2221112l2—9	....	....
Kane	2120 —3	0—0	1121—4

As a result of this day's sport a pleasant rivalry between teams and individuals has sprung up, and the outcome will surely be a number of races. The Mifflin boys are members of the Altoona Gun Club, and Harrisburg has been watching for an opening ever since Bill Clark walked off with the Harrisburg Shooting Association Top Wad Co.'s gold medal. The Altoona contingent seems only to be waiting for a flash of the green to start the fun.

MESSNER TO MEET M'WHORTER.

There's trouble brewing in Pittsburg, Pa. On Wednesday, Aug. 14, E. H. McWhorter, one of the best live bird shots in western Pennsylvania, called on "Pop" Shaner and left a deposit for a series of races with John G. Messner, of Wilkinsburg, the winner of the Grand American Handicap. Messner heard of it and before the sun had set it was covered. There are to be two races, and should it be necessary a third one for $100 a side each and expenses. The dates and places have not as yet been decided on, but it is understood that they will be shot on neutral grounds.

On the same day John H. Shaffer, of Pittsburg, called at the *Times* office, and authorized that paper to issue a challenge to James O'Hara Denny, of Ligonier, who made such a good showing at Monte Carlo and other foreign tournaments during the present year. In case it does not suit Mr. Denny at this time to shoot a race, Dr. E. M. Cundall or Norwood Johnson, of Washington, Pa., is invited to take his place. The proposed race or races are to be for $100 a side and details to be mutually agreed upon. The merits of these men are pretty well known among the shooters of the country, and some lively arguments can be looked for.

HUNTINGDON HAS A LIVE CLUB.

The Huntingdon Gun Club, a practically new organization, with a membership of about thirty enthusiasts, is beginning to reach out for social contests with some of their older neighbors. They have issued a challenge to members of the Altoona club to shoot a six-men team race on their new grounds. They bar some of the older and more experienced shots of this club, which is only to be expected. The Altoona boys appreciate this friendly intrusion, and have decided to pay them a visit within a week or so.

KOTTY WON THE GOLD MEDAL.

Our club held its semi-monthly shoot at the Wopsononock grounds on Saturday, August 17. The Irish societies of central and western Pennsylvania were picnicking at this resort on this date, and as a result a very large audience witnessed the spirited contests. The weather was fine and a most pleasant afternoon's outing resulted. The scores in tabulated form are as follows:

Events:	1	2	3	4	5	6	7	8
Clark	9	8	9	9	10	10	9	7
Sands	9	10	7	7	8	..	..	..
Murray	8	5	5	3	..	4	..	9
Killits	6	8	5	..	7	7	7	4
House	8	6	8	9	8	9	7	2

GUN.

Kentuckians at the Traps.

PADUCAH, Ky., Aug. 19.—Our all-day shoot to-day was a thorough success, 48 shooters taking part in the events on the programme. The day's sport passed off very pleasantly and all present expressed themselves as having had an enjoyable time. Among them from out of town were: R. M. Beadles, Cargill and McKeel, Mayfield, Ky.; Fred. Schmidt, Jim White and Cockrill, Memphis, Tenn.; Lyons, Watson, Means and Phelps, Louisville, Ky.; J. D. Gay, Pine Grove, Ky.; Dowell and Danforth, St. Louis, Mo.; Bud Page, S. M. Page and W. D. Day, Elkton, Ky.; Griffith, Bowling Green, Ky.; W. M. Page, Hopkinsville, Ky.; R. H. Browning, Charleston, Mo., etc., etc.

An event, which was numbered event No. 8 on the programme, did not fill. The conditions were $10 entrance, handicap, 20 entries to fill, the prize being a fine Kentucky mare. J. D. Gay made the best average and carried off to Pine Grove the silver cup which was offered for the best average in the programme events. The scores were as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11
Targets:	10	20	10	25	15	10	20	10	15	10	10
H G Thompson	8	18	9	17	12	9	13	10	12	4	8
Hayer	5	..	5	..	..	4	..	..	..	..	..
Geo Robertson	8	13	10	12	12	10	11	5	12	8	6

J. B. STIPP, Sec'y.

Trap at Watson's Park.

CHICAGO, Ill., Aug. 22.—Watson's new shooting park, which is right on the car line, is all ready for business, and will be open every afternoon from Sept. 1 next. On Monday, Sept. 9, C. S. Wilcox and C. B. Dicks will shoot a match at 100 live birds per man, $100 a side, loser to pay for the birds.

The latest scores on these grounds are as follows:

Aug. 13.—Chicago Shooting Club, 15 live birds:

W J Eich	1001102111012011—10	H Ehlers	1111220111221112—14

Aug. 14.—South Chicago Gun Club, 20 live birds:

L Willard	1121111212211110111—19	G Sibley	1012111120012200211—15

Same day, 30 empire targets:

G Sibley	1011110011101111011111001111—22
L C Willard	1111111111111111111101111101111—28

Aug. 21.—Audubon Gun Club, 15 live birds:

C B Dicks	1212021020111102—11	C S Wilcox	2022021220002212—10

RAVELRIGG.

Pennsylvania's State Shoot.

THE Keystone Shooting League, of Philadelphia, Pa., has no cause for a quarrel with the clerk of the weather. It could hardly have picked better weather for its three days of target shooting on Aug. 20, 21 and 22, even if it had been allowed that privilege. Friday, Aug. 23, the live bird day, was perhaps a trifle too warm and sultry, but one can't have everything in this world. The fact remains that the weather which graced the Pennsylvania State Sportsmen's Association's fifth annual tournament, which was held at Holmesburg Junction on the above dates, under the auspices and on the grounds of the Keystone Shooting League, was just about perfect for the business in hand. So much for the climatic conditions. Now for

THOSE WHO WHERE THERE.

There are many problems that are easier to solve than that which every management has to face when making preparations for a tournament—How many entries shall we have? If the estimate made is below the actual number that puts in an appearance, the accommodations are voted as inferior, the management incompetent, and shooters don't get as much shooting as they expected and wanted to have, hence many go away disgruntled. On the other hand, if the number in attendance falls short of the estimate, there is a feeling of disappointment manifest everywhere and there is an appearance of a fizzle about the tournament, which is often more fancied than actual. In making preparations for its guests, the Keystone League had carefully thought out everything and had left nothing to be desired on the part of the shooters. Still the number that arrived was not up to expectations.

HERE'S A LIST

of those who were present: J. O'H. Denny, Ligonier; S. L. Sharp, Ephrata; James H. Worden, H. B. Shoop ("Brewster"), H. A. Dill ("Henry"), W. H. Brensinger ("Sullivan"), and W. Hepler ("Wellington"), all of Harrisburg; James Schmeck, John Shaaber, C. Ritter, L. Wertz, B. Harrison and O. I. Melott, Reading; J. M. Runk, Chambersburg; H. Buckwalter and Johnson, Royersford; W. G. Clark, E. J. "Adams" and J. H. "Kane," Altoona; J. Benning, Allentown; W. H. Stroh, West Pittston; W. H. Burnham, York; M. M. McMillan, Mahanoy City; M. E. Miller, Stroudsburg; J. R. Yost, Norristown; H. E. Anderson, G. S. Franklin and Wiley, Lancaster; H. L. Moore, E. F. Roth and J. G. Martin, Wilkesbarre; L. Swartz, Lansdale; H. H. Meyers, Columbia; D. Longenecker, an ex-Harrisburger, now of Philadelphia, etc., etc. The local clubs were represented by W. H., J. H. and I. H. Wolstencroft, three brothers that know how to shoot; Joseph Thurman and his son Harry ("Father Time") Thurman; Joe Leaming, the Keystone's hustling captain; H. "Landis" David, H. "Henry," W. Paddock, Howard Rid e, W. Wilson, Frank Kleinz, T. S. "Thomas," J. Bergner, N. Swope, Howard French, J. W. Evans and others. From

OUTSIDE THE KEYSTONE STATE

came: L. W. Bicaise, Charleston, S. C.; Lou Erhardt, Atchison, Kan.; Harvey McMurchy, of the Syracuse Arms Company, with his fellow-citizen, "Uncle Dan" Lefever, of the Lefever Arms Company; A. W. duBray, Dayton, Ky., shooting and talking the Parker gun; F. Van Dyke, Dayton, N. J., representing the Winchester Arms Company; Gus E. Greiff, from Von Lengerke & Detmold, with his box of Francotte guns and his samples of Schultze powder; T. H. Keller, of Plainfield, N. J., representing the U. S. Cartridge Company; Neaf Apgar, also of Plainfield, shooting Walsrode to the front; another Plainfield man was the ever welcome Charlie (otherwise "Dutchy") Smith; M. Herrington, the New York representative of the W. A. smokeless powder; Fred. Quimby, New York, of the Empire Target Company, and general agent for the American E. C. Powder Company; Chas. S. Hebbard, Elizabeth, N. J., manager of the Empire Target Company; Mrs. M. F. Lindsley ("Wanda"), the wife of Milt. F. Lindsley, who is now busy down in the Buckeye State preparing King's Smokeless for the fall market; E. D. Fulford, Utica, N. Y.; C. H. Burbridge, Hartford, Conn.; Chamberlain, Wilmington, Del.; "Uncle Billy" Sigler, Montclair, N. J.; I. W. Budd, Pemberton, N. J.; Mablon H. Rupell, Milford, N. J., and others whose names have slipped our memory. A goodly list, after all, isn't it?

The main event on the open set of traps was the

E. C. POWDER COMPANY'S CUP

contest. This was a 100-target handicap race, unknown angles, handicaps ranging from 1 to 10 extra targets. The 100-targets were divided up into two events of 50 targets each, one 50 shot on the first day, the other 50 on the second day. The winner turned up in E. D. Fulford, who broke 96 out of his 100; this, with one extra target, making a total of 97. Billy Wolstencroft broke 94 out of his 100 and also his two extra targets, scoring 96 in all. Through an oversight, Fulford's extra target was not counted, the scores being thought to be a tie on 96 each. A shoot-off at 25 targets was the result; this Wolstencroft won and took the cup, but only *pro tem.*, promptly returning it to Fulford when the mistake above referred to was discovered. It was the irony of fate, perhaps, that Schultze powder should provide the winner and runner-up for an E. C. cup! Fulford always shoots the U. M. C. Company's factory-loaded ammunition, with Schultze loaded in the company's Trap shell. Both he and Billy Wolstencroft shot Greener guns. It is worth noting that Neaf Apgar was the only scratch man on the list.

On the set of traps reserved for State competitions the chief feature of the first day's programme was the

INDIVIDUAL CHAMPIONSHIP

of the State of Pennsylvania at targets. This trophy was won in excellent style by W. H. Burnham, a member of the York City Gun Club, after a tie with "Brewster" on 47 out of 50. The tie was shot off at 25 targets, Burnham defeating his opponent by the score of 23 to 20. W. Wolstencroft missed his 50th target, thus spoiling the chance of three ties for the trophy presented by the firm of which he is a member, Wm. Wolstencroft & Sons. Mr. Burnham, whose victory was a very popular one, shot a Scott gun, using Wood powder in a U. M. C. Smokeless shell; Brewster shot a Smith gun, using DuPont's Smokeless in a similar shell.

During the second day's shooting two trophies were disposed of—the American Wood Powder Company's three-men team trophy and the Harrisburg Shooting Association's trophy for the six-men team championship of the State. The first-named trophy was won by the Independent Gun Club of Reading, whose trio, Schneck, Shaaber and Ritter, is a strong combination, although Ritter fell down to 23 out of 35—25 singles and 5 pairs. Keystone No. 1—W. W., Landis and Tredway—was second, with the No. 2 team of the same club close up with four breaks less to its credit. The shooting of the Harrisburg team in this event was a mystery to its rooters—69 out of a possible 105! The

HARRISBURG SHOOTING ASSOCIATION TROPHY

was won by a team representing the donor of the cup, thus avenging to a great extent the ignominious defeat in the three-men team race. As the next tournament of the association, and consequently the next contest for the trophy, takes place at Harrisburg in '96, under the auspices of the Harrisburg Shooting Association, it will be no easy matter for any team to take this trophy away from the Capital City.

Thursday, Aug. 22, saw the contest for the

READING SHOOTING ASSOCIATION TROPHY

emblematic of the five-men team championship of the State. Such poor scores as were made in this trophy contest have very seldom been recorded at the Pennsylvania State shoots. The scores on this day were in marked contrast to those registered last year at Altoona, when the fourth annual tournament was held on the brow of Wopsononock Mountain. On that occasion the Philadelphia quintette made the great score of 121 out of a possible 125. This year the Keystone Shooting League took it with the score of 103, the Harrisburg men being four points behind them with 99. Reading brought up the rear with 95.

Before passing on to the detailed and tabulated scores a few words are necessary to explain just what accommodations had been provided by the members of the Keystone Shooting League for its guests. First and foremost the club possesses

AN EXCELLENT CLUB HOUSE,

fitted from end to end, and from ground floor to rooftree, with everything necessary for one's comfort. As will be seen by the accompanying cut, it is a two story building of a very neat type. Its dimensions are sufficient to accommodate fifty shooters with ease. The photograph from which the cut was made was taken by Billy Wolstencroft, who is somewhat of an amateur photographer, it would seem.

As stated below, three sets of traps had been placed in position, and the shooters at the score were protected by an ample awning. Lunch was provided in a large tent near the entrance gate; thus a stoppage of the shooting for the purpose of adjourning for lunch was done away with. In the cashier's office Billy Garbin was in command. His good nature made it a little difficult to get a full set of the scores, as the newspaper men were allowed full sway inside his little office, an accommodation that was somewhat abused.

It isn't often that one has a chance to make more than passing mention of the

SQUAD HUSTLERS,

but on this occasion we must pay a special compliment to Captain Joe Leaming, Secretary John C. Shallcross and Harry Thurman for their labors on behalf of the success of the shoot. Mr. Leaming's energy and undaunted enthusiasm on Friday, when the weather was ultra warm, deserves special recognition at the hands of his club. Squad hustling may seem an easy thing to ordinary attendants at a shoot, but only those who have conscientiously tried to do their duty in that station of life can fully appreciate what such duties demand.

The balance of the story of the fifth annual Pennsylvania State Sportsmen's Association's tournament must be left to the scores, a perusal of which will readily tell the results in the various events. Bear in mind that the initials "W. W.," "J. W." and "I. H. W." are used in place of the long surnames of the Wolstencroft brothers.

First Day.

As there were two sets of traps and two different programmes, one open to all, the other open only to members of the association, it has been thought best to place the scores made at each set of traps in different tables for the purpose of readier reference.

Second Day.

The programme for the open events was the same as that of the previous day. On the traps reserved for State events No. 3 was the American Wood Powder Company's trophy contest, and No. 6 the six-men team race for the Harrisburg Shooting Association's trophy. The details of both of these events are run in full below, together with the complete scores of those who figured most prominently in the E. C. Powder Cup contest. Of the other State events, Nos. 1, 4 and 7 were at known angles, Nos. 2, 5 and 8 at unknown angles. Below is a synopsis of the day's shooting:

THE AVERAGES.

First Day.

That the shooting was not easy is shown by the tables of averages which are given below. Fulford, Van Dyke and McMurchy on the open set of traps made good averages, considering that all events on this set were shot at unknown angles. Although 33 shooters took part in these events only the 16 best averages are given:

OPEN EVENTS.

	Shot at.	Broke.	Per cent.		Shot at.	Broke.	Per cent.
Fulford	110	103	93.6	I H W	150	126	84
Van Dyke	170	158	92.9	Lefever	80	65	81.2
McMurchy	90	83	92.2	Greiff	190	151	79.4
Apgar	130	114

averages being as follows, no shooter's score being considered unless he shot in three or more events:

STATE EVENTS.

	Shot at.	Broke.	Per cent.		Shot at.	Broke.	Per cent.
W W	195	172	88.2	Burnham	195	158	81
Schmeck	195	171	87.6	Henry	195	157	80.5
Landis	195	170	87.1	David	115	92	80
Worden	195	170	87.1	Lane	155	123	79.3
Sullivan	195	162	83	Runk	105	83	79
Brewster	195	159	82	Buckwalter	85	67	78.8
J W	175	143	81.7	I H W	175	138	78.8
Park	65	53	81.5	Tredway	155	122	78.7
Shaaber	155	126	81.2	H Henry	195	152	77.9

Second Day.

The averages for this day are made out without any reference to the extra targets shot at in the handicap allowance for the E. C. Powder cup contest, the second half of which was Event No. 5. Thirty-two shooters took part in the open events, six of them shooting through the programme of 190 shots. The twelve highest of those who shot in three or more events are as follows:

OPEN EVENTS.

	Shot at.	Broke.	Per cent.		Shot at.	Broke.	Per cent.
Fulford	190	180	94.7	I H W	130	112	86.1
Apgar	190	175	92.1	Sigler	80	65	81.2
Greiff	190	172	90.5	J W	90	73	81.1
McMurchy	150	135	90	Burbridge	190	151	79.4
Van Dyke	190	168	88.4	Budd	170	133	78.2
Smith	190	166	87.3	Lefever	100	76	76

The programme of State events contained six sweepstake events, the other two events being team trophy contests, details of which appear elsewhere. Forty-four shooters tried their hands in the above list of events. The fourteen best averages of those who shot in three or more of the sweepstake events are given below, the scores made in the trophy events being ignored, it being necessary to shoot in six 20-target races to qualify for average money:

STATE EVENTS.

	Shot at.	Broke.	Per cent.		Shot at.	Broke.	Per cent.
W W	120	114	95	Landis	100	83	83
David	60	52	86.6	I H W	80	66	82.5
Brewster	120	102	85	Worden	100	82	82
Prey	120	102	85	Tredway	80	65	81.2
Sullivan	120	102	85	French	120	97	80.8
Lane	60	51	85	Runk	100	80	80
Henry	100	85	84	Ridge	60	48	80

Third Day.

The programme of open events for the third day, containing as it did eight 20-target events, unknown angles, necessitated the firing at the whole of the 160 targets to qualify for average money, hence McMurchy's 94.1 did not cut out Apgar's percentage of 92.5. Thirty-six shooters took part in one or more of these open events, but the average number of entries in each event was only about 14, No. 7 with 22 entries being by far the largest number of entries in the open events on this day. The ten best averages were:

OPEN EVENTS.

	Shot at.	Broke.	Per cent.		Shot at.	Broke.	Per cent.
McMurchy	120	113	94.1	Landis	80	70	87.5
Apgar	160	148	92.5	I H W	140	117	83.5
Fulford	160	145	90.8	Keller	60	50	83.3
W W	160	145	90.8	Smith	160	131	81.9
Van Dyke	160	143	89.5	Greiff	120	97	80.8

The programme for the State events was composed of a trophy event, a merchandise event and six 20-target events. Landis and Sullivan tied on 108 out of 120, W. Wolstencroft being second with 106 out of the same number. Forty-four shooters put down their names and put up their money to take part in these events, the sixteen best averages among those who took part in three or more sweepstake events being as follows:

STATE EVENTS.

	Shot at.	Broke.	Per cent.		Shot at.	Broke.	Per cent.
Landis	120	108	90	Worden	120	101	84.1
Sullivan	120	108	90	Schmeck	120	100	83.3
W W	120	106	88.3	Ridge	80	66	82.5
I H W	80	70	87.5	J W	120	96	80
Staub	60	52	86.7	Leaming	60	48	80
Wiley	60	52	86.7	Shaaber	120	94	78.3
Brewster	120	102	85	Franklin	60	47	78.3
H Thurman	120	102	85	H Wilson	60	47	78.3

Looking back over the figures in the open events all of which were at unknown angles, we find that the four best averages among those who took part in any portion of the three days' target shooting were: Fulford 428 out of 460—average 93 per cent.; McMurchy 331 out of 360—average 91.9; Apgar 437 out of 480—average 91; Van Dyke 469 out of 520—average 90.2

HOW THE TARGETS WERE THROWN.

Two sets of the Empire Target Co.'s new expert traps were used, empire targets of course being thrown. Charlie Hebbard had every reason to congratulate himself on the way in which both traps and targets worked, balks being exceptionally rare. During the entire three days' shooting 19,890 targets were thrown as nearly as we can figure it. Adding another probable 1,000 as the number thrown in one or two extra events, of which we have no record, the total foots up to almost 21,000. Our tables show each day's record of targets thrown as follows: First day, open events, 2,760; State events, 4,260; total, 7,070. Second day, open events, 3,090; State events, 3,780; total, 6,870. Third day, open events, 2,200; State events, 3,750; total, 5,950.

A third set of traps had been placed in position, but was not needed, the number of entries falling short of what might reasonably have been expected. It should be added that the Empire Target Co.'s wire pull was used throughout this tournament.

FRIDAY, AUG. 23,

was live bird day. As stated above, this was the hottest day of the shoot, the sun beating down very strongly, causing spectators and shooters to hunt the shade.

It was an unfortunate thing that the management decided to place a seven-bird event on the State traps on the programme for this day, making it event No. 1. This event had 31 entries at $5, delaying the commencement of the Williamsport Trophy event until well after midday. The result was that time ran short, as well as pigeons, the two trophy contests being carried over until Saturday, and only three of the four events scheduled for the open set of traps being disposed of, this set of traps being requisitioned for the L. C. Smith trophy contest. As regards the failure in the supply of birds, the management stated that it had had 400 ready crated and delivered at the P. R. R. depot at 4 P. M., but that the road had refused to transport them. The birds shot at on Friday were provided by Worden Bros., of Harrisburg, and were a good lot of summer birds. On the

OPEN SET OF TRAPS

the three events decided were as follows: No. 1, 7 birds, $5; No. 2, 10 birds, $10; No. 3, 7 birds, $5. In the scores which are given below it will be seen that W. G. Clark, of Altoona, carried off the honors, killing straight in every event; J. Berguer missed only two out of his 24. No. 1 had nine entries, No. 2 the same number, but No. 3 had twenty, six of whom went straight. Below are the scores in detail:

	No. 1.	No. 2.	No. 3.

THE STATE EVENTS

attracted naturally the most attention. As an eye-opener No. 1 found favor with the masses, resulting in 31 shooters putting up their five-dollar bills and toeing the mark—23yds. all. The scores made were as follows:

Harrison, Worden, Franklin, Kane, Burnham, Goodman, H. Henry, Schmeck, Wellington, Rothacker and McMillan, 7; Shaaber, English, Melott, Thurman, Brewster, Wiley, Adams, Denny, Stroh, Clark, J. Thurman, I. H. W. and J. W., 6; Myers, Bergner, Sullivan and Paddock, 5; Anderson, W. W. and Quirk, 4.

This was followed by the special event of the whole tournament—the contest for the Williamsport trophy, emblematic of the

INDIVIDUAL CHAMPIONSHIP OF THE STATE

at live birds. Thirty-three shooters entered for this event, the winner proving to be M. M. McMillan, a member of the Farmers' Gun Club, Mahanoy City, who killed 25 straight before he could call the trophy his own.

Of the thirty-four shooters seven killed 15 straight. "Thomas" not being present when the ties were shot off, was declared "withdrawn." All ties in this event are shot at 5 birds. Of the six men left, H. Thurman was the first to drop out, missing his fifth bird in the ties. John Rothacker missed his first bird in the next series, being joined in the succeeding round by B. Harrison, of Reading, and "Wellington," of Harrisburg. This left McMillan and Kleintz to fight it out.

The result was not long left in doubt, as Kleintz missed his next bird, and McMillan killing his last two, won handsomely with 25 straight. In 1894 "Sullivan," the runner-up, forced R. A. Welch, of Philadelphia, to kill 35 straight before he won the championship. The detailed score below, giving the number of the trap, flight of the bird, and the kills and losses, will tell the remainder of the story:

Williamsport Gun Club's trophy for the individual championship of the State at live birds, 15 birds per man, 28yds. rise, ties shot off at 5 birds, $10, birds extra:

The L. C. Smith trophy, which represents the

THREE-MEN TEAM CHAMPIONSHIP

of Pennsylvania, was won by the Keystone Shooting League's team No. 2, with the low score of 37 out of 45. Altoona and Keystone No. 1 tied for second money with 36, Kane and Adams, two of the Altoona team, each dropping their last bird. The scores in detail, together with the conditions, are as follows:

L. C. Smith trophy, three-men teams, 15 live birds per man, $25 per team:

NOTES OF THE SHOOT.

Jim Denny says he is now the proud possessor of the most expensive pair of hunting trousers he has ever worn, the pair he won in the merchandise event, standing him in at $100. Those are his figures.

"Sullivan" was so badly crippled with a strained back that it was a wonder he could keep on shooting. His scores in many instances may be directly attributed to his misfortune.

McMillan killed every bird he shot at on Friday and Saturday, scoring seven straights in State event No. 1.

A complete set of Clark's patent live bird traps were used for the State events. The traps worked well and seemed to send the birds off as fast as any other trap on the market. Their great feature is the ease and rapidity with which a trapper-boy can fill them.

More l di g ce i this tourn ment with their presence than we have had the pleasure of seeing at any similar gathering for many months past. The Kingston League is a popular organization around the Quaker City.

"Joe" Leaming's voice and collar somewhat wilted on Friday. This was due to the energy he displayed in squad hustling.

Goodman, of the Farmers' Gun Club, Mahanoy City, was probably the "daddy" of all the shooters present on Friday. He fully atoned by his work on his last six birds for his failures on his first four.

McMillan won the championship with a Smith gun, E. C. powder and Smokeless shell. Kleintz, the runner-up, shoots a Greener gun, E. C. powder and uses a Trap shell.

The following letter from "Wanda" (Mrs. M. F. Lindsley), dated Aug. 26, has been received with a request that the same be placed in our report of the above shoot:

"CINCINNATI, O., Aug. 26.—Would you do me the favor of expressing through the columns of your good paper, FOREST AND STREAM, my warm thanks for the courtesy and kindness shown to me by the members of the Keystone Shooting League, and by the other sportsmen who were their guests at the Pennsylvania State Shoot. It is with many regrets that Mr. Lindsley and myself are called away to other fields and from our many friends in the East. No matter how far we may wander, we shall never forget all the kindness shown to 'Milt' and 'Wanda' by 'the boys.' Hoping that we shall be able to return now and again to shoot on the old grounds, and trusting that we may find in our new home good friends among the shooters of the West, I remain, etc."

Mrs. Lindsley and her husband carry with them to Cincinnati the best wishes of those among the shooters in the East with whom they have come in contact.

THE ANNUAL CONVENTION.

The fifth annual convention of the Pennsylvania State Sportsmen's Association was held in the Colonnade Hotel, Philadelphia, on Tuesday evening, Aug. 20. In the absence of the president, N. A. Hughes, Esq., of Williamsport, the vice-president, Jas. H. Worden, Esq., presided and called the meeting to order. The roll-call showed the following clubs represented by delegates: Ephrata G. C., S. L. Sharp; North Side G. C., of Pittsburg, J. O'H. Denny; Farmers' G. C., of Mahanoy City, M. M. McMillan; Harrisburg Shooting Association, H. B. Shoop; Herron Hill, Pittsburg (proxy), J. O'H. Denny; Hartsville G. C., E. M. Bolleau; Ashbourne G. C. (proxy), E. M. Bolleau; Independent G. C., Reading, Philadelphia, H. Thurman; Keystone Shooting League, Philadelphia, George Cohen; Lansdale G. C., L. Schwartz; Pittsburg G. C. (proxy), J. O'H. Denny; York City G. C., W. H. Burnham.

The minutes of the fourth annual meeting held at Altoona in 1894, and the minutes of the mid-winter convention held on Feb. 7, 1895, were read and approved. The Ashbourne G. C., Hartsville G. C., and the Farmers G. C., of Mahanoy City, were elected members of the Association. Junius H. Davis, of Philadelphia, was elected an individual member. Letters from the president, N. A. Hughes, and from director Jno. A. Wilson, of Franklin, expressing regrets at their inability to be present at the convention, were read by the secretary. The report of the legislative committee, which runs as follows, was received and filed:

HARRISBURG, Pa., Aug. 19.—*To the Officers and Members of the Pennsylvania State Sportsmen's Association.* Gentlemen: Owing to the demands of business, I find myself unable to report personally the work undertaken by the legislative committee appointed at the Altoona convention, a fact which I sincerely regret, and wish to assure the officers and members that nothing would afford me more pleasure than to have been able to make such report in person, had it been possible to do so.

The committee of which I had the honor of being named as chairman in conjunction with the various other committees, were called

together at Harrisburg in November by the president, N. A. Hughes; the Game Commission bill, circular letter and form of petition herewith attached were approved and the chairman ordered to have such number printed as in his judgment were deemed necessary to fulfil the objects desired. I had 2,000 of each printed (at an expense which will be shown by the treasurer) and distributed them to all gun clubs, game protective associations and individuals within the State that were thought to be interested in game protection. I mailed with each package sent to an individual a letter explaining fully the objects and intentions of the circular, as well as the bill and the use to which the petitions would ultimately be put.

The great interest manifested by sections of the State having at that time no representation in the State Sportsmen's Association, and the final support of the bills by their members on the floor of the House, were as gratifying and surprising as the indifference and inactivity of sections of the State supposed to be handily taken care of by the various old influential clubs and associations were disappointing. The failure of the passage of the Game Commission bill as originally drawn, on third reading in the House can be attributed to nothing else but neglect to see and secure your members' influence at the proper time.

The bill was in charge of the Hon. S. J. M. McCarrell, of Dauphin, in the Senate, and was promptly passed by that body. It was introduced the first night of the session in the House by the member from Dauphin, the Hon. George Kunkel, who upon the third reading in that body explained the objects at length, who the people were who had asked him to introduce the bill, their numerical strength in the State and the necessity of such a measure to prevent the utter extermination of what the bill proposed to protect. He was assisted on the floor of the House by the member from Mifflin—Walter H. Parcels—and opposed by the following: Frank N. Moore, of Bradford county; Richard J. Baldwin, of Delaware, and P. M. Lytle, of Huntingdon.

In justice to those members of the House who were charged by the press at the time with defeating the measure, and who were known as "the Granger Members," I wish to state that that statement is not true. Among the staunchest supporters of the bill were found officers of high rank in that organization, and the poll of the House will show as many of them for as against the measure. The bill as passed carries with it no appropriation to in any manner make it effective.

Another of the measures which were adopted by the winter convention, known as the Focht Non-market bill, introduced by the Hon. B. K. Focht, of Union, passed both branches of the legislature, and, as is known by every true sportsman in the State, was vetoed by the Governor, who gave as one of the reasons that it was class legislation and therefore unconstitutional.

The bill known as the "Ruffed Grouse Bill," introduced in the Senate by Hon. Clarence W. Kline, of Luzerne, also passed both branches almost unanimously, but met the same fate as the Focht bill at the hands of the Governor, who professed not to have any knowledge of the law upon this subject. I make no comments, merely expressing to you my disappointment at his action.

On the question of game protection, we as an association have started a campaign of education, and awakened an interest heretofore unknown. Being in the right, there is no doubt but that we shall ultimately win. To do this, however, there must be a better and more thorough organization, a better understanding throughout the whole State, and concerted action with one object before us. And until that object is attained, keep all other game legislation out of the House calendars.

I would suggest that the legislative committee be enlarged so that it may include one from each county in the State, and our wishes, which are just and right and in the interest of no particular class, but for the benefit of all the people, should be made an issue at the proper time. No sectional bickerings as to the commencement of seasons, etc., should stand in the way of game protection, and the entire State organization should stand as one man in demanding that our game birds, mammals, insectivorous and song birds shall have equal recognition in the matter of appropriations for protection as our food fish.

I personally regret that more has not been accomplished during the past year and feel that some one else might have done better in attending to the work. I have done the best, however, as I have seen it, and upon this line have no excuses to offer. I will make final report to the winter convention, which meets for the consideration of game laws, protection, etc. H. M. F. Worden.

Chairman Leg. Com. Pennsylvania State Sportsmen's Ass'n.

After the reading of the report a hearty vote of thanks was accorded the committee for their labors in behalf of better game protection.

The treasurer's report showed a balance in favor of the Association of about $165.

Under the head of new business the chairman offered the following resolution: "Be it resolved by the Pennsylvania State Sportsmen's Association in convention met, that this convention tenders State Senator S. J. M. McCarrell and Hon. George Kunkel, of Dauphin county; Senator H. D. Green, of Berks county; Warren H. Parsons, of Mifflin county, and all those who assisted in the passage of protective game legislation through the Senate and House a press vote of thanks. And be it resolved also, that we sincerely regret the position taken by His Excellency, Governor Daniel H. Hastings, in vetoing all legislation passed by the Senate and the House, thus totally ignoring this Association and its thousands of friends who had petitioned, praying for the passage of the measures of protection presented or supported by this Association." A clipping from a newspaper was read at this point, relating to the case of H. Clay Merritt, the cold storage dealer of Kewanee, Ill., the particulars of which case are well known to the readers of Forest and Stream. The above resolution was passed without a single dissenting voice.

After the resignation of the Wingohocking Gun Club had been received, Mr. Denny moved that the Sixth Annual Convention and Tournament of the Association be held at Harrisburg in 1896, under the auspices of the Harrisburg Shooting Association. The motion was seconded by Mr. McMillan, and carried.

The following list of officers for the ensuing year was then elected: President, James H. Worden; Vice-President, J. O'H. Denny; Secretary, H. M. F. Worden; Treasurer, J. H. Wolstencroft; Directors, W. H. Wolstencroft, John A. Wilson, N. A. Hughes, Hy. Thurman, M. M. McMillan and W. H. Burnham. The post of corresponding secretary was not filled, it being left to the discretion of the Harrisburg Shooting Association to choose the person to act in that capacity. This concluded the business of the convention, which then adjourned, to meet at the call of the chair. Edward Banks.

New York German Gun Club.

New York, Aug. 21.—The scores below were made at the regular club shoot of the New York German Gun Club at Dexter Park, L. I., this afternoon. Schortemeier again won the first medal, Kronsberg taking the second medal, and Schlicht the third medal. J. Frazer acted as referee. Scores:

L H Schortemeier (25)	22112212—8	122—3	222—3

A Good Day's Sport at Marlin.

Marlin, Falls County, Tex., Aug. 14.—The all-day shoot which was held to-day under the auspices of the Marlin Gun Club was a success far beyond the expectations of every one interested. This was owing largely to the assistance extended by the business people of the city. The Falls County Fair Association furnished exclusive privileges of the fair grounds property, free of charge, and the gun club extended the same to F. M. Stallworth & Co. for a refreshment stand and to sell loaded shells.

The merchants closed their places of business in the afternoon, one and all, and part of them entered into the matches, and when it came to delivering special prizes donated, the very best in stock was none too good.

Messrs. G. C. Oltorf and J. M. Kennedy furnished the printed matter for the club at cost of paper and ink. S. N. Donohoe furnished beef, pork and mutton at cost and barbecued it gratis. The Nicholson Hotel presented the club with an elegant monogram cake and ice cream for the occasion, and cut the regular rates for visitors who had to remain over night. J. W. Christian made the bread and cakes at cost of the raw material. Fannin, Son & Whittaker transported the shooters to and from the grounds at 6 for $1, paid by the club. Dinner was served free and spread in the pavilion at 1 o'clock. Ladies turned out *en masse* in the afternoon and made the event a gala day indeed. They seemed to catch on to and appreciate the good points made and applauded the shooters frequently. The ball at the boat club house, given by the young men of the city, was a great drawing card. The first dance on the printed programme was for "The Gun Club." There were about 100 couples in all.

The shoot was under the management of the original committee of arrangements, H. G. Rush, W. W. Turner, A. Stumbach and E. R. Emery. The judges' stand answered well for the referee's, judge's, cashier's and score-keepers' offices, all of which positions were ably filled by Capt. Lenair, E. W. Murrill and Bill Poe, F. W. Emery and H. Wagner and C. J. Bartlett respectively. The gun rack was in charge of a competent boy, who cleaned the guns as fast as they were used. Five bluerock traps and bluerock targets and three live-bird traps were used, and shooting was under the rapid fire in squads system. Waco, Temple, Latt, Mart, Mexia and Bremond Gun Clubs were represented. Everything passed off pleasantly and all seemed well satisfied.

The scores were as follows:

Events:	1	2	3	4	5	Events:	1	2	3	4	5

Averages of those shooting in at least half of the target events were as follows: Ed. Fosgard, 87½%, winning special prizes for same; M. A. Reese, 84%; T. E. Hubby, 83%; S. K. McCall, 82%; W. W. Turner, J. R. Jackson and G. H. Threadgill, each 80%; Dick Jackson, 78%; W. M. Caldwell, H. L. Sherrill and I. L. Reese, 75%; W. E. Hunnicutt, 70%; W. T. Lenoir and J. J. Booker, 68%; H. C. Graham, 67%; Ed. Sparks, 64%; Ed. North, 63%; D. S. Moffitt, 60%; T. H. Ligon, 58%; J. D. Marley, 57%; H. S. Seward, 56%; Jno. Marley, 52%; E. R. Emery, 50%, and H. G. Rush, 45%. H. G. Rush winning special prizes for the lowest average shooting in at least half the events.

NOTES.

Ed North has the only 16-gauge L. C. Smith in Texas, and while he is one of the best shots, this seemed to be his off day.

T. E. Hubby was just out of bed from a spell of sickness and had to lie down between matches.

W. W. Turner ran out of his regular 36-grain load and "fell down" immediately.

The balance sheet of the receipts and expenditures of the occasion shows a deficit of 5 cents.

The club proposes to have a shoot next year, probably in July, that will attract shooters of all classes from far and near.

P. S.—We are perfecting an arrangement here whereby the Gun Club, the Boating and Fishing Club and the Commercial Club will occupy the same elegantly furnished club rooms over the First National Bank building. We are nearly all of us members of the three clubs. The regular meetings of each not to conflict with the other and each to furnish its own class of literature.

The Newsman.

Trap in Maryland.

Baltimore, Md., Aug. 21.—The fourth and final tournament of the Maryland and District of Columbia Trap-Shooters' League was held to-day on the grounds of the Baltimore Shooting Association, under the auspices of the Green Spring Valley Gun Club. A large number of interested spectators were present, together with about thirty-five shooters, who participated in the various events. The day was propitious in every respect. Shooting began about 10:30 A. M. and continued until 6 P. M., with an hour's intermission at noon, when the respective contestants adjourned to Halstead's hotel and partook of a most enjoyable dinner as the guests of the Green Spring Valley Gun Club. The Green Spring Valley boys do not always win all the prizes, but when it comes to a question of open-handed and open-hearted hospitality, they can give the other clubs cards and spades, and then beat them out.

After dinner and a preliminary bout at 15 targets, known angles, to get in practice, the event of the day was called, viz.: the team race. At the last tournament held on the grounds of the Standard Gun Club, Aug. 7, the team of the Baltimore Shooting Association came to the front with such a rush that it was thought its chances of winning out were good, but it came out to-day in different toggery, unfortunately leaving its spectacles at home; could not see the targets, whereas to the contrary the Standard team had its eyes on them from the jump and never lost sight of them. This team shot a good race and won on its merits. A summary of the team score shows the following results:

	Baltimore, July 6.	Washington, July 20.	Baltimore. Aug. 7.	Baltimore, Aug. 21.	Total.
Standard Gun Club	127	131	136	140	534
Capital City Gun Club	124	135	134	137	530
Baltimore Shooting Association	127	126	142	130	525
Green Spring Valley Gun Club	95	101	118	128	442

Entrance $15 per team, 25 targets per man, moneys divided 60 and 40 per cent.

After the team race a 50-target race for prizes was shot off, entrance $5. The prizes were: First, bicycle; second, case Mount Vernon whisky; third, handsome leather gun case.

Following were the scores made during the day:

Team race, 25 targets per man, known angles:

Stanley.

Willey Defeats Post.

Paterson, N. J., Aug. 22.—A good crowd got together at Willard Park to-day to witness the match between Allen Willey, of Hartford, Conn., and A. H. Post, of this city. The match was shot under the following conditions: Fifty live birds per man, 30yds. rise, Hurlingham rules, $50 a side. T. W. Morfey acted as referee. The contest was one of the best and most exciting that has been shot here for some time, Willey eventually winning by one kill—44 to 43. During his first 25 birds Willey seemed to have hard luck, losing three dead out of bounds, and scoring only 20 to Post's 22. His 18th bird was lost in a peculiar manner. When the trap was pulled the bird flipped up a foot or two, Willey shooting when it had lit on the ground again and apparently missing it clean. The referee said, "Another bird if gathered," and Willey broke his gun. As soon as he had done so the bird got up and flew away, the referee calling it "lost bird." Willey claimed a balk and wanted another bird, but this was not allowed him. During the last 25 Willey shot in great form, while Post was unfortunate enough to have three of his birds, and one of them his last, drop dead out of bounds, the race ending as below:

Dutcher.

Great is the Cotton States and International Exposition, Atlanta, Ga.

Enormous preparations are being made for the coming Exposition, which opens Sept. 18 and closes Dec. 31. Probably no other city of similar size and environments in the world, certainly no other such city in the United States, would have undertaken this great enterprise so wonderfully accomplished by Atlanta, and even Atlanta could not have done this without the Southern Railway—the greatest Southern System entering Atlanta from all the four points of the compass, north, south, east, west—absolutely the only railway entering the Exposition grounds, and consequently the only line bringing passengers from all parts of the world into the gates of Atlanta, and into the grounds of the Exposition, performing the best service and affording liberal rates.

On the direct line to California and Florida, this railroad gives the tourist and pleasure-seeker an opportunity to visit one of the grandest Expositions next to the Chicago World's Fair. The facilities from New York and the East in reaching Atlanta could not be improved upon. The Southern Railway, the great trunk line between the North and South, operates solid Pullman vestibuled trains, New York to New Orleans, Memphis, Jacksonville, Chattanooga, giving through Pullman Sleeping and Dining Car service from New York via Atlanta, the Gate City of the South. For further information, descriptive book in thirteen different languages, address any officer of the Southern Railway, New York office, 271 Broadway.—*Adv.*

"Hunting and Fishing along the Northwestern Line"

is the title of a booklet recently issued by the Chicago & Northwestern Railway. It is profusely illustrated, and gives information in detail concerning the best hunting and fishing grounds in the West and Northwest. Copies will be mailed free to any address upon application to W. B. Kniskern, General Passenger and Ticket Agent, Chicago & Northwestern Railway, Chicago, Ill.—*Adv.*

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where WE get back a good deal more than cost of catalogue and postage.

ABBEY & IMBRIE,

18 VESEY STREET, NEW YORK CITY

MARSTERS HAS WORMS.

Sand Worms, 12c. per dozen. **White or Blood Worms, 25c. per dozen.**

Favorite Flies and their Histories.

By MARY ORVIS MARBURY.

MRS. MARBURY is thoroughly enthusiastic over her subject, and after an introductory essay on "Insects, Natural and Artificial," etc., she gives the history of the various favorite flies, accompanied by letters from anglers relating to their use. Two or three years were spent in collecting information in this way. The kind interest shown by fellow-fishermen in cordial replies giving their knowledge and opinions was both surprising and delightful, and awakened warmest gratitude. These letters are records of actual experiences, and conclusions deduced from the same; and they cannot fail to be of great assistance to any one who may wish suggestions regarding new waters. The colored plates depict 17 hackles, 18 salmon flies, 48 lake flies, 185 trout flies and 58 bass flies, the comprehensive character of the collection, and the value of the detailed comments on each of its 291 flies, will be more apparent. . . "It is destined to remain for generations to come," says *Forest and Stream*, "a prominent landmark in angling literature. The fly-fisherman of to-day who does not possess it lives below his privileges."

Square octavo, 522 pages, 32 colored plates, 6 engravings and 8 reproductions of photographs. Price $5.00, postpaid.

FOREST AND STREAM'S OUTDOOR SCENES.

FROM ORIGINALS IN WATER COLORS AND OIL, PAINTED EXPRESSLY FOR THE FOREST AND STREAM.

HE'S GOT THEM.

AS PREMIUMS.

We have prepared as premiums a set of four beautiful and artistic reproductions of original paintings of realistic outdoor scenes. The art work is the best obtainable in New York; the pictures are rich in effect and are intended for framing. They are done in 12 colors. The yacht race is from an oil painting; the others from water colors. The scenes are shown in the small cuts herewith. The plates are 14¾ x 19in. The pictures are sent both to **new** subscribers and to **old** subscribers upon renewal, on the following terms:

Forest and Stream *one year and the four pictures*, **$5.**
Forest and Stream *6 months and any two pictures*, **$3.**

If subscribing for 6 mos. designate by title the two pictures desired. Single pictures will be sold separately, price $1.50 each, or the set, $5. Remit by express or postal money order, payable to Forest and Stream Publishing Co., 318 Broadway, New York.

The pictures are sent by mail, postpaid, wrapped in tube.

Copies of them may be seen at this office, and inspection is invited.

Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

MARSHALL M'DONALD.

UNITED STATES Commissioner of Fish and Fisheries Marshall McDonald died at his residence in Washington on Sunday morning, Sept. 1, aged sixty years. The event was not unexpected by his friends, who had long noted with solicitude his gradual failing with consumption.

Commissioner McDonald was born in Romney, Va., in 1835. In 1854 and 1855 he was a student of natural history under Professor Baird at the Smithsonian Institution. He was graduated at the Virginia Military Institution in 1861; and served from 1861 to 1865 in the Confederate Army. From 1865 to 1879 he was a professor in the Virginia Military Institute.

In 1875 he became interested in fishculture, and was shortly afterward appointed to be the sole Fish Commissioner of Virginia. The following year he invented the fishway which bears his name.

In 1879 he became attached to the United States Fish Commission. For some years he was in charge of the entire work of the distribution of young fishes and afterward served as Chief of the Division of Fishculture. He received gold medals for improvements in fishculture from the International fishery exhibitions at Berlin and London, a silver medal from the Société d'Acclimation of France, and a special medal from the same society for a fishway devised for the River Vienne, in France. In 1871 he devised the automatic hatching jars now in general use by the United States Fish Commission, the several State Commissions and in Europe and Japan. This apparatus first made possible the vast extension of the work of shad propagation accomplished of late years and rendered the work of the United States Commissioners practicable from the commercial standpoint. In the winter of 1882 he developed at Woods Holl the tidal apparatus now in use for hatching the floating eggs of cod, halibut and other marine species. The vast work of distribution carried on by the United States Fish Commission was developed by using this, its methods perfected, and the cost of the work cheapened, so that vastly greater results were obtained without any increase of cost.

In January, 1888, Col. McDonald was appointed by President Cleveland to the office of United States Commissioner of Fish and Fisheries. The interests thus intrusted to him were vast and complex; and the requirements of the place were all the more exacting because it was one that had been filled by a Baird. The appointment of Commissioner McDonald was universally recognized as an excellent one. He brought to the place practical knowledge acquired by long experience, large breadth of view, a faculty of organization, executive ability, integrity and a high sense of duty and of responsibility to the people. He was accounted the most accomplished fishculturist in the country, if not in the world. The record of his administration is an honorable one. By the death of Commissioner McDonald the country loses a public officer who has served faithfully, honestly and well. The closing of his life is a loss to fishculture and to the public interests.

The papers from the pen of Commissioner McDonald, published from time to time, are found in his State reports, in the annual Reports of the Commission, in the Transactions of the American Fisheries Society and in the columns of FOREST AND STREAM. They cover a wide range of fishcultural work in its scientific and economical aspects.

BEFORE THE STARTING GUN.

WHATEVER fears and doubts have been awakened by the earlier reports of Valkyrie III. have apparently disappeared, and at this time, four days before the first races, there is a general feeling of confidence that the Cup will be again defended successfully. Just what grounds exist for this feeling it is hard to say; though much is known about Defender, the best informed are still in the dark as to the speed of Valkyrie III. There is no longer any room for doubt as to the many good qualities of the American ship; not only is she a very fast vessel, but her shapely form and the manner in which she does her work, her power at small angles, and her ease through the water when pressed, show out in marked contrast to the idol of 1893, Vigilant.

That she is very fast cannot be questioned, but there are still two points in doubt—is she faster than Valkyrie III., and is she strong enough to stand through the series of races? On both of these points we can give no opinion, nor do we trust the opinions of others. Nothing conclusive is known of Valkyrie III., and the little seen of her during the trial races was by no means an assurance of an easy win for Defender in such weather as the Cup races have been sailed in for ten years, and as prevails this week.

That Defender is amply strong in her hull is stoutly asserted by all connected with her, and may be quite true; but it would indeed be strange if, no matter what might ail her, they would admit that she was in the least strained or in danger of straining. No doubt everything possible has been done to put her in perfect condition, and it may be that the hull has been thoroughly sound from the first.

There is something amusing about the solemn statement promulgated in writing by two of her amateur crew to the effect that she is in every way sound and in good condition. One is reminded by it of the physician's certificates which are posted in the lobby of the Opera House when a "star cast" is spoiled at the last moment by the substitution of Maugiere or Russitano for Jean de Reszke. The many minor mishaps to Defender's gear and fittings can only be taken as an indication that extreme light construction has been pushed to a dangerous limit.

The very thorough trials between Defender and Vigilant, ten in all, have left absolutely no grounds for doubt as to the superior speed of the new keel boat. Whether this speed is a matter of five, ten or twelve minutes over a thirty-mile course, is of no consequence in this case; Defender has proved herself the faster boat, and the proper one to defend the Cup. As compared with Vigilant, her weakest point is before the wind, but she can more than make up any loss here on other points of sailing.

Whatever the result may be, the sailing of Defender against Vigilant has left no ground whatever for lamentations and regret over the passing of the centerboard and the adoption of the keel in Cup defense. Defender has not only repeatedly defeated Vigilant to windward, but has beaten the other two centerboards, Volunteer and Jubilee, even worse. Vigilant's position as the fastest centerboard yacht of her size ever floated can hardly be disputed; and yet she has been fairly and decisively beaten to windward by a keel boat.

If it be urged that Vigilant is but a mongrel centerboard in type, then it rests with those who would make such an argument to show that a faster centerboard boat of some other type is possible. Considering the great power of the modern 90-footer, we cannot conceive of any enlargement or modification of the more successful centerboard boats of the past, the typical American yacht that would carry 12,000sq. ft. of sail on 90ft. waterline, and be as able and fast as Defender. Certainly no such famous sloops as Arrow, Gracie, Mischief or any of the smaller ones would be capable of enlargement to such proportions as would match them with Defender. Whether victorious or defeated, Defender has already shown herself superior to all American yachts of her class, both centerboard and keel.

One good result, for which we have long contended, is likely to follow the present races—the return of Cup racing to a smaller class and the extinction of the present 90ft. syndicate racing machine. Both sides are now fully convinced of the excessive cost and general uselessness of these craft, and will welcome the building of something within the reach of individual ownership.

SNAP SHOTS.

At first blush the connection between the swindling of life insurance companies and the protection of game would appear to be remote; but an incident has just occurred in northern Minnesota which indicates that there may be a close relationship between them. In 1893 a St. Louis doctor insured his life for $48,000; then one dark night he dug a can of worms and went fishing. When he failed to turn up again, the heirs attempted to collect the insurance. The companies resisted the claim on the ground that death had not been proven. The case went to the courts and the companies finally were compelled to pay the full amount. Meanwhile they had offered a reward of $20,000 for the discovery of the man alive; and stimulated by this detectives have ever since been working on the search. Last Monday, having traced the doctor to northern Minnesota, they found him in the wilderness close to the Canadian line, fifty miles from a post office, where he was living in a hut. When the detectives came upon him he was out in the woods hunting game out of season; and when they arrested him, they told him that it was for illicit hunting. It is to be hoped that this little true story may come to the ears of all the game wardens in the country, that they may by it be stimulated to arrest shooters out of season, handcuffing and holding them for a possible $20,000 reward. They will be perfectly safe in treating every man who kills game out of season as a swindler. If he is not a fugitive from justice who has robbed a life insurance company, he is at least by the pursuit of game out of season a swindler of the public.

In our game columns Dr. Morris writes of the gathering of wildfowl eggs by Indians in the North, who collect them for food. We have before now printed other reports of this character from other quarters and sent to us by equally responsible correspondents. Unlike the albumen egg industry, this is a practice which actually exists. It has been carried on from time immemorial and of the effects upon the wildfowl supply there can be no question. The problem of providing a remedy is extremely perplexing.

Read that report of the obliteration of prairie chickens from Nebraska and then give your adhesion to FOREST AND STREAM'S Platform Plank—The sale of game should be forbidden at all times. Read that report and then decide whether the Plank is sentimental, or too rigorous. We should think that even the people of the prairies themselves might at last come to indorse our Platform.

A queer story from Oregon relates that United States District Attorney Murphy has been advised by a delegation of sportsmen that the timber lands of Lincoln county have been set on fire in order that the smoke might prevent hunters from elk hunting in the mountains. As the fires are on Government land, the attorney is asked to interfere. Tens of thousands of acres of forest lands have before now been destroyed as the results of hunters' carelessness with camp-fires, by the burning over of districts to make new feed for the game, and by conflagrations spreading from burned coon trees; but this Oregon firing for elk protection is something new.

It is not considered good form to kill immature game. Little fish are immature fish. It ought not to be considered good form to kill them. If the counsel of Commodore J. U. Gregory were generally followed, and if small fish were thrown back to grow, the supply would be maintained without further restrictions. There is here a "plank" for fishermen: Throw back the little ones.

We inquire again: What is the difference between potting a bunch of birds on the water and potting a bunch of birds on the land? The question is open for debate.

The Sportsman Tourist.

CAMP FOREST AND STREAM.—II.

Proper Preliminaries.

IN Camp FOREST AND STREAM all things are done decently and in order. The immediate duty on the first morning, therefore, was not to set forth at once on a mad quest for bass, but to finish all the arrangements about the camp. In due course we built a most excellent table out of pieces of board we found cast up by the waves of our little lake, which seemed to appreciate our wants exactly and to be anxious to supply them. Then we executed some masterpieces in camp stools. Then we drove certain nails in the trunk of a great oak, against which our table was built, each nail thenceforth to have a certain mission of its own, one to bear the striped dish-towel, one the plain dish-towel, one the approved aluminum frying-pan, one the camp torch, two the bar of soap, etc., etc. We lashed the tent lantern to the pole of the house tent, arranged the bed nicely, stowed away the mess box in the exact position it was thereafter to occupy, got a clean board to slice bacon on, and then went into the woods to secure the main fetich of Camp FOREST AND STREAM, the coffee stick. As I have mentioned from year to year, these coffee sticks, being namely the stick used for lifting on and off the coffee-pot at the fireside, are always jealously preserved, only one being used at each camp, and a stick once dignified by this choice being thereafter never by any chance used for another purpose. We attribute much of the success of the annual FOREST AND STREAM camp to the care exercised in this matter.

Having at length arranged these things to our exact satisfaction, having laid the bacon knife and big wooden-handled fork which is J. B. H.'s particular camp comfort duly upon the bacon board, and having finally crowned all our efforts by tacking a nice brown canvas tablecloth across our new table, and giving a final touch to the FOREST AND STREAM banner, we at length pronounced the camp complete. By that time it was past noon, although we had not noted the passing of the hours. So then we got our luncheon, and after that put in two hours in thoroughly cleaning out our spring at the foot of the bluff. This we lined nicely with clean stones, giving it for floor a handsome mosaic of many colored pebbles, which shone and glittered as the bright water rippled over them. Below the drinking well of our spring we dug a cold storage chamber for our butter jar, and below the cold storage pool we drove down a sharp-edged board for dam, and thus made a beautiful waterfall, putting in some rocks below the fall so that the music might be better. And this tiny music we could hear at night, wafted waveringly up the hill with the other voices of the lake and of the shadows.

These things, I say, being all accomplished, we found the sun sinking toward the big trees across the lake, and knowing that it was now coming on the hour when bass go visiting, we concluded to put our little lake to the final test, it having in everything else been found not wanting. Searching in the grass along the edge of the water we picked up four or five lovely frogs, which had apparently been waiting for us, and pushed out into the lake, J. B. H., meantime, with a sigh of supreme satisfaction, putting together the favorite bamboo casting rod with which he had fought so many successful battles with the big bass of this region.

The First Bass.

We had never been upon this lake before to try the fishing, but we knew exactly where to go, for already from the top of the bluff we had spied out the water. We knew that a sharp drop-off marked the bar for almost the entire circumference of the lake. On the east side the shallow water ran out some distance. In the center the lake was very blue and very deep, one did not know how deep. But beyond, where a little creek came in, we could see wide beds of rushes and occasional beds of lily-pads. It being now well on toward evening, and we having a great notion for fish for supper this night, we set forth at once across the lake to the rush beds. Here we found a delightful place for bass, with big white weeds growing up in dense cover clear to the edge of the bar, from which it sank suddenly off into the unknown caverns of the earth.

Just at the edge of this bar J. B. H. began to drop his frog, the boat being some 25yds. out in the deep water skirting along the bar. He had made but a few casts when there came the big whirling splash for which we were anxiously looking, and the line cut swiftly down into the deep blue water outside of the bar.

"Gracious! I have got a whopper," said J. B. H. And the bend of the rod looked it. But, alas! after a run or so the "whopper" went clear of the water and shook out the hook from his mouth. I saw then it was a bass weighing not more than 2lbs., though J. B. H. scoffed at such a statement, bemoaning meantime the loss of one of his prettiest frogs. Yet a few moments later, when we had another strike, the fish using much the same tactics, going far down into the deep water, and jumping three times into the air in the effort to get free, J. B. H. was again certain that he had a "whopper," though the landing net disclosed a bass weighing only about a pound and a half. We had never seen a big-mouth bass fight so hard for its size, and indeed I have never seen any kind of bass fight much harder than the big-mouths in this lake when they got into the deep clear water. We went on and caught three or four more fish, the largest not more than 2½lbs., but J. B. H. was delighted and declared that the sport was the best he had ever had in Wisconsin. I was a little disappointed in the size of the fish, but J. B. H. pointed out that they were just the right size to eat. Moreover, he explained, he was going to catch a big one just at a certain point of rushes just a little on ahead.

The Big One.

We approached within 20yds, or so of the aforesaid rush point, and J. B. H. sought to plant his frog close alongside of it. He missed his point by several yards, but he did not by any means miss the big bass which he had mentioned, and which was apparently lying there, a very bass *ex machina*, to finish out the drama of the day. The frog fell in shallow water, and when the bass struck there was a vast commotion and a wide deep circle of bubbling water settling down and outward into spreading rings of ripples. "Let him run!" I called out to J. B. H. But that veteran calmly remarked, "Never you mind me, young man!" as he tranquilly watched the loose line run out on the first run of the bass. The fish evidently was bound for a deep hole under the grass bank back of the rushes. Just outside of it he stopped and swallowed the frog, and the instant he put on the extra touch of speed which that act always seems to impart to a bass J. B. H. struck him hard and firm, and so began the fight which, of all the big fights we have had with the Waukesha bass, we considered to have been the most exciting. Fearing to tangle the bass in the rushes, we tried to work him out into the deep water, to which he obligingly consented, making a run for the boat which left a bend in the line in spite of all both reel and oars could do. Then he went down and kept on going down, about ten miles it seemed to us, and the rod could not stop him, though it went up into a rainbow arch exceedingly good to behold. For a time the arch held rigid, but at length the fish began to move, and then it was ding-dong and see-saw for half an hour, it seemed to me, though it may not have been more than five minutes. We killed this fish out in the open lake over water perhaps 200ft. deep, and I never expect to see a prettier fight with a fish of any sort. This fellow fought deep and did not jump excepting with one short splash, when he hardly went clear of the water. At length we saw him stick his back fin out, and finally his mouth came up, seeing which we shortened line and passed the net under him. We found he weighed 4½lbs., and he was bright, clean-cut and shapely; an athlete every inch of him.

"Now we will go in," said J. B. H., his face beaming satisfaction. "This lake's all right." This declaration I was glad to hear, and I knew now that the experiment of moving Camp FOREST AND STREAM to the new lake was an experiment no longer. The aluminum frying-pan had been pronounced a success, the water of the spring had been found of just the right taste and temperature, and lastly, the fishing of the lake had been commended. Thenceforth all doubt left my mind, and I slept that night in comfort.

We gave our big bass to neighbor Schwartz that night, he having come out upon the lake about sunset to see how we were getting along. Before this we had turned loose two or three of the other bass, all of which we kept alive and kicking in the live-box which was built through the bottom of our boat. This left us two bright, pretty little bass of about a pound and a half each, which J. B. H. had selected with great care, and declared to be the exact articles to furnish the supper which should conclude our first day in the camp. How good these bass were, with the accompaniment of crisp bacon and nicely fried eggs, the whole crowned with a cup of perfect coffee, I shall not attempt to describe.

Indeed, it is useless attempting to describe the charm of a season of life in camp, and I should not write of these things at all were it not possible that others may wish to know where they may go and do likewise. For camping of the quiet, contentful sort I know of no country better than this of Waukesha and Walworth counties in Wisconsin, and I imagine that others who go there will find as we did each day going by too quickly, although each day could produce nothing startling or heroic in event.

Fish, Game and Diamonds.

I venture to say that here is the only one on earth which can produce bass, pickerel, trout, squirrels, woodcock, grouse, ducks, rabbits and diamonds all within a space of six miles, and all in a pretty country watered with the purest of unfailing springs. Yet all of this is true, at least in a mild and limited extent, about our new-found camping land. As to the diamonds, the incredulous may scoff, yet it is absolutely true that not only one diamond, but three or more have been found within two miles of the village of Eagle. It was not many years ago that a boy playing in the gravel back of the old farmhouse which surmounts a certain little hill, near Eagle town, picked up an odd-looking stone. The boy's mother took the bright pebble to a jeweler in Milwaukee, who saw that it was a diamond, and bought it of her for the princely sum of $1. Then the Milwaukee jeweler, to certify himself, took the stone to a Chicago expert, who pronounced it a rough diamond worth at least $500. Then the Milwaukee man went out and bought the farm on which the diamond was found, and at once began to prospect for more stones of the same sort. Meantime the former owner of the farm sued the Milwaukee man for obtaining diamonds under false pretenses, and the result was a very pretty legal mix-up. Two or three more small diamonds were found, none of great value, and the sinkers of the prospecting shaft at length, as might naturally be expected, came upon a sheet of pure and bubbling Waukesha water, which put an end to their diamond well and closed out the history of the quest for precious stones. This is no fish story, but a fact. Any one who goes across that singular glacial country, full of odd steep hills and deep sink pots, will agree that it is the strangest piece of topography he has seen for a long time, and will admit that one might find almost anything in such a looking region.

An Old Gentleman's First Trout.

We did not find any diamonds, but we did find trout, within eighty miles of Chicago. We discovered half a dozen different little streams known to but few where a few trout still can be had by the expert, this information coming largely from obliging Billy Tuoby, of the Eagle Lake Hotel, of whom and of which I cannot say too much in cheerful and thankful praise. Moreover we found a trout preserve fairly swarming with trout running in weight up to 4lbs. This was on the farm of State Senator J. A. Lins, a few miles from Eagle. Mr. Lins has a beautiful little place with about half a mile of fishing water. The head of this little stream is the strongest spring in all that great country of springs. A little river gushes out at the foot of the rocks of a tall bluff and runs down over a bed of gravel, where the trout spawn in season. Lower down a great dam forms a pool some 100yds. in length, and this pool is a very treasure house of trout. Mr. Lins seems never to have taken a great deal of pains with these trout, and has kept them solely for his own pleasure, once in a while eating a mess of them or giving them to his friends. Although we were strangers to him, when he heard that J. B. H. had never caught a trout, he insisted that we should go out to the pool and catch a few for breakfast. And there one day, down beneath the big oaks which surround the great "Minnehaha Springs," J. B. H., 75 years of age, hooked, played and landed his first trout. Previous to this we had had some hard and unsuccessful efforts along marshy streams, and J. B. H. was disgruntled with the trout question, declaring them a by-word and a snare. But when he saw the darting play of the fish in the water, and witnessed its brilliance as it lay upon the grass, he forgot the past, and, like every other man who sees his first trout, went into open and undisguised raptures. He caught half a dozen more trout after that, and I caught one or two to see if I had forgotten how, but we put them all back except five, which we thought would be just about right for our supper and breakfast. When it came to the eating of these we thanked Senator Lins yet the more fervently, for this was novelty of the extremest sort to J. B. H., and the eating as well as the catching of one's first trout is a high episode in one's life, even though one be then 75 years of age. Senator Lins wishes to sell his trout preserve, and I am satisfied that if J. B. H. had had the money in his pocket he would have bought it then and there.

Little Fishes.

And so the days wore on, with now and then a lusty trout, and now and then a bass, or a croppy, or a dozen little perch as long as one's forefinger, the latter being the sweetest of all the fishes of the lake. We early learned that our new lake was fairly alive with small fish such as perch, croppies, rock bass, etc., and finally coming to tire of catching bass, we actually laid aside our sportsmanship sometimes, and rejoined the ranks of the derided still-fishers. A sweep of the minnow seine, in the shallow water near our spring, would give us all the minnows we wanted, and then we would amuse ourselves by hunting out the bars where the croppies and rock bass lay, J. B. H. recognizing in the latter fish the "goggle-eye" of his earlier days, with which he had passed many pleasant hours. These small fish we caught on pieces of minnow, on tiny casting spoons, on flies and all sorts of things for bait. One evening after sundown, when out casting the fly in the shallow water close inshore, we struck two great black bass, neither of which we could hold among the rushes. Had we been of the mind to work hard at fishing, with either the casting rod or fly rod, I don't know how many fish of all sorts we could have caught. As it was, our main concern was not to catch more fish than we could use. One time we found a bathing party of children visiting our beach, and to these gave away a good string of fish, much to our mutual satisfaction. Another time a minnow pail full of fish found its way down to a family of cottagers on Eagle Lake, and several times we found it necessary to carry over a pail full of fish to neighbor Schwartz, who, blessed by a large family of his own, was entertaining a dozen or two of visitors. Our hearts rejoiced in these visitors, for while they remained we caught fish for them all. I do not know whether this could be called market fishing or not, but anyhow we used to receive at our camp baskets of eggs, bottles of milk, etc., for which we could not pay, neighbor Schwartz insisting that a fair exchange was no robbery. From all of which it may be seen how ideal was our situation.

Cooking in the Camp.

One evening J. B. H. coaxed the two youngest of Mr. Schwartz's family, Susie and Nellie, down to camp to eat supper with us, and they were joined by a young lady boarder from the city, who was escorted by the five-year-olds across a certain dangerous territory infested by woolly sheep. To Susie and Nellie we fed abundant strawberry jam, and the messbox being further called upon, we brought off this social occasion with great eclat and to the abundant satisfaction of our guests. On still another occasion we invited our family of cottagers to dine with us at sundown, the event to be ambitious in the way of a camp dinner. The tiny creek connecting our lake with Eagle Lake being too crooked and too full of weeds for night navigation, our guests took team and came around to the west side of our lake, whence we ferried them across in our boat, six of them, four adults and two children. We were to have fish that night for supper and when the signal for the ferry came we had not caught any fish; but in half an hour we had a dozen or two of just the right size. These we forthwith fried before the wriggle was all out of them, and our guests called them excellent. Also we had bacon and eggs and soup and preserved fruit and Maryland beaten biscuit and a great many other things. I mention the soup incidentally, for though we intended to have the courses of our dinner come in due sequence, the soup unfortunately did not get done until toward the close of the meal, although it was just as good as it would have been any other time, so far as we could see. But the crowning work of art for that dinner was the pan of biscuit baked in our Buzzacott oven, and served red hot, with butter fairly frozen from our cold storage spring. These biscuits, I regret to state, were brought by our eldest lady guest already measured out in a meal bag. But we mixed the flour in a clean towel on our table, rolled out the dough, cut out the biscuits and cooked and ate them then and there in camp, so that light should not be made of this achievement. Our dinner lasted well into the night, so that between our guests and their waiting team there extended half a mile of black and pathless woods, much to their terror; nor could they ever see how J. B. H. and I led them through so easily.

In fact J. B. H. and I were following our usual course of spying out the country, and when we were not fixing things around camp or taking Mr. Schwartz's lady boarder out fishing on the lake—which we loved to do, it was such a pleasure to hear her squeal when a fish bit, and to see her run her hand out under the tip of the rod "to keep the fish from breaking it"—we were wandering around over the countryside hunting for springs and lakes and streams. One day we found two beautiful springs which emptied into the creek across the lake from us. Indeed this stream we found spring-fed throughout and quite capable of carrying trout. Later we learned that trout had been planted in it higher up, and some day we are going to see about these trout for ourselves.

Many Waters.

On another day neighbor Schwartz took us out riding over about ten or fifteen miles of country, and showed us a few more lakes. We went entirely around Beulah Lake, and saw Potter's Lake, Brady's Lake, Mud Lake, Booth's Lake, Pickerel Lake, etc., crossing the very head springs of the waterway which makes down through Beulah Lake into the Mukwonago River and so into the Fox. Yet, although neighbor Schwartz had lived in that

country all his life, we were able to show him a lake which he had never seen or heard of within six miles of his house. This was the little lake once called Giller's Lake, now known as Craig's Lake, about a mile and a half from our old camping ground on Phantom Lake. This is the place where we have caught several huge bass, and we intended to accept Mr. Craig's kind invitation to fish it again this season, but he happened to be away when we called for him at Mukwonago. Mr. Craig informed us that the small-mouth bass which he caught two years ago in the creek below Mukwonago dam and planted in his lake have now reached half a pound or more in weight, and are so abundant that one party, without his knowledge, caught and took away fifteen of them in one day. He is putting in still more of these bass every year, and he says that next year we must come and have a try for the new small-mouths in his lake. He assures us also that there is another big bass in that lake which he thinks will weigh 7 or 8lbs., and which declines to be caught by anybody not hailing from Camp FOREST AND STREAM. If that bass knows when he is well off he would better emigrate before J. B. H. comes after him next summer with his little casting rod and his pleasing spotted frog. For I need not say that next summer, if all goes well and as we hope, we shall again see Camp FOREST AND STREAM pitched on the bank of our new lake; and I hope there may be more pleasant and desultory days whose devious but all too rapid flight may be again recorded in a desultory way. This year our camp seemed to us pleasanter than it had ever been, and as pleasant as it could ever be, and I know I felt a sort of sadness on the morning when we folded our canvas and rode away, looking back at the smoke of the fading camp-fire, whose fingers beckoned us to stay.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

GAME NOTES WITH PENCIL AND CAMERA.—II.

[*Continued from page 180.*]

FROM this place we retraced our way to a little stream that puts back into the bog from the north side of the bay. On the point between the first bend in this stream and the lake is a large beaver house built last year. Ascending the stream we soon came to a point where it forked. We chose the West Branch and made our way up that till stopped by a beaver dam. Fresh cuttings floating on the water showed that there were beaver close by.

Descending to the place where the stream branched our eyes were gladdened by the sight of a large buck on the opposite bank. Jock adroitly ran the bow of the canoe in behind some protecting bushes growing at the water's edge, and for half an hour or so we lay there, unseen spectators of a very pretty little bit of deer life.

We soon perceived that the buck was not alone, but was accompanied by a doe. The two, however, paid little attention to each other, though feeding nearly side by side. Possibly they were an old married couple, though it is more likely that they were thrown together simply by chance. The buck seemed to have some strange aversion to getting his feet wet, and preferred to kneel to reach the lilies growing close to shore, rather than wade out among them. He also hesitated a long time before crossing a tiny inlet from the stream, moving back several times to his old feeding place before he could make up his mind that it was really worth the effort to go further down the stream.

Meanwhile the doe had unhesitatingly entered the water and swam across to our side of the stream, at a point, however, where she was more or less concealed by the bushes. Once across, she was joined by a fawn who scampered about with joy at her return.

"STOOD LOOKING AT THE LILY-PADS."

The timidity of wild fawns, as a rule, gives them a character of sadness, and this little incident was pleasing as showing that such is not the keynote of their lives.

Gradually, and evincing all the symptoms of a vacillating mind, the buck worked down the stream till he reached a point nearly opposite. Here we secured his Loto as he stood looking at the lilypads, the incarnation of laziness and a cloyed appetite. To our surprise, instead of looking at us when the shutter clicked, the buck raised his head and looked in the other direction. The bushes moved and the next instant another buck appeared on the scene. They looked each other over and then, having been attracted by some motion in the canoe, for I was attempting to reload the large camera, they looked across at us. I saw it was useless to attempt this, and instead took the kodak and tried several pictures with that. One was given last week, showing the small buck in plain view.

The other had jumped back in the bushes, but his curiosity was not yet satisfied, for his head appears in the photo.

Incidentally I had caught a glimpse of the doe on our side of the stream, standing with her neck outstretched looking intently at the bucks, as if to inquire what was wrong. She did not suspect that in reality the cause of their alarm and subsequent departure was on the side of the stream where she stood and where her precious fawn was hidden.

By the time we had reloaded she had disappeared; but when we got opposite the spot where she had last appeared I stood up in the canoe and looked over the low rim of bushes that fringed the stream edge of the bog. There she stood, only 50ft. away, scared half out of her senses by my appearance, and rooted to the spot. I took advantage of her fright to take a photograph with the small camera, upon which, however, only her head appears.

A trifle further up stream we heard a stick crack on the east shore, and looking in that direction I saw a fine buck partly concealed behind some trees less than a hundred feet away. At the same instant Jock saw a large deer on the opposite bank that at first he took to be a caribou or moose, from its dark color and owing to the fact that it stood in dense shadow.

Meanwhile I had not succeeded in attracting his attention to the first deer, and the canoe shot ahead to a position where it winded us, and was off. The other deer had also seen us, and disappeared before we could get close enough for a picture.

We ascended the stream to the point where the Aroostook Carry, via Lapomkeag, begins, without seeing any more game, and then retraced our course to its mouth. Once on the lake, we worked our way leisurely along the edge of the bay toward the sand beach where we had seen the deer earlier in the day.

When we reached the feeding ground sure enough there was a small deer. This deer acted in a most peculiar way, which can most easily be explained upon the supposition that it mistook the large camera in the bow of the canoe for another deer. This camera was stained red, and resembled somewhat the color of a deer in its early fall coat. The wind had played havoc with our blind of bushes, and large patches of the color must have been plainly visible.

Whatever the reason, the little deer on sighting us ran inshore and then directly down toward us. We could hear it splashing along and knew it was coming our way and endeavored to change our position. Unfortunately a clump of bushes 4ft. high lay between the spot where it would appear and the camera.

But the deer did not give us time. In less time than it takes to write it it popped into view and stopped, its neck outstretched and only just beginning to understand that it had done a foolish thing. The next second it realized that home and mother lay in the other direction, and its endeavors to get away quickly would have been ludicrous were it not for the fact that we felt the loss of the photograph keenly.

After lunch we ascended another little stream putting into this same East Bay around which our morning had been spent. As we had the wind with us we saw no game; but numerous tracks, including those of moose and caribou, gave witness that it was there, though not visible.

Coming down again to the bay we found the wind blowing a gale in our teeth, and taking out my paddle I assisted Jock to drive the canoe against it. We were going along at a fairly good pace when I saw something in the water ahead that I took to be the grandfather of all living muskrats. It had just left the marshy shore and was making its way out toward deep water, swimming rapidly with its nose just above the surface. Its head was tilted back and it looked at us from the corner of its eye. I have a faint impression of seeing its tail

CURIOSITY.

about a yard behind, but of this I am not sure. For an instant I lost its eye, as I turned to call Jock's attention to it, and when I looked again it was gone. Jock had just that moment been looking at some beaver workings along the shore, and he said the animal was undoubtedly a beaver.

That beaver should have known we wouldn't have harmed a hair of his hide and given us an opportunity to take his picture. Unfortunately, however, his knowledge did not reach beyond the fact that his pelt had a considerable commercial value under certain conditions.

Soon after we sighted a deer near the sand beach where we had seen the others. It did not wait for us, however, but disappeared in the woods while we were still a long way off. A little later we came unexpectedly upon a doe standing partly behind a fallen tree. She stood her ground bravely till the canoe came within about 100ft., but was so hidden by the tree that the photograph was unsatisfactory.

This was the last deer seen before reaching camp, and made a total of fifteen for the day, or thirty-two in all since entering the woods.

Tuesday, July 30, was another windy day characterized by frequent rain squalls. The wind was more southerly than it had been, and Jock decided to try the upper waters of Warderley Brook. We looked for moose and caribou on this stream and had not dared to ascend it before with the wind from the west for fear of stampeding the game. The limit of our time in the woods was rapidly approaching, however, and though the day was by no means what we desired, we could not afford to wait longer.

Soon after entering the bay at the mouth of the stream, we saw a deer on the bog. We were at the time close to the south shore of the bay, and to get to leeward required crossing to the other side. We decided on this course, but almost immediately had reason to regret it, for behind a little point on the shore we had just left and barely out of camera range we saw a doe. We changed our course at once, blaming ourselves for not thoroughly exhausting its possibilities before leaving the protecting shore, but the doe had seen us and was off, whistling.

Then we turned our attention again to the other deer, but before we got within reasonable distance he was off, bounding over the bog as if on springs.

At the mouth of the brook we tried fishing a little, for as Jock expressed it we were "starving in a land of plenty." In fact we had had no meat to eat for more than a week, and our diet of bread and coffee—or bread and tea—had only once or twice been varied by fish. We were working hard to get pictures, and did not have time to fish.

I have no doubt that sportsmen accustomed to the Maine woods will listen to the statement of our larder with some incredulity, as it is not the usual thing for parties back in the woods to be without meat at any

of the year, but it is a fact that we had none. We did not consider our needs superior to the law, and though we knew that the hotels out of the woods were serving venison to their guests and that parties similarly situated to ourselves were eating it, we buckled our belts a little tighter and resisted temptation. Bread was our staff of life and our sole excuse for existence, and if I ever fell out with an old friend it was with this one, when my appetite went back on me while hunger kept increasing.

It was an off day for the pickerel, and finding they would not bite we proceeded up the stream.

A deer concealed in the trees winded us and bounded away whistling. While fishing we had seen another across the bay, but in a position where it would have been a loss of time to attempt an approach. Rounding a bend in the stream we came upon our fourth deer for the day, a doe feeding breast deep at the edge of the water. She had not seen us, and Jock ran the canoe inshore behind some pucker bushes. After watching her some minutes and seeing that she would not be likely to give us a better opportunity than already offered, I signaled to Jock to push off into the stream, trusting to luck to get a photograph. Just then a blast of wind caught the canoe and threw it into the bushes that scratched and grated along the side and at once attracted the doe's attention to us. There was but one chance to take her, and I raised the large camera above the breastwork of bushes and pressed the bulb. But my action was not so quick as the deer's, and the negative shows a pair of heels high in the air and a rump of fleecy whiteness, very like the view of a rabbit diving into its burrow.

A little further along Jock ran the canoe inshore to look at some moose tracks in the mud, and as the boat grounded a large buck walked out on the opposite shore 200ft. away. I turned the large camera and took a picture, for I knew we would get no closer. The deer can be found on the negative, but that is all that can be said of it. It is too small for any practical use.

For a moment the buck stood as though petrified, and then slowly turned and with a few great bounds was out of sight, but we heard him whistle for some minutes.

Two miles or so up stream from the lake is a carry a quarter of a mile or more in length. Near the lower end of

CARIBOU TRACK.

this carry is an old dam, the gates of which, however, have not been closed of recent years. Just below the dam, in the nearly dry bed of the stream, Jock showed me the skeleton of a moose killed by a sportsman he guided last fall. We found that some large animal had gnawed pieces off the bones and Jock said the skeleton had been dragged some distance from its original resting-place. Near by, at one side of the carry, was a "bear tree," and on it were fresh tooth marks of a large bear. There seemed little doubt that this was the animal that had been at the moose skeleton, and for a memento of the wilderness I photographed the tree. It was a small spruce and the green bark had been bitten off about the height of a man's head from the ground.

Near the upper end of the carry were some fresh caribou tracks and one of these I photographed, strapping the small camera tightly to my head, lens downward and holding my breath during the delicate operation. Caribou tracks in general appearance are somewhat similar to moose tracks, but are broader and more rounded.

Evidences of moose were also seen, and the great weight of these animals might be inferred from the way they had barked tough spruce roots by stepping on them. Nothing of less weight than a horse would have stripped these roots in the same way by simply walking over them.

A short distance above the carry Warderley Brook branches, one stream coming from the north and the other from the south. We chose the latter, being governed by the direction of the wind. All along the banks we saw moose and caribou tracks in abundance, and clean swaths had been cropped in many places among the lilypads. But we saw no game. The wind swirled and eddied, and sometimes seemed to blow from all directions of the compass at once. At other times the prevailing head wind would change and give us an undesired boost along, all which caused us to pray more fervently than ever for a quiet day.

On our way back to camp we saw one deer—a doe—below the carry, and got very close to her, but her body was concealed by the bushes and we failed to get a picture. This made a total of six deer for the day or thirty-eight in all.

The next day we decided to move our camp to the carry at Warderley Brook, as everything seemed to indicate that that would be the best hunting neighborhood for the remaining days of our stay.

Scarcely had we pushed off from shore when Jock spied a deer on the opposite shore just above the "Thoroughfare." We paddled across, but he had gone back into the woods, and did not appear again, though we waited for some time. This deer was a buck and had no doubt come down to the lake simply to drink.

On entering Warderley Bay we sighted our second deer for the day, feeding along the north shore, but on account of the direction of the wind we did not attempt an approach.

Number three for the day was a doe. We got within 100ft. of her, but some bushes intervened between deer and camera, and she was off just a moment too soon.

The next was a buck that stood behind a fallen tree at the water's edge, just above a place where the stream is obstructed by submerged rocks. While maneuvering for a position the deer winded us and was off.

It was at this place last fall that Jock lost the chance of killing a large bull moose. He was coming up the stream one day just after the season opened, and rounding the last bend of the Narrows when he blew his nose. He had taken a look ahead and no game was to be seen, but the instant he blew his nose up popped the moose's head from behind a miniature island near shore. The moose had been standing half submerged and it did not require much of an island to conceal him.

He ran back a short distance from the stream without having presented an opportunity for a shot, and then stopped. Jock could tell this from the cessation of noise that marked the moose's flight. The bull had not had time to make out clearly the cause of its fright, and it did not know whether to leave the spot for good or not.

More from curiosity to see what the effect would be than anything else, Jock went ashore on the opposite side of the stream, and selecting a good place gave one of his most seductive moose calls. The sound was hardly out of his lips when there was a crash that shook the trees across the stream, and the moose was off like a runaway locomotive. The sound verified its worst suspicions, and yet that same moose will eventually, no doubt, meet its death in answer to such a call. So much do circumstances alter cases.

Our fifth deer for the day was on the south branch of the stream above the carry. This was a buck with enormous horns, and seeing these first I felt sure we had at last found caribou, but a moment later the color of his body undeceived me. He was standing on a narrow point in a perfectly impregnable position, and was off long before we were within range.

Number six was a doe that had finished her call at the stream and who gave us just a glimpse of her lithe form before retiring to the shelter of the woods. It was lunch time, and so far we had not succeeded in getting any pictures.

In the afternoon our first deer, number seven, for the day was a buck. We got a glimpse of him going back on the bog and worked the canoe cautiously up to the spot where we had seen him. Standing up I found he was still there, head up and every muscle tense. I secured a minute photograph with the small camera. Number eight was a doe, who went back into the woods without giving us the opportunity we desired. Number nine was only half a block further on. While looking for the doe we heard a crackling in a piece of swampy undergrowth, and going nearer we saw the alders shaking and a buck's horns above them. Though only 60ft. distant according to our estimate, he would not come into plain view. When finally he raised his head and looked at us there was a tree between.

J. B. BURNHAM.

OFFICE OF FOREST AND STREAM.

THE OUTING OF SIX.—II.

Columbine and Clematis, Trout and More Trout.

THAT horse of Collie's will never be forgotten. According to his statement it had been driven, rode and packed constantly for seventeen years, and all my efforts with whip and spur aroused in it only temporary enthusiasm. But even its slow gait had with it advantages, for I was amid the scenery that I loved. Out of the cedars and into the realm of long-leaved pine I strolled, and the spicy aroma of balsam filled the air. Flowers were few, for the altitude is great and the season like the 1st of May at Provo.

Emerging from the cañon at a point where the valley of Panguitch Creek opens into dairy ranches, I visited first the famous trout holes at White Rocks, concerning which I wrote FOREST AND STREAM four years ago. But now the spot was profaned by a shearing corral, and, as shearing was in full blast, and 3,000 sheep were watering at the spot, I did not delay for further investigation. Two miles above was Dodds's ranch, and as my friend Dodds has three miles of the finest trout streams inclosed by his fences, and does not permit trespassing, I knew that, should he be at home, this was the place for us to make our first permanent camp. Indeed I wrote to George before leaving Provo, but as he had not been to town for his mail he was taken completely by surprise, making his whole-souled hospitality the more appreciated.

As I neared the ranch I looked in vain for the house where I had spent many memorable evenings in the past. Nothing was left but the chimney. Half a mile up Butler Creek I saw a man repairing fences. Thinking it might be Dodds, I rode over to him, and ten minutes later the old friends were walking toward the new cabin, each new observation calling up the memory of "Auld Lang Syne" (Dodds is Scotch, hence the quotation). The new house was in course of construction. It was located close to a splendid spring, concealed from the highway and partly shaded by willows, and within 300yds. of either Butler or Panguitch creeks. My host was "batching" it, and he soon had ready a dinner of coffee, fresh bread and the most delicious mutton that I ever tasted. He said that sheep and stockmen kept him constantly busy repairing the miles of fence that surrounded his place. He had no time for fishing, but his son caught a mess every day and we were welcome to all the fishing we wanted. He picked out a splendid camping place for us, and then telling me that I had better get a mess of trout for supper he went back to his fence mending.

All my tackle was in the wagon between Dodds's and Panguitch, but trout I must have even if I had to resort to the bent pin outfit. This, however, was unnecessary. In my wallet I had a coachman on a No. 8 hook. This was left over from my outing in Colorado five years previous. I suppose that I had kept it just for this especial time and purpose. A line was sought for and I found a spool of 50 cotton in the cabin. This was soon twisted, and a willow pole completed my paraphernalia. Fishing with such a rig required more skill than though I had used a cheap split-bamboo rod. I had no reel, and had I attempted the "ker swish-splash-slam" method and thrown the trout over my head by main strength and awkwardness neither hook nor line would have lasted a minute. As I wandered down to the brook with my improvised tackle I felt almost like a boy again. In the virgin meadow the grass was knee deep, and by the water side the ground fairly blazed with buttercups. But in other respects the flora was very different from that of the East. In the meadow the showy *Thermopsis rhombifolia* held sway, and under the willows blossomed that stately brunette of the lily family, *Fritillaria atropurpurea*. Perhaps I was doing too much mental botanizing. Thoughtlessly I went to the water's edge. Scud! scurry! Here they go—not the big beauties of which professional sportsmen boast, but those little brook trout, from 6 to 10in. in length, the kind that used to be common in northern New Jersey, southern New York and western Massachusetts before the restocking of the depleted streams became a necessity. With such a tackle trout must be hooked by the sense of touch and not by that of sight. Back to mind came every pool and riffle along the creek, and I stole cautiously to a hole upon which the now long-drawn shadows would not be cast. Silently I dropped my fly upon the water. I could not see it touch the surface, but in a second there was a sharp tug, a strike, and Mr. Trout was hooked for keeps. I could not play him, so I led him up stream and gently raised him out. Six times did I repeat the operation before my fly ceased to attract. These trout would average 9in. in length and one went over a foot. They were average size with the rest of our catch while at Dodds's ranch. When I had ten trout on my string I saw Doc and Andrew coming on the buckboard. I had to leave my work and go to the road to direct them to camp. Then I returned to the willows, and by the time the sheep wagon hove in sight I had enough trout for supper. In the meantime Doc had caught four fish and Andrew two. This was Andrew's sole experience with trout. He had come to botanize and botanize he did; but (*sub rosa*) though he did not do much with the rod, subsequent events proved him a dandy with the rifle.

At supper that night Mr. Dodds joined us, and thereafter we enjoyed his entertaining society at every meal. Out of the goodness of his heart he brought some of that delicious mutton with him, notwithstanding the fact that we were infinitely in his debt. Then we made down the beds and Andrew slept alone, for I was bound to chum with my old comrade, and all of us, horses included, rested and grew fat.

The next morning Andrew and I determined to botanize while the rest of the party fished. I told my partner that he could get fifty new species at Dodds's. This number he was inclined to ridicule, but before evening he was fully converted to my opinion. When we regained camp we found the four fishermen had captured 110 trout, Ted having the largest string (forty-four) to his credit. These lasted us for four meals, there being generally eight at the table. We fished no more until they were gone. After cleaning them, attending to our plants and getting dinner, we prepared to loaf, when Mr. Dodds expressed his willingness to guide us to what he considered one of the daintiest bits of scenery. I knew the poetic nature beneath that rugged exterior. If Dodds said it was beautiful it was sure to be enchanting. Our route lay over a sandy knoll southeast of the cabin, and here we found many new plants, among them a delicate white echinocactus. Here were also horned toads; striped, spotted and parti-colored lizards. Doc began to look for his diamond-backed rattlesnake, but it was not to be found. I forgot to mention in my last that Doc had four wishes, and but four: 1st, diamond-backed rattlesnake; 2d, 15lbs. trout; 3d, the skeleton of a cliff-dweller; 4th, either a buffalo or a mountain sheep—I forget which.

Half a mile from camp we struck Panguitch Creek in one of the prettiest glades that artist or angler could imagine. Overhead birches and white-coated cottonwoods, with shimmering leaves, arched the stream that wandered along now as placidly as a meadow brook, now whirled in deep, black, trout-haunted eddies about the roots of some dead forest monarch, and now glinted its white riffles in a fleck of sunshine as it hurried downward to the valley. Out of the deepest shadow came the occasional note of thrush and warbler—not the continuous matin or vesper song of the heavenly chorus, but a single liquid call, soft and sweet as an echo from paradise, afraid to intrude upon the noontide silence of a sleeping world. Soft and rich was the mossy carpet over which we walked, and about us were myriads of buds that another week would see expand in all their floral loveliness.

The scene changed. The sunlight that fell here and there down the fretted aisles seemed more distant and more cold. The walls of the glen drew closer together and became precipitous. There was a sound as of the rushing of many waters. A deep black pool, angry and blanched with the mighty force of the constrained torrent! Then the grim walls rose to a height of 150ft. perpendicularly from the stream and less than 2ft. apart. So narrow is this box cañon that in seasons when the creek has gone dry men have walked through the gateway and their shoulders have grazed each pillar. No wonder that the water is from 15 to 20ft. deep in the pool below, and that here the largest and gamiest trout hide. The picture was more beautiful than grand, for nature had veiled rock, crag and even precipice itself with the delicate drapery of June. From brackets scarce large enough for the cliff martin's nest hung graceful sprays of *cheilanthes*. Where frost seams had scarred the rugged furrows the beautiful *clematis verticillaris* found a foothold, and every rocky shelf was a bed of that most modest and fragrant columbine *Aquilegia cærulea*. This variety was a pure albino, smaller flowered and with a more delicious perfume than any I had seen before. An artist would have found it almost an impossibility to leave such a spot, and I do not remember to have seen any gem of similar beauty in the length and breadth of the land. As one of our number remarked, "That picture alone paid for the whole journey."

When we returned to camp the botanists had sufficient work to employ their time for many an hour, and the taxidermists proceeded to investigate the beautiful little swallow that from this point to the Buckskin Mountains was found at every watering-place. It was the violet-green swallow (*Tachycineta thalassina*, Swains.). As further fishing was prohibited until all the trout in camp were eaten, we retired early, and long before sunrise on Thursday morning Andrew and I were getting breakfast. As a rule we had that most important meal on the table (wagon-sheet) before the other boys had their eyes open.

On this particular morning Andrew, Doc and I were to take the buckboard and drive about the lake, selecting a suitable camping spot for the next week. Dazzled by glowing reports of young chickens in hayland and forest, the balance of the crowd wished to spend the morning in hunting.

By 10 o'clock we were at Panguitch Lake. In the three years since I last saw the lake every available foot of land had been taken up and fenced. But the lake was as beautiful as ever. Beneath the cloudless sky its clear, ultramarine waters reflected pine-clad hills and aspen groves. Not a ripple disturbed its surface save when some rainbow-sided monarch in pursuit of smaller game leaped from his native element or where the wildfowl rested far from shore like glittering jewels on the sapphire sea. A pair of snowy swans, the only ones I have seen in southern Utah, were there, and there were numbers of the American eared grebe (*Colymbus nigricollis*, California, Heerm), here called the fish duck, but the game members of the Antidæ were on the further side. We drove around the eastern side of the lake, and on the gravelly bottom, running up to where their backs were out of water, we saw 3 and 4lbs. trout chasing young fry and minnows. Already we were listening to the music of the reel that in two more days would sing its legitimate song. Finding no good camping spot we went around the southern end, where the water backed up over the meadowland, making a splendid feeding and breeding ground for teal and mallards. Here our road lay among the pines, the elevation being about 7,300ft., and beside us grew that delicate and fragrant lily *Lencocrinum montanum*, Nutt. At this point we secured in the bird line *Passerina amœna*, Say.; *Piranga ludoviciana*, Wills.; *Dendroica auduboni*, Towns. Unfortunately this used up all of our fine shot and we were unable to get anything smaller than No. 4 in southern Utah, so that henceforth many of our most rare specimens were too badly torn to be preserved by amateurs.

Passing around to the west side in a sheltered cove we saw a man mending his fence. His farm had a small water frontage, and with him we made arrangements for camping. By pasturing our horses with him at 10 cents per diem each head, we secured the use of a cabin and of a boat. The man was one of the professional fishermen that make their ready cash in winter by trouting through the ice, and we found him infinitely more accommodating than the thoroughbred tourist robbers on the other side of the lake, with whom I have had experience in the past. After delaying to inspect a shingle mill, we returned to Dodds's ranch about 2 o'clock. The other boys had returned from their shoot empty handed, but we were well satisfied with our morning's work.

After dinner a bear and deer hunt was planned for Friday, and Saturday or Sunday was fixed as the time for moving the outfit to the lake. In these arrangements I was not considered, as my plan was to immediately start southward for Long Valley—distant some 50 miles—there to inquire concerning grass and water on the Buckskins, and, if reports should be favorable, secure a guide to pilot us to Grand Cañon. I left Dodds's at 5 o'clock, having twelve miles to make without a trail, and in the dark I got off my bearings, reached the Sevier River six miles below the settlement that was my destination for the night, rode my horse into a hole instead of across the ford, and finally at midnight, wet and hungry, wrapped myself in the saddle blanket and went to sleep in an old haystack. The next morning about 10 o'clock I crossed the rim of the basin and descended rapidly down the Virgin River into the valley of the Colorado. The picture was so entirely different from what was seen on the northern side of the divide that I seemed to be in another world. The season was a month or six weeks more advanced than at Panguitch. Now the cañon widened into a fertile valley, now it was hemmed by black volcanic rocks. There were snug farms and busy sawmills; but over in the background were the fantastically carved pink cliffs of the eocene, making in the sunlight one of the most wonderfully beautiful pages in nature's geological story. At hand were the wild roses, thalictum, clematis, frasera, all growing beneath the shade of stately pines, and in the air was the perfume of a semi-tropic June, each leaf brushing some fresh scent into the face, while

> "The winds, with musky wing,
> About the cedarn alleys fling
> Nard and cassia's balmy smells."

I spent two days in Long Valley in one of the neatest, thriftiest and most prosperous settlements of Utah—Glendale and Orderville. Then, on Sunday afternoon (June 16) I set my face lakeward, recrossed the rim and at sundown rode up to Jerome Asay's ranch at the head of Asay Creek. Here I enjoyed a trout supper, Jerome's boys getting 2 and 3-pounders out of the brook that cuts the farm, and using the clumsiest tackle imaginable. According to the statements of the natives there are but three seasons about the basin's rim—June, July and winter. The dairy ranches are inhabited only during the summer months, but for good living these dairy ranches are seldom equaled and never surpassed. There is mutton or venison or trout or all three for every day during the season, and late in July and August young grouse are abundant. There are berries and berries, and the milk, butter and cheese made from this wild Alpine feed is the richest and sweetest in the world.

At 7 o'clock on Monday morning I started for the lake camp, where I supposed the boys to be. On the way I spent a couple of hours in searching for a practicable short cut for the sheep wagon, but the wind storm of the 3d inst. had created such havoc along the divides that cut-offs were impossible. In many places the well-traveled roads were blockaded by fallen timber. It was 1 o'clock when I reached the lake. The white top of the wagon showed me that the camp was duly located, but the buckboard, one team and all the boys were missing. As I found a dishpan full of trout already cleaned and a mountain hare dressed for the broiler, I did not worry over their absence, but proceeded to get dinner. At 4 o'clock I took one of Reynolds's rowboats and started for trout. And here a word as to tackle. I could not get a fish with bait or with brilliant flies, but brown hackles and cowdungs were fetchers every time. The best flies, however, were those made by Reynolds himself, using the feathers of the redhead. All the fishermen about the lake make their own flies and do better work with them than with the imported article.

Rowing across a small bay, I landed on a rocky point and fished from the shore. My first cast was fruitless, but my second was greeted with the ripple and splash that anglers love to hear, and in a few moments I had a 2-pounder in the creel. Without walking a 100yds. I landed seven good trout, all gamy. Then for half an hour I failed to hook a fish. There was the rise and the strike, but no holdfast. Disgusted at such monotony I examined the leader and found both brown flies hookless, save for the shank, and the coachman was untouched. I had fish enough for supper, and when I got back to camp the boys were just preparing the evening meal. They had spent the day exploring Blue Spring and the volcanic formation in its vicinity. When I gave my report all hands were in favor of a southward start on the morrow. Their expedition in search of big game had been a failure; they were tired of fishing, so I promised them plenty of deer, and Andrew and I knew that the flora would hold out as long as we would. After supper and before and after breakfast on Tuesday morning we fished, and about 11 o'clock we said good-by to Panguitch Lake and started for Mammoth. The trip was uneventful and the scenery comparatively tame. During the day the ornithologists secured two birds that I had supposed to be of entirely different habitat. They were *Spizella socialis arizonæ*, Coues, and *Sialis arctica*, Swains.

At Mammoth, where we made an early camp, we were disappointed in the fishing, but we were a little too early in the season. The next day we traveled to Asay's. Almost the entire drive was through pine timber. I was surprised at the great number of woodpeckers that we saw. Of these we secured specimens of *Melanerpes toquatus*, Wilson; *Dryobates villosus harrisii*, Aud.; *Sphyrapicus varius nuchalis*, Baird. We also determined *Contopus richardsonii*, Swains., though we could not save the skin.

Making an early camp near Jerome Asay's house, we caught enough trout for supper and one of the boys shot a gadwall on the creek. About dusk a horseman galloped down from a distant sheep herd and we recognized a fellow student of the Provo boys, Tim Hoyt by name. He was running his brother's ranch near the summit of the divide, about five miles from our camp. We accepted with thanks his invitation to dinner to-morrow, as well as the proffer of an extra team to pull the sheep wagon over the river. He reported deer as plentiful, and Perry and Ted fixed their rifles for a daybreak walk to Hoyt's ranch, where we would meet them with the outfit about 10 o'clock. When we lay down that night it was with the knowledge that our trout fishing was at end and that to-morrow night, amid other scenes and other sounds, we would be fanned by warm breezes from the Arizona desert; we would be in sight of the Buckskin Mountains, and we dreamed of deer and of the Grand Cañon of the Colorado.

SHOSHONE.

EHEU! EHEU!

Editor Forest and Stream:

I was delighted to see in your issue of Aug. 3 that "O. O. S." has founded a cult whose mystic motto is the mysterious "Eheu!" I am, as is your correspondent "Mount Tom," an admirer of the genial "O. O. S.," and I always read his writings with avidity. As a rule I understand him, or at least make out to conjecture his meaning is in the blindest parts; but as did "Mount Tom" I too stumbled over that "Eheu," although I knew that being used by "O. O. S.," it must be something good.

I felt with respect to this something as did the man who went to Boston. He had his wife with him, and when she would say to him, "John, what is this?" and "what is that?" he explained that this was the post office and that was Fanueil Hall, and so on, until they came to something he did not know, when he said, "I don't know, Mary, but it is Boston, and it's all good." So one might say of "Eheu!" We don't know what it means, but it is "O. O. S's." and it must be good.

Far be it from me to insinuate that "Eheu" is a foreign form of swear words. It would be cruel if the pleasure of "Mount Tom" and myself and others and our satisfaction with the term of unknown significance were misplaced, but surely even in that case we would be quite as innocent as little Tommy, who, when his mother wanted to pack him off to bed pleaded, "Please, ma, may I not sit up and hear grandpa swear?" Or it may be that in using "Eheu" with such unction as did Mount Tom in his story he is making use of a word whose real meaning is something very different from what he thinks it to be. It is related that when the first missionaries went to the Sandwich Islands and set about making prayers in the native tongue, they used for "amen" a word which never failed to excite the risibilities of the congregation, and at last they found that the real meaning of it was "dry up."

I cannot believe for a moment that "O. O. S." has sprung upon us anything of this base nature. I prefer to regard his "Eheu" as what your star correspondent E. Hough might describe as a bright carmine word, not one of those deep blue expletives which we are so often told color the air about the man making remarks upon the breaking of his leader by a big fish. I am not sure but that in this new sporting term we have something which has long been demanded, a polite swear word for the columns of FOREST AND STREAM. I notice that you are not very much given to "damns," not so much as I think might be for the advantage of some of your stories. There is a certain strength and virility about some of these expressions, which we all know to be used in actual life despite their being tabooed by a finicky editor. To my mind your the ever-charming relations of the Danvis personages have at times been distinctly weakened by the very apparent mutilation made by some one in your shop who was too fastidious to permit those rugged old Vermonters to talk in print as they do in life. Would it not here be better for the sake of truth if old man Granther Hill, for example, had been given free range to Eheu to the line, let the chips fall where they might?

DICK OF CONNECTICUT.

N. B.—Speaking of leaping bass, I once saw a very small one, hooked by a greenhorn, leap not 2ft., but 25ft. at the very least, right up over the fisherman and behind him into a tree. If ever a man needed a nice little word like "Eheu," it was then.

Game Laws in Brief.

THE *Game Laws in Brief*, current edition, sold everywhere, has new game and fish laws for more than thirty of the States. It covers the entire country, is carefully prepared, and gives all that shooters and anglers require. See advertisement

Natural History.

SOME NEW MEXICAN HOUSES.

MY title raises visions of squat adobes and cliff-hung pueblos, or perhaps the still more remarkable cave dwellings of the mountains. But the houses which claim our present attention are made by still older inhabitants than those disturbed in their peaceful land tenure by Coronado, and the architecture loses nothing in comparison with the most curious products of human workmanship. I watched the process of adobe building (just the same to-day as when the brethren of Moses cried under their heavy burdens), and wondered at the remarkable similarity of houses in the same zone, whether in the wildest of the new territories of America or the oldest of the circum-Mediterranean provinces. The same square, windowless walls and flat roofs, the same narrow streets—donkey-trodden and filth-breeding—even the same familiar odors here as there.

The great Rio Grande valley was carved out by prehistoric torrents which not only strewed it liberally with volcanic fragments and tell-tale strays from Colorado formations, but deposited in the shallows of the diminishing stream beds of clay which to-day afford to the adobe builder brick and mortar, floor and ceiling for his house. This clay is of the superlative Illinois variety, *i. e.*, "the kind to which one sticks" rather than that "which sticks to one." Very little is required to fit it for use. A pit is dug and connected with an irrigation canal, then only a little puddling and kneading, during which a little chaff is sometimes worked in, is required before the well-tempered clay is ready to be pressed into bottomless frames and turned out upon the ground. The sun does the rest and does it so effectually that the floods may come and the rains beat upon such a house, for rain does pelt and arroyos beat furiously at times in New Mexico, but the house will endure anything short of a long, soaking rain or an earthquake. The bricks are built solidly into the walls with no other cement than adobe mud, and the abode is finally plastered without and within with the same universal fictile.

But while our Mexican has been leisurely preparing to build another architect has actually constructed her house of adobe borrowed from his own pit. It is an elegantly colored and slenderly framed wasp, who daintily carves out a fragment of suitable size and kneads it with her jaws, then away to her chosen site beneath a sheltering rock. Here the nearly cylindrical brick is pressed into place and carefully tamped until firmly set. Brick after brick is added in tier after tier until a dome-shaped cell, perhaps an inch in height, with a door at the bottom, is completed and the house is ready for furnishing. Naturally Madam Wasp is chiefly concerned about the larder, and, as some time must elapse before the hungry child will seek its food, a curious expedient is resorted to to provide fresh food at the proper time. Spiders and the like are caught and a delicate surgical operation is performed with the sting which, while paralyzing the creatures, does not destroy life. Thus they are left sealed up with the egg to await the growth of their devourer. It would be curious to speculate upon the reflections of the spider awaiting in helpless agony its inexorable fate. But probably such sympathy is uncalled for.

Our second builder might be called "Truth," for we found her in a well—a well of her own construction in the bare sand of the mesa. We had noticed a number of deep cylindrical holes which looked as though a cane had been thrust into the sand, but our attention was attracted by the fact that many of these cavities were curbed up to a height of nearly an inch. Great neatness and ingenuity were displayed in the adaptation of materials to this work. One curb was built up of small pebbles and grains of sand bound together with silk threads, a second was formed wholly of the helms and leaves of the buffalo grass, and others of miscellaneous fragments. Evidently somebody was at the bottom of this thing and objected to the pelting of sand grains during high winds. We determined to go to the bottom of it also and in a few minutes a very much surprised and hairy black spider stood staring at us with three pairs of eyes. She resented our interference in a very characteristic way, which left us rejoicing that our prize did not prove a tarantula.

Of course we also found the trap-door spider who improves upon the architecture above described by adding a door and dispensing with the curb.

The most remarkable of spider homes we have seen belongs to a "new species" and is at present unique. It is a veritable stone castle in the air. Swung three or four inches from the ground by innumerable threads it hangs in mid-air. Its supports are fastened on one side to a sagebush and on the other to stones and other anchorages on the inclined surface. The house itself is about three inches high and from half to three-quarters of an inch in diameter and is composed of small pebbles set in silk and invested by a loose network of fibers. The interior is delicately lined with silk and forms a soft and luxurious den open below. From her cushioned lounging place Mistress Spider views the intricacies of a perpendicular maze of sticky threads and is always ready literally to fall upon her prey. The rare skill and great strength displayed in erecting a stone house, which although subject to the sweep of the wind is yet durable and impervious, challenges admiration if not wonder. We hope at some time to be able to describe the process by which such relatively large blocks of stone are raised and set in place, but at present it remains a mystery.

Upon the same sandy mesa we find the works of those curious but wrongly-named "white ants" whose evil deeds are carefully covered by galleries of sand wrought with cement of domestic manufacture. Fortunately these are not of the voracious and ineradicable Central American types, whose depredations leave nothing wooden untouched, and in a few hours make of a costly piece of furniture only an external seeming which crumbles at the touch. These humble allies feed upon the woody herbage of the mesa, and erect over the devoted plant a dome of clay connected by long galleries with their subterranean home. Never, by any means, can they be forced to cross an uncovered space. (Perhaps they suffer from agraphobia?) It is curious indeed to follow these cylindrical tubes, less than a pipe stem in diameter, long distances over inequalities and across crevices to their destination. When broken, the gallery is at once repaired. A curious investigator pinned a struggling ant in the

breech made in such a gallery. The builders were at first nonplussed, but soon evaded the difficulty by carrying the gallery around the victim and thus uniting it. They also compromised with their sympathies by building a mausoleum of clay over their still struggling colleague. It is not among men alone that it is often easier to ignore distress than to relieve it.

One more subterranean home and we have done. Along the Rio Grande one sees innumerable hillocks and the incautious Easterner says at once, "Ah, moles I see." But he is wrong and our Western education taught us how to open the burrow, leaving it exposed to the light, while a steel trap was buried a few inches inside the opening. The next morning we were greeted with a very angry yellowish beast resembling a rat, but with an enormous head and claws like a grave digger's spade. We recognized in his Southern dress our pouched gopher, pest of the potato fields and general ravager of root crops. A few days rendered him quite tame and a most encouraging pet in spite of blindness in the light and a certain irritability of disposition. When fresh earth was given him he fairly ramped about in excitement, caused, no doubt, by the smell of the soil. He sprang fiercely at work, literally tooth and nail, and was soon nearly out of sight. Very amusing it was to see him emerge from his burrow shoving before him a great load of earth like an animated scraper.

The older writers fabled how he filled the great pockets, which open outside the jaws and extend to the shoulders, with earth and carried it thus to the opening. But *Thomomys* has a better use for these pouches than that. They serve, in fact, the same purpose which is supplied to a German university student by the pocket in his coat-tail (rarely lacking its *brödchen*), and is often distended with food. The long, almost interminable burrows form a complex system, along which at intervals are storehouses capable of holding several quarts. The northern variety has a most remarkable device for securing green and succulent vegetation during the long winter. Being very fond of the stolons of the red clover, great quantities are gathered in autumn and packed in separate storechambers of such a size that the material slowly decays and "heats." The warmth so produced stimulates the growth of the external stolons, and so green vegetables are always at the disposal of the subterranean gardener. In one of the deepest of these chambers a dry, soft nest is constructed, where the long winter months are chiefly passed in sleep.

But as we walk to and fro on the high plateaus or along the greener arroyos we are continually catching glimpses of strange homes and skillful workmen, all, we cannot doubt, working together to achieve the common destiny in which we hope to have our humble share.

New Mexico. C. L. Herrick.

ABOUT ADIRONDACK BEARS.

Editor Forest and Stream:

If there was a sportsman in the State Legislature when it gave a $10 bounty on bears, why didn't he rise up and paw the air? The idea of putting a bounty on bears and not on deer or partridges. It is enough to make a farmer quit voting and to make him shoot birds in the spring, to think that his buckwheat and oats become food for partridges and deer, yet no bounty is offered for them—in fact that there is a restrictive law on them. Bears are not a circumstance to what partridges and deer are. Adirondack bears are such fearful creatures that if a man is so incautious to get within eighty rods of one it begins to claw the ground in a way to make things swish so that in five minutes it is a mile away still clawing things.

Then, too, every little while we read about how a man was out after bears. How he set a trap after baiting it carefully, then gets caught in the blamed thing himself and loses an arm or so. All because bears are so terrible that they must be trapped and hung up on a heavy log before they can be approached.

They are such ravenous creatures, too, when hungry. Why, only the other day I saw where one had been digging wild turnips in a swamp, and he was so afraid he couldn't stand the temptation to eat me that he made tracks 12ft. apart before I'd gotten within half a mile of him. He was a big one, too.

Two or three years ago a little shaggy dog that would weigh about 8lbs. barked at a 250lbs. bear and so irritated it that it climbed a tree and stayed there almost an hour; then, as the dog had gone home, came out of the tree and fled.

One night about dusk a big black object was seen chasing a man's sheep up the road. "B'ar," said the man, "Whoop! an' I'm after him." Then he got his rifle and went. The big "b'ar" turned out to be a dog, and that is what 99-100ths of the bear raids turn out to be, and the raids on pig pens are made by scratch cats or Canada lynx instead of by bruin.

It is a matter of common knowledge (not in Legislatures, for they haven't any, but to woodsmen and sportsmen as well) that bears are as vicious as deer, but no more so, and that where a dollar's damage could be laid against a bear ten dollars could be charged up to deer or to partridges.

They haven't put a bounty on mosquitoes, punkies and black flies, but one of any of these can and does hurt a man more than a bear has hurt one within the past ten years, I do not know but twenty years. There isn't even a bounty on hornets' stings (extracted). That only goes to show that some people are chumps. Then think how much better it would be if the bounties were on mosquitoes instead of bears. You hold up your cheek and there is a hum. You raise your hand, squash! and with a knife you scrape it off and pinning the proboscis to a sheet of paper have your evidence.

How much difference it is with bears! You shoulder your rifle and begin to still-hunt for them. A week passes and you've seen tracks, but no bears in sight. A bear trap owner comes along and you bewail your ill-luck. You talk to him awhile. Then, thinking evil of yourself, go with the trapper and set the machine. You go to it two or three times and at last there is your bear. His forward paw, a dirty mangled stub, but held fast by a whitened bone; tears run down its cheeks and the brown eyes show suffering. Up goes your rifle and bang! A gash along one jaw. The bear shrieks with pain. Bang! and the bear dies. Yours!! Yes, but he isn't anything to be proud of, and if you further a bounty law you are no better than the man that traps bears for sport, and if you'd kill such a bounty law you would increase your own chances of killing a bear man-fashion by still-hunting.

Bears are around to some extent, but the berries were dried up, and instead of on them the bears are feeding on what they can get, roots, etc. So far I know of only one being killed and that was in a trap.

Raymond S. Spears.

Northwood, N. Y.

ANIMAL HYPNOTISM.

I am pleased to find that my question, Do animals practice hypnotism? has called for an interesting communication from Mr. Chas. F. Amery more or less to the point.

As the editor of this paper wrote in his brief note to my article, "actual facts are not abundant," Mr. Amery does not produce any new "facts," but confines himself to argument. He says that he does "not believe in the power of any animal to fascinate its prey by its graze." He holds that "the gaze of a ferocious creature upon its defenceless foe serves to inspire terror."

Whatever Mr. Amery may or may not believe, other people do believe that some animals have the power of fascinating others by their gaze. There is—there can be—no doubt about it. I need only draw upon my own observations. I have seen several cases in which birds were actually charmed by cats.

Many a time we have watched cats try to charm birds and fail. But that does not prove that the power of fascinating prey does not exist. There are people who can not be hypnotized. They resist the effort to conquer them and make them pliant "subjects."

So it is with animals. Attempts to charm do not always prove successful. Some animals are not "good subjects" for the mesmeric power; they simply refuse to be charmed. Some people who have resisted the efforts of one mesmerizer have been known to become "good subjects" for another. That this holds in the animal world is shown by the fact that a cat which fails to charm one bird will succeed in charming another bird.

Mr. Amery argues that animals are paralyzed with fear and simply allow themselves to fall easy victims. There is no doubt that terror does and often will put an animal in a position similar to that of being charmed. But the cases cited by me in my former article do not admit of such an explanation. In case of the squirrels coming voluntarily down the tree and talling helpless into the claws of the cat, terror had nothing to do with it. Fear does not lead either animals or human beings into danger.

Perhaps I should have stated in my account of this case that the cat was lying stretched out on a board seat at the foot of a big elm tree. High up among the branches the squirrel was hopping and playing. It was not until the squirrel came down the trunk of the tree and some 5 or 6ft. from the cat that the latter fixed its gaze on the squirrel. Then the cat raised its head, opened wide its eyes and presented a certain intensity of life and suppressed action that denoted a putting forth of some power of some kind.

In conclusion, I am inclined to think that the power which we know as "charming" is a form of hypnotism. The subject is an obscure one, because even the most patent hypnotic phenomena among human beings are but vaguely recognized and understood. L. J. Vance.

MOUNTAIN MOCKINGBIRD.

One of the most charming song birds of the mountain section of North Carolina is the wren (*Galeoscoptes carolinensis*) of the Troglodyte family. Its notes are varied like the Southern mockingbird and catbird, both of which it closely resembles in everything but size, and it is locally known as the mountain mockingbird, though it is really a wren and only allied to the others. Though quite diminutive, being no larger than the common songless wren, its notes are loud, full and positive, very often imitating the redbird and robin, from whose warbling it is not easy to distinguish it when unseen, especially as it possesses the art of ventriloquism to a remarkable degree, the observer very often looking for it in the frondage of a distant tree when it may be warbling among the dry twigs of a brush pile only 10ft. distant. Its haunts, like those of the catbird, are in the underbrush of the upland valleys in the vicinity of mountain streams, and to any one who is fond of sylvan minstrelsy and woodsy environment a ramble in the shade of these quiet purlieus is most captivating. Here its nests are usually built, three chicks to a nest, the eggs when first laid being ovoid in shape and white with brown speckles. In such seclusion they are not easily studied, but this summer a pair of wrens were so considerate to science as to build their nest of grass and fine straw in the top of a lattice on the side of a farmhouse kitchen furthest from the cats, and there they reared their little brood quite unmolested, until finally the younglings essayed their first flight on Aug. 18, the parent birds encouraging them with chirrups and chu-r-r-wees until they became strong of wing, which was very soon; and in a few hours they disappeared and were off and away. The male bird is now teaching them to sing, and I hear his *witch-ta-witchita* even now amid the frondage on Turkey Creek, uttered with a joyous sort of expression as if the sylvan world were heaven enough for him, and the season of cares and duties had forever passed away.

Sometimes I feel almost sorry that I did not capture a pair of the younglings when I had the chance, for I feel confident that, born and bred as they were within 2ft. of the heads of people who were continuously passing daily, they would have been easily domesticated and made good cage birds. Usually birds of this family are shy.

I am not informed of the distribution of this mountain songster. Personally I have not observed him elsewhere than on the Blue Ridge and Alleghanies.

The mockingbird of the sea coast and lowlands is a warm weather bird, seldom seen in this high altitude.

Charles Hallock.

Blackwell's Springs, Buncombe County, N. C.

Remedy for Snake Bite.

Dr. W. H. Howell, of Center Hill, Fla., communicates the following to the *Medical World*, Philadelphia: "Since I have been practicing in Florida I have been constantly expecting an opportunity to test permanganate of potash in serpent poisoning. We have some very large rattlesnakes here and any quantity of moccasins. Occasionally a dog is struck by a rattler and death invariably results in a very short time. There have been a few persons bitten by them in this community and all have died in great agony. A few weeks ago I was called out five or six miles in the country to see a lad about 8 years old who had been bitten the day before by a moccasin. It was twenty-four hours after the wound was inflicted before I saw him and the condition of the lad was anything but encouraging. He had been bitten on the calf of the right leg, and the fang punctures being at least one and a half inches apart, it must have been a large snake. Nothing had been done for him except the administration of alcohol freely. The entire limb—even his body—was enormously swollen. The leg from his knee down was almost black. He was cold and his pulse very small and weak, while he lay in a stupor except at short intervals, when he would shout and scream as if he thought another snake had fastened its fangs in his person. I injected at the seat of the bite one-tenth grain permanganate of potassium and they continued to administer it by the mouth; one-sixth grain doses every two hours; gave digitalis to sustain the heart, and continued the alcohol in moderate quantities. Visiting the boy next day I was rather surprised to fined such marked improvement. The swelling was reduced, the discoloration had disappeared, while a strong pulse and calm surface denoted a much better general condition. The antidote was continued for another day and he made a prompt recovery without even suppuration at the seat of the wound."

Frog and Water Snake.

Burleigh, Ont., Aug. 23.—A curious incident came to my knowledge last week while stopping at this place bass fishing.

A reverend gentleman seeing a very large bullfrog in the edge of a marsh near this place, with something sticking out of his mouth like a cigar, concluded to investigate, and to his amazement found it to be the head of a water snake about 18in. long which the frog had all but swallowed, commencing with the tail. The frog lost his dinner and the snake his life. This certainly was a case of "the biter bit." C. B. T.

Game Bag and Gun.

NEBRASKA GROUSE CLEANED OUT.

North Platte, Neb., Aug. 25.—*Editor Forest and Stream:* I think that perhaps a few game notes from Nebraska may be timely, so I give you the results of my explorations.

Business recently called me to western Nebraska, and in the last six or seven weeks I have been all over northern and western Nebraska, the Black Hills of South Dakota and portions of Wyoming. My trip took me over the entire Sand Hills country, embracing about one-third of the State of Nebraska, and naturally I made careful inquiries in regard to prairie chickens and sharp-tailed grouse, as this section has always contained both in the greatest abundance. In my travels I did a large amount of driving that frequently took me away from the railroads and into the heart of the chicken country, a section in which in the last few years a moderately fair shot could bag in a day's shoot anywhere from fifty birds up. Taking into consideration the great abundance of birds up to a very recent date it sounds incredible to state that they are all gone, yet it is an absolute fact. In several hundred miles of travel I did not see a bird. Two years ago in traveling fifty or sixty miles by train it was no uncommon thing to have a dozen or more coveys flush from beside the track, and yet on this trip, over 200 miles of which was made in a buggy, away from the track as well as beside it, and frequently with one or more dogs along, I never even saw a feather. Constant inquiry elicited the information that scarcely any have been seen this season. Occasionally some one would mention seeing a covey or a few stray birds, but mostly the answer was, "Haven't seen a chicken this year."

The answer to this is not hard to find, for the constant fusillade that has been kept up both in and out of season by everyone owning a gun could have but one result. Last year the crop failure throughout this section caused many to take to market-shooting who had never done so before, and every man and boy big enough to shoulder a gun was out early and late shooting for market as long as there was a bird in sight. As late as the 1st of last April I heard of parties still camped in the hills and shooting for market.

Nearly every town on the B. & M. R. R. in this section has its recognized game buyer who devotes his entire time to this business, and large cold storage houses are located all through the sand hills, often at stations containing less than a dozen buildings. In addition to these, nearly every merchant in small towns makes a business of buying game and shipping it to Chicago and New York. It is marked "dressed poultry," but the station agent knows what the barrels contain. This is a cattle country and there are scarcely any domestic fowl in the region. They take grouse in trade and handle them in the same way butter and eggs are handled in older-settled communities. Several merchants I know have told me that in the fall they usually have to stay up until 12 and 1 o'clock at night to pack and ship the grouse received during the day. This is all done in direct violation of the game laws, but then game laws cut no figure in Nebraska.

Well, it's all over now, and we won't have to worry for fear we will not get good chicken shooting any more. If any one wants a good gun they can have mine. I will have very little use for it in the future.

I have talked and written on the subject of game protection until I have made a bore of myself, and the only thanks I got was to be called a crank and an alarmist. You couldn't make a sportsman of Nebraska believe that the fearful slaughter that has been going on for years would decrease the supply; but I rather think that they will change their minds when they get out this fall. I have seen the once countless buffalo wiped off the face of the earth, the deer and antelope about exterminated, and now I have seen the last of the sharp-tail and pinnated grouse as far as Nebraska is concerned.

I talked with Lowe, the Chicago man who has been located for the last two years at Hyannis, Neb., and who operates the big freezer at that point as well as several others at other places. He tells me that last season he shipped over two thousand dozen grouse from Hyannis alone; and yet he has the nerve to say that market-

shooting 'didn't clean them out; says it must have been some disease. He tells me that last summer he was in northern Minnesota, near Tower, and that he shipped thirteen barrels of dressed fish out of that State. Other parties tell me that he brought three barrels of Minnesota fish home with him. He boasts that he is going back again to repeat the performance and will try and get a moose (protected until 1898).

I saw quite a few ducks on the Nebraska lakes and a few geese that had hatched there and the shooting should be fair this year. Curlew, avocets and dough birds were quite plentiful, but are about done now.

I don't know as it does much good to kick now that the grouse are gone, but the information may be of service to some brother sportsman who contemplates a trip to this section in anticipation of good grouse shooting, and will save him an expensive and disappointing trip. This wanton and ruinous slaughter illustrates how useless it is to have game laws as long as the large Eastern cities are only fences for the disposal of stolen game. Were such markets as Chicago and New York kept closed against foreign game only during the close season there would still be plenty of grouse in the sand hills of Nebraska. The "stop the sale of game" plank will have to become a reality pretty quick or it will be everlastingly too late.

W. R. HALL.

DESTRUCTION OF WILDFOWLS' EGGS.

NEW YORK, Aug. 28.—*Editor Forest and Stream:* Because FOREST AND STREAM has brought up the question from time to time I have taken pains to make inquiries about the destruction of wildfowls' eggs by the Indians and others. A calamity cry is harmful in its effects as a rule because it is apt to come in an exaggerated form from interested sources, but such testimony as I have obtained came from men who had no interest further than to give a civil reply to an ordinary question.

Last summer while on the Nepigon Lake in Ontario I noticed a good many adult ducks and not many young ones. I asked my guide, J. B. Marcellaes, of Fort William, for the reason, and his reply was that Indians were fond of duck eggs. I said that the Indians were not likely to give so much time to egg hunting as to make a great decrease in the ducks, and his reply was that Indians had not much else to do during the breeding season of the ducks.

This summer while on the north shore of the Gulf of St. Lawrence I noticed that practically all of the inhabitants were eating the eggs of wildfowl, and I learned that several even made a business of putting the eggs in barrels of brine for winter use. I asked Capt. A. Joncas, of Natashquan, if it made much impression upon the numbers of birds, and his reply was that many breeding grounds were now entirely deserted, although it would be difficult to say if there were fewer birds. He said that the eggs were taken so persistently along the coast that young birds which are finally hatched late in the season are unable to migrate, and he has walked for miles along the coast where he could walk on windrows of young sea fowl that had starved and frozen to death. Capt. Joncas is an old Indian trader who follows the coast from Natashquan to the Esquimaux River, and who knows what he is talking about. In giving me that description he did not have the air of a man who was exaggerating. He was sitting on the cabin of the boat smoking as we rolled lazily along under a light breeze, and we were engaged in ordinary conversation.

Sunday is a great egg-stealing day along the north shore of the Gulf of St. Lawrence. The men belonging to the cod fishing companies and the lobster canneries join the Indians and the natives in a search for wildfowls' eggs on that day. I have seen half a dozen boats land on one island during one Sunday, and the occupants immediately went to work at collecting eggs. The eggs which were not newly laid were generally thrown away instead of being placed back in the nests. The Indians make use of the eggs after incubation has begun, but I have watched a native throwing eggs all about in disgust because they did not lie flat in his pail of water. That is the test that is employed on the coast. If an egg lies flat upon its side incubation has not begun, but if the big end tips up a little incubation has begun.

Speaking again of the Esquimaux River I asked one of my Indians, "Joe Mullins," of Olomonasheebon camp, if the Indians ever destroyed more game than they wanted to use. He said: "Oh yes. Last winter we had caribou matches on the Esquimaux River to see who could kill the most, and we killed hundreds of caribou that were left where they fell without being touched further."

Indians do not hesitate to kill a mother bird or animal for food, leaving the young to starve. An Indiam shot a female goose near my camp this summer and left the four helpless young ones. I asked him why he did not take the young ones, and he simply answered: "Too little." This sounds like a calamity letter, but I have given authority for my statements. ROBERT T. MORRIS.

TACOMA, Wash., Aug. 19.—*Editor Forest and Stream:* I do not believe that there is any use in further investigating this fake, as I have all along termed it. I had the matter up some time ago for investigation as General Agent of the U. P. R. R., which I was at that time and am still. I also made some little investigation for my own good as State secretary of the N. G. B. and Y. P. Association, also as a member of the Sportsmen's Association of the Northwest. Recently at Seattle I looked into the matter a little on behalf of the Washington State Sportsmen's Association for the Protection of Fish and Game, of which I am first vice-president. But I could find nothing accurate nor positively definite. In other words it was always "some one told me" or "they say," etc., which of course goes for nothing.

So far as the regulations on public carriers are concerned, I can assure you that no shipments are being made nor have any shipments been made. I am the representative of a transcontinental line in this Territory and am here for business; and am satisfied that no such shipments could be made as are spoken of without the matter coming to my knowledge. I have communicated with the customs department in British Columbia, and find that they also know nothing of such a business being carried on. I think your issue of June 22 deals very fully on the subject, and on reading it through I find the investigation very complete. Our Association, the N. G. B. and Y. P. Association, undoubtedly took the matter up on information given by Mr. W. A. Story (with whom I am personally acquainted and who is State secretary for Oregon of the above Association), presuming that the reports as presented to him were based on facts, and desired to stop the slaughter through Congress if possible. The intention was undoubtedly good and you should not deal hard with Mr. Bortree in his endeavors to do good. I might say to you that at the last meeting of the State Sportsmen's Association for the Protection of Fish and Game, held at Seattle in July, a Mr. Emmons got up and made a speech asking the Association to have the slaughter in Alaska stopped, and stated that he saw the shipments being made, and presented the Association with an egg of large size (I think he called it a swan's), which he said was of the kind being shipped and used for albumen. He left right after he made his speech and before the meeting was over. He said that he had recently arrived from Alaska. E. E. ELLIS.

THE WHEELS OF TIME RUN BACK.

MT. MORRIS, N. Y., Aug. 22.—*Editor Forest and Stream:* Everett's wild pigeon experience as told in FOREST AND STREAM of Aug. 17 vividly brings to mind similar experiences, and in fact I can find something in each issue that reminds me of a like experience and sets the wheels of time running backward; and for a short time we can live over again some few days of pleasure spent in field or forest with dog and gun, or on stream or lake with rod and reel.

I think the hunting instinct came to me at the beginning, for among my earliest recollections was a cross-bow made by my father, with which I could occasionally kill a sparrow or a chipmunk, proudly to be exhibited as proof of my excellent marksmanship and zeal as a hunter. But as the years rolled by this gun lost its charms, and I began to long for something more destructive. By much persuasion and many promises not to let my hunting interfere with my work, I induced my father to buy an old smooth-bore from a neighbor. The stock was trimmed with pieces of tin and silver, and was so long I could not put it against my shoulder, but let it stick back under my arm.

Then came the more difficult matter of getting ammunition, but by doing chores or an occasional day's work for the neighbors I always managed to keep a supply of G. D. caps, powder and shot on hand, and as I remember some of the wonderful shots made with the old gun I can safely say I never have been able to better them with the high-priced and fancy guns I have owned since then, and they never afforded me one-half the pleasure. For then I was satisfied, knowing that I had a better gun than any boy of my acquaintance. I have never since been able to get a gun that just suited me. In those days southern New York afforded an occasional bear and deer were quite plenty; but they were too much for me. I never attempted to hunt them, but confined my exploits to directing the old gun loaded with B. B. shot against the squirrels and rabbits (hares), which were very plenty. Pigeons, during the spring and fall flights, were more than thick and many a time have I been detailed to keep them off from a wheat or buckwheat field where they seemed bent on destroying the crops. But along in the early '70s they began to disappear and for the past fifteen years I have not seen a single one. Love for dog and gun have never lost their charm and although "chained to business" I "do the next best thing" and have always found time for an occasional outing. At another time I may relate some personal experience for the benefit of my brother hunters, as I like to read of theirs.

The prospects for good grouse and squirrel shooting are excellent in this vicinity this fall. Three of our hunters were out last week on opening day and returned with four woodcock and eleven grouse about half grown. It is the universal decision of our sportsmen that the season is at least fifteen days too early, as the birds are too young and small and too easily killed. It makes an excuse for hunting and the young squirrels have to suffer along with everything that runs or flies. It leaves pretty poor picking for those who try to do as the law requires.

E. M. S.

ANOTHER NITRO EXPERIENCE.

Editor Forest and Stream:

I was very much interested in the article on nitro powders in your issue of Aug. 17, and wishing to add my testimony I will give you an experience with nitro powders during the past year. Last fall I bought a well-advertised, well-recommended 16-gauge, 7lb. gun that listed at $60, and 500 nitro shells, 2¾drs., 1oz. shot. Opening day came and found us after ducks and snipe on the great Horricon Marsh with every prospect of good sport. I had shot the gun a few times at snipe, and though the recoil seemed great and about every third shell came apart after shooting I thought I would risk it. But after twenty-five or thirty shots I had to desist. At nearly every shot the gun would spread so that it took all the strength I had to open it. The butts of the shells were bulged out and broken, and the jar (from escaping gases, I presume) hurt my head as much as if some one had struck me with a club. My day was spoiled, as I was not in reach of other shells or guns. I sent the gun back to the makers with a few of the cartridges and an account of how it acted. They did the square thing by sending me another and better gun. I changed the cartridges for some loaded with 2¼drs., and had no further trouble that season, though my confidence in nitros was not thoroughly restored.

Some of your readers will doubtless remember the experience of my friend while hunting in Dakota last fall, as I sent his letter on to you for publication. He was shooting a new gun bored for nitros, but through the gun's bursting narrowly escaped being crippled for life, and is not entirely over the injury yet. The makers of his gun fitted him out with new barrels, and a finer set I never saw.

Opening day this year found him and me together again, he with the gun just described and I with an $80 hammerless from one of our most responsible makers. We had supplied ourselves with the load decided on last fall—2¼drs. nitro and 1oz. No. 9 shot. Snipe and yellow-legs were plenty, and we looked forward to a great day. But after about twenty shots my friend had to stop. His gun would hardly open; the butts of the shells were occasionally loosened so they would come right off when trying to extract the shell, and his head ached till it was torture to shoot. My gun and shells were acting the same; when the shells did not come apart the base was bulged out to nearly double its original thickness, and the lever would hardly work. Now I believe a powder that will act this way is not safe. These guns were good ones, from two of our oldest and best manufacturers; guns that would stand a lifetime of use with black powder. We both concluded, as the loads were no larger than we had been accustomed to use, that the powder had unusual strength. But is it safe to use a powder that is liable to act this way? Are the makers always sure the nitro or explosive parts are equally mixed with the other? W. E. W.

THE SPORTSMEN'S ASSOCIATION.

Editor Forest and Stream:

A special general meeting of the above Association was held at the office of the Winchester Repeating Arms Co., 312 Broadway, New York city, on Tuesday, Aug. 27, 1895, at 2:30 P. M. There were present: Mr. Chas. Tatham (president), Messrs. J. H. Studer, C. F. Wiebusch, F. S. Webster (secretary), Alfred Chasseaud (Overman Wheel Co.), J. A. H. Dressel (treasurer), W. W. Hart, Chas. Daly, J. von Lengerke, H. C. Palmer, P. G. Sanford, F. W. Sanger, J. Burnham (FOREST AND STREAM), Jacob Pentz (*Shooting and Fishing*).

The report of the treasurer was read by Mr. J. H. Dressel.

Mr. F. S. Webster moved that the financial report be accepted and placed on file. This was carried.

Mr. F. S. Webster, as secretary, stated that he had no report to make, as the treasurer's financial report covered the secretarial report. The only remark he desired to make was with reference to the work entailed by the exposition. Every one seemed entirely satisfied with the exposition; there were something like sixty-nine exhibitors, all of whom had expressed themselves as pleased with the exhibition, and hoped that they would be represented at another exposition.

The chairman said that the object of the meeting was to receive the financial report of the exposition, and to take what steps might be necessary toward holding another exposition if it was so desired. He would be pleased to hear the opinion of those present.

Mr. J. A. H. Dressel moved that another exposition be held in the early part of 1896, as may be decided upon, and that a committee be appointed to fix the date. This was seconded by Mr. Hart.

Mr. Studer thought that it would be advisable to appoint a committee to see what arrangements could be made with exhibitors before deciding upon an exposition.

Mr. Dressel differed from Mr. Studer, and thought that they should first decide whether or not they should have an exposition.

The chairman ruled that they first decide whether or not they should have an exposition.

Mr. Chas. Daly said that the exposition was not sufficiently remunerative to his firm to justify him in voting for another.

The chairman stated that his firm had not received back the amount they had expended in the exposition, but if there was to be another exposition they would go into it.

Commodore Sanford, on behalf of the Winchester Repeating Arms Co., said that if there was to be an exhibition his firm would exhibit with a larger space than last year.

The chairman asked Mr. Sanford if he was in favor of an exposition or not, to which Mr. Sanford replied in the affirmative, and that he would go with the rest.

The chairman said that it was a question of increasing business. So far as the advertisement of a firm is concerned he believed that it might be a good thing, and if one wanted to increase the interest income of one's business it would be of service.

Mr. Webster thought that the chairman had touched upon a very vital point. They all agreed that no one exhibitor could trace any immediate benefit from the exposition itself. It had been held for the purpose of increasing the love of sports; that the manufacturers might get together to show what is being done for the benefit of the sportsman, and it was more in that direction than any other that the exposition had been held. No one could say but that the World' Fair had enlarged the field of the manufacturer, had spread trade to a certain extent, yet at the present time no manufacturer, who was an exhibitor there, could trace any direct benefit from that outlay. The Sportsmen's Exposition was started for the purpose of getting exhibitors together and of keeping up the interest of sportsmen, and when it was looked at from that point of view you could not fail to see its importance. Many of the old exhibitors had expressed their willingness to exhibit again, and he had also received eight or ten letters from other companies who were also in favor of another exposition. He did not think the present meeting at all indicative of the feeling of the whole body of exhibitors, as he had not found one of them but was in favor of another exposition. Besides these there were at least a dozen others who had expressed a regret that they were not present at the last show.

Mr. J. von Lengerke said that there was a general undercurrent of feeling that there should be another exposition. In looking for data for comparison of the success of the last exposition, he believed the only comparison that could be made was with the bicycle show. But the Sportsmen's Exposition was different even from that. He then minutely gave his reasons why the public should more heartily support a sportsmen's exposition than a bicycle show. The popularity of the latter was largely attributed to the fact that the manufacturers at the show made contracts for machines for the whole season with dealers. While they could not do that with the Sportsmen's Exposition, yet there was so much more interest manifested in the latter that the attendance of the general public was, he believed, five to one over the bicycle show, and he was of the opinion that at the next exposition the attendance would be even exceeded.

Mr. Sanger thought that the month of May was not altogether a suitable time to hold the exposition. This year he thought it might be held in March with far greater advantage so far as attendance was concerned.

Mr. Palmer agreed with Mr. Sanger, and thought that the next show would go far toward increasing the public interest in the exposition. Exhibitors now had a fair idea of what they would require at such a show, and he understood from many that they would have much better exhibits next year.

Mr. Sanger said that he had been informed that from twenty to thirty hunting parties had been made up during the show. His informant had told him that he had just returned from Maine, and the people there had told him that these parties were some of the direct results of the exposition.

Mr. Palmer stated that he canvassed for the first show, and he had found that many of the most prominent manufacturers had come to him and said how sorry they were that they could not get ready in time for the show. The former show gave them an illustration of what could be accomplished with plenty of time to prepare their exhibits, and there is no doubt that the last exhibition can be improved upon; and even if the same number of people attended as then did, when they knew nothing at all of the nature of the exposition, their success would be assured. Last year there was no organized press committee, and certainly the exposition did not receive that support from the daily press that it deserved.

Mr. Alfred Chasseaud did not think they could judge of the success of an exposition by the first. He did not think it had been properly advertised, and he never remembered having seen an exhibition that had ever had such a cold shoulder from the press. He thought that for the next exposition the spaces and bill of expenses would be less, and would show much better results. They would be able to rectify many mistakes which were made in the last show.

The chairman thought the motion should now be put to the meeting as to having another exposition and asking a committee to fix the date. He thought also it would be necessary to appoint another committee to see the exhibitors. Of course if the committee who had charge of the matter should find that there were not enough people sufficiently interested to make it a success, they would have to report again to another meeting.

Mr. Studer offered as an amendment that an exposition be held in March, 1896. Mr. Sanger thought that that would be the best time of the year to hold the meeting, and he could leave the week of March 16 open. The chairman asked if it was a question of just that week and Mr. Sanger replied in the affirmative. Mr. Webster desired to mention that a great number of exhibitors were desirous that the exposition should remain open longer than a week, and it would be well to get the ideas of exhibitors on that point.

Mr. Dressel thought the motion had better be put in the form he had first suggested, that an exposition be held in the early part of 1896, that a committee be appointed to consider the best thing to do and report the facts to another meeting.

The chairman thought it would be best first to make a motion to hold the exposition, and have a committee to settle the time and place, and find out what exhibitors would be willing to come in. The committee could report to the trustees, who are the officers of the association, and then they could go ahead and take the necessary steps.

The chairman then put to the meeting Mr. Dressel's motion that there be an exposition in 1896 and it was carried.

The chairman then put the motion that the chairman appoint a committee of three to decide the time to hold the exposition, and to find out the best arrangements that can be made and report to the trustees. This was put to the meeting and carried.

The chairman appointed Mr. Dressel, Mr. Daly and Mr. Chasseaud as the committee.

Mr. Webster pointed out that no time was stated when the committee should report. He thought that a time should be fixed, as many exhibitors were anxious to know if there was to be an exhibition or not. He thought it highly advisable that they should report as expeditiously as possible.

The chairman decided to ask the committee to report by Sept. 17, and he adjourned the meeting until that date. FREDERIC S. WEBSTER, Sec'y.

CHICAGO AND THE WEST.

Opening Days.

CHICAGO, Ill., Aug. 31.—The opening days of the main shooting season for most of the game-producing States in this region are now falling due. The exodus of sportsmen for Dakota, Minnesota and Wisconsin has begun and is large. The late heavy rains should help sport, not only at ducks, but at chickens. There are a few chickens left in Illinois, and there are some in Wisconsin. In Iowa the supply is slowly increasing in some sections once shot out. Protection is practical as to increase of game, if only it be put in practice and not left to theorizing and speech-making.

Iowa Chickens.

Mr. John G. Smith, of Algona, Ia., writes in regard to the situation in his locality:

"We look for fair shooting. I do not think there have been many violations of the game laws in this part of the country. I have been over the country a great deal and have not seen a case. Have heard of some, but think most of it is talk. Farmers say there is no shooting done."

Law on Winnebago.

From all appearances a good effort is making for the enforcement of the law in the case of illegal fishing on the waters of Lake Winnebago. Andrew Budseis, William Wendler and Emil Windler, charged with violating the fish law, were fined $25 and costs yesterday.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

The Old Gent wouldn't Like it.

THE change in the law on partridge in that State, setting the beginning of the open season back to Sept. 20 instead of Sept. 1, as formerly, is not being very kindly received by the farmer's boy in that State, if all reports are true, and the chances are that many flocks of partridges will be destroyed before the city sportsman gets there, if he waits till the legal open season. But the new law adding imprisonment to fine for breach of the game laws in that State will tend to restrain both. Said a rich man's son the other day, in conversation with a friend about a vacation trip into Maine: "No, I shall not try for a deer this year till the legal open season. I have shot several in August, and taken the chances of getting found out, in which case the old gent would have had $40 to pay. But now that there is a chance of getting into jail as well, why, the old gent wouldn't like it." SPECIAL.

"Deer are Queer Creatures."

NEW YORK, Aug. 28.—*Editor Forest and Stream:* While one is "chained to business" and can't get away these hot days in the city, a letter like the inclosed helps to make the day seem shorter, work lighter, and brings such a flood of memories of forest and stream, lake and mountain, that one cannot help thinking life is still worth living, with the hope that another year will loosen that "chain," and that again we are away in the woods. This letter is from an old fishing companion, but one who has never before been away in the woods. NIAGARA.

THE ADIRONDACKS, Aug. 22.—*My Dear Old Chum:* Since giving a short account of my first night's jacking I have been fishing more or less (no bait), fairly good luck.

Yesterday our guide and myself went out still-hunting, took the canoe for about a mile from camp and then struck into the woods. After tramping about some, the guide saw a deer looking over a small knoll. For the life of me I could see nothing. Told him to fire. He did. Missed it. We then tramped about a bit and sat down to eat our lunch. Both had our pipes going, and I was just in the act of biting into a sandwich when the guide remarked "that deer were queer creatures. You might look up and none would be in sight, and at the next glance one would be there." Just then he whispered, "There's a deer." I leaned over toward him and there stood one looking at us about 600ft. away. The guide said it was a buck, so I drew a bead and blazed away. It was a dead deer. Say, what's "buck fever?" I haven't felt it. "You can't lose me, Charley." Shot both my deer through the fore-shoulder just where I held. Am going to sell out and go as a sportsman, BILLY.

Canvas Boats.

MARLIN, Falls County, Tex.—If you will kindly allow me space, I feel called to express myself still further on the canvas folding boat subject.

All of the nice little articles which have appeared in your valuable columns, complimentary to said boat, strike chords in my heart.

Another season of very hard usage has added no wrinkles to my little boat's horns. She is just the same little duck as the first time I proudly saw her.

She is 12×40. I have added a deck seat and a 10sq. ft. jib to her this season, and the last time I was out she sailed around an 18ft. St. Lawrence River skiff, which carried about 85sq. ft. on a single stick, several times. The last time I went by I heard the skipper say, "I can't follow him any way I can fix it."

As for shooting out of it, I am like "Aztec." All I want is another chance. I learned last spring that I could get nearer to ducks by sailing than most any other way, having lots of fun, getting quite a number of ducks and not working very much. I remember one instance. I ran down on a single wood duck, put the helm down, cast off sheets, picked up the gun and fired over the bow all at the same time. I got the duck at about 40yds., and came within an ace of getting the mainmast as well.

A member of the club purchased a 10ft. boat of same kind, only a little flatter bottomed and fuller lines. It carries three men as staunchly as one man, and stands up with a 40sq. ft. sail, like the proverbial church.

When I think of my little boat, my fishing tackle, my hammerless L. C. Smith and my pointer, I feel that I would hardly trade places with a millionaire.

Let the good work go on. THE NEWSMAN.

Wisconsin Deer Regions.

CHICAGO, Ill., Aug. 3.—For your information I give below a synopsis of the reports received from agents of the C. & N. W. Railway, on the Ashland Division, relative to prospects for deer hunting this fall:

ANTIGO, Wis.—Within a radius of ten miles of this station good deer hunting is anticipated, especially on Wolf River and west of Kempster.

EAGLE RIVER, Wis.—Old hunters say that the prospects for deer hunting within five or ten miles of this station are better than ever before.

MANITOWISH, Wis.—Hunters in this vicinity report to our agent that within a few miles of the railroad, east or west, deer were never so plenty. Fishermen also report that they see a number of deer nearly every day.

RHINELANDER, Wis.—Our agent at this point is informed by hunters that there will be good deer hunting within a radius of eight or ten miles in any direction, also north and south of McNaughton. The most desirable localities are where pine has been cut and near streams and lakes.

TOMAHAWK LAKE, Wis.—This point is considered a good locality for deer hunting, and agents report that the prospects for this fall are very favorable.

W. B. KNISKERN.

Adirondack Deer Clubbers.

GLOVERSVILLE, Aug. 23.—*Editor Forest and Stream:* While Samuel W. Paddock and Howard Goodfellow, of Gloversville, N. Y., accompanied by E. D. Knappen and son, of New York, were fishing at Peck's Pond on Tuesday, the 20th inst., they discovered a deer swimming across the pond near what is known as Green Island. After giving chase in their boats they succeeded in heading it off from the shore, and having no firearms of any kind in the party they managed to kill the deer with repeated knocks on the head. The deer was undoubtedly run to the lake by dogs which are known to have been running loose in that section nearly all summer. It was a large buck which was in the velvet. CAYADUTTA.

Indian Territory.

LOCO, I. T.—Upland plover are not so plenty as they were last season. However, any one wishing to shoot them can find plenty by stopping off at Duncan and driving out east a couple of miles to where the Ardmore road intersects the old Chisholm trail. L. R. Whittemore and W. R. Morton while hunting horses on Caddo Creek came upon about twenty or thirty young wild turkeys. They were about two-thirds grown. There are also two hen turkeys and about twenty young using with Willie Carson's tame turkeys a couple of miles from here.

L. D. W.

Prairie Chickens in North Dakota.

NORTHWOOD, N. D.—It is a disappointment to us out here how scarce the chickens are this year. What is the reason? TH. GJERDRUM.

At Early Morning.

DAYLIGHT. The morning air is cool and crisp as you walk through the woods over the dew-covered leaves. Out for sport now; leave all cares and worries behind. Suddenly your dog stops stark still. "Oh! what is this?" you murmur. Then giving him the word, you walk along. With a loud *whir-r-r-r* up jumps a partridge. To shoulder your gun is but the work of a moment. Bang, but you miss. There he goes over to the right! Another shot, he flutters against the wind and drops to the ground—dead. Your dog retrieves, and as you hold the plump bird in your hand what a feeling of joy and happiness vibrates through your whole being. B. A. A.

Game Shooting Range.

Editor Forest and Stream:—In rejoinder to my friends who write in your issue of this week: 1. I have hunted and killed moose. 2. If "Train" is a sure shot on moose at 200yds. and running away, no criticism is to be offered on his shooting at that distance. I would not shoot under those conditions, nor trust anybody I know to.

DICK OF CONNECTICUT.

P. S.—About those fellows who tell us of clipping off partridge heads with bullets, did you ever see it done, or are they just talking? It's one thing to talk and another to clip a head. D. OF C.

Sea and River Fishing.

THE LEAPING BASS.

GREENWICH, N. Y., Aug. 26.—*Editor Forest and Stream:* I have caught quite a few bass in my time, both of the large and small mouth varieties, and I know that I have never seen one leap 5ft. high, nor even 3ft., unless the spring of the rod assisted a small one; but I have no reason to doubt the statements of "Kingfisher" and others that they can and do perform this feat under certain conditions, namely: a sufficient depth of water to enable them to acquire the necessary velocity. But just how high a bass can leap seems to be "one of those things that no fellow can find out," unless some mathematical angler can tell just what rate of speed a bass is capable of attaining and will compute the height to which that speed would carry him.

But why does he leap? "That's the question." I do not believe that he mistakes the hook for a "louse," nor do I believe that he leaps for the sole purpose of getting room to shake out the pesky thing. A fish when hooked rushes about in every direction in his frantic efforts to escape—to the right and left, forward and back and up and down; and leaves the water for exactly the same reason that the wild steer when first roped dashes his head against fences, trees and even buildings, simply because he does not "look before he leaps." The "savagerous" shake is I think easily explained. Everyone knows that a fish progresses through the water by alternate lateral movements of his tail or rather of his whole body, the reaction of which movements upon the water carries him forward. Now when he leaves the water he is making exactly the same motions; but in the less resisting air there can be no forward motion and the vigorous movements of the fish become to all appearances a shake. He may on rare occasions shake out the hook, as "Hoodoo" and others say, but I think if he is in the water at that particular instant with the line at the same tension he will have the same success.

As for taking the bait the second time, may it not be a feeling of revenge, as the dog will snap at the whip that strikes him or that prompts the child to retaliate upon the stone against which he stubs his toe?

Of course you should lower the tip of the rod when the fish breaks, for just as sure as he goes up just so sure is he to come down, and if you do not lower the tip slightly the weight of the fish and his renewed exertions when he regains the water will lower it for you with perhaps disastrous results. TEFFT.

PHILADELPHIA.—*Editor Forest and Stream:* "Chained to business" after an extended trip, "fishing," of course, feel as if I'd like to make a cast or two in FOREST AND STREAM after that bass which Dr. M. G. Ellzey raised and which is still leaping. I kind of like to be around when they jump; come to think of it, have seen them do it before to-day and no hook stuck in them neither; reckon they were sort of frightened like at some theory about habits.

A fly fisherman exclusively for twenty-two years and a persistent one, it has been my happy lot to creel many a black bass. A fly-tyer for almost the same period, I "feel ruffled like" that any one should degrade the intelligence of trout and bass to the extent that they are not specially attracted by particular colors in lures.

I trust I do not mistake the Doctor on the color question, but being a fisherman of the color type and judging from the standpoint of success, I do dare to go contrariwise and say particular colors are essential to a taking fly on different waters.

It rather pains me to have a fly fashioned in strict conformity with nature's own styled a "lure," since it is an imitation of a natural insect, "fly" sounds better. Again he says that the essential qualities of a killing fly seem to be that it is easily seen through the water and not too gaudy and unnatural looking to frighten the fish. As far as any fish being frightened at a fly containing all the colors of the rainbow, I suspect the Doctor must be mistaken. If such a combination causes any fright among surface feeding fish, it is the manner in which it is dropped upon the water, nothing more, for such patterns have been known to kill well.

If any particular pattern does not take, it seems presumptuous to suppose that by reason of its composition it is not seen well. The essential quality of a killing fly is not so much its being seen through the water as it is the proper color to attract; for in clear water deceptive sight in fishes is a rarity, and it is the angler's duty, as well as his skill and knowledge, to place it where it can be seen. If a knowledge of the water is possessed, and it is placed where fish are known to be, it may turn out the "good thing" in the book. If it does, "push it along."

When one contrasts the somber colors of the most successful patterns used to deceive trout in the waters of Pennsylvania and vicinity, it is quite true that certain bass flies are indeed a straining point upon insect nature,

Like all followers of the art, I venture not only to suspect, but affirm, that the Doctor's selection of a whip or cast for the work ahead on strange water is confined to that particular fly which in his experience has served him to most advantage. If it does not take, what becomes of the theory of sight (or easily seen)? Might it not be charged to other and more practical reasons, such as nature instructs us in, for instance, to find the higher-colored insects more plentiful in the open meadows than in the woods, where somber colors prevail? To imagine a whip selected haphazard, without any concern regarding color, or on the principle that "everything goes," is indeed a cruel slap at the acknowledged thinking powers of a bass, not to mention trout.

Since the Doctor is absolutely certain that a bass does leap he should not doubt that there is a motive other than fright which prompts it. It does not require close observation to distinguish an extended maw and a vigorous shake. However, a point in the Doctor's favor which seems to have been overlooked is the fact that his original article had particular reference to fly-fishing at twilight. While it is generally known that bass can be taken at night, whether they shake themselves would be difficult to discern at that particular time. That they do, and do it savagely, is proven to me by observations conducted strictly in broad daylight.

Having taken your "killer" for a natural insect or as a lure (as you choose), if the former they soon discover that it is one of those species with a stinger attached (insects do have them, you know) and it certainly seems that the leap has a different meaning than fright, inasmuch as this does not always occur at the strike, and it is therefore reasonable to suppose it is premeditated. If he is fully satisfied of being fast to a line directly after the strike it's funny, for if he happens to be hooked in a pool where there "are others" the other fly attached to your leader will invariably catch on, not to a snag so much as another fish. In moderately deep water this is a common occurrence. The handling of a brace does not permit either fish much, if any, freedom to leap, so I suspect they cannot be much frightened, but engaged in a tug of war.

Combating sunken snags, rocks and currents requires skill, but the real test occurs during that very same leap under discussion, and it is a study to cope with it successfully. Since its consummation requires only a second or a fraction thereof, spare me, brother anglers, if I dare to be so critical as to say that I endeavor as near as possible to be alert for its three distinctive parts—the upward plunge, the shake and the drop. Granted that you have a full appreciation of the enemy's quickness and prowess, and are attending strictly to business with a taut line, the percentage of loss during that vital instant when the vigorous shake occurs will be greatly lessened if a good sharp tug is given, then eased up for the drop. To time this is an art, since the upward plunge and the vigorous shake happen at the same time, except when an extraordinarily high leap is made. If quick enough four in five times you will prevent that shaking process from taking place and be entirely free from that "tired feeling" occasioned at sight of the fly going one direction and the expected prize in another. My experience has proven that this can be acquired just as the strike is also acquired; but will require much practice as regards pond fishing.

It is probably no secret that a bass can often be prevented from leaping by swinging the rod in the opposite direction from that in which he is running, being careful that no slack is left in the effort to turn him. In stream fishing the rise of the leader is a sufficient warning of what is coming, not always so in still water or pond fishing. With fish of such weight as are not easily kept near the surface, I have seen leaps start from a depth of 8ft. or more, with the fish perfectly still and no sign whatever to indicate the movement, and have been caught "napping" with the extreme suddenness of the act notwithstanding my diligent study of the action. All large sensible bass leave you in the air; cause, well, they seemingly despise those fearful stories going around about the big fellow that got away and would rather trust your deceptive sight about it.

Still water offers the best field for observation, since the leap is just as liable as not to occur near the boat after a sharp run and even in the last stages of the fight, with barely strength enough to make the effort and succeeding only in raising his head of the water, the shake is perceptible in a modified form, but the motive is none the less apparent, the prize is too close to the net for one to be mistaken by reason of that most defective of our senses—sight. While a bass a pound in weight will give a good account of himself, I have had special reference throughout to those weighing two, three and four times that size, which may justly be termed a prize with a fly, inasmuch as the chances for a good hold are meager compared with other styles of fishing.

The leap of the common pike (*Esox lucius*) when hooked with the fly is similar to that of the bass, except that it is not so high out of the water; the vigorous shake is readily perceptible. Brown trout and California rainbow trout of good size will also leap, but the shake is less vigorous. Is this fright? That is the question.

While pond fly-fishing for bass may not bring into play the full complement of tact and skill required in running water, yet a 2lb., 3lb. or 4lb. bass hooked in such water gives the angler the best opportunity to study that grand spectacle, the leap—probably his greatest chance of freedom. Let him leap, Doctor. Lower your tip also if you like, but we hardly think the method is synonymous with success. We can, however, accord you a vote of thanks for provoking such an interesting batch of experiences, as there is always something to learn. M. G. SELLERS.

Stoney Lake, Ontario.

BURLEIGH, Ont., Aug. 23.—Small-mouth black bass fishing has been good in Stoney Lake for this season of the year; better in September. In a catch of thirteen bass made by my wife and myself last Tuesday, six caught in succession weighed exactly 3lbs. a piece, weighed as soon as caught. T. B. C.

Learned from "Forest and Stream."

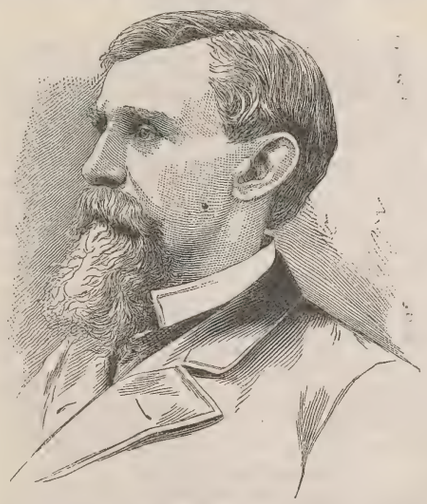
RUSSELL, N. Y.—Did my first fly-fishing yesterday morning. Caught seven fine trout averaging ¾lb. each. All the instructions I ever had in the art I received from our paper, FOREST AND STREAM. C. E. W.

PORT HURON FISHING TOURNAMENT.

PORT HURON, Mich., Aug. 26.—*Editor Forest and Stream:* I send you an account of the fish tournament held under the auspices of the Port Huron Anglers' Protective Club. Our club has been in existence for two years and over; it has been alive and that is all. A short time ago I saw an article on the matter of fishing contests in your paper; so after talking it over among the members it was decided to have one, and see if it would not awaken some interest in fishing matters. It proved to be such a success that they had to have another, and that one proved to be a hummer, and has been the making of our club, bringing nearly all sporting fishermen into our ranks. CHAS. WEICHSLER.

Among the provisions of the club rules are these:

"Its objects are the enforcement of all laws for the protection of fish in the counties of St. Clair and Sanilac, and the cultivation of a due love for fishing with rod and line.



"The executive committee of the club shall examine into all cases of violation of the laws for the protection of fish in St. Clair and Sanilac counties and prosecute the same when deemed expedient, for which purpose the funds of the club shall be subject to their control.

"It shall be the duty of each member of the club to give information to the executive committee of all violations of the law for protection of fish in the counties aforesaid coming to their knowledge, together with such evidence as may have come to their knowledge.

"Each member pledges himself to faithfully and honorably obey the laws for the protection of fish and to use his best efforts to prevent others from disobeying them."

And this is the story of the fishing and the supper: The second fishing tournament of the Anglers' Protective Association was held at Stag Island on Thursday. Something like forty lovers of the gentle sport left the city on the Hiawatha at 1:30 o'clock and were met at the island by the fishermen who occupy the cottages there. Ed. Percival brought a party down on the steam launch Lark, and A. Schofield brought along his steam yacht Delilah.

Frank Haynes and Theo. Kaesemeyer were elected captains of the two sides and they chose their men, there being twenty-two on each side. Fishing began at 3 o'clock and continued until 7 o'clock. The party was

MARSHALL M'DONALD.

divided in a dozen or more boats. Each boat was required to contain members of both sides, and they were allowed to fish anywhere they might see fit, but the buying of fish was forbidden.

The boats returned to the island about 7:30, and after turning over their score cards the weary fishermen, gloating over the afternoon's sport, sat down to a banquet in the pavilion in the park. The entertainment was tendered by the cottagers at the island, the club being their guests for the day. The pavilion had been handsomely decorated during the day with bunting and the various implements used by fishermen. The supper was splendid and elaborately served by the ladies of the island. The tables were decorated with flowers and colored candles at intervals. Music was furnished by the Port Huron harpers, through the courtesy of Capt. Neal, of the ferry company. After the supper had been thoroughly discussed by the hungry crowd, Frank E. Beard called the assembly to order and said that he had been asked to act as chairman, but he regretted that Mr. A. R. Avery was not able to act in the capacity of toastmaster. The latter had been confined to the house during the day. He called upon Mr. Jos. W. Avery to relate his experiences of the day.

Mr. Avery said he had no experiences of his own, but had seen A. S. Phillips going head foremost over the side of the boat, and he supposed the latter must have caught a sucker.

James O'Sullivan was accused of buying fish, but he stoutly maintained his innocence, and claimed that some one had stolen his fish and that some had flopped out after he had caught them. Nevertheless he had returned with twelve.

Dan Runnels was too full for utterance.

Alex. Avery expressed his feelings at not being able to go fishing with the boys, and called attention to the catching of a sucker by A. S. Phillips, the rules being that he who should catch a sucker should forfeit his entire catch. He also complimented the members on their veracity, and said that the rules provided a fine for any one who should understate his catch.

Theo. Kaesemeyer was like Uncle Daniel—too full for utterance.

Nelson Mills welcomed the fishermen to the island and said he was trying to make it a place for people to enjoy themselves.

Capt. Beach congratulated the ladies on the supper and said that he had fished in nearly all the various waters in the United States, and had nowhere had so much sport as in the St. Clair River.

Rev. D. H. Cooper accused Will Boyce of being able to make more noise over a smaller fish than anybody else. He said that Capt. Neal and Dave McTaggart claimed that on Sunday Boyce had caught a fish with a Waterbury watch and a piece of money in its mouth which he had lost four years ago. The fish also had a recipe for purifying Black River, which was signed J. O'Sullivan.

Chas. W. Andrews, of St. Louis, told about fishing in the Mississippi.

Henry Middleton, of Louisville, Ky., said the people of his State didn't do much talking. They could drink better than they could talk.

Fred Haynes told how he caught the turkeys which had just been eaten, and A. S. Phillips denied the accusation that he had gone over the side of the boot after a sucker; said he thought the other fellow must have had something in the boat stronger than water.

Sam Boyce, Jr., F. A. Bailey, Fred W. Sherman and Capt. Neal were also called upon. Capt. Ed Thomas, of the Hiawatha, told how he had landed excursions on the head of the island twenty years ago, when the lower portion was all wilderness.

Mr. Cooper explained for Dan Runnels that his fish were not dead. He knew they were alive—when caught.

Three cheers were given for Capt. Neal in recognition of favors extended to the fishermen and a vote of thanks was given the ladies. At a business meeting Capt. Neal and Ted Haynes were elected honorary members of the club.

The report of the judges came last. Capt. Kaesemeyer's team won with a total of 1,420 points, Capt. Haynes's side getting only 1,040 points. The first prize was awarded to Charles Weichsler, he having 420 points to his credit. He caught eighteen pickerel at 10 points each, one black bass 12½in. long, 200 points, two rock bass at 15 points each, and a catfish. The prize was a glass water set.

Robert Dunsmore took the second prize, a silver match box, with 140 points. Bert Gibson won the third prize, a pair of Indian clubs, with 125 points. George Ernst and Henry Middleton were a tie for fourth prize with 120 points each. Ernst won the toss and received a hand mirror, Middleton taking the fifth prize of a bottle of perfumery. Capt. Beard and Fred W. Sherman were a tie for the sixth prize, a match box, with 110 points each. Sherman won the toss.

Then there was the booby prize. Ed. Percival and Sam Boyce each caught only suckers and had to toss up. Percival won. The chairman knew that Mr. Percival would take much pleasure with the prize and presented him with an order to have six teeth extracted by Dr. McGregor, free of charge.

The contest was decided on points, the different varieties of fish counting as follows: Black bass, 100 points. Rock bass, 15 points. Pickerel, 10 points. Perch, 10 points. Sheepshead, 10 points. Black bass over 12in. long to count double.

All present were united in their praises of the entertainment, voting it the finest of the kind ever given on the river, and so expressed themselves to their hosts.

Four sheepsheads were caught during the day.

Mr. Middleton is enthusiastic over the sport to be on St. Clair River and announces his intention to rent a cottage on Stag Island next summer and occupy it the entire season with his family. Capt. Beach thinks this most popular river will become a summer resort for its entire length during the next few years. It is likely that several tournaments will be held at the island next year. They are proving very popular with the members of the club.

BOSTON, MAINE AND CANADA.

BOSTON, Aug. 30.—The season is rapidly wearing away, and the time for the fall fly-fishing is almost at hand. In passing it may be remarked that the sportsmen who care for trout in the fall, in New England, are rapidly growing less. The trout begin to be full of milt or spawn, and it is not considered good sportsmanship to catch them. But there is a strong desire for August fishing, so many vacations occurring in that month. Mr. Harry Brown, a son of Walter Brown, one of the greatest lovers of angling the Boston wool trade ever knew, with his son, a grandson of Walter, are just back from Nova Scotia, where they have had good trout fishing. They went to Anapolis, and then some thirty miles across the country southward, toward Liverpool. They found good August fishing for trout that would weigh from ¼ to 1lb. The grandson of Walter is developing a love for angling that may lead him in the footsteps of his grandfather, though it is possible that he may never be able to paint a trout with the skill of his grandfather. One of the most attractive trout paintings I have ever had the good fortune to see was done by that gentleman. It might have been called the last struggle, so well did it represent a noble trout on the surface, with the cruel fly in his jaw, the taut line and the pliant rod.

Mr. J. Irving McLaughlin is back from the Bonny River region, in New Brunswick, and to say that he is pleased with his trip hardly expresses his enthusiasm. It was about his first trout fishing and camping trip, and to him it has been an ideal vacation. He speaks in the kindest terms of the accommodation and attention of their guide, Mr. Sullivan. Some good impressions of brook trout on paper are his trophies.

It has been Knights Templar week in Boston, and but little gunning has been done after shore birds. Tuesday was very much of a holiday, all the places of business being closed, and several gunners avoided the Knights Templar parade, and fled to the shore after shore birds. At Castle Island and Plum Island, at the mouth of Ipswich River, where they expected to find good flocks of summer yellow-legs, they found that the flocks had been broken and scattered by local gunners. Besides the day was a sultry one, and after considerable calling, and no birds, they gave up in disgust.

From Marshfield there are some good reports of flocks of summer yellow-legs. The local gunners have brought a number of bunches of birds to Boston. Mr. L. W. DePass, Assistant Secretary of the Chamber of Commerce, will take a day off at Marshfield on Monday. Or rather that day is a legal holiday, Labor Day, in Massachusetts. He will look after the birds, and is likely to get a good number. Several gunning parties along shore are planned for that day, and the FOREST AND STREAM shall have the results. SPECIAL.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the atest by Monday, and as much earlier as practicable.

SALMON ON THE RESTIGOUCHE.

AS I HAVE already informed you, the June angling was not nearly up to its usual standard, owing to the lack of water. This prevented the fish from lying in the reaches, usually the favorite spots, most of June. It is true the angler may say, "Fish must pass, why not catch them?" There are two reasons why. Fish won't rise when traveling, as a rule. Again, when river lowers and water clears, fish travel by night, only resting when reaching the deeper pools. As many salmon as usual were in the river. Mr. Rogers and friends got their usual score of 150 salmon. The Indian House, Patapedia and Devil's Acre pools gave fine fishing the whole season, the stage of water suiting them; another pool on the Sweeny property, now changed masters, also fished well.

The Upsilquitch River fished well in July, giving some eighty fish. The Metapedia River was also better than usual, particularly in the last three weeks of the season. On the Mowat pools I had fifteen fish in seven days. Something over fifty were taken by friends on them. The Causapcaul pools, fished by the Restigouche Salmon Club, also gave good sport. On the whole the year has been good where the angler could secure the proper pool.

I heard the Restigouche Salmon Club passed a law limiting the number of fish to a rod to eight per day. This may have a tendency to prevent the sport degenerating into slaughter as well as leaving a residue for the succeeding angler. It cannot bind riparian owners who fish their own waters, and it will require legislation to cure. I doubt if the average weight was over 20lbs. Large numbers of 12lb. and 14lb. fish were in the river, I should say their first year in as adults, and being young and foolish they took the fly more readily than their elders. Many 30-pounders felt the gaff; two of 38lbs. were got. My heaviest was 28lbs.

While on scores let me mention a ten-year-old son of Mr. A. O. Barbarie, who on a trout rod on Aug. 5 hooked, landed and killed a 14lb. fish near the Upsilquitch River. Another son of Mr. Ayers, of Bangor, took eight salmon, a young fisherman about 13 years old. Young Q. P. Mowat, same age, killed a 14lb. fish on a trout rod and fly, at Mill Stream, Metapedia, on the 10th.

The last three weeks of the season turned out cool and showery, and the latter end was much better, particularly so with any fish newly in from sea. The change put new life in the June fish, as, if they did not take the fly, they would come up and look at it, and the angler knows well what new life he gets when a salmon makes a pass at the fly, and how [many times he will change his fly and position to get him to come again.

I see our friend Mr. Mitchell, of Norwich, on his outing is doing the Scottish Locks for trout, and he did not get a first prize in a competition. One sure thing, where Mr. Mitchell fishes, you will never find his line dry.

So far I have no accounts of scores on the lower rivers, I understand nothing extra has been done. I see the St. John River (Gaspe) is reported as turning out large fish. I purchased salmon there three years and never got a fish over 12lbs. from it. Perhaps the restocking it with the Dartmouth fish has increased the size. The lessee reports 100 fish seen in the river in one pool. Out of the many on the 100 miles of Restigouche water 500 salmon can be seen to-day, and the young smolt in their new silver dress are now dropping down toward the ocean in shoals in order to perpetuate the name and fame of the old Restigouche.

JOHN MOWAT.

CAMPBELLTON, N. B., Canada.

SOME NAMES OF FISHES.

QUEBEC, Aug. 26.—*Editor Forest and Stream:* I am frequently asked the origin of the names of some of our fishes. After considerable inquiry, finding many different opinions, I have come to conclusions partly my own, to the best of my belief, and will state my reasons.

Maskinongé.—This fish is called by many the masquellongé, muskellunge, mascalonge, muskellunjeh, etc. My opinion is that the pioneers (French explorers) of this country when traveling in canoes no doubt fished for food on their way, catching among many other fishes the pike, which they knew and called by the same name that it was known by in France then as well as now, *le brochet.* It is probable that when they reached Lake St. Peter, near the River Maskinongé, where then as now the fish is found, the travelers caught their first specimen of this monster pike; and comparing it with the smaller members of the same family, they remarked the difference in size and markings, and to distinguish it from the others called it maskinongé, after the name of the river where it was caught. This river empties into Lake St. Peter, and is situated in the county of Maskinongé, Province of Quebec.

Doré.—This fish is called wall-eyed pike, pike-perch, Ohio salmon, etc., and was not known to the French at all. It no doubt takes its name from its yellow or golden hue. This is pretty freely admitted. Doré means golden or gilded.

Poisson Castor, Dogfish, Mudfish, Bow-Fin, Grindle, Lawyer, etc.—This good-for-nothing, voracious fish has a rounded tail somewhat resembling that of the castor or beaver in shape. Hence it is called *poisson castor* (beaver-fish) by the French. Among its many other names is that of the lawyer, which is said to be owing to its biting at anything, and when caught no one wants it, for he is a slippery fellow.

Ouananiche, Wannanish, Winninish, Landlocked Salmon.—This gamy and combatant little salmon was doubtless met with at Lake St. John by the first Jesuit missionaries. The Indians called it then as now "ouananiche"—little salmon—"ouanan" meaning salmon, "iche" little; and it really is a dwarf salmon. J. U. GREGORY.

How about Turtles and Gars?

ST. LOUIS, Mo., Aug. 27.—*Editor Forest and Stream:* Sitting on the Okaw Bridge in the burden and heat of the day, I was amusing myself in trying the effect of the new-fangled mantled bullets on turtles and gars, when the thought struck me, Is this a cruel waste of innocent life? We are taught that all things animate have their uses, and that it is more or less a sin to disturb the equilibrium of nature by killing things unfit for food. But the more I thought the fact over, the less use I could find for turtles and gars. They destroy things that are good for us to eat; and nothing seems to prey upon them in turn. How, then, about the "balance of nature?" They are responsible for much ill-temper and naughty speech on the part of our brethren, the anglers. I remember one occasion in particular when an exemplary man of my acquaintance passed nearly a whole day watching the most exasperating nibbles pulling at unbaited hooks, and crying aloud in the agony of his great grief, "*God* forbid that I should swear!"

Are gars and turtles good for anything? Does anything but the Missouri rifle crank prey upon them? Are they not an all-around unmitigated nuisance?

I put these questions to a gentleman in overalls who stood on the pier watching my target practice, and he replied in his quaint drawl, "I reckon God A'mighty made them to encourage rifle shootin'."

I reckon so, too. What does Mr. Hough reckon? (Here is my hand, brother; go in and hit Science another lick—I believe in fairies, me). And they of the gentler school, woodsmen poets, "Coahoma," "Kelpie" and the rest—now, honor bright, how about turtles and gars?

HORACE KEPHART.

Ouananiche Almost Inexhaustible.

QUEBEC, Can., Aug. 27.—I had the pleasure of taking quite a number of ouananiche in Lake St. John in July of this year, and found them in as great numbers and about the same size as I did twenty years ago. They are, I believe, almost inexhaustible. If all anglers will act as well as those I met at the Grande Décharge this season, every one of whom I came across while fishing putting back alive into the water all small fish, showing that they were true sportsmen and gentlemen, they will greatly assist in keeping up the supply. It affords me much pleasure to make this statement.

There are miles of lurking good feeding places where these fish cannot be interfered with by the angler. The waters fished over occupy only spaces here and there, with long stretches between, in which great numbers of the fish safely enjoy the summer months.

I hardly believe that they will perceptibly diminish in numbers for many years to come. The supply from the great Lake St. John and several large rivers emptying into it appears sufficient to keep up the number in the waters known as the Grande Décharge, the favorite fishing ground; and the true sportsmen, by putting back small fish and contenting themselves with a reasonable daily catch, can materially aid in maintaining the present excellent state of the fishing as I found it.

J. U. GREGORY.

Tim Pond Trout.

NEW YORK, Aug. 29.—*Editor Forest and Stream:* I have just returned from a two weeks' trip to the Dead River country in Maine, most of the time being spent at Jules K. Viles's camps on Tim Pond, which is truly an ideal spot for those who love to fish for speckled trout. I was accompanied by my wife and our son, who is 7 years old. We all stood the trip in from Eustis to the pond very well. The boy especially took delight in the buckboard ride. Mine is a fishing family, and each of us had a fly-rod. Mrs. Simpson and the boy each succeeded in taking two trout at a cast within a few seconds of each other. This was too much of an event for me to let pass unnoticed, so I have had the fish skins mounted for decorative purposes. Tim Pond is the best place I ever saw for August fishing with a fly. We took an average of thirty trout a day, running from 6oz. to 12oz. each. We caught many smaller ones, but returned them all. The largest number we took to the camp was forty-three in one day, although if we had been so disposed we could have got more, as we threw back at least as many as we killed. While we were in camp we saw several fish caught weighing from 1½ to 2lbs., but nothing larger than ½lb. fell to our lot. We saw abundant deer and partridge signs.

WILLIAM SIMPSON.

Lake Winnepesaukee.

MIRROR LAKE, N. H., Aug. 30.—Noticing W. B. Smart's disparaging remarks in your last issue on fishing in Lake Winnepesaukee, I take the liberty to write of my luck. Two weeks ago a friend and myself went trolling in my folding canvas boat and in three hours had the "scientific" fortune to secure three bass weighing respectively 4lbs. 6oz., 4lbs. 2oz. and 3lbs. 9oz.; total 12lbs. 1oz., besides several smaller ones.

A week ago I spent the day fishing and secured nine bass, which weighed 13lbs. As I have visited this part of the country for five seasons and have seen very little mention of it in your columns, I desire to mention my success here during July of last year, when I secured six bass weighing respectively 2lbs. 15oz., 3lbs. 3oz., 3lbs. 12oz., 3lbs. 2oz., 4lbs. 4oz., 3lbs. 3oz. I caught all while still-fishing with pickerel frogs. This year, however, I have had best success while trolling with a Skinner casting spoon. The first year that I was here ('89) I caught a small-mouthed bass weighing 5½lbs., while my mother beat the record for this vicinity with one weighing just 7lbs. and measuring 21½×16¾in. around. G. L. G. W.

The Nepigon.

NEPIGON RIVER, Aug. 20.—The tourist season is now at its height; there are about twenty-five ladies and gentlemen enjoying the privileges of the stream. The Nepigon is equaled by no other river on the continent for both scenery and fishing, and the quality and size of its trout have been tested this season. This is one of the best seasons for fishing that has been for years. Among those who are now up the Nepigon are: Dabney Carr, Dr. N. B. Carson and family, R. S. Carr and son, E. Stevenson, Dr. E. J. Marsh, L. M. Yale, T. M. Stetson and F. W. Salsbury.

Judge J. Fitzsimmons and Mr. J. W. Hague have just returned from their trip up the Nepigon. They have had excellent sport, catching several 5lb. and 6lb. trout; this is their first experience on the Nepigon. They say seeing is believing, so they preserved a few 6lb. trout to take home with them to convince their friends who doubt their fish stories.

JOHN E. NEWSOME.

A Small Boy's Big Catch.

NEW YORK, Aug. 29.—*Editor Forest and Stream:* Victor Grob, a lad of 13 and a great fisher, caught on Wednesday, the 28th inst., at the foot of West 152d street, at one haul the following: On the bottom hook an eel, on the next a large soft shell crab, on the third hook a Lafayette, and on the fourth hook a hard shell crab, and landed them all safely on the dock. Can any one beat that?

AN OLD SUBSCRIBER.

Lake Champlain Bass.

LAKE VIEW HOUSE, Vt., Aug. 26.—As a constant reader of FOREST AND STREAM, I look with a great deal of interest at your reports of the catches made in various parts of the country from time to time, and as we have your invitation to "report your luck" before us all the time, I send the following: Myself and son Harold (15 years of age), without any guide, took twenty-five black bass at Wood Bar, Samson's Lake View House, Lake Champlain, Vt., 5 A. M. and 12:30 noon. Nineteen were taken by 8 A. M. and we stopped fishing when we had taken twenty-five. Largest weighed 3½lbs., the three largest 8lbs., fifteen weighed 30½lbs., and twenty weighed 38lbs.; total weight of catch 42lbs.

Mr. A. L. Wager, of Rhinebeck, also took nine fish in two hours and a half, weighing 19½lbs., at same place and time. J. K.

Caught a Shark with a 12oz. Rod.

AL CUMMING had an encounter with a huge shark at Santa Cruz on Sunday. Cumming had engaged a boat and was out for salmon. Suddenly there was a jerk at his line that almost capsized the boat. The fish came to the surface, and his fins showed that he was a big shark. Cumming toyed with him for a while, and as the shark felt the sharp prong of the hooks forced into his mouth he made a plunge, going down fully 100ft. and reeling out about 500ft. of line. Cumming had only 100ft. more on his reel, and if the shark had accomplished that distance he would have escaped. But he was exhausted and came to the surface again. Then, with the skill of an experienced angler, Cumming played the line carefully, and after great effort got the shark alongside of his boat. Both the shark and his captor were winded. The boatman killed the shark with one blow of his boat-hook.

Mr. Cumming caught the shark with a 12oz. salmon rod and a linen salmon line. The fish was more than 5ft. in length and weighed fully 150lbs. It is the largest shark ever landed with a hook and line, and its capture was due to the perfect knowledge of fishing that Mr. Cumming possesses. The contest lasted just an hour, and exciting as it was for Mr. Cumming it was also as much so for the onlookers. Fully twenty boats were in the vicinity.—*San Francisco Examiner.*

Fishculture.

Loss of Fish at Caledonia.

THE principal hatching station of the State of New York is, as is pretty well known, situated on Caledonia or Spring Creek, near Mumford, in Monroe county. This was the first hatching station to be established by the State, and it is the largest one now operated by the Commission. Spring Creek, as it is locally known, is made up of springs which rise from the ground near Caledonia, in Livingston county, and at this point there is a mill pond. Below the mill pond the stream is controlled for some distance by the Caledonia Fishing Club, and then comes the State property, on which is the hatchery, the ponds for stock fish, rearing ponds, etc. Below the State property the stream is controlled by another fishing club. The hatchery, the stock ponds, the rearing ponds or boxes, are all dependent upon the creek for a supply of water; or, in other words, the main creek, with the mill pond at its head, flows through all the receptacles for fish, from the hatching trough to the ponds containing the largest breeders. On the property of the Caledonia Fishing Club is a club house, and the gentlemen of this club are as much interested in maintaining the supply of fish in this part of the stream as any citizen of the State is in maintaining the stock of fish at the State hatchery below. All along the creek there have been erected "hides," as they are called, which are simply hiding places for the fish, which nature did not supply as liberally as the club and the State thought necessary for the comfort and security of the fish. With this preface as to the location of things at Caledonia I may come to the main subject. Last June there was a great loss of fish in Caledonia Creek and in the State hatchery and rearing and breeding ponds.

I have seen several brief accounts in the newspapers of thisdisaster, but not one that I read gave a correct account of th e loss or of the reason for it.

Early in June I was at the Caledonia hatchery and this whole country was suffering from drought such as was never known before, I was told. Springs were drying up or flowing half or less their usual quantity of water, and the heat was intense, for I recall that the thermometer stood at 96° in the shade at the hatchery building. Mr. James Annin, Jr., the general superintendent of the State hatcheries, lives on this creek a little way above the State property, and on the morning of June 6 I went from his house down the creek in a boat to the hatchery. The water was very low and clear, and the fishing club, as we passed over their water, had a man employed raking from the bottom some of the moss and vegetable growth which interfered with fly casting. In the afternoon when I returned up stream to take the cars at Caledonia the water had raised materially and was very muddy. In the morning I had noticed three dead trout on the bottom, but in the afternoon I could not see them. It was evident that the mill was in operation at the head of the creek, and the volume of pond water coming down in consequence was greater than that previously in the stream. On my way to the station I noticed the mill pond very low and fairly reeking with decomposed and decomposing vegetable matter. This, I was told, was most unusual.

The next morning many dead fish were found, chiefly yearlings, near the pond, and from that time on the deadly pond water, poisoned with decaying water weeds, worked its destruction upon the fish of the Caledonia Fishing Club, then upon the State fish, and then upon the fish in the creek below the State property. The fry in the troughs went first and then the yearlings, and finally the stock fish.

So far as the State is concerned the loss is a blessing in disguise, as the stock fish in the ponds had been so hybridized and monkeyed with that it was difficult to tell whether some of them were most bull pup or most yaller dog. As soon as it was discovered that the fish were dying because of the flow of water from the mill pond every possible effort was made to check the disaster. The State and the Caledonia Fishing Club had the same interest at stake and both worked together. Scientific men from Rochester hastened to the spot to determine the cause of death, and the science of fishculture put forth every effort to check the disease, for disease it was, though brought about by the warm pond water, which was killing the fish by thousands. In another column of this journal may be found the report of Prof. Dodge, one of the first on the ground, made to the Commissioners; the report of Prof. Lathinon made to Commissioner Babcock, and the report of Prof. Smith made to Mr. Annin, which show the cause of the disaster. If State fish alone had suffered it might be said that it was the visitation of an all-wise Providence for the purpose of putting the seal of disapproval upon the hybridization of fish.

Now, as to the actual loss of fish sustained at the hatchery and the number of fish that are left on hand of all kinds and ages, I have seen but one printed account of the loss, and this was furnished by a former superintendent of the station to a Western paper. After enumerating the various species of breeding fish and the number of each species at the station, he says: "They are all dead. Furthermore, all the fish in the creek from the railroad bridge [this bridge crosses the creek at the lower end of the State property] to the head of the stream are dead. The natural fish food in the creek, including shrimp, crayfish, sticklebacks, miller's thumbs and water insects of all kinds, are gone."

This is a bad showing, if true; but, as his estimate of dead breeding fish is 45,000 greater than he reported he had on hand last year (and it is not probable that he then underestimated his stock fish), and no breeders have since been added to the ponds, it may be in order for him to explain, while in the explaining business, why it is that the loss was 45,000 greater than the number of fish he had on hand when he was in charge of the hatchery. The truth is, there was no such loss of breeding fish, and the condition of things in the creek is not as bad as stated in that newspaper article. These are the facts, as near as they can be honestly computed. The loss of breeding brook trout was less than 1,000, about 3,000 hybrids classed as brook trout, about 2,000 to 2,500 California trout, 3,000 brown trout, and 50 large lake trout past breeding and kept in the ponds merely as show fish. So much for the fish in the breeding ponds. In addition, there was a loss of 4,000 to 5,000 two-year-old brook trout and California trout, and about 100,000 fry of various kinds.

There are left at the station and now in good condition about 1,000 of the largest brown trout, 100 or 200 California trout and from fifty to seventy-five of the large lake trout, perfectly useless except for show. There are also 3,500 one and a half year old brook and California trout and 20,000 fry of various kinds on hand. The young fish have, however, been placed in the ponds since the visitation of the wrath of Providence.

Fish are being sent to Caledonia from other stations and will be from outside sources, and the station will soon be in better condition than before the flood. As to the loss of fish food, insects are rising in all parts of the creek and some good catches of trout have been made in the waters of the Caledonia Fishing Club. The hatchery foreman has made catches of brook trout in the creek below the State ponds with a fly, and has placed the fish in the breeding ponds, where they may be spawned artificially in the fall. The stock fish now on hand will probably yield 1,000,000 eggs and they will be added to materially before the spawning season commences, and all will be pure bred fish with no males in the whole outfit. A. N. CHENEY.

Prof. Dodge's Report.

TO THE COMMISSIONERS OF FISHERIES, GAME AND FORESTS, Albany, N. Y.—Gentlemen: In pursuance of your request I made yesterday another visit to the hatcheries, creek and mill pond at Caledonia.

At the State hatchery all of the young trout in the trough are dead, except a few in one trough, in which the treatment with salt was begun earlier than in the others. In this trough there still remain a few young fish, though even these will probably be dead in a day or two. It is significant that the salt treatment has evidently enabled the fish in this trough to survive for even so short a time as three or four days longer than the others. The mature fish in the ponds are still dying and present the same appearance as noted for the past three weeks, viz.: some of the fish being covered with larger or smaller patches of water mould, while others show bleached spots on various portions of the body, but no mould.

In company with Mr. Annin, I went to the mill pond and we walked around the entire pond at the water's edge, examining the various refuse heaps and tracing every inflowing stream to its source. The pond is almost entirely filled with a growth of stonewort (*Chara*) or "moss," as it is sometimes called, and of water-silk (*Spirogyra*). The water is very low and in some places has receded for several feet from the natural margin of the pond. Many of the plants are dead, and the greater part of the pond contains decomposing vegetable matter. We found no place where a house drain empties directly into the pond. Two barns stand so close to the water (one being partly over it) that their drainage must necessarily get into the pond. Two or three manure heaps probably contribute their leechings after every rain. In various places ashes, cinders, dead grass and branches of trees, old iron, paint pails, broken crockery and refuse of all sorts had been dumped into the water or stream along the shore. In fact, the mill pond seems to be the general garbage receptacle and dump for all of the houses in the neighborhood.

Between the pond and the grist mill lies a filthy spring hole from which the sprinkling carts of the town draw their supply. The overflow from this place runs into Spring Creek. The spring hole at present is filled with the decaying branches and leaves which have fallen from the surrounding trees, and which have been accumulating for many years past. An immense growth of bacteria is now to be seen in the water in this place.

A tributary to Spring Creek, but not to the mill pond, is the East Branch, which arises from a spring (Brady's Spring) under a drug store in the village of Caledonia. At the head of this stream stands a privy which evidently is constantly used, and the refuse from which is carried away down stream and into Spring Creek. House drainage from the apartments over the drug store is carried in a trough over the roof of the privy and dropped into the stream. Further down this water runs under a livery stable and carries away the drainage from this establishment as well as the washings from the barnyard. Still further down is built a pig pen and yard inclosing part of the stream. The land inclosed in this pig yard slopes toward the stream, and into the latter necessarily runs all of the drainage from both yard and pen. Several pigs are at present confined here and probably spend part of their time wallowing in the water. Back of the drug store are piled barrels and various other receptacles from which drippings may find their way into the creek.

Samples of water were taken from eleven different places at the State hatchery, the mill pond and its tributaries, Spring Creek and Mr. Annin's hatchery. Culture experiments were started upon the spot to endeavor to find which waters are infected with the water mould, for this organism, even though further developments may show that it is not the only cause of death among the trout recently, is undoubtedly an exceedingly important factor in the epidemic. It will be several days before these culture experiments can be completed, and without awaiting their conclusion it has seemed best to report at once upon the condition of the mill pond.

In view of what was found there only one recommendation is possible, viz.: to abolish the pond as such at the earliest possible moment. To do this will of course necessitate the purchase of the pond and water rights from their owners, but I am firmly convinced that this measure must be carried out if Spring Creek is to be maintained as a trout stream and the State hatchery is to be operated with any assurance of safety and success. If left in its present condition the mill pond will always be a menace to the work instituted at the State hatchery and to the preserve of the Caledonia Fishing Club. The destruction of fish witnessed the past few weeks may be repeated during any or every succeeding season. The pond should be purchased, the dam removed and the water from the springs allowed to seek their natural channels. If this plan be adopted there will no longer be any opportunity for the drainage from privies, houses, barns and pig pens to get into the creek, there will be only the natural amount of decaying vegetable substances present and there will be no further trouble with hot water from the pond raising the temperature of the creek many degrees above normal. There will be no chance for water moulds and bacteria to increase in such enormous numbers, for there will be neither the abundant food supply now to be found in the pond nor the high temperature needed for their development. The water flowing from the spring in the bottom of the pond will pass directly into the creek instead of being held in check until the sun warms it up to 85° or more.

For the present it seems to me that the pond, having first been treated to a very liberal allowance of salt, should be drawn down as low as possible and allowed to become as dry as the sun can make it. This will destroy many of the organisms (such as mould and bacteria) now in the pond water and produce a very thorough disinfection of the bottom. The water should be drawn off rapidly so as to get it through the creek and out of the way in the shortest time. Gradual withdrawal of pond water into the creek means a longer exposure of the fish to the attacks of the moulds. After the bottom of the pond has become somewhat dry much of the refuse can be raked out and removed.

The position of the privy drain and pig pen on the East Branch should be changed so that this stream will no longer be polluted.

All of the "hides" along Spring Creek should be thoroughly examined and the bodies of the dead fish removed and buried. Mr. Annin told me that under a single "hide" he found over 400 dead fish (if I remember correctly) in all stages of decay and completely overgrown with water mould. I think that this discovery goes far toward explaining the severity and duration of the epidemic among the fish, for those affected would naturally remain under the "hides" with the well fish and infect the latter, while the bodies of the dead held by the roots and plants growing down into the water have accumulated in these places, and the water moulds have thus had a wholly unsuspected location and food supply. It is little to be wondered at then that in spite of the stringent and heroic precautions taken at the State hatchery to save the fish the latter were simply overwhelmed by enormous numbers of the spores of the moulds and water polluted by the putrefactive bacteria and other organisms developed on the bodies of the dead fish.

In this connection it is interesting to notice that in every sample of water, except the one from Mr. Annin's hatchery and the one from the spring west of the mill pond, there is seen this morning (about fifteen hours after collection) a large development of bacteria. Further, two small trout taken while still alive from a trough in the State hatchery are now nearly dissolved by putrefactive bacteria, while two similar specimens taken from Mr. Annin's hatchery have scarcely commenced to decay.

The spring hole near the grist mill should be treated with salt and then raked clean.

I believe that the measures mentioned above must be carried out if the trout in Spring Lake and at the State hatchery are to be saved. CHARLES WRIGHT DODGE.

The Kennel.

FIXTURES.

BENCH SHOWS.

Sept. 9 to 13.—Industrial Exhibition Association's annual bench show, Toronto, Ont. C. A. Stone, Sec'y and Sup't.

Sept. 10 to 13.—Binghampton Industrial Exposition's fifth annual bench show, Binghampton, N. Y. A. P. Fish, Sec'y.

Sept. 17 to 20.—Rhode Island State Fair Association's third annual bench show, Narragansett Park, Providence, R. I.

Sept. 17 to 20.—Orange county Fair Bench Show, Newburgh, N. Y. Robert Johnson, Sec'y.

Sept. 17 to 20.—Montreal Kennel Association's show, Montreal, Can. Geo. K. Lanigan, Hon Sec'y-Treas.

Sept. 17 to 20.—Milwaukee Kennel and Pet Stock Association's first annual bench show, Milwaukee, Wis. F. S. Morrison, Sec'y.

Sept. 18 to 20.—Omaha Kennel Club's second annual show, Omaha, Neb. E. L. Marston, Sec'y.

Oct. 8 to 11.—Danbury, Conn.—Danbury Agricultural Society. G. L. Rundle, Sec'y.

1896.

Feb. 19 to 22.—Westminster Kennel Club's twentieth annual dog show, Madison Square Garden, New York. James Mortimer, Supt.

FIELD TRIALS.

Sept. 10.—Morris, Man.—Manitoba F. T. C. John Wootton, Sec'y, Manitou.

Oct. 22.—Columbus, Wis.—Northwestern Beagle Club's third annual trials. Louis Steffen, Sec'y, Milwaukee.

Oct. 29.—Assonet Neck, Mass.—New England Field Trial Club's fourth annual trials. Arthur R. Sharp, Sec'y, Taunton, Mass.

—. Morris, Man.—Northwestern Field Trials Club's Champion Stake. Thos. Johnson, Sec'y, Winnipeg.

Oct. 30-31.—Monongahela Valley Association Trials, Greene county, Pa. W. H. Beazell, Sec'y, Homestead.

Nov. 5.—Chatham, Ont.—International F. T. Club. W. B. Wells, Sec'y.

Nov. 5.—Oxford, Mass.—New England Beagle Club trials. W. S. Clark, Sec'y.

Nov. 7.—Newton, N. C.—U. S. Field Trial Club's Trials A. W. B. Stafford, Sec'y, Trenton, Tenn.

Nov. 11.—Hempstead, L. I.—National Beagle Club of America, fifth annual trials. Geo. W. Rogers, Sec'y, 250 West Twenty-second street, New York.

Nov. 18.—Eastern F. T. Club, at Newton, N. C. W. A. Coster, Sec'y, Saratoga Springs, N. Y.

Nov. 25.—Continental Field Trials Club's quail trials at Newton. P. T. Madison, Sec'y, Indianapolis, Ind.

Dec. 2 to 4.—High Point, N. C.—Irish Setter Club's trials. Geo. H. Thompson, Sec'y.

1896.

Jan. 20.—Bakersfield, Cal.—Pacific Coast Field Trial Club. J. M. Kilgarif, Sec'y.

Jan. 20.—West Point, Miss.—U. S. F. T. C. trials. W. B. Stafford, Sec'y.

Feb. 3.—West Point, Miss.—Southern F. T. C. seventh annual trials. T. M. Brumby, Sec'y.

COURSING.

Sept. 24.—Lisbon, N. D.—Cheyenne Valley Coursing Club's meeting. H. C. Waterhouse, Sec'y.

Oct. 1.—Aberdeen, S. D.—Aberdeen Coursing Club's meeting. J. H. Davis, Sec'y.

Oct. 8.—Huron, S. D.—American Waterloo Cup. F. B. Coyne, Sec'y.

Oct. 23.—Goodland, Kan.—Altcar Coursing Club's meeting. T. W. Bartels, Sec'y.

Oct. 28.—Goodland, Kan.—Kenmore Coursing Club's meeting. C. F. Weber, Sec'y.

Monongahela Valley Trials.

HOMESTEAD, Pa., Aug. 30.—*Editor Forest and Stream:* The Monongahela Valley Game and Fish Protective Association will hold its first field trials on the preserve grounds, Green county, Pa., Oct. 30 and 31. Derby and all-age stake to be run; pointers and setters to run together. Entries close Oct. 1. Entrance fee $10; $5 to nominate and $5 to start. Ten per cent. of entrance money to be deducted by the Association. The balance to be divided into 50, 30 and 20 per cent. for winning dogs. Eastern Field Trial rules to govern.

This Association was formed last winter by a number of the leading sportsmen of Pittsburgh and vicinity, who, having hunted and fished in many sections of the country, recognized the fact that the game and fish were fast being depleted and little was being done to preserve them, saw the necessity of taking steps to protect and stock the fields and streams within easy access of the members. About 8,000 acres of land, particularly well adapted to the protection and propagation of game and fish, have been leased. One hundred dozen quail were liberated last spring and one hundred dozen ordered for delivery this fall. Deputy Game Warden J. W. Phillips, overseer of the preserve, reports birds more plentiful than for years, this having been a favorable season for hatching.

We are now raising a number of Mongolian pheasants with the object of stocking the preserve with them.

Arrangements have been made for bass and salmon fry to stock the streams that flow through the grounds.

A great feature of the Association will be the annual field trials, in which all are invited to participate. Visitors can be assured of a royal welcome and a good time. We hope the local and nearby sportsmen will take an interest in the trials and give us their support by entering and running their dogs. Mr. W. S. Bell, the well-known field trial judge and treasurer of the Association, will judge the trials.

The Association, which is limited to sixty members, is composed of some of the leading professional and business men of this city. Dr. George Gladden is President; W. S. Bell, Treasurer, and W. H. Beazell, Secretary. The Directors for the ensuing year are Drs. Gladden and Doyle, Messrs. W. H. Beazell, W. S. Bell, A. C. Peterson, W. T. Lindsey and S. B. Cummings. Solicitor, C. G. McIlvaine, Esq. Any information concerning the trials will be cheerfully given by applying to

W. H. BEAZELL, Secretary, Homestead.

Manitoba Trials All-Age Stakes.

MANITOU, Man., Aug. 22.—I inclose you herewith list of entries for the club's All-Age stakes. The number exceeds our expectations and there will no doubt be a grand gathering at Morris next month.

ENGLISH SETTERS.

L. Rausch, St. Louis, Count Bondhu II.
F. R. Hitchcock, New York, Tory Dotlet.
C. W. De Pauw, Indiana, Auld Clootie.
E. McKenny, Manitou, Val Lit.
Ed. A. Burdett, Pennsylvania, Anne of Abbotsford.
Arthur C. Ely, Chicago, Mattie Ringold.
Frank Richards, Minnesota, Molly R.
John Wootton, Manitou, Bonnie Lit.
W. F. Ellis, Manitou, Colombus.
N. T. Harris, Kentucky, Cynosure, Dixie's Flag and Tony Boy.
Philip M. Essig, Mississippi, Rod's Top.
Herbert Ames, Massachusetts, Lady Mildred.
A. P. H. Lonsdale, England, Roma.
Thomas Johnson, Winnipeg, Trilby, Patti, Psyche and Sancho.
C. G. Stoddard, Dayton, Gladstone's Speck, Anto Gladstone and Hal Pointer.
Chimo Kennels, Winnipeg, Larry Noble and Ortolan.
Manchester Kennel Co., Tennessee, Gleam's Dart and Gleam's Ruth.
T. G. Davey, London, Brighton Dick.
Chas. W. Graham, Winnipeg, Gladiator II.
R. Bangham, Windsor, Dash Antonio.

POINTERS.

Charlottesville Kennels, Virginia, Selah.
W. N. Kerr, Pittsburg, Little Ned.
N. T. De Pauw, New Albany, Jingo.

JOHN WOOTTON, Sec'y.

Toronto Show.

TORONTO, Aug. 27.—*Editor Forest and Stream:* C. H. Mason, after two weeks' consideration and without even notifying the committee until asked last Saturday, has declined to judge the classes allotted him at the bench show of the Industrial Exhibition Association. Mr. Mortimer will take Boston, bull, fox and black and tan terriers; Mr. Davidson, wolfhounds, greyhounds and deerhounds.

The following specials have been added for beagles: $10 for best kennel; $5 for best pair, dog and bitch; $5 for best stud dog with three or more get; $5 for best pair dogs; $5 for largest number of beagles entered by one party or kennel.

The Rochester-Pittsburg Kennels, now holders of the Grogan cup, offer the same for competition under the original terms—for the best bull-terrier owned and exhibited by a resident of Allegheny county. Puppies for sale may be placed in a large tent adjoining the building, in which benches will be built at the charge of $5 for care and feeding. The entries for this must be sent in at once; only a limited number to be entered.

C. A. STONE, Sec'y.

A. K. C. Meeting.

NEW YORK, Aug. 20.—A Special Meeting of the American Kennel Club will be held at the office of the Club, No. 55 Liberty street, this city, on Thursday, Sept. 12, 1895, at two o'clock, to consider and vote upon certain amendments to the Constitution and Bench Show Rules, as recommended by the Committee on Rules. These amendments are of vital importance.

The regular quarterly meeting of the Executive Committee of the Club will be held at the same place, immediately following the meeting of the Club.

By order of the president.

A. P. VREDENBURGH, Sec'y.

Sulphur for Fleas.

MANCHESTER, N. H., Aug. 20.—I think I have found a simple way to rid our dogs of fleas. Cleanse the bed thoroughly, sprinkle a good supply of dry sulphur on the floor, and place clean hay or straw over it.

Previous to treating the kennel as above I could comb from thirty to fifty fleas per day from my beagle. Now I am surprised if I find a half dozen at a combing.

J. B. E.

NATURAL METHOD OF RETRIEVING.

(From "Fetch and Carry," by B. Waters.)

The natural method cannot be successfully applied to all dogs. As to old dogs it is generally uncertain and, in most instances, unsuccessful in its application. Only a relatively few old dogs have much playfulness and those are generally discreetly observant. They are discriminating even in their play, and it is not an easy matter to deceive them, or at least it is not easy to deceive them a number of times in succession on the same matter. They soon fathom the purpose of the trainer and thereafter refuse to be taught. They are too intelligent to believe that work is amusement.

Sometimes, by associating the act of fetching with a palatable reward, given after the act is completed, the mature dog will learn to fetch for the profit of the effort, the material gain of something to eat which he derives from it. But he soon learns to play his teacher for the rewards, and it is extremely difficult to train him past the stage wherein he looks for immediate profit. His estimates are faultless. His cunning is equal to the occasion. If his hunger is appeased, he loses interest in the lesson at once. Therefore it is better to be sparing in the rewards, so that his appetite may not be satisfied too quickly.

It is, furthermore, a noteworthy fact that, when a dog works for something to eat, he is sooner and more easily satisfied than when his food is disassociated from work, in which matter he shows a degree of perception akin to that of the wiser animals. He does not like to work too much, which may be construed to his advantage as a reasoning animal.

A few families of dogs, which are naturally intelligent, good-tempered and industrious, may take readily to retrieving and learn it quickly with little teaching; but the act is due to intelligence, not to instinct.

Even special retrievers, which are carefully schooled, frequently retrieve in a faulty manner. No system of training, however, will make all dogs good performers. Dogs vary in their capabilities quite as much as men. The intelligent dog, from experience and observation when in actual field work, soon adds a comprehensive finish to the elementary lessons taught him by his trainer. He learns the practical purposes of the art and exercises an intelligent application regardless of fixed rules. The work of the intelligent dog in retrieving, as in all other branches, will be incomparably higher in quality than that of the dog which works on the formal lines of an education. The intelligent dog, however, is not exceedingly numerous.

As to the length of time required to educate the retriever, it can be determined only by actual trial. By the natural system, it is safe to say that the time from puppyhood to maturity is none too long. However, the conditions vary greatly comparing one dog with another.

Instances have been mentioned, by writers, of puppies being taught retrieving in one lesson, and of some puppies which retrieved without any lesson. It is well to ignore such statements when considered in connection with practical retrieving. If they have occurred, they are too rare to be considered a factor in practice.

In the practical application of the natural method, it is first necessary to secure the puppy's affection and recognition as his master. By making a companion of him as much as possible, he will soon become devoted. If he is petted betimes, and his interest is engaged by giving him palatable morsels occasionally and by personally attending to giving him his regular meals, he will soon become inseparably attached to his master.

It requires no effort to develop the puppy's fondness for play. That trait he has naturally. The trainer has but to present the opportunity for its exercise.

It is better to give the lessons in a room. Then the puppy's play will be confined within proper limits; he is then under better control, and there are no outside incidents interposing to obstruct the lesson. Spectators should be excluded from the room, as they distract the dog's attention.

A ball or glove is the object commonly employed for the puppy's edification in the first lessons. The glove is not a good article for the purpose. It absorbs saliva, and the puppy is predisposed to bite and tear it, which may later develop into that most objectionable fault, namely, a hard mouth. A ball is better. It forces the puppy to open his mouth wider, it is more difficult to hold or to bite, and it cannot be caught and shaken.

In the early lessons the puppy has his way in everything, to a great extent. Everything being ready, the trainer engages the puppy's attention to the ball and throws it temptingly out. The puppy springs after it instantly, proudly takes possession of it and when the trainer attempts to take it he tries, by wily maneuvers, to baffle him. If left to his own devices he will sometimes permit the trainer to get close enough to reach for the ball, but he watches him closely, eyes bright, muscles tense, and he dodges quickly and is away at the moment that the trainer reaches forth to grasp the ball. His bearing is then proud, and he challenges further play. He is then delighted and is the embodiment of vivacity. His pleasure is unbounded. The trainer repeats the throwing, and the puppy resumes as before. So the play proceeds, the puppy proud of his agility and superiority in getting possession of the ball, and showing great craftiness in avoiding capture. If the trainer, by an affectation of stealthy advance, attempts to circumvent the puppy, the latter stands and watches him intently, conscious of his ability to avoid his trainer by his superior speed and suppleness, and he attempts no evasion till the last moment of safety is gone.

By the exercise of mild authority the trainer regains the ball, and the puppy watches eagerly for it to be thrown out again. If, when it is thrown, the trainer runs after it, the spirit of rivalry is intensely aroused, and the puppy then exerts all his energies to be first to get possession. In this manner the frolicking is continued.

There are certain peculiarities of the dog's manner which the trainer should try to correct from the beginning. The puppy, when caught, may hold the ball tightly in his mouth, he disliking to lose possession of it. This tendency should be discouraged. It is greatly aggravated by any attempts to forcibly pull the ball from his mouth, since he exerts greater force to retain it. A hard mouth is often developed and confirmed unintentionally in this manner. To guard against the fault, catch the dog by the collar with the right hand, at the same time taking hold of the ball with the left. If the puppy then tries to pull on the ball, the trainer can balk the effort by catching all the puppy's force in the collar and at the same time yielding but still retaining the grasp of the ball. Then press, with the right foot, the toes of one of his forefoot, only pinching sufficiently to make him let go of the ball, at the same time saying "Give" in an ordinary tone of voice. The method is very effective and does not alarm the dog in the least. By repeating this a few times, he will promptly open his mouth to the order "Give," without the least effort to retain the ball. This part of the lesson, if conducted as above described, is quickly and easily taught.

From this beginning the trainer proceeds, lesson after lesson, developing the retrieving feature as much as possible, and at the same time suppressing such undesirable traits as opportunity or the dog's disposition will admit.

At the time the ball is thrown out, the trainer utters the command "Fetch." He repeats it every time that it can be associated with the act, to the end that the puppy will learn and remember its meaning. He can be taught both to go after the ball and bring it to hand to the same order, "Fetch." By the constant repetition of this order (or such other word as the trainer adopts for the word of command), the puppy soon learns to associate it with retrieving the ball and then comprehends the meaning of it.

Whatever word the trainer adopts as the word of command he should use it without change, and also use it only in its proper relation. To command the dog to "Fetch," "Go get it," "Bring it here," etc., is, to say the least, confusing and unskillful, and an obstruction to the training.

After the start there are no specific rules for the trainer's guidance. Thereafter much depends on his own tact, industry and intelligence.

The gradations in a course of lessons through many weeks and months, from the crude starting point of carrying in play to retrieving to command, depend for their success on constant repetition, which, as the puppy matures, becomes habitual. As he ages he outgrows his frivolity and becomes sober in demeanor. To the knowledge which he has acquired by constant drilling there is added an habitual obedience; and, if the trainer has been skillful, he has gained his pupil's respect and affection.

A few general hints, however, can be given. When the puppy shows a lack of interest, or when he has been erroneously drilled too long, and is consequently fatigued, the lesson should end at once. The peculiarities of disposition should in particular be noted and worked to advantage when opportunity offers, and anything that is obstructive to the lessons should be carefully avoided. It should be kept constantly in mind in this relation that what the puppy does is voluntary, and that in this system there is no way of making obedience compulsory.

By associating a reward with the act of fetching, the puppy sometimes manifests a greater interest in the work. When he fetches well, a palatable morsel, one of a number kept conveniently at hand for the purpose, is given to him as a reward. The rewards, however, must be given in moderation, and the fact impressed that they only come after well doing, otherwise he may lose interest in the play and devote his attention to the more profitable prospect of a meal. The morsels, which tickle his palate, must be kept as auxiliary to the lessons and not as a matter of equal importance to them.

It will be noted that there is very little true training in this system. The trainer is always subject to the dog's caprice or inclination. The pupil is always the real master of the situation, and the successful trainer must adapt himself to the dog's moods and capabilities, and must take any course in the lessons that will further his purpose.

After the puppy has got an idea of fetching the ball the trainer next endeavors to teach him to carry it steadily and tenderly. This is a very important feature to enforce from the beginning. Once a hard mouth is acquired it is almost impossible to cure, while a habitually hard-mouthed retriever is worse than none. Any objectionable acts which lead up to hard mouth, such as tossing the ball in the air, dropping it and pouncing upon it, shaking or attempting to tear it, etc., should be promptly discouraged.

If these faults cannot be suppressed in the regular lessons it is better to give him special lessons apart from the regular ones. It is also better to give them in a different room, otherwise, if there be any unpleasant associations with the lessons, the puppy may connect them with the room and refuse to play at all.

To make the puppy carry steadily mild compulsion is sometimes necessary. A short, light rope, 2 or 3ft. long, should be tied to his collar, thus affording a means of controlling him easily. No frolicking should be permitted at this stage. Also to avoid complications with the regular lessons it is better to use a different object for the dog to carry, as a corn-cob, a roll of cloth, etc. Place it in the puppy's mouth and force him to hold it steadily without biting it. If he attempts to reject it hold the left hand under his lower jaw while the right hand holds the rope grasped close to his collar, and force him to hold the object whether he is willing to do so or not. If he attempts to bite it tie some long, slim nails on it about a ½in. apart. Then make him hold in his mouth the pad thus prepared. The dog intensely dislikes the touch of the iron on his teeth and he will hold the pad so prepared very tenderly. Treat him gently, but firmly, and alarm him as little as possible; but, in any event, he must be made to hold the object steadily and tenderly.

If he succeeds in ejecting the pad from his mouth place it promptly back again, giving him at the same time a light stroke with a whip and the order "Hold" or "Steady," or any order which the trainer prefers to use. This treatment is so different from what he has been used to receiving that, if plucky and self-willed, he under it may be obstinate or sulky. But if the trainer proceeds quietly and firmly, and with proper deliberation, unpleasant complications may be avoided.

Each branch of the lesson must be repeated till the puppy will perform reliably.

After he has learned to hold it steadily, walk him about the room and enforce the same steadiness in making him carry the pad as in holding it when he is at rest. If he drops it, observe the same course as before. At such times as he carries it well, praise and pet him. At all times the trainer should observe the same unperturbed demeanor and quiet tone of voice. Even if there are any unpleasant incidents, the puppy will forget them and take part in the lessons in good faith if treated kindly afterward.

As he becomes proficient in fetching the objects—the ball, cob, etc.—other and heavier objects may be introduced for retrieving practice. At first the puppy may show a violent dislike against grasping feathers. To accustom him to them, some may be tied around the cob, so that by their constant presence he may outgrow his dislike, if such he have.

At last, after he is proficient in the preliminary lessons, he is practiced on dead birds, and the discipline in this respect is simply a continuation of the lessons.

The practical application in field work is so similar to that described in the force system that the reader is referred to it for the information. After passing certain elementary stages—the more mechanical stages of fetching and carrying—both systems merge into the same methods. As to the more practical features of field work, they also are fully described in other chapters. The qualities which should be most cultivated are enumerated in the chapter on "The Qualities of a Retriever."

As before intimated, the permanency of the accomplishment, when taught by this system, is uncertain. The natural retriever generally, at some period of his working life, refuses to retrieve. As the act depended on the dog's pleasure for its success, so it may terminate at any time he so elects. However obedient he may be when he is about the house or yard, there will come a time, at work in the field or elsewhere, when he will learn that he can disobey. What is to his own advantage he learns quickly and remembers well. Some day, when in his work he has lost the enthusiasm and industry of youth, he may refuse to go into punishing cover or disagreeable marsh to retrieve. In such cases the amateur generally resorts to punishment. The punishment formed no part of his lessons. He was not taught to retrieve by compulsory methods, and he therefore does not comprehend the trainer's motive when punishment is administered; but he does know that retrieving has suddenly lost its pleasing features and indeed has become painful. Repeated urgings only serve to demonstrate that he can disobey when he chooses to do so. He is moreover quite as likely to consider that he is whipped for gathering the birds as for not doing so.

Nearly all natural retrievers are more or less hard-mouthed, the degree of the fault varying from a sly pinch to gross mutilation. Some dogs, though not necessarily ones taught by this system, do not hesitate to bolt a bird if not in sight of their handler at the time.

To sum up, the method is not at all certain in its results. It requires a long time to teach by it. It is applicable only to young dogs. It develops many hard mouths. Obedience is by it seldom permanently established. But few men have the time or patience to go through such a protracted course, one entailing so much effort and loss of time to accomplish so little.

THE DOG'S IMMORTALITY.

Albany, N. Y.—*Editor Forest and Stream:* With a pleasure far from common I read in Forest and Stream of Aug. 24 Rev. Chas. Josiah Adams's remarks on the immortality of the dog.

So far as differences of opinion are concerned, his plea that there are opposite opinions on almost every subject is well taken. Apart from such simple matters as are within the cognition of even the narrowest intellects and which are so self-evident that there is not a point on which to make an objection against them, there are few matters on which all are agreed. I consider that there are some exact sciences, others which are not exact. For instance, the science of mathematics may be called theoretically exact, though in practice, owing to the imperfections of the senses and the limited field allotted to man's powers, they may have the imperfect results of improper application. There are other sciences, as for instance medicine, which is so intricately connected with the phenomena of life itself that there is a constant uncertainty as to the relation of the material and the immaterial, or at least what we are taught to call the material. Our senses are so exceedingly limited, however, that conclusions are arrived at which are often false. The microscope has opened up the world of little things as the macroscope has opened up the world of great things, and, though both go an infinite distance beyond the scope of man's vision, instead of bringing him nearer the end, they but immensely enlarge the beginning. There is nothing so small but what something may be smaller and nothing so great but what something may be greater, taking the sum total of human knowledge as the cognition of smallness and greatness. I mention this to show that man's knowledge at best is relative and incomplete, and therefore it is unbecoming for him to dogmatically say, "This cannot be," or "That cannot be." Were this dogmatic style of argument accepted, there would be instantly an end to progress. All improvement means change, and change means more or less destruction of what has gone before. Were the first teachings of the world accepted without question, we would still believe that the earth was flat, that the sun moved, that gravity was an unequal force, etc. This is but to show that the theory of the dog's immortality may be directly in the line of progressive march, and may be true even if it is novel and opposed to the vanity of man, who tolerates no rival in the realm of intellect.

The reference to his dog, poisoned by some man who would be honored and dignified by calling him a brute, is not without an intense pathos. The dog poisoner has all the vile traits of man, inherited and acquired. He is a coward morally and physically, for he does by stealth and sneaking ways what he dares not do openly. He is maliciously vindictive, for he destroys the animal because his master loves him, and he destroys life wantonly and unfeelingly because he has a vile enmity or a malicious nature to gratify. The man who will poison a dog to gratify his malice would undoubtedly poison a man were he not so timorous and cowardly that he dare not do so. The law is so stringent in protecting man and so lax in protecting dogs that the coyote in man's form is daunted by the moral force of the law. But this is wandering from the subject.

The Rev. Mr. Adams refers to dogs having been taught to say words. He, however, failed to mention whether the dogs understood the meaning of the words. Parrots soon learn to repeat words and even sentences, but I think it is generally conceded that the words to the parrot have no ideas connected with them. They are merely sounds severed from all ideas.

I present this as showing the possibility of animals

merely imitating sounds as sounds, and not sounds as representing ideas. That animals have a certain limited power of communication it is idle to attempt to deny. We see it every day. The sentinel crow has a note of alarm easily understood by the rest of the flock, and the fact that a sentinel is posted is conclusive proof that the crow has foresight, forethought and reason as well as memory. It also shows a power of communication when one or two are assigned to the duties of sentinel, and accept and perform them.

Dogs have a much greater power of communicating their ideas, and they learn the peculiarities of their masters and adapt themselves to them. One will even learn to interpret the expression of countenance of his master, and can tell whether he is pleased or displeased.

That they have fears which are supersensory or supernatural is shown by the fear and anger displayed at some object or shadow at night so indistinct that they cannot determine what it is. All this shows that they have imagination, but whether it is a rudimentary imagination, or whether it is of the same kind as that of man, but lesser in degree, is what I cannot determine.

The Rev. Mr. Adams, having given this matter deep investigation, could give us valuable information if he will be pleased to do so. All the life of man, it is true, has its counterpart in the life of the dog and other animals. His brain, nerves, muscles, senses, organic life, etc., are on the same plan as that of man. But, as I understand it, the immortality of man is determined by things outside of material phenomena. So for myself, I hope the dog is conceded a place in the hereafter commensurate with his honesty and devotion, and the unselfish life he lives on earth. That an animal of the dog's high development should be doomed to total destruction is not reconcilable to any theory of justice which man teaches or is taught.

EGO.

Editor Forest and Stream:

Aug. 10 FOREST AND STREAM contained a criticism of Rev. Charles J. Adams's book on the immortality of the dog. Your correspondent "Ego" undertakes to prove that the dog cannot inherit life hereafter, but implies that man can. So far as man is concerned he does not take issue with the Rev. Mr. Adams. Both believe in man's immortality.

I can heartily endorse all that the Rev. Mr. Adams claims for the intelligence of the dog, but when he asks me to grant immortality because of this intelligence I sharply draw the line. The dog's intelligence does not prove immortality, neither does man's.

The Rev. Mr. Adams proves beyond a doubt that the dog possesses all the attributes of man. "Ego" takes exception to this and advances ideas to disprove it. I wish to take the side of the dog and briefly answer "Ego's" main points of argument. Remember that Rev. Mr. Adams proves to his own satisfaction that the dog has the same organic life as man, and that his intelligence proves that his mental attributes are much the same. In answer to this "Ego" writes:

"Granting the similarity of physical life and manifestation, I think there is such a wide difference in the mentality of man and dogs and man and all the lower animals as to destroy all analogy from which to draw so broad a conclusion. The circumstances which match each other are too few and too unimportant for the conclusion, and there are many circumstances in man's mentality which have no counterpart in that of the dog. For instance the power of speech is absent in the dog; the imagination, whose grasp is but little short of infinity in man, is absent in the dog."

What are the circumstances that match each other and are "too few" and "too unimportant?" Let me enumerate some of the traits held by both dog and man: Fear, courage, hate, anger, joy, sorrow, sympathy, reflection, memory, affection, jealousy, ambition, grief, foresight, anticipation and the power to dream. Are these common traits "too few?" Are they "too unimportant?" Why, they contain about all there is to make life worth living. "Ego" asserts in answer that these traits possessed by the dog "have all a direct use in his animal existence." So they have, and also have a direct use in man's existence. It would be impossible for man to exist without them. "Ego's" statement that speech and imagination are absent in the dog is made to show that the latter cannot possess immortality. Do speech and imagination prove man's immortality, and if so, where is the proof outside of assertion?

According to science speech is a matter of evolution. The hands were used at first in communicating ideas by signs; speech was unknown. As a reminder of this sign language speech is either left or right-handed—that is, if one is left-handed the knowledge of speech is located in the right brain, and if right-handed in the left brain. Just as some of the early sign-makers used the left or right hand in sign speech. Speech is the child of evolution. The infant does not inherit it as a proof of immortality, but must acquire it through the teachings of those who, when infants, were likewise taught. If a child is born deaf and remains so through life it can never enjoy the boon of speech. This is verified in that unfortunate class the deaf mutes. They live in a world of speech and yet cannot acquire the power to utter the simplest words. Their vocal organs may be perfect, but they cannot acquire speech because their organs of hearing are defective. A dog can convey more ideas in his bark than a deaf mute can in his guttural explanation.

The dog cannot acquire human speech not because his hearing is defective, for it is not, but for the simple reason that he does not possess the human vocal organs.

In a degree the dog does possess speech, not "Ego's" speech, but speech nevertheless.

Speech is the power to convey ideas by articulate sounds. Will "Ego" assert that the dog does not possess this power?

The master can tell by his dog's bark whether a friend or a stranger approaches.

From my hammock, during the night, I hear the dogs pass word from house to house along a distant highway, warning the approach of a team or foot passer. If a tramp passes there is a note of warning in the bark of each dog which I readily understand. But it is not worth while to argue on this line, for everyone lucky enough to own an intelligent dog knows that the animal can convey ideas by articulate sounds and that constitutes speech. The wild dog does not bark, so it would seem that the domesticated dog has advanced through evolution far on the road toward speech.

When "Ego" claims that the dog lacks imagination, I shall have to ask him for proof. I think I can prove to the contrary. When he asserts that the dog "so far as we know has neither conception nor longing for a future state," he forgets that a large number of human beings are in the same category—that countless numbers do not "understand the glories of a future life" any more than does the dog. It is a fact, beyond a doubt, that the dog possesses all the attributes of man, and that intelligence is a matter of degree.

The gulf between a dog and the native Tasmanian (tribe now extinct) is not as wide as the gulf between the Tasmanian and a Daniel Webster.

In the economy of nature it is inevitable that some animal shall be above all others. Man is that animal, but it does not prove his immortality any more than the fact that the dog is higher than many other animals proves his immortality.

Both man and dog belong to the animal kingdom. Their organic life is the same. Their mental attributes differ in degree only. Beyond this there can be but mere conjecture; give the dog the benefit of the doubt.

HERMIT.

GLOUCESTER, Aug. 26.

The Proposed Rule Against Cropping.

TUCKAHOE, N. Y., Aug. 30.—*Editor Forest and Stream:* As the American Kennel Club will act on the above proposed rule at its next meeting, Sept. 12, I beg to say a few words against it. Of course, nobody will construe my remarks as hostile to the A. K. C., as I am, and always have been, one of its stauncest admirers and supporters; but in this case I am compelled to say that this rule should never be adjudicated in its present state by the A. K. C. As far as I can comprehend the scope of the A. K. C., it is formed for the benefit of the dog in regard to upholding honesty and fairness in dealing, and showing and fostering knowledge and understanding of man's best friend, through the consolidation of the different specialty and kennel clubs getting the necessary power to enforce such rules.

But these are only in regard to the general conduct of doggy affairs, and correctly so, whereas this proposed cropping rule is a direct interference with the rights of breeders not under direct jurisdiction or adjudication of the A. K. C., and only an imitative sentimentalism, which should better be left to the Society for the Prevention of Cruelty to Animals, where its proper sphere is. If the specialty clubs, whose special hobby is a cropped breed, should take this question up among themselves, and then ask the A. K. C. to enforce their arrived-at decision, it would be on a different and correct basis; but in its present state the majority of delegates have no special knowledge of these breeds, and will of course decide in the popular way, so as not to have the name to foster cruelty. I personally would not think of cropping a dog myself, and keep no great Danes for this reason. But because I like to take a glass of beer when I am thirsty, I do not see my right to deride my neighbor who likes whisky and seltzer better, and leave this to his own liking and judgment; and so should this question be left to those interested in cropped breeds, and not be compelled to do what a number of men have decreed for them, of what they very likely know no more than they do of how their tailor fits their clothes till they wear them, when they mighty quick discover any ill fit.

The strongest point I can think of is the reason why this rule has been evidently proposed—I mean the enactment by the English Kennel Club of such a rule, as the case will be plainly solved over there. Most or all cropped breeds are imported year after year in the best specimens from England, who are the breeders and have some semblance of right thereof, but we can hardly pose as yet prominent in any of the aforesaid breeds, and therefore undertake to make rules for foreign countries, as in the case of the great Dane, for instance. If any unbiased dogman could see a cropped great Dane next to an uncropped one, he certainly would exclaim: "No, give me the cropped one every time," and in this breed the proposed rule means plain and simple prohibition of importation, as we have to import our material from Germany, and they certainly will crop, rule or no rule. Such would evidently be the result; and if the A. K. C. was created for such ultimate reason, I doubt it very much. Especially where England is solving the question for us I again say earnestly, let the natural way of non-interference have its course. If specialty clubs take this matter up, all right, but until then do not be more Catholic than the Pope, and leave this matter over here to the society with the long name whose aims and tenor I indorse in general very heartily.

G. MUSS-ARNOLT.

Continental Trials.

MORRIS, Manitoba, Sept. 3.—[*Special to Forest and Stream.*] The weather is warm, and the birds not plentiful. There is a good attendance. The Derby work has been poor. There were nineteen starters, and the stake was finished this afternoon. Winners: First, Sam T. Second, Ightfield, Mentor and Tory Fashion. Third divided by Brighton Dick, Fen Follett, Sister Sue and Rex. Fourth divided by Lady Rush, Domino, Gleam's Dart, Gleam's Rush and Stridemore. The All-Age begins this afternoon.

B. WATERS.

Put a Peg Here.

THE Manitoba All-Age Stake entries show a list of twenty-two pointers to twenty-nine setters. That is a big difference from the entries not so many years back when the setters had big majorities. And a total of fifty-one for the stake deserves a peg, too.

National Beagle Club of America.

NEW YORK, Aug. 26.—A field trial committee meeting of the National Beagle Club of America will be held at the rooms of the American Kennel Club, 55 Liberty street, this city, Monday, Sept. 9, at 3:30 P. M.

GEORGE W. ROGERS, Sec'y.

Irish Setter Club Trials.

Editor Forest and Stream:

The Irish Setter Club will hold their trials as advertised on Dec. 2, 3 and 4, providing the Continental trials are finished by that time, and if not then as soon as they are over.

The club has decided to open the All-Aged Stake to all Irish setters, thus allowing previous winners to compete. This should greatly increase our entries and help make the trials a success.

With such dogs as Bedford Finglas, Currer Belle IV. and other winners entered in the All-Aged Stake it would be well worth seeing. Mr. W. S. Bell will judge.

GEORGE H. THOMSON,
Sec'y I. S. C., Room 22, 400 Chestnut st., Philadelphia.

Montreal Show.

MONTREAL, Aug. 29.—An error in the entry forms of the Toronto Industrial Exhibition Dog Show reads that the fee for registering and listing is 50 cents per dog. The fee for registration is $1, and that for listing 25 cents for each dog. In class 45, Irish setters, the prize should read $10 instead of $20 for first. The entries will close positively on Sept. 9, and must be in my hands on or before that date.

GEO. K. LANIGAN,
Secretary and Superintendent.
Box 692, Montreal, Canada.

New England Field Trials.

TAUNTON, Mass., Aug. 29.—It looks now as though we were going to have a very successful stake and a nice entry of dogs. We have lots of birds on our grounds for this part of the country, and if they are not driven to the swamps and thickets before our trials, it will be more satisfactory than ever before.

ARTHUR R. SHARP, Sec'y.

Yachting.

FIXTURES.

SEPTEMBER.

7. First international race.
7. San Francisco cruise to Mare Island, San Francisco Bay.
7. Revere open, Marblehead (Mass.) Bay.
7. Larchmont, 34 and 21ft. classes, Sound.
7. Royal Nova Scotia, open handicap, Halifax.
7. Royal Canadian, Prince of Wales cup, Toronto.
7-8-9. Ewcinal, cruise to San Mateo, San Francisco Bay.
7-8-9. California, cruise to Napa River, San Francisco Bay.
7-8-9. Corinthian, cruise to Martinez, San Francisco Bay.
8. San Francisco squadron sail, San Francisco Bay.
9. San Francisco sail to Sausalito, San Francisco Bay.
12. Sea Cliff special, Sound.
13. Cor., Atlantic City Record, Atlantic City.
14. Larchmont, schooners and 34ft. and 21ft. classes, Sound.
14. Royal Canadian, 27ft. class, Toronto.
14. Royal Nova Scocia, open handicap, Halifax.
14-15. California, sail to Goat Island, San Francisco Bay.
15. Cor., regatta, San Francisco Bay.
19. Larchmont, 34 and 21ft. classes, Sound.
21. Huguenot cruiser's race, New Rochelle Sound.
21. Larchmont, schooners, 34 and 21ft. classes, Sound.
21. Royal Canadian, 32 and 18ft. classes, Toronto.

The Seawanhaka International Challenge Cup.

OUTSIDE of the sailing of the large singlestickers, the trial races of the Seawanhaka Corinthian Y. C. for the selection of a defending boat to meet the English challenger Mr. J. Arthur Brand in the races for the club's new international challenge cup have proved quite as exciting and interesting as anything yet seen this season. Though fewer boats started than first expected, there were enough to make a good race, and as at the start most of them were entirely unknown, the result was quite beyond conjecture. It is a matter of regret now that more types were not represented; the presence of a Clapham boat and a Dyer boat would have added still more to the interest, and such experiments cost but little in so small a class; but in spite of the long notice given, yachtsmen have only since the trial races begun to realize the possibilities of keen sport at a moderate outlay which the class affords. If one starts in the right way it is easily possible to spend a thousand dollars in a silk and mahogany creation, but on the other hand the winner cost considerably less than this, and the boat which won third place in the three races is said to have cost just $85 for material, the work being done by her owners, and it is safe to say that she could be duplicated of a lighter and much improved construction, with good sails and a bronze instead of a steel centerboard, for $100.

The racing as it was included many different types, Mr. Herreshoff in particular being represented by one of his best fin models and by an extreme up-to-date centerboard boat specially designed and constructed for the class, while it would be hard to find anything more extreme in the direction of the flat scow or "flying pontoon" type than Question. The list of yachts, owners and crews is as follows:

	Owner.	*Designer.*	*Builder.*	*Helmsman.*	*Crew.*
Olita	c. b.	H. C. Rouse	N. G. Herreshoff	C. B. Vaux	R. B. Burchard.
Trust Me	fin	C. M. Clark	N. G. Herreshoff	C. M. Clark	K. Whiting.
Trilby	fin	G. Tyson	C. Olmstead	C. Olmstead	C. J. Pierce.
Question	c. b.	L. B. Huntington, Jr	L. P. Huntington, Jr	L. B. Huntington	Philip Howard.
Ethelwynn	c. b.	C. J. Field	W. P. Stephens	St. Lawrence Co	C. J. Field.
L'Indienne	c. b.	R. Outwater	T. F. Newell	R. Outwater	F. B. Jones.
F & R	c. b.	F. & R. Wyckoff	F. & R. Wyckoff	F. Wyckoff	R. Wyckoff.

The conditions of the races were as follows: Trial races to select the defender for the year 1895 of the Seawanhaka International Challenge Cup for small yachts, Aug. 26, 27, 28.

Prize.—A prize is offered by a member of the club in memory of the late Robert Center, to be known as the Center helmsman's prize.

Under the terms of gift it will be awarded to the "amateur helmsman who, in the judgment of the race committee, handles his boat in the most seamanlike manner from the preparatory signal of the first to the finish of the last trial race."

Courses.—(1.) The course for the first and third trial races shall be triangular and shall be as follows:

Triangular Course.—From a line between Center Island buoy and the committee steamer anchored S.E. of the same, E. by N.½N.—2 miles to and around a mark bearing a red flag or ball, leaving it on the port hand; N.W.—2 miles to and around a mark bearing a red flag or ball, leaving it on the port hand; S. by W.½W.—2 miles to the finish line between Center Island buoy and the committee steamer anchored N.W. of the same. Course to be sailed over twice; total distance 12 nautical miles. On the second round yachts will leave Center Island buoy on the port hand.

Note.—The race committee may, in their discretion, direct the course to be sailed in the reverse direction, leaving buoy and marks on the starboard hand, and the signal for such reversal of course will be the anchoring of the committee steamer at the start to the N.W. of Center Island buoy. In this case the committee steamer will be anchored S.E. of Center Island buoy at the finish.

(2.) The course for the second trial race shall be a course to windward or leeward and return.

Course to Windward or Leeward and Return.—From a line between Center Island buoy and the committee steamer to and around a mark bearing a red flag or ball, leaving it on the starboard hand; distance 3 miles and return; course to be sailed over twice; total distance, 12 nautical miles. The direction will be signaled by the general yacht signal code from the committee steamer at least fifteen minutes before the preparatory signal.

The start will be a one-gun flying start with a preparatory signal, and will be made at 12 o'clock noon across a line between Center Island buoy and the committee steamer.

First Signal.—Preparatory. Whistle (15 seconds long). The club burgee on the committee steamer will be lowered and a blue peter hoisted. There will be an interval of five minutes between the first and second signals.

Second Signal.—Start. Whistle (15 seconds long). The blue peter will be lowered and a red ball hoisted.

SPECIAL CONDITIONS.

(1.) The yacht selected to defend the cup shall be the one which, in

the judgment of the race committee, shall be the best adapted therefor, and not necessarily the winner of a majority of the trial races.

(2.) On Saturday morning, Aug. 24, all yachts entering for the trial races will be measured in racing trim at the club anchorage, Oyster Bay.

(3.) Each yacht must carry a racing number (which may be obtained at the club house on the morning of the first race) fastened securely on both sides of the mainsail.

(4.) In the event of a race being postponed or ordered resailed, it will be sailed at as early a date as may be practicable.

Entries.—Entries must be in writing and filed with the secretary of the race committee, Charles A. Sherman, 64 Leonard street, New York, by 12 o'clock noon, on Aug. 23, or at the club house at Oyster Bay by 10 o'clock on the morning of Aug. 26.

GENERAL CONDITIONS AND REGULATIONS.

As previously announced in a circular issued by the race committee on May 1 last, the Seawanhaka International Challenge Cup is this year offered for competition between yachts of not exceeding 15ft. racing length (S. C. Y. C. measurement). Entries in the trial races will therefore be confined to yachts of this class.

The defense of the cup is open to yachts owned by members of the yacht clubs of the United States in good standing.

The general conditions governing the cup and the general regulations for the control both of the international and trial races as amended are as follows:

I. The cup shall be a perpetual international challenge cup. The Seawanhaka Corinthian Y. C. shall have the custody of the cup in the first instance, and every challenge shall be through some recognized yacht club of a foreign country, and the cup when won shall be delivered to and held by the club through which the challenge was made.

II. A challenging yacht shall be met by only one competitor.

III. The races shall not be less than three nor more than five in number, the cup to be taken by the winner of the majority.

IV. The American courses, while the cup remains in the custody of the Seawanhaka Corinthian Y. C., shall be on the waters of Long Island Sound in the vicinity of Oyster Bay, or in the bay itself. They shall consist of a triangular course and a course to windward or leeward and return. For the 15ft. class each leg of the triangular course shall be two nautical miles in length, and shall be sailed over twice, making a total of twelve miles. The course to windward or leeward and return shall be three nautical miles to each leg and shall be sailed over twice, making a total of twelve miles.

V. The start shall be a one-gun flying start.

VI. The races shall be sailed without time allowance.

VII. The challenge cup is offered this year for yachts of not exceeding 15ft. racing length (S. C. Y. C. measurement).

The formula for determining racing length under the S. C. Y. C. rules is as follows:

$$\frac{\text{L.W.L.} + \sqrt{\text{Sail area}}}{2} = \text{Racing length.}$$

VIII. In the 15ft. class, yachts shall be measured without crew on board, but instead thereof a weight of three hundred pounds shall be carried amidships during measurement to represent the crew.

IX. All ballast shall be fixed. (Weighted centerboards shall be considered fixed ballast.)

X. No outrigger or other outboard mechanical device, for carrying live ballast to windward, shall be allowed.

XI. In determining sail area a system of measurement shall be employed which will give, as nearly as possible, the actual number of square feet thereof. Sails shall be limited to mainsail, jib and spinaker. The combined area of mainsail and of the jib used in windward work shall constitute the factor of sail area in determining racing length. The area of spinaker and balloon jib shall each be limited to four-tenths of the total area of the mainsail and jib used in windward work.

XII. The helmsman shall be an amateur, and the total number of persons on board shall be limited to two.

XIII. Future competitions for the cup shall be limited to yachts of classes from 15ft. to 25ft. racing length, both inclusive.

Excepting in case of conflict with the foregoing conditions and regulations, the racing rules of the Seawanhaka Corinthian Yacht Club shall govern the trial races.

Note.—Attention is called to the fact that it is expected to arrange a series of open races with Spruce IV. after the challenge cup races.

OLIVER E. CROMWELL, Chairman, Port Chester, New York.
CHARLES W. WETMORE, 35 Wall Street.
WALTER C. KERR, 26 Cortlandt Street.
VALENTINE MOTT, 62 Madison Avenue.
CHARLES A. SHERMAN, Secretary, 64 Leonard Street.
Race Committee.

The new Herreshoff boat Olita was ordered by Vice-Com. Rouse immediately on the completion of the preliminary arrangements with Mr. Brand last April, everything being left to the designer, the only limitations being that she should be strong enough to carry at the davits of the schooner Iroquois and should have two watertight bulkheads. The yacht was completed at the end of July, and her crew, Messrs. Vaux and Burchard, have had little time for necessary alterations and working up. In type she is very different from previous light draft Herreshoff craft such as the very successful Alpha, and she has nothing whatever in common with the very fast and handsome Herreshoff fin-keels like Alerion, Memory and Niagara. There is about her a very strong suggestion of the "one design" model by Mr. Linton Hope which we published on Feb. 9. She is 29ft. over all, 6ft. 4in. beam, and 3in. draft, with a high freeboard amidship and a rather straight sheer. The stern is cut off short, ending in a wide and deep square transom much like the old Newport catboats; when in sailing trim the tuck was barely immersed, and when at rest about a foot of the after end of keel is exposed. The bow is like that of Dragoon, with over 3ft. overhang, to judge by the eye, and just above and parallel to the water. When under way the bow was quite clear of the water, dipping in now and then just enough to break the water; it was not pretty, and to all appearances served no other purpose than to make a back sail when on the wind.

The construction is very simple and light, 5/8in. white cedar planking laid with a ship lap on bent frames hardly larger than in a canoe. The keel is made stiff for hanging at the davits, by carrying the sides of the centerboard trunk as far as possible fore and aft, instead of just clear of the head ledges; under the deck is a very light clamp, but there is absolutely nothing in the way of bilge clamps to stiffen the bottom. The deck is equally light, of 3/8in. white pine laid with a ship lap on very small deck beams. The bulkheads are placed in the extreme ends of the boat, leaving an open space of some 14ft. between them. The cockpit is 4ft. 3in. wide and quite long. The hull is so lightly built that the bottom and deck work very perceptibly when under way, this being, according to the theory of old deep-water men, a distinct element of speed. The centerboard is of bronze, rectangular in shape and dropping some 3ft. below the keel when fully down, the fore edge nearly vertical. It is about 2ft. wide and probably weighs under 500lbs., may lifted by an arm, as in all of the Hope boats. The rudder is of bronze and is to house in the trunk, as in the Hope design already mentioned, for convenience in carrying at the davits. The boat is painted white all over, with varnished decks. The bilge is round and full, the bottom very flat and the floor long.

The rig is very poor in construction, the spars are solid, the mast being but 27/8in. diameter, and the fittings are rough; the main boom gooseneck is fastened to the mast with four large screws, something that would cause a canoeist to raise his hands in horror. The blocks and rigging are of the ordinary stock variety, by no means good enough for canoe work; and the sails, a boom and gaff mainsail and a jib with tack at the stemhead, were of the new criss-cross cut and very poor. The Herreshoff mainsail was condemned after a few trials and hastily replaced with another of the same cut by a New York maker, which proved no better, in fact the boat was very badly handicapped, especially to windward, by poor sails, spars and rigging.

When Olita was ordered, Mr. Herreshoff was desirous of having both types represented in the class and Mr. W. K. Vanderbilt ordered a bulb fin, Osprey, already described. In beauty of lines and in construction she is greatly superior to the centerboard boat, having two long and symmetrical ends, a beam of but 4ft. 6in., and being planked with mahogany. The rig, however, is like that of Olita. It was expected that she would be present, and Mr. Paul Butler was invited to sail her in the races, but as he had never seen or sailed her before, and would have had no opportunity to learn her or to put her in shape, it is perhaps as well for his reputation that she was not present. From her spins in Newport Harbor she looks to be a fast and certainly is a handsome and stylish boat, and her presence in the races in proper form would have added greatly to the interest, but like all the others, she would have needed some careful preparation at the hands of her crew.

There was, however, a Herreshoff fin-keel in the class, Trust Me, a duplicate, as we understand, of Miss Sutton's Wee Winn, but built late last year. She is a handsome boat, of mahogany, with pine deck, and rigged with boom and gaff mainsail and jib to stemhead. The sails were by no means new and only fair in quality. She was sailed very persistently and pluckily by her owner and a young friend. Her dimensions were not suited to the class, her waterline being over 16ft. and her sail area under 200sq. ft.

The other fin-keel, Trilby, is by no means the chestnut that her name would indicate, but a new boat specially designed for the class by Mr. Charles Olmstead, designer of Vorant II., Gavilan, Eidolon, Wild Cat, Consternation and many other yachts. She was built by Wood & Son, of City Island, under Mr. Olmstead's personal supervision, and is a very handsome piece of work, the hull of double skin construction, mahogany outside. She is 5ft 1in. beam and with a full bilge, especially for a fin-keel; the two ends being carried out easily to an extreme length of some 24ft. The fin is deep and rather narrow, both edges vertical, and slid in a trunk, so as to be moved if desired. She has been under way for a month in preparation for the races. Her deck was originally of mahogany, but in the week preceding the races this was removed and a white pine deck, 3/8in. thick, was substituted. She had a rather small cockpit, with mahogany coaming and with her long ends, mahogany topsides brightly polished, white varnished deck and mahogany partner plank and coaming, she was the prettiest piece of boat-building in the fleet. The boom and gaff mainsail, a very good sail, was made by Wilson & Griffin, of New York, as was the jib, cross-cut after Mr. Wilson's method. The jib was large compared with the mainsail.

The Indienne, a boat, L'Indienne, is a wide centerboard craft of 7ft. beam, and with long ends, of lapstrake construction with white cedar planking, she had a very good suit of sails, with a large jib and a boom and gaff mainsail.

F. & R. is a sharpie or more properly a skiff, so far as that doubtful term applies, with a short square stern instead of the long fantail of the New Haven sharpie. She is of the usual rather heavy construction and was built last season, having raced so successfully with many local boats of her own type that her owners concluded to enter her. She carried a jib and mainsail rig with bowsprit and very large jib, having very fair sails.

The most unique and interesting boat in the class was Question, 24ft. over all, 5ft. beam, 1ft. depth, and about 3ft. in draft, with a waterline of 14ft. 8in. According to Mr. Hyslop she is the most difficult boat to measure that has ever come under his tape in many years' experience as measurer. The sides are almost parallel for three-quarters of the length, the stern being square and the bow rather abruptly pointed. They are vertical from end to end, about 1ft. wide amidships, and rounded downward on deck and upward on the bottom so as to make a reversed sheer above and quite a rocker below. There is no semblance of a cockpit, merely a 10×12 hatch in the deck to carry a spinaker or a copy of the sailing directions, and the crew in sailing lie perfectly flat at all times except when off the wind in a drift, when they get a little rest by squatting on deck in various odd positions. In any sort of a lop they are likely to be washed fore and aft. The centerboard is sheet steel 6ft. long and about 155lbs. in weight, dropping far down and allowing high above the deck when raised. The hull is roughly built of pine, painted a dull lead color, and the deck is canvased. The rigging is simple but crude, and the sails, mostly a boom and gaff mainsail with but a few square inches of jib, are old and not over good.

The whole outfit, while lacking in style beside Trilby, Olita and Ethelwynn, was picturesque in the extreme. The two young fellows who sailed her were tanned a rich brown, their costumes consisted of red jerseys cut extremely *decollette*, with blue trunks to match, and the effect of hull, sails and crew was most striking and unconventional. The boat was launched early in the season, being intended for this class, and has been raced persistently and successfully; in fact, though in these races not sailed by her owner, but by his brother, she had probably an advantage over all the others in the experience and local knowledge of her crew.

The last boat in the class, Ethelwynn, was specially designed for these races, and as the order was not placed until July 1, she was the last completed, and has had the least time for final preparation. She is a centerboard boat, carrying a 55lb. plate of Parson's manganese bronze, 3/16in. thick and 4ft. 6in. long on the lower or forward edge; on the wind this plate being dropped until nearly vertical. It is hung on a pin and is of the shape introduced by Mr. Linton Hope, being raised by an arm and tackle. The boat is 23ft. 4in. over all, with 3ft. 9in. fore overhang and 4ft. 6in. after overhang, on a 15ft. waterline, these extreme lengths being taken merely for structural purposes and to avoid carrying a bowsprit. Her extreme beam is 6ft., and at the waterline it is about 4ft. 8in., the draft of hull being 6 to 7in., and the least freeboard 15in. The stem is a sharp point and the counter ends in a neatly shaped transom. While the model is derived from the Scarecrow and other similar boats, some very wide departures have been made both in lines and construction in the directions indicated by the experience with these cruising boats; the angle of the floor has been very much sharpened, the displacement cut down to carry only a crew of 300lbs. with hull and rig of racing weight, and the beam on deck has been widened as much as possible to give a seat for the crew. The centerboard was made as light as possible, the weight of the crew being depended on for ballast, with a margin in the length and displacement to admit of about 100lbs. of lead if found desirable on trial.

In the construction every effort was made to save in weight without sacrificing necessary strength, and as very little has been done here in racing craft of such small size and yet different from canoes, the scantling was a matter of experiment. The result seems satisfactory, the boat, with a total weight for the hull alone of 355lbs., being strong and stiff. The keel is of spruce, with no stem knee, but in one piece from stem head to transom, the latter being of mahogany. The frames are of steamed rock elm, the main frames at mast, bulkheads, and end of waterline and middle of trunk, being hackmatack of natural crook. The planking is of 1/8in. white cedar laid diagonally and 1/4in. mahogany laid fore and aft, with Union silk between, the outer skin finishing to under 1/4in. The outside hull is very handsome, but in the deck all appearances were sacrificed to utility, and in place of tapered strips of white pine a light deck of 5/16in. white cedar was laid, covered with canvas laid in paint. With a properly laid pine deck the boat would have compared favorably with any in the class for looks, but the painted deck, though neither handsome nor shipshape, is lighter, tighter and stronger.

The hull was built by the St. Lawrence River Skiff, Canoe and Steam Launch Co., of Clayton, N. Y., and in a hurry, the lines laid down full size, were received on July 13 and the boat was shipped by rail and received at Greenwich, Conn., on Aug. 7; this does not sound like much compared with the latest English record, made by Sibbick, of Cowes, of a 1-rater furnished complete in five days from the date of the order; but in this latter case the boat was little different from a large number of others already built, and many of the parts were got out in advance, while in the case of Ethelwynn everything was new, the workmen knew nothing of the nature of the boat until the lines were received, and had never built anything of the kind before. The work was hurried under the personal supervision of the manager of the company, Mr. J. G. Fraser, and the result is highly creditable to him and his men.

The rig is a distinctive feature of the boat, to which her success thus far is largely due, being almost a duplicate of that leg of mutton rig devised by Mr. C. J. Stevens for his Scarecrow, and which has answered perfectly on that boat. After an experience of a dozen years in canoes and later in Scarecrow, Mr. Stevens has produced a rig that is not only original, but is alike perfect in the general disposition of sail and in its mechanical details. In this work he has been materially aided by Messrs. Gilbert L. and R. H. Wilson, the sail makers, the former in particular taking a very great interest in canoe sails and making many suggestions which have led to the present improvement on the old English balance lug, the starting point. The excellent mechanical work and practical skill in boat sailing of Mr. L. K. Young, of Bridgeport, has contributed in no small degree to the success of Scarecrow, he having made several sets of spars for her and worked out a number of minor details in the way of fittings. The spars of Ethelwynn were made by him, a handsome hollow mast and boom; the sail hoisting on a railway by means of small toggles on the luff. These, with the spring gooseneck, the blocks and other special fittings, were also made by him.

The standing rigging is of phosphor bronze wire rope, set up with light lanyards instead of turnbuckles, and the running rigging is of the English cord imported by canoeists. The mainsail, of about 190 sq. ft., is of a stout cotton cloth; the first sail was not entirely satisfactory, though used in several races, and a new sail was made by Wilson & Griffin, which was bent for the first time on the morning of Monday's race, proving very satisfactory. The first jib, of 50ft., proved too large and was not as good as was directed, and a second one was made of but 35ft., which answered admirably both in size and cut, the cloths running in various directions, after Mr. Wilson's new method.

The boat was built and rigged after the best canoeing practice, of securing strength and lightness by the use of the finest materials in specially made articles, and not trusting to stock fittings, etc., and the results have well repaid the extra care and trouble. The rig was undoubtedly superior in quality to those of all the other boats, though several were carefully rigged and with good sails.

The value of the water-tight compartments was fully tested by an unfortunate capsize in the Horseshoe Harbor Y. C. race of Aug. 24, in a very strong breeze, three other boats capsizing and one being dismasted, the boat being steered by a stranger. She capsized entirely, but floated so high that her crew did not get wet, and one hand by going overboard stowed both sails, the boat being easily righted with her cockpit less than a quarter full.

Two other boats intended for the class did not appear, as they proved to be unsuited for the measurement a Dyer boat, built at Lake Minnetonka, and 2EZ (Too Easy), designed and built by Mr. E. Towle.

On Monday morning the seven boats were off the club station at Oyster Bay, and the flagship Oneida, Commodore Benedict, took aboard the regatta committee. The club had provided a good steamer to leave New York each morning and follow the races, returning to the city at night, the charge being $1.50 including dinner, but only half a dozen people appeared on her on this and the two following days. The morning was hot, with a little wind in the Bay and even less outside when the Oneida anchored off the Center Island Buoy at noon. The yachts had already towed out, and with a flood tide and no wind Question made fast to the buoy, and Trilby, Ethelwynn L'Indienne and Trust Me tied up astern of her while the crews went swimming.

It was hot and tiresome until about 2 o'clock, when a light S.W. wind came in and the boats cast loose and began to work about the line. The preparatory signal was given at 2:15 and the start at 2:20, The boats came for the line bunched under Oneida's quarter, Trilby first and Ethelwynn inside her, the two touching as Trilby luffed for a moment for the gun. When over the line Olita and Ethelwynn quickly took the lead, the former with a working jib and the latter set a balooner. This was Olita's first race, and she made a very promising beginning, starting up quickly in the light air, and with sheets well off she traveled very fast and easily, soon turning the first mark with a lead of over a minute on Ethelwynn and of about three minutes on the others; L'Indienne, which had essayed a spinaker, being last.

The second leg was also with started sheet, the wind still very light and the water smooth, Olita showing even better and adding another two minutes to her gain over Ethelwynn. F. & R. showed a good third in this work, while Question was but fifth.

Sheets were now hardened for the beat of two miles, Olita and Ethelwynn both standing to the westward toward Lloyd's Neck. As they came for the line Olita was almost headed by a sand schooner, but fortunately managed to get by her bows. Ethelwynn made a gain of over a minute on the windward work, and was 1m. 58s. astern at the beginning of the second round. F. & R. made a very bad showing on the wind, while Question, sailing an easterly course, came up almost unnoticed until she was third boat. The times at each mark are given below.

The second round opened with more wind from the same quarter, and again Olita sailed very fast, adding a minute on the first leg and two more on the second, until she led Ethelwynn at the lee mark by 4m. 48s. She started again to the westward, the ebb now giving her a push on the lee bow while she kept well above the strong ebb out of Oyster Bay and Cold Spring Harbor. The wind was light but steady and she had more than at any time earlier in the race. Ethelwynn, with five minutes to make up in three miles, was no sooner by the buoy than she went about and headed in on one long leg for Lloyds' Neck, apparently a poor course with the ebb from the harbor on her weather bow, but there was nothing left for her. She stood on until well in under the shore and a long distance from Olita, now out to the westward, and finally the two came about. It was slow work, as they had passed the lee mark at 4:44 and it was not until 5:25 that they came together, Ethelwynn going easily across Olita's bows. She tacked and stood for the line, where she was timed with a lead of 1m. 19s., showing a gain of 36m. 7s. in two miles. A part of this was undoubtedly due to a stronger breeze out of the harbor, but the wind was freshening for both all the way home The rest of the fleet was far astern, L'Indienne having withdrawn entirely after the first round. The official times were:

First race.—Start 2:20 P. M.:

	First Round.			Second Round.			
	1st mark.	2d mark.	Line.	1st mark.	2d mark.	Line.	Elapsed
Ethelwynn	2 50 56	3 18 21	4 06 55	4 25 45	4 48 58	5 36 50	3 16 15
Olita	2 49 53	3 15 10	4 04 57	4 22 57	4 44 10	5 38 09	3 18 09
Question	2 52 40	3 23 11	4 09 00	4 27 40	4 53 10	5 46 07	3 26 07
Trilby	2 52 50	3 23 20	4 10 40	4 29 51	4 54 12	5 46 37	3 26 37
Trust Me	2 52 30	3 22 27	4 17 25	4 37 55	5 01 30	6 00 10	3 40 10
F & R	2 52 12	3 21 57	4 18 25	4 40 20	5 05 55	6 12 37	3 52 37
L'Indienne	2 53 37	3 23 57	4 26 20	Withdrew.			

Tuesday, the day of the windward and leeward race, was cloudy, with a very light off-shore wind and a sprinkle of rain. The start was made at 12:45, the Oneida's launch running out with the mark. Olita crossed on the gun close to the spar buoy, with Ethelwynn close inside her. Neither F. & R. nor L'Indienne started, leaving but five boats, the other three going over the line with spinakers set and with booms to port (the right jibe as it proved) on Trilby and Trust Me. Olita and Ethelwynn were in such close company on the line that they could not set spinakers until over and clear, both having booms to starboard. Still, in a light wind Ethelwynn ran away faster than Olita had done on the first day. She had shipped four pigs of lead, 25lbs., early in the morning, and the extra weight did not seem to stop her in the light winds of this and the following race. Her crew had turned out at 4 A. M. to get her on the beach for a rub down with a special black composition kindly given them by the crew of F. & R. The bottom was painted with copper bronze on the first day, with varnished topsides, and though the appearance suffered by the black stain over the mahogany, the boat was smoother and faster. At the first turn she had made 3½m. on Olita and about 4 on the others. Both she and Olita ran a little by the lee and had to take in spinakers and jibe before coming up with the mark.

The windward work was slow and tedious, taking an hour and a half for the leader to cover 3 miles. Olita's mainsail, but indifferent on the first day, was now stretched into a worse bag, after the manner of the criss-cross kind. Ethelwynn's new mainsail was sitting even better than most leg o' mutton sails, which are apt to show wrinkles about the head even when doing good work.

Olita made a long tack inshore to the eastward while Ethelwynn made several shorter tacks. The wind held light, but shifted a little to the eastward, then came rather stronger from the south.

The end of the first round showed Ethelwynn 10m ahead of the second boat, Trilby, and 19m. ahead of the last, Question.

The second round started in a very light wind and with the flood tide still running to the westward at the outer mark. Ethelwynn steered to the eastward to avoid being carried beyond the buoy in a possible calm, and when a little way out she was obliged to head still further off her course to avoid a long tow of barges which threatened to cut her off entirely from the mark, at the same time there was a promise of an easterly wind offshore. Olita sailed a middle course, also having to look out for the tow. When Ethelwynn was a mile out the wind dropped until she was almost drifting, Olita faring little better. After a time the light easterly air came up the Sound and both set spinakers for the mark, but in the meanwhile the southwest wind came in quite fresh and brought up the rear boats, Question being the most favored of all; being near the Center Island buoy when the wind came, she was able to head for the lee mark in a straight line, and at the turn, instead of 19m. she was just 28s. astern of Ethelwynn. The other three were almost up to the leaders, so that after having won the race at the end of the first round Ethelwynn was forced to start almost even to win it again in the last 3 miles.

The wind was stronger and truer than at any other time during the three days, and Ethelwynn began to gain from the moment her sheets were trimmed. On the way over, though the sky was clear, a little rain fell, but the water was comparatively smooth. She made up 3m. on Question and more on Olita in the three miles, winning very easily.

Second race.—Start 12:45 P. M.:

	First Round.		Second Round.		
	1st mark.	Line.	1st mark.	Line.	Elapsed.
Ethelwynn	1 30 17	3 00 51	4 03 15	4 33 03	4 08 03
Olita	1 33 45	3 17 21	4 04 35	4 57 48	4 12 48
Question	1 34 12	3 19 53	4 03 43	4 56 25	4 11 25
Trilby	1 34 03	3 10 27	4 04 11	5 00 07	4 15 03
Trust Me	1 34 19	3 15 17	4 04 50	Not timed.	

Wednesday was the most trying of the three days, the wind being very light and the weather intensely hot even under the wide awnings of the Oneida, while on the little boats the heat was almost unbearable. When the start was made at 12:15, the wind was very light W. S. W., the tide flood and the water smooth. Question and Ethelwynn crossed the line together, Olita being on the weather quarter of Ethelwynn. Spinakers were quickly set, Olita dropping her spinaker boom in the water as she crossed the line and losing a little time. They dragged slowly over the first leg, Ethelwynn in the lead and gaining, having a minute and a half on Olita at the turn, with the others far astern.

On the reach to the second mark the wind fell entirely, Olita picked up Ethelwynn and the two drifted side by side. Ethelwynn's crew went over the side, one at a time, for a swim, and one of Olita's crew followed. While one of her men was in the water and the boat a little shaken up by the climbing in, Ethelwynn dropped somewhat astern of Olita, and though there was apparently no increase of wind the latter began to forge ahead and open out the distance, probably aided by a trifling slant of wind. Olita went ahead faster as a light breeze caught the whole fleet, and spun out a long lead of 6m. over Ethelwynn in the remaining mile to the lee mark, Question and Trilby making up from 5 to 11m. on Ethelwynn.

The windward work was very slow, the wind still holding light, the two leaders stood over toward Lloyd's Neck together, Ethelwynn finally crossing Olita's bows, the latter running along to leeward for a time and then creeping out ahead. The steam yacht Venture ran by the pair and washed them in the most unconcerned manner, in fact, out of the large fleet of yachts about the course on the three days, several showed an utter disregard of the courtesies commonly accorded to racing yachts by outside craft.

Olita was in the lead by a short distance as they neared the buoy, but made a wide turn; the helmsman of Ethelwynn shoved her straight at the buoy and swung round as if on a pivot right between Olita and the big black spar, but there was not wind enough to give her any headway, and she failed by 27s. of being first at the end of the round, though having made up 6m. on the windward work.

The other three were far astern when the leaders started again on perfectly even terms for the last round, with spinakers set to starboard. In the middle of the leg a light S.W. breeze sprung up; the two held very evenly together, the times showing a gain of 9s. for Olita at the turn.

A slight freshening of the breeze astern brought the laggards up, and the second leg started with more wind, but still hardly a sailing breeze. On her best point of sailing Olita again gained, and had a lead of 1m. 29s. at the lee mark. Question set her spinaker with the pole over her bows, using it as a balloon jib, an expedient that is undoubtedly contrary to the rules, but which she availed herself of at times in a light air, and she made up over a minute on Ethelwynn on this reach.

The wind was now light but steady, and held its force to the end, making a very even race. As soon as they were trimmed down, Ethelwynn began to outpoint Olita, while the latter fell away bodily to leeward, as she did in all of the windward work. Question pointed very high and held on well. After standing east for a short time they broke tacks, and when they came together Olita on starboard crossed Ethelwynn's bows and tacked on her weather, but was unable to hold her advantage. The next time they came about Ethelwynn was on the other's weather bow and had the race won, finally crossing the line with a lead of 5m. 31s., a gain of 7m. 10s. in the 2 miles. Question came very close to third place. The full times were:

Third race.—Start 12:15:

	First Round.			Second Round.			
	1st mark.	2d mark.	Line.	1st mark.	2d mark.	Line.	Elapsed
Ethelwynn	1 05 25	2 55 37	4 14 57	5 14 13	5 36 06	6 13 12	5 58 12
Olita	1 06 53	2 49 40	4 14 30	5 13 37	5 34 27	6 18 43	6 03 43
Question	1 10 11	2 58 40	4 26 27	5 18 37	5 39 17	6 19 33	6 04 33
Trilby	1 16 53	2 58 45	4 21 30	5 19 57	5 42 43	6 26 27	6 11 27
Trust Me	1 16 45	3 05 23	4 24 05	5 19 30	5 42 43	6 34 20	6 19 20

After a short consultation, the committee announced the choice of Ethelwynn to defend the cup against Spruce IV. The question of the Center prizes was a more difficult one; the committee had watched each boat as closely as possible for the three days, making notes of the good and bad points of sailing; but it was some time before a decision was reached, the successful crew being that of Question.

The very light weather of the three days was a disappointment to all and gave the committee no opportunity to see the yachts in a strong breeze or reefed; but the performance of Ethelwynn in the drifting and the light airs showed her to be the fastest under extreme light weather conditions, the only exception being the reaching of Olita; and in the stronger wind of Tuesday afternoon she did as well relatively as at any other time.

The sailing of the races was greatly facilitated by the use of the flagship Oneida as a committee boat, Com. Benedict doing everything in his power to aid the committee, and displaying the greatest interest in the small craft and their plucky crews. In the hot drift of the last day, on the beginning of the second round, he forsook the shade of the awnings and had the Oneida's smaller launch lowered and went out himself with a big pitcher of ice water and a supply of cold ginger ale, picking up every one of the boats and refreshing the thirsty crews. On board of the Oneida, in the latter two races, was Mr. H. K. Sturdee, of Albany, a friend of Mr. Brand's, who represents him in this country. Mr. Brand and Spruce IV. sailed on the Fulda, on Aug. 31, for New York, and are expected next Sunday. On his arrival the dates and conditions of the races will be finally arranged, the time being after the termination of the America's Cup races. It is probable that some open races will be arranged for the 15ft. class after the conclusion of the Spruce-Ethelwynn races.

Aluminum.

From the New York Times.

THE use of aluminum plates in the construction of the yacht Defender has attracted unusual attention to that metal, while the report of the naval experts at Norfolk, Va., against its use on naval vessels, because of its corrosive tendencies, has raised a fear that it may lessen the chances of the American yacht in the international race with the Valkyrie III. But James C. McGuire, consulting engineer of the company which supplied the Defender's aluminum plates, says that there need be no such misgivings, because the Defender's aluminum plates are alloyed with nickel, while the plates tested by the naval officials at Norfolk were alloyed with zinc. The former, he says, are proof against corrosion, while the latter are not.

"The Navy Department," said Mr. McGuire, "tested aluminum which we furnished for ship construction. The object I had in view was to get the strength and stiffness needed in ship construction, and I bent all my energies in that direction. In order to get the requisite strength and rigidity, we used an alloy of zinc. When those plates were tested by the authorities of the Navy Department at Norfolk, it was found that they collected barnacles and corroded, and it is from the result of those reports that the opinion has gone abroad that aluminum is corroded by salt water.

"We then did not know that salt water is such an enemy to zinc, but these and other experiments taught us that when aluminum is to be used in and around salt water, we have got to use other alloys than zinc. This we can do. The difficulty has been overcome by using alloys of copper and nickel. We had to find this out by experimenting, and now we are not recommending the use of any alloys which contain zinc for use around salt water, and the alloys which we have used for marine work which have had no zinc in them, while they do not collect barnacles, do not corrode to an appreciable extent.

"I personally supplied the aluminum plates for the Defender. They are made with nickel alloy. There is no danger in her plates at all, so far as direct corrosion goes; the only thing to be feared is galvanic action between the aluminum plates and other metals.

"Aluminum plates are $2^{1}/_{10}$ times lighter than Tobin bronze, of which the Vigilant is constructed. The Defender's bottom is of manganese bronze, which is of about the same weight as Tobin bronze."

Mr. McGuire exhibited two plates—one of aluminum and the other of copper—taken from the hull of a vessel plying between New York and West Indian ports. The copper plate was badly corroded, while the aluminum plate was free from rust, but covered with barnacles. The copper plate was much the heavier of the two.

"Both plates," said Mr. McGuire, "were on the same hull during the same period, so that a comparison is instructive. During those six months the copper plate, though free from barnacles, lost $^{7}/_{1000}$ of an inch in thickness, while the thinner and lighter aluminum plate lost $^{5}/_{1000}$ of an inch.

"Nearly all the European navies use aluminum plates in the construction of war vessels, and reports received from naval authorities of the Old World are favorable to them. If aluminum was unsatisfactory they would quickly abandon its use.

"Aluminum is like any other metal and must be treated like any other. If aluminum used in ship construction is kept clean and painted there will never be any trouble with it.

"It is mined in Alabama and Georgia, where it is usually found on high ground in light, earthy soil. It is hydrated oxide of aluminum in its crude state and is known as bauxite. When the impurities are removed only oxide of aluminum is left. That is put through an electric furnace, and the affinity which oxygen has for aluminum is broken by the electric current—the oxygen is set free and the aluminum is deposited. It is poured in its melted state into moulds and becomes cool as soon as ladled out.

"Aluminum is also found in clay. Clay is silicate of aluminum, while bauxite is oxide of aluminum. We cannot use the clay because it is too expensive, and, besides, the silicate is left behind.

"We expect soon to have aluminum in competition with copper, and it will eventually be used for railroad car construction, because it is so light and durable, but as yet it is too expensive a metal for general use. Its present value is 50 cents a pound in ton lots. That is $1,000 a ton."

Aluminum is very ductile and may be rolled into sheets of .0007 of an inch in thickness, and beaten into leaf, the same as the best gold leaf made in Paris. It may be drawn into tubes or wires and spun or stamped into different shapes. It may be highly polished. It is the lightest of commercial metals, being only one-third as heavy as iron. It has a delicate purple tint, but it is believed that the colors of the metal may be varied.

Pure aluminum seldom corrodes or tarnishes, except when exposed to damp weather. Even salt water has little effect on the pure metal.

Aluminum melts at 630° centigrade or 1,160° Fahrenheit, and does not volatilize at any temperature ordinarily produced by the combustion of carbon.

Pure aluminum is soft, but the commercial aluminum is as hard as copper. It hardens when being worked either by pressing, forging, rolling or stamping. Castings require a large amount of alloy metal, but when they are drop-forged or hammered the metal becomes as hard and rigid as brass. A sheet of aluminum 12in. square and 1in. thick weighs 14.12lbs. A bar 1in. square and 12in. long weighs 1.176lbs. A bar 1in. in diameter and 12in. long weighs .918lbs.

Cast aluminum, in tension, has an equal strength to cast iron, but under compression it is weaker.

Aluminum readily unites with all metals except lead, antimony and mercury. Aluminum bronze, which is made with an alloy of 10 or 11 per cent. of aluminum with copper, is one of the densest, finest grained and strongest of known alloys. Aluminum bronze may be worked in a lathe; the chips cut smooth and long, and do not clog the tool. It is much more rigid under transverse strain than gun bronze, and it is an unusually safe metal under compression.

The Right of Way at a Mark.

WE were in hopes that the very important question touched upon in our recent comments on the Vigilant-Defender dispute might have aroused a discussion that would help to settle the matter, especially as we are well aware that many expert racing men are opposed to our view of the case. The following letters, from the *Field* of July 31 and Aug. 10, bear on the same point, the former taking a very strong view of the opposite side. The conditions in the case of Carina and Caress were very closely identical with those in the first Vigilant-Defender case.

Editor Field:

I beg leave to call attention to your report of the 20-rater race in the Royal Southampton Y. C. on July 13. You state that the "Stephanie and Inyoni fouled each other at the start, and forced the Luna on to the committee vessel, she being utterly unable to avoid doing so, etc." As I was helmsman of the Stephanie, I disclaim being in any way responsible for this fouling.

To explain the position to your readers, there was a soldier's wind up and down Southampton Water, and a broad reach on the starboard tack for the first leg of the course. Immediately before the start Luna and Inyoni were up to windward of the committee vessel, obviously so placed to bear down on the weather side of the starting line at gunfire. The Audrey was to leeward of these vessels, and Stephanie was sailing up from the lee side of the starting line close hauled on the starboard tack, and the right of way for vessels so sailing is indisputable, but other reports that probably emanate from the same stable as your own describe this point of sailing as "forcing an overlap from the leeward."

When Stephanie was about 20yds. from the committee vessel Audrey crossed her bows and Stephanie had to luff to clear her boom, immediately afterward bearing away, overlapping on her weather quarter abreast of the committee boat. Inyoni sailed down wind and then overlapped Stephanie and Luna was overlapping Inyoni. I don't think this statement of the case will be disputed, and you, Mr. Editor, will no doubt be able to appreciate it, and perhaps give an opinion about it in a footnote to this letter. As I understand the Y. R. A. rules, the Stephanie could have stood on her course right up to or to windward of the committee vessel, and the other vessels must get out of her way, and if they claim to be also on the starboard tack, Rule 18 states that vessels running free must keep out of the way of vessels close hauled, and if sailing with the wind on the same side the yacht which is to windward must keep out of the way of the yacht to leeward. The committee boat being an obstruction under Rule 20, no vessel has a right to claim room without having an overlap before the obstruction is actually reached, and the sense of this rule in reference to overlaps can only be applied to vessels that have been previously sailing in the same direction, and it cannot possibly be applied to vessels that sail toward each other at right angles, and I maintain that if a vessel sails down wind toward an obstruction and meets a vessel that has sailed up wind toward it, or is passing it as in this case, that the vessel sailing down wind is bound to keep clear of the other, and to do this she ought to pass under her stern and not try and force a weather passage. I have written on this exact point of sailing over and over again, using the same arguments and quoting the same rules, so nobody can now accuse me of doing so to elucidate this case.

If this ruling is correct or incorrect, it is very advisable that some competent authority should give an opinion about it, because nine times out of ten the fouling and crushing that frequently occurs on the weather side of starting lines is entirely due to vessels sailing down wind and forcing a weather passage as here described.

A vessel on the port tack when passing a committee boat is not relieved from the responsibility of getting out of the way of a vessel on the starboard tack; but many people seem to think that this committee boat offers some form of protection, and that the primary rules touching these points of sailing are to be thrown over in favor of others that really cannot be applied.

* * * * * * * * *

C. P. CLAYTON.

HYTHE, July 24.

The editor of the *Field* adds the following: As far as the rights of way are concerned we agree with the conclusions founded on the statements in this letter.

Mr. Clayton has presented in his own forcible style the exact opposite of our contention, which, as stated as long ago as the Volunteer-Gracie protest in 1891, is that the rules of the road at sea differ from the special rules adopted by yachtsmen for the regulation of yacht racing. The rules of the road at sea take no cognizance whatever of those lines and marks which are absolutely essential to yacht racing; and in construing the latter a new principle must be recognized: that while sailing in the open and clear of all marks, the ordinary rules of the road, such as port tack giving way and a yacht with the wind aft giving way, are in full force; but when in the proximity of a mark, even these imperative rules may become inoperative in the face of others intended to secure the rights of a yacht which has a leading position or an overlap. We have never met with a definite formulation of this proposition, but we believe it to be the very foundation of the racing rules.

On the facts as stated by Mr. Clayton we would take direct issue with him as to Rule 19 of the Y. R. A. superseding, for the time being, the second and third sections of Rule 18, or by the New York Y. C. rules, that Section 1d of Rule 16 supersedes sections 2 to 6; in other words, that a yacht which is clearly the inside vessel and the nearer to the mark, providing she has her overlap properly established, has the right of way over a yacht on the wind and even on starboard tack. We note that the Y. R. A. rule is worded, "When rounding any buoy or vessel used to mark out the course," and this might give grounds for a claim that a mark at the line is passed and not rounded; but even this hardly gives ground for a claim that the marks at the starting line are not covered by the same rules as the other marks of the course. By the wording of the American rules no such contention would be possible.

While we believe that this construction is justified by the letter of the present rules on both sides of the ocean, we are still more strongly of the opinion that such a construction is the proper one, and should be made plain, if necessary by an alteration of the wording, so as to cover a very common case at the line, exactly that of Vigilant and Defender.

The legitimate course of a yacht starting in a race down wind is across the line at right angles to it, the most direct and only proper course. If one boat and much more if a fleet of half a dozen are coming for the line with booms squared out and spinakers set, it is not only most dangerous, but most unjust, to give any one yacht the right to stand along the whole line on starboard tack, with all four feet in the trough, if we may be pardoned such a vulgar *simile*, throwing the fleet into confusion, risking numerous fouls, and gaining for herself a most unfair advantage.

We recognize very fully that the whole question is a difficult one, but that makes it only the more imperative that it should be firmly and finally settled, so far as the construction of the rules is concerned.

We are not a little surprised that so expert a racing man as Mr. Clayton should fall into the error of assuming for a moment that a committee boat or any other mark is an obstruction to the course under Y. R. A. Rule 20.

The other letter is as follows, covering very closely the points of the first Vigilant-Defender case:

Editor of the Field:

I have a case (somewhat similar to Mr. Clayton's in your last issue) that I might ask you to elucidate, and it occurred at the Campbelltown regatta. The Rule of the Road says one thing, and the Y. R. A. arrangement, I think in No. 36 (though I have not the little blue book beside me) is to my mind disjointed and contradictory in its two paragraphs bearing on one and the same subject.

Well, my story is this: The Carina was reaching with the wind a point or so free on the starboard tack from the committee vessel to the outer extremity of the starting line, where a flagboat was stationed, which flagboat had to be passed on the starboard hand, and the course of the race from then was approximately straight. Carina had arrived pretty close to outer mark just before the second gun.

The Caress, which had been considerably to windward while Carina was reaching and was employed in checking, found Isolde dead astern of her (they both being also on starboard tack); Caress suddenly bears up for the outer markboat, bringing the wind quarterly, and nicks in between Carina and markboat, the two vessels meeting almost at right angles, and in passing the flagboat a decided squeeze took place, which might have been worse had not Carina's helm been put a-weather a trifle, but luckily the squash only ended in one of Carina's weather shrouds bursting from colliding with Caress's main boom. Now, sir, ought Carina to have given Caress room, and by so doing allow herself to be driven to leeward over the line; or, on the other hand, had Caress the right to nick in, she being virtually before the wind, while Carina was by the wind? Caress certainly could have hit the markboat before Carina, as she was before Carina's center in bearing down, and immediately before she rounded to pass the markboat. My first impressions were to protest, but I withdrew, as I thought it a hardish nut for our Campbelltown friends to crack, and I did not care to anticipate a reference to the Y. R. A. and its decision for the month of February, 1896. I was sailing along just to windward of line; in fact, running the line down. It is not a position I should select as a rule, for it is attended with risk, but in this case there was no alternative, as the starting line was curiously placed relative to direction of wind on that morning.

V. MONTAGU.

WHERWELL PRIORY.

Larchmont Y. C. Fall Regatta.

LARCHMONT—LONG ISLAND SOUND.

Monday, Sept. 2.

THE Sound about Larchmont was smooth and calm throughout the whole of Monday, with barely enough air in the afternoon to drive the fleet over one round. Defender and Vigilant were under way in view of the racers. The race was devoid of interest in spite of the fine lot of yachts starting, as there was nothing more than a drift. The times were:

	Length.	Start.	Finish.	Elapsed.	Corrected.
CLASS C—SCHOONERS.

The Trial Races.

WITHIN the past week the repairs on Defender have been completed, two more trial races have been sailed, in each of which she has beaten Vigilant decisively, and she has been selected by the America's Cup committee to meet Valkyrie III.; a new steel boom and gaff have been completed and shipped on her; Lord Dunraven and Mr. Watson have arrived in New York, his lordship has conferred with the Cup committee and the final arrangements for the races have been perfected, though not yet announced. Valkyrie has been tried several times under sail, a second steel mast and boom have arrived for her and the latter has been shipped, and Defender has gone into the Erie Basin Drydock, probably for the last time before the race of Saturday next.

The new mast of Defender was stepped late on Aug. 25, a fine stick of Oregon pine, 2in. larger in diameter than the old one and 2ft. longer in the head. The work of rigging was pushed all Monday morning, and at noon she left in tow of the tug Wallace B. Flint, the Hattie Palmer carrying the spare spars. The old mast was hauled out at the Herreshoff spar yard at Walker's Cove, and the spar purchased two years ago for Colonia was also hauled out and worked into shape to serve as a spare mast if necessary later on. The steel gaff and boom were not ready, so they were left behind. The new boom is cylindrical, and not ribbed like that of Valkyrie. It is 106ft. long and 16in. in diameter at the center and 8in. at the ends, of $\frac{7}{16}$in. steel. Several riggers went on the yacht from Bristol to complete the rigging. Defender reached New Rochelle early on Tuesday morning. While setting up her bobstay, when at anchor, the U-shaped foot of the dolphin striker gave way, a steel forging, and it was found necessary to make a new one. The second trial race, set for Tuesday, had been postponed until Thursday, and on Wednesday afternoon Defender towed down to the Horseshoe, where both Valkyrie and Vigilant were anchored.

Thursday was clear and sultry; even on the water there was no escape from the intense heat. The wind was light and a little west of south, with some roll to the sea. The triangular course lay first southeast, then north by east one-half east, and then west by south, each leg eight miles. The start was given at 11:20:00, Vigilant going over on the weather of Defender after very little maneuvering, the two being timed: Defender 11:20:28, Vigilant 11:20:40. Though under Vigilant's lee, Defender, with clubtopsail and balloon jibtopsail drawing, soon worked free and took the lead, gaining steadily as they worked slowly along, the wind gradually dropping, until, a couple of miles from the start, both were nearly becalmed. Meanwhile Valkyrie had come out by the Hook as the race started off the Scotland, and with a very favorable slant came up very fast on the other two, her hull looking very low and wide through the absence of bulwarks and the broad belt of white at the wales. The size of her rig and the sit of her sails were remarkable; the balloon jibtopsail had that hard luster noticed in the sails of Valkyrie II. and all of her sails were faultless to the eye; the clubtopsail was very large and the mainsail was sitting well, though just bent for the first time. Holding a little better breeze, she ran up near the two American boats, surveyed them and then stood away. After this rather exciting incident followed a long and dreary drift, both yachts becalmed, but Defender drifting faster, being less disturbed by the roll of the sea. About 1 o'clock, when still three miles or so from the mark, Defender took in her balloon headsail and set a small jibtopsail to meet a light breeze from the southward, which headed both. They stood on the wind for the mark, Defender fetching below it and having to tack to make up ground lost in the drift, while Vigilant squeezed by with nothing to spare. They were timed: Defender 2:01:00, Vigilant 2:06:17. The times prove nothing in such weather. Defender was slow with her spinaker pole and sail, having just tacked; Vigilant came for the mark in fine style, with pole out to starboard and sail already aloft in stops, breaking it as she turned to take the new course.

The second leg was run very slowly, the only incident being a squall in the distance and a little rain which fell on the following boat, but seemed to miss the leader. Defender made a couple of minutes more on Vigilant. The times at the second mark were: Defender 3:16:30, Vigilant 3:24:00.

The short shower had been followed by lightning and thunder in the distance, and by the time that Defender was well started for the line with sheets hardened in the sky was black with a coming squall that promised to be of the regular August variety. When the wind struck her the new boat stuck to her clubtopsail and carried it boldly and ably, though her jib split from clew to stay. Her crew worked very quickly and had the torn sail off her and a new one trimmed home in hardly more than seven minutes. The squall proved to be comparatively a light one, nothing to compare with a similar disturbance ashore two days later; but the wind blew very hard for a short time. Vigilant first lowered her baby jibtopsail and then her club topsail, even then having all she wanted under lower canvas, but Defender carried her clubtopsail. After Defender crossed the line the sky cleared and the wind fell, Vigilant sent up a jibheader, but with no wind she was left far astern, the official times being:

	Start.	1st Mark.	2d Mark.	Finish.	Elapsed.
Defender	11 20 28	2 01 00	3 16 30	4 10 08	4 49 40
Vigilant	11 20 40	2 06 17	3 24 00	4 28 23	5 07 43

Elapsed times between start and first mark: Defender 2:40:32, Vigilant 2:45:37. Defender beat Vigilant 5m. 5s.

Elapsed times, first and second marks: Defender 1:15:30, Vigilant 1:17:43. Defender beat Vigilant 2m. 13s.

Elapsed times between second mark and finish: Defender 0:53:38, Vigilant 1:04:23. Defender beat Vigilant 10m. 45s.

Defender beat Vigilant, total elapsed time, 18m. 3s.

After the race the Cup committee decided on calling a final trial on the next day, and the two yachts were out at the line by 10:30 with cluptopsails aloft, though there was a good breeze from S.E. and quite a roll to the sea, the tugboats being thrown about in a very telling manner. The start was made at 11:10:00, both on the starboard tack and Vigilant to windward, but Defender crossed with a lead of 10s., just 8s. after gun-fire, and at once began to work ahead. The sea favored her as compared with Vigilant, and she did again what she has so often done before, going away to windward and ahead with no regard whatever for the fact that she was only a keel boat, while Vigilant was a centerboarder. The work of the two was interesting, with a good breeze and some life to the water in place of the dead drifting of the day before, but it showed nothing new; Defender rounded the weather mark at 12:47:25 and Vigilant at 12:53:02, a gain of 5m. 27s., which might have been more had there been any necessity for it. The most important point of the race was the run in under spinakers and balloon jibtopsails, with a moderate breeze and following sea, similar to but less severe conditions than those of the last race between Vigilant and Valkyrie II. in 1893. At this work Vigilant made a gain of 15s. in 10 miles, a very good performance considering her shorter waterline and smaller sail area, together with her fuller form. If it means anything at all it strengthens our supposition that the keel contour of Vigilant, reproduced in a modified and improved form in Valkyrie III., is superior off the wind to a breeze to that of Valkyrie II., copied in Defender. At any rate, the down wind work of the two boats in the races for the Cup is likely to be very interesting. The times were:

	Start.	Turn.	Finish.	Elapsed.
Defender	11 10 08	12 47 25	2 02 18	2 52 10
Vigilant	11 10 18	12 53 02	2 07 40	2 57 22

Elapsed time of Defender to outer mark, 1:37:17; Vigilant, 1:42:44. Defender beat Vigilant 5m. 27s. in windward work.

Elapsed time of Defender from outer mark to finish, 1:14:53; Vigilant beat Defender 15s. on the run.

Defender beat Vigilant 5m. 12s.

After this final race the selection of Defender to defend the Cup was a matter of course, and after a meeting of the Cup committee the following notice was posted in the evening at the club house:

The America's Cup Committee have selected the yacht Defender as the representative of the New York Y. C., as against Valkyrie III. in the contest for the America's Cup. A. CASS CANFIELD, Sec'y.

Both of the Astor cups were awarded to Defender as the winner of two out of the series of three races. Later on the same evening Lord Dunraven met the committee at the club house and the details of the races were arranged, though not yet made public.

Lord Dunraven, accompanied by his two daughters and Mr. G. L. Watson, arrived on the Teutonic late Wednesday evening, and after resting aboard all night the gentlemen were met by the City of Bridgeport and taken down to the Horseshoe, where Valkyrie was awaiting them. The yacht had left the Erie Basin on Monday morning, bending a new mainsail and stopping in the Bay to adjust her compasses; then lying in the Horseshoe all night. On Tuesday and Wednesday she was under sail, on the latter day being outside the Hook looking for the Teutonic. On Thursday and Friday she went out, being under way while the trial races were being sailed, but mainly at a distance from the American boats. On Saturday she towed up to the Erie Basin, where a new lightest steel boom of similar construction was shipped. The first steel boom was galvanized, but the second is painted a yellow color.

Defender's new steel boom was shipped aboard the yacht late on Friday night at the Erie Basin, being brought by steamer from Bristol, and on Saturday she was under way testing it. It proved weak at the gooseneck and was reinforced by a $\frac{1}{2}$in. steel plate; on Sunday she also received a new and larger clubtopsail and two new jibtopsails from Boston. On Sunday she was docked in the Erie Basin and thoroughly prepared for the races, being floated on Monday morning. Valkyrie III. will be docked on Wednesday and floated on Friday. Vigilant started on Wednesday for Port Jefferson to lay up.

The Yellow Dog and the White Boat.

From the New York Sun.

THERE appears to be a disposition among some patriotic but injudicious well-wishers of the white wonder from Bristol to look with doubt upon the addition to her ration drawers of a certain or uncertain yellow dog enlisted in Rhode Island and rated on her books as Mascot.

Everybody admits that the Defender needs some guardian genius to protect her keel from mud and her upper parts from sprains and fractures. But a yellow dog? Would not a dog of another color—Nonsense! We hail the omen. Does anybody expect a boat like that to carry a great Dane or a St. Bernard? Does anybody look for a red, green or purple dog? The color that was good enough for the long-haired Achaians and the old Northmen, the plowmen of the sea, is good enough for a dog, even for a dog good enough to be the luck bringer of the Cup keeper.

Besides, the yellow dog is thoroughly American. He is an emblem worthy of a Yankee ship and a Yankee crew. He is often spoken of contemptuously. No matter. This is the country where even the yellow dog has the right to exist and make a living, subject to the dog laws. The yellow dog, even in his most despised and tailless condition, is the dog of democracy. He shifts for himself; he is on the watch for opportunities; and he is not stuck up. As a symbol and as an invocation to Fortune on an American boat he can give tail and forequarters to the proudest descendant of Llewellyn's hound or the dog of Montargis. To hear some of these people talk, anybody would think the Defender ought to have for her mascot a Siberian bloodhound, that pampered pup of Asia, or a greyhound rampant on its own pedigree, or a dachshund with no sea legs and mighty little land ones. This is mere snobbery.

To be sure a dog is not the best theoretical nautical luck bringer. If to Æolus, god of the winds, could be sacrificed a Populist full of wind and whiskers, the old blower would cheerfully lend his bag to the Regatta Committee and let them pick what winds or breezes, strong, moderate or light, they pleased. He brooks no rival. He thirsts for Peffer and if the Neptune, shaker of the earth, could be thrown overboard his only peer in earth shaking, the Hon. William Jennings Bryan, of Nebraska, the celebrated performer upon the three-pronged fork would resign the supervision of the seas during race days to the skipper of the Defender. But Peffer and Bryan have no sporting blood. They will cling to life and the grasshopper preserves and caterpillar reservations of the Kaw and Platte. They will do nothing for yachting, and so the yellow dog must serve.

Observe that mystery envelops this dog. He may be the intelligent animal that used to have "Dr. Faustus" on his collar. In that case he will be able to run the whole ship, although he might be troublesome in a gale of wind. He may be Pythagoras, metempsychosed into a sport, in which case he should be mighty useful in looking after the legs of the triangle. He may be Palinurus or some other old pilot water dog, come from the Happy Isles to see how yachting is getting on. He may be some dog-headed god of the Egyptians, full of wisdom. Whoever he is, the black raven of Dunraven had better beware that dog. There is more in him than meets the eye.

If the white wonder beats, shall a patriotic country not honor this yellow dog, this steersman and sailorman of Fortune? Shall not a public kyneion, a doggery of State, be erected to him, where he shall be kept in luxury and honor for the rest of his days? And when old age shall bring him to his end, shall not each Yankee yachtsman beg a hair of him for memory, and the fell of him be hung up on some sacred wall, vestments devoted to the strong god of the sea?

The Drowning of R. W. Inman.

THE accident to the auxiliary yacht Adelaide, of which very little was known when we went to press last week, proved to be quite as serious as at first feared, resulting in the drowning of her owner, Robert W. Inman, of New York. The yacht, the sloop Adelaide, built by Wood Bros. in Boston in 1886, of 46ft. waterline, was fitted last fall with one of L. J. Wing & Co.'s naphtha engines; she was in command of Capt. Amherst Jacobs, with Herbert L. Dorne as mate, a boy, LaFayette Jaques, and a steward named Ruhlmann. In the evening of Aug. 26 she left the Columbia Y. C. house at 86th st., Hudson River, for Bath Beach, in Gravesend Bay. With Mr. Inman were two women and a man, the identity of the party being very much mixed by the various accounts which they have given. All went well until off Bay Ridge, about 7:30, the yacht then beating down on port tack with a light S. W. wind. The Iron Steamboat Co.'s steamer Perseus, a large passenger steamer, was coming up from Coney Island in charge of Capt. W. H. Hulse. The yacht's port light was burning and the night was clear, but the steamer ran across her bows before stopping, the yacht striking her forward of the starboard wheel, heeling badly and throwing Mr. Inman and one of the women into the water, the man jumping after the woman. The other woman was hauled aboard of the Perseus by the mate of the yacht, Dorne. The yacht finally went clear and got away without serious injury. The man and woman were picked up, after being for some time in the water, by the schooner John W. Houston, Capt. James Ducey, and Mr. Inman's yachting cap with the New York Y. C. device was also found. The steamer claims to have lowered a boat, but she finally went on to New York carrying the mate and the woman. Capt. Hulse made the following report of the accident:

Time of collision, near 7:30 P. M.
Location of wind, south.
Mr. S. S. Fairchild, Inspector:

While coming up the Bay on Aug. 26, near Bay Ridge Buoy, I saw a vessel on my starboard side coming from the eastward, showing her port light. She being on the wind, I made calculation for her to go under our stern, but on nearing us she kept hard off before approaching too nigh.

I blew her three sharp danger whistles and immediately saw there was danger of collision, when I rang four bells to stop and reversed the engine, which was promptly executed. We were backing when the sloop yacht Adelaide struck us on the starboard side forward of the forward gangway. I had a boat put overboard. She returned from the yacht, reporting that they were all right, and we proceeded on our way to New York. Yours respectfully, CAPT. W. H. HULSE.

All efforts to find Mr. Inman's body proved useless, but on Friday it was found by two boys floating off South Beach, and on being taken ashore was identified. The funeral took place on Saturday. Mr. Inman, who was but 34 years old, was not a racing man, though he bought the centerboard cutter Titania and rebuilt her into the schooner Dagmar; he and the two yachts were, however, well known about all the Sound ports.

From all appearances, and in spite of the story of the captain and the other steamboat people that the small boat in a light breeze ran into the big and swiftly moving steamer, the disaster was the result of that reckless running on the part of these boats with which all yachtsmen and boat sailors on the Bay are only too familiar. The rules of the road are all very well on paper, but in actual practice they offer little protection from these steamers to the small yacht that is becalmed or under easy way in the channel between Staten Island and Bay Ridge.

American Y. C.

MILTON POINT—LONG ISLAND SOUND.

Friday, Aug. 30.

THE fall regatta of the American Y. C., was sailed on Aug. 30 over the club courses off Milton Point, in a moderate easterly wind. The times were:

	Length.	Elapsed.	Corrected.
SCHOONER CLASS.			
Amorita		1 35 21	1 35 21
50FT. CUTTERS.			
Minerva	45.63	1 49 05	1 49 05
36FT. CUTTERS.			
Vorant II.	34.00	4 15 06	4 15 06
Dragoon	34.00	3 54 32	3 54 32
Infanta	33.30	4 13 22	4 12 01
Acushla		5 58 42	3 58 42
30FT. CUTTERS.			
Gavilan	29.60	2 19 40	2 19 40
30FT. CABIN CATS.			
Mary	28.02	2 27 20	2 27 20
25FT. CABIN CATS.			
Kittie	23.00	2 27 59	2 27 18
Keora	23.47	2 42 21	2 42 21
20FT. OPEN CATS.			
Terrapin	19.58	2 44 34	2 44 34
Ione	19.62	2 43 45	2 43 45
Ruth	16.00	3 27 18	3 16 54
Ethel	16.04	3 32 46	3 19 28
15FT. CLASS.			
Question	15.00	2 30 48	2 30 48
21FT. SPECIAL.			
Houri	21.00	2 19 29	2 19 20
Vaquero	21.00	2 20 47	2 20 47
Celia	21.00	2 20 12	2 20 12
25FT. OPEN CATS.			
Elsket	23.02	2 35 53	2 35 53
Punch	21.07	2 32 34	2 29 57
Kismet		2 47 35	2 41 39

The winners were Amorita (sail over), Minerva (sail over), Dragoon, Gavilan (sail over), Mary (sail over), Kittie, Ione, Question (sail over), Houri and Punch.

The regatta committee included Stuyvesant Wainwright, chairman; M. C. Parsons, Isaiah Paxson, Horace See and Simeon Ford.

Kill von Kull Y. C.

PORT RICHMOND—KILL VON KULL.

Saturday, Aug. 24.

THE annual regatta of the Kill von Kull Y. C. was sailed on Aug. 24 in a strong and squally S. W. wind that disabled several boats, the times being:

	Length.	Elapsed.	Corrected.
CLASS A—CABIN CATBOATS.			
Drift	22.02	1 26 50	1 26 45
Restless	21.10	Disabled.	
Willie K.	22.10	Disabled.	
CLASS E—OPEN CATBOATS, 20 TO 23FT.			
Tempest	22.10	1 10 55	1 10 55
Pauline B.	22.07	1 11 15	1 11 01
CLASS F—OPEN CATBOATS, 18 TO 20FT.			
Bon Ton	18.00	1 11 45	1 06 55
Maria	18.04	1 14 13	1 09 42
Minnie H.	19.10	1 12 55	1 10 05
C. T. Wills	19.05	1 22 00	1 18 43
CLASS G—OPEN CATBOATS, 16 TO 18FT.			
Maggie P.	16.03	1 13 44	1 06 37
Millie	17.03	1 13 25	1 07 35
Jean	16.08	Did not finish.	
Chick	16.11	Did not finish.	
Merry Maid	17.03	Did not finish.	
CLASS H—OPEN CATBOATS UNDER 16FT.			
May Lee	15.08	1 39 55	1 31 59
Irving H.	15.00	Did not finish.	
Imp	14.10	Did not finish.	

The judges were: Com. John Croak, George Ross, T. F. Donovan and Edward Buel. The regatta committee consisted of O. G. Hastings, J. I. Housman, T. F. Donovan, H. E. Buel and George Ross.

On Aug. 31 the club sailed its annual race for the Housman cups in a reefing S.E. wind, the times being:

	Elapsed.	Corrected.
CLASS A—SLOOPS.		
Maggie P., C. Lissenden	1 50 20	1 38 08
Dilemma, L. Morris	1 59 30	1 54 54
CLASS B—CATBOATS.		
Minnie H., J. I. Housman	1 45 10	1 40 17
Tempest, W. Houghwout	1 38 58	1 38 58
Maria, George Ross	1 50 35	1 42 52
Millie, C. A. Passmore	1 52 23	1 42 25

Indian Harbor Y. C.

GREENWICH, LONG ISLAND SOUND, Thursday, Aug. 29.—The Indian Harbor Y. C. sailed a special race on Aug 29 for classes under 34ft. The wind was light and the race slow, the times being:
